'Go, little book, God send thee good passage,
And specially let this be they prayers
Unto them all that thee will read or hear,
Where thou art wrong, after their help to call,
Thee to correct in any part or all.

CHAUCER.
PREFACE.

The present volume is the second of a series of Handbooks for the East now in course of preparation, and designed, like the Editor's European handbooks, for the guidance of travellers.

The materials from which the Handbook for Lower Egypt has been compiled were partly furnished by Professor G. Ebers of Leipsic, while articles on special subjects, as well as many additions and emendations, have been contributed by a number of other writers. The Editor is specially indebted to Professors R. Lepsius (who amplified and revised the Sinai Routes), H. Kiepert, P. Ascherson, and C. B. Klunzinger of Berlin; to Dr. G. Schweinfurth, Franz Bey (for the remarks on Arabian architecture), Dr. Reil (for information respecting Cairo and its environs), Dr. A. Spitta, librarian to the Khedive, of Cairo, etc. To several English gentlemen who have contributed a number of valuable corrections and suggestions, and particularly to the distinguished Egyptologist, Dr. Samuel Birch, the Editor also begs to tender his grateful acknowledgements.

The Editor has also repeatedly visited Lower Egypt for the purpose of obtaining the most recent practical information, of the kind most likely to be useful to travellers. As, however, a tour in the East is attended with far greater difficulty than in Europe, and sources of information are far less abundant, the Handbook must necessarily contain many imperfections, and the Editor will therefore gratefully avail himself of any communications which his readers may kindly contribute, as many of them have so generously done in the case of his European handbooks. As Oriental life and scenery differ widely in many respects from European, and can hardly be appreciated without some previous study, the Editor has endeavoured to supply the traveller with all the most necessary preliminary information, believing that it will be acceptable to most of his readers, although somewhat beyond the province of an ordinary guide-book.

The second volume of the present Handbook, embracing Upper Egypt and the Nile, and chiefly from the pens of Professor G. Ebers of Leipsic and Professor J. Dümichen of Strassburg, will probably be published during the present year.

The Maps and Plans have been an object of the Editor's special care, as he knows by experience how little reliance
can be placed on information obtained from the natives, even when the traveller is conversant with their language. The best map of Lower Egypt is that of Mahmud Bey (Cairo, 1874; four sheets, on the scale of 1:200,000), but it is published with Arabic names only. About the year 1855, a "Carte Hydrographique de la Basse Egypte et d'une Partie de l'Isthme de Suez" (two sheets; scale 1:250,000) was published by Linnan Bey, and another of the Delta and the Nile as far as Assuan was prepared for private circulation only by Professors Lepsius and Kiepert. These maps, together with the English and French Admiralty charts, and the map of the French expedition, so far as still serviceable, form the chief basis of the special maps contained in the Handbook. The maps of the environs of Cairo have, as far as practicable, been revised and brought down to date from observations made on the spot by Dr. Reid; and the same gentleman has also revised and amplified the small maps of the cemeteries of Memphis, which are based on those drawn by Professor Lepsius. The plans of the mosques and the sketch of the Tombs of the Khalifs have been contributed by Franz Bey, the architect. It is therefore hoped that the maps and plans will, on the whole, be found the most serviceable that have yet been published for the use of travellers in Egypt.

Heights above the sea-level and other measurements are given in English feet, from the latest and most trustworthy English and other sources.

The Prices and various items of expenditure mentioned in the Handbook are given in accordance with the Editor's personal experience, but they are liable to very great fluctuation, in accordance with the state of trade, the influx of foreigners, the traveller's own demeanour, and other circumstances. In some cases the traveller's expenditure may be within the rate indicated in the Handbook, but as many unexpected contingencies may arise on so long a journey, an ample pecuniary margin should always be allowed.

Hotels, etc., see p. 17.

Transliteration. The vowel sounds of Arabic words mentioned in the Handbook are represented by $a$, $e$, $i$, $o$, and $u$, as pronounced in Italian (ah, eh, ee, o, and oo). The è used in the Handbook is a contracted form of $ei$, and is used in preference to it, as it exactly represents the usual pronunciation (viz. that of the $a$ in fate). The diphthong sound of $ei$ is rarely used except in the recitation of the Korân. Arabic words written in accordance with this system will generally be found to correspond with the forms used by German, French, and Italian philologists.
CONTENTS.

