Ash Wednesday,	March 1	Whit Sunday,	June 4
Palm Sunday,	April 9	Trinity Sunday,	June 11
Easter Sunday.	April 16	Advent Sunday,	Dec 3

CHRONOLOGICAL CYCLES.

Dominical Letter	A	Solar Cycle,	26
Golden Number,	4	Roman Indication,	8
Epact (Moons age,) Jan. 1st.	3	Julian Period,	6578

ASPECTS OF THE PLANETS.

The best time for viewing the Planet Mercury, during this year will be on the 27th of July, at one hour after sunset. He will then be visible in the western sky, about one hour above the horizon.

Venus will be Evening Star till the 10th of May, then Morning Star till the end of the year. She will be brightest on the 4th of April, and on the 16th of June. Her greatest angular distance from the Sun, will be on the 2nd of March, and on the 19th of July.

Mars will be a very conspicuous object in the heavens, in the evenings of January and February. He will be easily distinguished by his red color. Jupiter will be in opposition with the Sun, on the 15th of June.

Saturn will be in opposition with the Sun, on the 18th of April.

Herschel will be in opposition with the Sun, on the 22nd of December.

ECLIPSES FOR THE YEAR 1865.

During this year, four Eclipses will take place.—two of the Sun and two of the Moon.

The first will be of the Moon, on the 10th day of April, P. M. visible throughout the Confederate States.

The second will be of the Sun, on the 25th day of April, at 8h 44m A. M. invisible in the Confederate States. It will be visible in South America, and in the South Atlantic Ocean.

The third will be of the Moon, on the 4th day of October, P. M. partially visible, in the Eastern Confederate States.

The fourth will be a great and singular Eclipse of the Sun on the 19th day of October, A. M. visible throughout the Confederate States.

The two visible Eclipses of the Moon, are carefully calculated to apparent time, for the places specified below, in the following table, as follows:—

	ECLIPSE OF MOON, APRIL 10th, P. M.					ECLIPSE OF MOON OCT. 4th P. M.					DIGITS ECLIPSED AT R' END

N, L. means North Limb, S. L. means South Limb.

THE GREAT SOLAR ECLIPSE

The great Solar Eclipse of the 19th of October. is carefully calculated for the places specified, to apparent time, in the following table, as follows:—

OCTOBER 19TH, A. M.

	BGNNG		MIDDLE		END		N MOON		DIGITS ECLPSD		
	h	m	h	m	h	m	h	m			
Austin, Tex.	7	2	8	28	9	54	10	9	8	NL

Atlanta, Ga.	8	5	9	44	11	23	11	5	11½	NL	Annular
Tallahassee, Fla.	8	9	9	45	11	28	11	3	10	NL	
Augusta, Ga.	8	22	9	56	11	45	11	13	11½	NL	Annular
Columbia S C.	8	24	10	2	11	42	11	17	11½	SL	Centrl
Raleigh, N. C.	8	31	10	15	11	58	11	26	10¾	SL	Nly Anlr
Richmond, Va.	8	37	10	19	0	1PM	11	29	10½	SL	

The centre of this Eclipse will pass over the places of the Earth's surface, that are indicated by the following table:—

LATITUDE	LONGITUDE	LATITUDE	LONGITUDE	LATITUDE	LONGITUDE
N 47 15	W 122 33	N 34 23	W 82 21	N 14 26	W 38 44
N 43 42	W 106 48	N 33 43	W 81 1	N 14 7	W 31 5g
N 41 0	W 98 7	N 33 2	W 79 43	N 14 26	W 24 17
N 37 58	W 90 11	N 27 54	W 70 47	N 14 5	W 20 7
N 35 43	W 85 5	N 23 54	W 64 16	N 16 7	W 11 4
N 34 43	W 83 1	N 15 24	W 44 48	N 16 50	W 6 50

The central Eclipse will first be seen at Olympia in Washington Territory; and it will be seen last at Timbuctoo in Africa. The central Eclipse at noon, will be in Latitude 23° 54' N. Longitude 64° 16' W. In the above table, Longitude is reckoned from Greenwich, England. The centre of this Eclipse will pass about 210 miles North of Columbus Ga. and about 150 miles North of Macon, Ga. and about 70 miles North of Augusta, Ga. It will pass near Columbia, S. C.

In many respects, this will be the most remarkable of Eclipses that will occur in the Confederate States during the present century. It will be annular; that is, the apparent size of the Moon will not be large enough to conceal the whole disk of the Sun: therefore at all places where the Eclipse will be annular, the edge of the Sun, all around the dark body of the Moon, will resemble a red-hot ring of iron. If the air be clear, several Planets and Fixed Stars will be visible in different parts of the sky, at the time of the annular Eclipse. The Planet Venus will be seen about 30° West of the Sun. The Planet Jupiter will be seen about 60° East of him; and Regulus will be seen about 60° West of him. Ursa Major near the North Pole of the heavens, and Spica about 11° west of the Sun, and Arcturus about 30° N of him, and many others in different parts of the heavens will be distinctly visible to the naked eye, if the air be *very serene*.

Not many persons have had an opportunity of seeing the Sun either totally or annularly eclipsed; therefore, all the particulars of this Eclipse have been calculated with much prolixity and care, in order that all persons who will then be living, may witness a grand Phenomenon of nature, which in all probability, they will never witness again. If the exact apparent time of the beginning and end of a solar Eclipse, at any place, be noted from correct observations, the longitude of that place can be correctly computed; and this method is the only correct one.

NOTE.—None of the Problems for 1864, have been solved; perhaps the Mathematicians of our country are so much engaged in military affairs that they cannot find leisure time to apply their minds to the solution of difficult Problems. Therefore, the insertion of Problems in this Almanac, has been omitted; but it will be resumed whenever a more propitious year rolls in sight.