I. Preliminary Information

(1). Plan and Period of Tour. Travelling Companions. Routes

(2). Expenses. Money

(3). Passports. Custom-House

(4). Consulates. International Tribunals

(5). Steamboats on the Mediterranean

(6). Modes of Travelling in Egypt

(7). Dealing with the Natives. Dragomans

(8). Equipment for the Tour. Health

(9). Beggars. Bakhshish

(10). Public Safety. Weapons. Dogs

(11). Hotels. Hospitality

(12). Cafés. Story-Tellers, Musicians, Singers, etc.

(13). Baths

(14). Bazaars

(15). Intercourse with Orientals

(16). Tobacco

(17). Post and Telegraph Offices

(18). Weights and Measures

II. Geographical and Political Notice (by Dr. G. Schweinfurth of Cairo)

Boundaries and Area of the Egyptian Empire

Divisions and Administration

Distribution of Land

Population

Origin and Descent of the Egyptians

The Modern Egyptians

(1). The Fellâhin

(2). Copts

(3). Beduins

(4). Arabian Dwellers in Towns

(5). Berbers

(6). Negroes

(7). Turks

(8). Levantines

(9). Europeans

The Nile

Extent of the River

Its Sources

Alluvial Soil. Nile Mud

INTEODUCTION.

'I shall now speak at greater length of Egypt, as it contains more wonders than any other land, and is pre-eminent above all the countries in the world for works that one can hardly describe.'

Herodotus (B.C. 456).

At the close of last century Egypt was in a great measure re-discovered by the French savants attached to Bonaparte's Egyptian expedition. Since that period it has attracted the ever-increasing attention of the scientific; its historical and archæological marvels have been gradually unveiled to the world; it is the most ancient, and was yet at one time the most civilised country of antiquity; and it therefore cannot fail to awaken the profoundest interest in all students of the history and development of human culture.

Like other countries of the far East, Egypt possesses for the 'Frank' traveller the twofold attraction of scenery and history. To the first category belong the peculiar charms of its Oriental climate, the singularly clear atmosphere, the wonderful colouring and effects of light and shade, such as are unknown in more northern climates, the rich and almost tropical vegetation contrasted with the solemn, awe-inspiring desert, and the manners, customs, and appearance of a most interesting, though not always pleasing, population. At the same time Egypt is pre-eminent among the countries of the East, and indeed among those of the whole world, as the cradle of history and of human culture. At every step we encounter venerable monuments which have survived the destructive influences of thousands of years and the vandalism of invaders and conquerors, and which are executed on so grand a scale, with so much artistic skill, and with such historical consistency, as at once to excite our highest admiration and command our most profound respect.

Owing to its distance from the homes of most travellers, and to the expense involved in exploring it, Egypt will never be overrun by tourists to the same extent as Switzerland or Italy; but it is now reached without difficulty by one of the numerous Mediterranean steamboat lines, and increased facilities are afforded to travellers by the recent construction of railways (p. 11) within the country itself, while its unrivalled attractions will abundantly reward the enterprising traveller and supply him with a subject of life-long interest.

Baedeker's Egypt I.
I. Preliminary Information.

Plan. The facilities for travel in Egypt are now such that the intending visitor may make an outline of his tour at home with almost as great ease as for most of the countries of Europe. During the travelling season, moreover, the weather is always fine (comp. p. 67), and never causes disappointment and derangement of plans as in most other countries. If, therefore, the traveller from a more northern region retains his native energy in this somewhat enervating climate, and resists the undoubted attractions of the 'dolce far niente', he will have no difficulty in disposing of every day to advantage.

Season. From the beginning of November till the middle or end of April there is rarely a single day of bad weather in Egypt; the prevalent temperature is that of a delicious spring or moderate summer, and the few drops of rain that occasionally fall will hardly be observed by the European traveller. The fertilising inundation of the Nile (p. 57) has by this time subsided, and the whole face of the country smiles with fresh verdure. About the end of April, and sometimes as early as March, begins the period of the Khamsin (p. 69), a sultry, parching, and enervating wind from the desert, prevailing at intervals for about fifty days (whence the name), and lasting from three to five days at a time, though in some seasons it does not make its appearance at all. Winter is therefore the proper season for a tour in Egypt. Those travellers, however, who can endure the fierce glare of an African summer sun will at that season have the advantage of seeing the extent of the overflow of the Nile, and will find that prices are then generally much lower than in winter. (Compare also p. 74.)

Companions. The traveller can hardly be recommended to start alone for a tour in a country whose customs and language are so entirely different from his own; but if he has been unable to make up a suitable party at home, he will probably have an opportunity of doing so at Alexandria or Cairo, or possibly at Suez or Port Saïd. Travelling as a member of a party is, moreover, considerably less expensive than travelling alone, many of the items being the same for a single traveller as for several together. Apart, however, from the pecuniary advantage, a party is more likely to succeed in making satisfactory arrangements with the natives with whom they have to deal. (Voyage up the Nile, see vol. ii; journey to Mt. Sinai, R. 10.)

Routes. A glimpse at Lower Egypt, i.e. Alexandria, Cairo, and the Suez Canal, may be obtained in three weeks (exclusive of the journey out); and the traveller may distribute his time as follows: —

(2). Expenses. Honey.
Expenses.
tries

The cost of a tour in Egypt, and in Oriental coun
is considerably greater than that of a visit to any

generally,
part of Europe, the

reasons being that most travellers cannot con
form with the simple habits of the natives, that they are ignorant
of the language, and that special arrangements have to be made to
The average charge at the hotels for a
meet their requirements.
day's board and lodging is 15-20 fr., without wine (compare p. 17).
The cheapest wine costs 3-4 fr. per bottle ; English beer 1-1^1% fr. ;
fee 1/2-l fr. ; the traveller's hotel expenses will therefore amount

20-25 fr. a day, to which must be added the hire of don
keys and carriages and the inevitable 'pourboires'. The total day's
to at least

expenditure should therefore be estimated at 30 fr. at least. (Steam
boat-fares are of course extra ; pp. 9, 10).
Estimate of expenses for Mt. Sinai, see R. 10 ; for the Fayum,
R. 9 ; for the voyage on the Nile, see vol. ii. of the Handbook.
The traveller whose time is very limited, or who is accompanied
by ladies, will also require the services of a guide or valet-de-place,
or 'dragoman', as they prefer to style themselves (5-8 fr. per day).
Money. A small sum of money for the early part of the journey
may be taken in English or French gold, or in English banknotes,
but large sums should always be in the form of circular notes.
These notes, which if kept separate from the 'letter of indication'

^

*


cannot be cashed by a thief or a dishonest finder, are issued by the principal London banks.

The current rate of exchange should always be ascertained from a banker (see also Table, p. 5), and money should be changed as rarely as possible at an ordinary money-changer’s, at a hotel, in the bazaars, or through a dragoman. For excursions in the country the traveller should be provided with an ample supply of small change (silver piastres, half-piastres, and copper coin), as the villagers sometimes refuse to change money of any kind, and the traveller may thus be very seriously inconvenienced. They also frequently decline to take a coin if the inscription is worn away by use, and in their examination of gold pieces they attach great importance to the ring of the metal. A favourite ornament with Oriental women consists of a string of gold coins worn round the head, or as a necklace, and coins with holes in them are accordingly often met with, but they are very apt to be rejected by the natives. In changing money, therefore, all these points should be attended to. It need hardly be observed that money should always be carefully kept under lock and key, and that it should be shown as little as possible, in order that the cupidity of the people with whom the traveller has to do may not be aroused.

Paper money is unknown in the East. Besides the Egyptian coinage, which moreover has two different rates of exchange†, Turkish, French, English, Italian, Austrian, and Russian gold and silver coins are freely circulated.

In ordinary retail traffic accounts are kept in current-piastres, which are worth one-half of the government tariff-piastres. As, however, these do not, as might be supposed, indicate two different coins, this twofold mode of reckoning is exceedingly puzzling to strangers. It should be particularly observed that at the shops and bazaars the prices are always fixed in current piastres, so that half the number of silver coins only has to be given. The shopkeepers, however, generally convert their prices into francs for the benefit of strangers, and although their demands are then somewhat raised, they are at least more intelligible. On the other hand, in making small purchases, and in dealing with country-people, it is more advantageous to keep to the reckoning in current piastres, as the sellers are very apt to demand as many francs as the amount of the price in piastres.

† There are indeed three rates of exchange: ‘Tariff’, ‘Current’, and ‘Copper’; and the latter is also liable to considerable fluctuation in the interior of the country. At Cairo, early in 1877, 1 tariff piastre was worth 6 copper piastres. (At Cairo and Alexandria, however, copper money may be declined.) The value of copper increases as we penetrate into the interior. Thus, at the beginning of 1877, 1 Napoleon realised 480 copper piastres at Alexandria, 450 at Cairo and beyond it as far as Síf, and 420 only higher up the river. No advantage, however, can be derived from this difference in value except when very large payments are made in copper, as is the custom with the peasantry. As all the taxes are

</table>

Payable in gold and silver only, the precious metals flow steadily from the country to the government coffer in the towns, where Greek and Jewish money-changers profit largely by these variations in the exchange. The 'shekhs el-beled', or village-chiefs, who always endeavour to depreciate the value of copper, also gain considerably by similar transactions.

Passports are usually asked for at all the Egyptian ports, and if
the traveller is unprovided with one he is liable to detention and
great inconvenience. Difficulties of this kind, however, are often
removed by a judicious administration of bakhshish (p. 16) in the
absence of the higher officials.

Custom-House. As a rule the traveller's luggage is opened at
the custom-house. One of the articles chiefly sought for is cigars,
on which 75 per cent of the estimated value is charged. Consider-
able difficulty is also made about admitting firearms and car-
triges. In such cases the examination will be greatly expedited
by the payment of a douceur of a few francs.

On all goods exported, one per cent of duty is charged on the
estimated value, and luggage is accordingly examined again as the
traveller quits the country; but exemption from this troublesome
formality may be again obtained by the above-mentioned expedient.
The exportation of antiquities is strictly prohibited (p. 24). If
luggage be forwarded across the frontier, the keys must be sent
with it; but, if possible, the traveller should always superintend
the custom-house examination in person.

(4). Consulates.

Consuls in the East enjoy the same privilege of extrerritoriality
as ambassadors in other countries. A distinction is sometimes made
between professional ("consules missi") and commercial consuls,
the former alone having political functions to discharge; and there
are consuls, vice-consuls, and consular agents, possessing various
degrees of authority. In all cases of emergency the traveller should
apply for advice to the nearest consul of his country, through whom
the authorities are most conveniently approached, and who will
effectually watch over his interests. It is therefore very desirable
that travellers should take the earliest possible opportunity of en-
tering into friendly relations with these most useful officials, and
the more so as access to some of the principal objects of interest cannot
be obtained without their intervention. The kavasses, or consular
officers, also render important services to travellers, for which they
expect a fee, although not entitled to demand payment.

On 1st Jan. 1876 an important reform in the Egyptian Legal System,
which is to be tried for five years, came into operation. Foreigners had
hitherto been entirely withdrawn from the civil and criminal juris-
diction of the Egyptian authorities, their consul alone being competent
to take cognisance of cases in which they were concerned. Besides the
native authorities, there thus existed no fewer than seventeen co-ordinate
consular tribunals, each of which administered the law of its own
country; and as it was often uncertain before which tribunal and by
what law a case would ultimately be decided, the system caused serious
inconvenience both to the landed and commercial interests. The Egyptian
government at length made a proposal, which was specially supported
by the now retired minister Nubar Pasha, and was acceded to by the
powers represented by consuls, that mixed tribunals should be appointed, consisting of courts of first and second instance, for the trial of all cases arising between natives and foreigners, or between foreigners of different nationalities, in accordance with Egyptian law, founded on that of France and Italy. Cases in which the Khedive himself and the Egyptian government are concerned are also tried before this new tribunal, so that the system of appeals, formerly so much abused, is now done away with. The courts of the first instance were established at Alexandria, Cairo, and Iemal'liya, the last of which has recently been abolished. The judges consist of natives and foreigners, the latter being elected by the Khedive out of the qualified officials nominated by the great powers. The appeal court at Alexandria is constituted in the same manner. Some of the judges of the first instance are also chosen from members of the smaller European states. These courts enjoy a constitutional guarantee for the independence of their jurisdiction, and, so far as necessary, they execute their judgments, both in civil and criminal matters, by means of their own officers. The languages used are Arabic, French, and Italian. — Besides these new courts, the consular and local tribunals still continue to subsist, their jurisdiction being, however, limited to criminal cases and to civil suits between foreigners of the same nationality, provided the question does not affect land. In due time, it is hoped, the local courts will be organised so as to work in harmony with the new mixed tribunals.

(5). Steamboats on the Mediterranean.

Alexandria, the chief seaport of Egypt, is regularly visited by English, French, Austrian, Italian, Russian, and Egyptian steamers, but the three last are inferior to the others, and are little employed by ordinary travellers. Whether the traveller returns westwards on leaving Egypt, or intends to proceed to Syria or elsewhere, it is important that he should be familiar with the principal steamboat services.

Those who purpose including Syria, Greece, and Constantinople in their Oriental tour had better, before leaving home, write to the 'Administration des Services des Messageries Maritimes, 16 Rue Cannebière, Marseilles' for a 'Livret des Lignes de la Méditerranée et de la Mer Noire', and also to the 'Verwaltungsrath der Dampfschiffahrtsgesellschaft des Oesterreich-Ungarischen Lloyd, Trieste' for 'Information for Passengers by the Austrian Lloyd's Steam Navigation Company' (published in English). With the aid of these two sets of time-tables, the traveller will have little difficulty in making out his programme. See also 'Baeleker's Palestine and Syria' (sold at the bookshops of Alexandria and Cairo).

In selecting a route the traveller must of course be guided by circumstances and his own inclination. The shortest sea-voyage is that from Brindisi, three days; from Trieste (via Corfu), or from Venice (via Ancona and Brindisi), five days; from Naples, four days. The last-named route is perhaps the best for returning, as the temperature of Naples and Rome form a pleasant intermediary between the warmth of Egypt and the colder climate of N. Europe.

The vessels of the principal lines are all nearly on a par with regard to comfort and speed, many of them being large and handsomely fitted up, while others are inferior. The following remarks apply chiefly to the French and Austrian steamers.

The First Class cabins and berths are always well furnished; those of the Second Class, though less showy, are tolerably comfortable, and
are often patronised by gentlemen travelling alone. In autumn and winter the vessels bound for Alexandria, and in spring those returning westwards, are apt to be crowded.

The Food, which is included in the first-class fare and usually in the second also, is always abundant and of good quality. Passengers begin the day by ordering a cup of coffee at 7 or 8 o'clock; at 9 or 10 a déjeuner à la fourchette of three courses is served; lunch or tiffin is a similar repast at 12 or 1; and at 5 or 6 there is a very ample dinner, after which tea is generally provided. Many travellers prefer the cookery on board the French and Austrian steamers as being lighter and better suited to the climate than that of the English vessels. Passengers who are prevented by sickness from partaking of the regular repasts are supplied with lemonade and other refreshments gratis.

The Steward's Fee, which the passenger pays at the end of the voyage, is generally from ½ fr. to 1 fr. per day; but more is expected if unusual trouble has been given.

The Baths provided for the use of passengers in the English and some of the other vessels may be used without extra charge, but the attendant expects a fee at the end of the voyage.

Tickets should never be taken at foreign ports through the medium of commissionaires or other persons who offer their services, but the traveller should, if possible, purchase them at the office in person. The tickets bear the name of the passenger and the name and hour of departure of the vessel. Return or circular tickets (to Syria and Constantinople) and family tickets for three or more persons are generally issued at a reduced rate, but no reduction is made on the charge for food. A child

of 2-10 years pays half-fare, but must share the berth of its attendant; but for two children a whole berth is allowed.

Luggage of 150-220 lbs. is allowed to first-class, and of 85-135 lbs. to second-class passengers.

Embarkation. Passengers should be on board an hour before the advertised time of starting. At Marseilles, Trieste, and Brindisi the vessels start from the quays, so that passengers can walk on board; but at Venice and Naples passengers are conveyed to the steamers in small boats, for which the charge at all the Italian ports is 1 franc or lira for each person, including baggage. Good order is kept at these ports by the police. Payment of the boat-fare should not be made until the passenger and his luggage are safe on deck. Before the heavier luggage is lowered into the hold, the passenger should see that it is properly labelled.

All complaints should be addressed to the captain. On board the foreign steamers a kind of military precision is affected, and questions addressed to the officers or crew are apt to be answered very curtly.

From Trieste to Alexandria (Austrian Lloyd) every Friday night. On Saturday and Sunday the Dalmatian and Albanian coast lies on the left. Arrival at Corfu on Monday morning, and halt of 4-5 hours; arrival at Alexandria generally about 5 a.m. on Thursday, so that passengers may travel thence by the first quick train to Cairo. — From Alexandria to Trieste the departures depend on the

</table>
arrival of the Indian mail, usually taking place on Sundays or Mondays, but sometimes as early as Saturday. The day and hour are advertised at the hotels at Cairo and Alexandria one or two days beforehand. Fares to Alexandria: 1st class 132 fl.; 2nd class 91 fl. 35 kr. Austrian silver currency; to Port Sa'id 149 fl. 96 or 105 fl. 69 kr.

**From Venice and Brindisi to Alexandria.** The steamers of the *Peninsular and Oriental Company* leave Venice every Friday morning, touch next morning at Ancona, and on Sunday morning at Brindisi, where they receive the English mails for India (arriving from London via Paris and Turin in 56 hrs.). They then leave Brindisi on Mondays for Alexandria, where they generally arrive on Thursdays. — From Alexandria to Brindisi the departures, like those of the Austrian Lloyd, depend on the arrival of the mails from India. — The chief cabin fare from Venice to Brindisi by the English steamers is 65, the second 45 fr.; from Venice to Alexandria 300 or 225 fr.; food included in each case. The fare from Brindisi to Alexandria is the same as that from Venice, so that passengers embarking at Venice effect a considerable saving.

**From Marseilles and Naples.** Vessels of the *Messageries Maritimes* leave Marseilles every Thursday about noon, arrive at Naples on Saturday morning, start again after a halt of some hours, and arrive at Alexandria on Wednesday about 5 p.m. On the voyage from Marseilles to Naples these vessels pass through the Strait of Bonifacio, but on the return-voyage they steer round Capo Corso in order to avoid adverse currents. In quitting the harbour at Naples the passenger enjoys a delightful view in fine weather. On the voyage out the vessel passes through the Strait of Messina at night. — From Alexandria to Naples and Marseilles every Tuesday at 9 a.m. On Friday about 9 a.m. the vessel sights the Calabrian coast with the Capo Spartivento, and to the W. the pyramidal Aetna, which is covered with snow until summer. It then steers through the Strait of Messina on the E. side, commanding a view of the beautiful promontory of Aspromonte on the right; towards evening it passes close to the island of Stromboli, and next morning (Saturday) arrives at Naples about 7 o'clock. — Fares from Marseilles to Alexandria 375 and 225 fr.; from Naples 275 and 175 fr.

Besides these steamboats may be mentioned those of the Italian *Società Rubattino*, which ply between Genoa, Leghorn, Naples, Messina, and Alexandria once weekly (leaving Genoa on Tuesdays, and Alexandria on Fridays), and those of the French firm *Fraissinet Pére et Fils*, which ply between Marseilles, Malta, and Alexandria twice monthly. The fares are about one-third lower than those above mentioned. The departures are advertised at the hotels of the different ports.

The *Russian and Egyptian Steamers*, the former of which are tolerably comfortable, ply between Alexandria and the eastern ports only (Syrian coast, Constantinople), and are not recommended to ordinary travellers. Fares and departures advertised at the hotels.
(6). Modes of Travelling in Egypt.

Railways. A network of railways constructed by the Egyptian government now connects most of the important places in the Delta. The engineer of the oldest of these lines, that from Alexandria to Cairo, was Mr. Stephenson, while the others were planned by Fayt-Bey. The officials were at first chiefly Europeans, but now most of them are natives. The carriages resemble those of other countries, but the third class is insufferably dirty. The dust and heat render railway travelling in Egypt exceedingly unpleasant in hot weather.

The traveller should be at the station fully half-an-hour before the hour for starting, as the process of issuing tickets and booking luggage is often very slow, and the ticket-clerks are entitled to close the office 10 minutes before the departure of the train. The personal tickets are printed in English and Arabic, the luggage tickets in Arabic only.

Time-tables will be found in the 'Moniteur Egyptien' and the 'Phare d'Alexandrie'; but as the hours are seldom altered, those at present fixed are given in the following pages.

Steamboats on the Suez Canal, and the small screw-steamers plying between Isma'iliya and Port Sa'id, see R. 7.

Donkeys (Arab. homâr) form the best means of conveyance both in the narrow streets of the towns and on the bridle-paths in the country. They are of a much finer, swifter, and more spirited race than the European, and at the same time patient and persevering. Those in the towns are generally well saddled and bridled in Oriental style. The attendants are either men or boys, who contrive to keep up with their beasts at whatever pace they are going, and often address long sentences to them in their Arabic patois. As the gait of the donkeys is sometimes very uneasy when they break into a trot, care should be taken not to engage one with this defect for an excursion of any length. As the stirrups are often in bad condition they had better not be used at all. The donkey-boys (Arab. hammâr) are fond of showing off the pace of their beasts, and often drive them unpleasantly fast. The rider who prefers a slower pace shouts 'ala mahlak or 'ala mahlakum; if a quicker pace is wanted, yalla, yalla, or mâshi, or sük el-homâr; if a halt is to be made, csbur, or the English word 'stop'. The donkey-boys, especially at Cairo, are generally remarkably active, intelligent, and obliging. Many of the donkeys, particularly in the country, will be observed to have been deprived of part of one or both ears. This has been done, in accordance with the somewhat cruel practice of the country, as a punishment for trespass, an additional fragment being cut off for each repetition of the offence.

† The boys are preferable to the men, as the latter are generally more exorbitant in their demands and less obliging, and even their donkeys appear to partake of their unpleasant disposition.
and the delinquents are known as horāmīyeh, or thieves. The horse
and donkey-shoes consist of plates of metal with a hole in the
middle.

The Camel (for riding begīn, in Syria delūl; for baggage gemel;
those with one hump are the only kind found here) is generally used
for the Mt. Sinai tour (R. 10) only, but for the sake of experiment
may be ridden on one of the shorter excursions from Cairo (e.g. to
the Petrified Forest or to Helūn). The patient 'ship of the desert'
is always surly in appearance, and though he commands our respect,
never wins our affection. Those only which have been properly
trained can be ridden with any comfort, the baggage-camels being
as unsuitable for the purpose as the ponderous Flemish cart-horse.
If well mounted on a tall and well trained begīn, the traveller will
find that camel-riding is quite undeserving of the vituperation so
often bestowed upon it by the inexperienced (comp. also R. 10).

(ī). Dealings with the Natives. Dragomans.

The traveller, apart from his ignorance of the language, will
find it exceedingly difficult to deal with the class of people with
whom he chiefly comes in contact. The extravagance of their
demands is boundless, and they appear to think that Europeans
are absolutely ignorant of the value of money (p. 16). Every at-
tempt at extortion should be firmly resisted, as compliance only
makes the applicants for bakhshīsh doubly clamorous. Payment
should never be made until the service stipulated for has been
rendered, after which an absolutely deaf ear should be turned to
the protestations and entreaties which almost invariably follow.
Thanks, it need hardly be said, must never be expected from such
recipients (comp. p. 16). Even when an express bargain has been
made, and more than the stipulated sum paid, they are almost sure
to pester the traveller in the way indicated. When no bargain has
been made, the fees and prices mentioned in the Handbook, all of
which are ample, should be paid without remark; and if the attacks
which ensue are not silenced by an air of calm indifference, the
traveller may use the word rūḥ or inshī (comp. p. 202) in an im-
perative tone, or vigorously brandish his stick at his assailants.
Gestures of the latter kind are intelligible everywhere, and when
they have produced the desired result the traveller will be inclined
to say with the Arabs themselves — 'The stick came from heaven,
a blessing from God!' The Egyptians, it must be remembered, oc-
cupy a much lower grade in the scale of civilisation than most of
the western nations, and cupidity is one of their chief failings;
but if the traveller makes due allowance for their shortcomings, and
treats the natives with consistent firmness, he will find that they are
by no means destitute of fidelity, honesty, and kindliness.

Notwithstanding all the suggestions we have ventured to offer,
the traveller will to some extent have to buy his experience. In most cases the overcharges to which he will be exposed will be comparatively trifling; but if extortion is attempted on a larger scale, he had better refer the matter to his consul.

Travellers about to make a tour of any length may avoid all the petty annoyances incident to direct dealings with the natives by placing themselves under the care of a Dragoman (Arab. ter-gumân).

The word dragoman is derived from the Chaldaean targem, 'to explain', or from targum, 'explanation'. The Arabic targum also signifies 'to interpret'. The dragoman was therefore originally merely a guide who explained or interpreted. Since the 7th cent. B.C. when Psammetichus I. threw open the country to foreign trade, against which it had previously been jealously closed, this class, which is mentioned by Herodotus as a distinct caste, has existed in Egypt. That author informs us that Psammetichus caused a number of Egyptian children to be educated by Greeks in order that they might learn their language; and it was these children who afterwards became the founders of the dragoman caste. The great historian himself employed a dragoman, from whom he frequently derived erroneous information. A dragoman, who was employed by the governor Ælius Gallus to accompany him up the Nile, is accused by Strabo of absurdity, conceit, and ignorance. The ignorant Arabian, Nubian, or Maltese dragomans of the present day do not attempt to explain or translate the ancient inscriptions. An effort was recently made with some success to educate young Arabs for this calling in a school founded for the purpose; but, like most Oriental undertakings, the scheme has not been persevered with.

The dragomans, who speak English, French, and Italian, undertake for a fixed sum per day to defray the whole cost of locomotion, hotel accommodation, fees, and all other expenses, so that the traveller is enabled to obtain, as it were, a bird's eye view of the country without being concerned with the cares of daily life. On the other hand the traveller is frequently imposed upon by the dragoman himself.

The charge made by the dragoman varies very greatly according to circumstances, such as the number and the requirements of the travellers, the length of the journey, and the amount of the demand for the services of such a guide. A dragoman is usually employed for the longer tours only, such as the voyage up the Nile, the journey to Mt. Sinai, the excursion to the Fayûm, and a visit to the less frequented towns in the Delta. Visitors to Alexandria, Cairo, Suez, Isma'îlya, and Port Saïd may well dispense with a dragoman, as every necessary service will be rendered them by the commissionnaires of the hotels (5-10 fr. per day). Dragomans of the better class, moreover, usually consider it beneath their dignity to escort their employers through the streets of the towns, and are apt to consign them to the guidance of the local cicerones.

For the above-named longer tours the charges vary so greatly, and the services to be rendered on each are so different, that a separate contract with the dragoman should be drawn up in each case. (Thus, for the Nile voyage he has to procure a dahabiyeh,
for the Fayûm horses, for Mt. Sinai camels, for the Delta canal-boats and donkeys, and, for the three last journeys, tents also.) Information regarding expenses and other details, as well as the names of some of the best dragomans, will be prefixed to each of the routes in question. The larger the party, the less will be the expense for each member of it, while for a single traveller a dragoman is of course a very costly appendage.

In conclusion, we may add that most of the dragomans are fond of assuming a patronising manner towards their employers, while they generally treat their own countrymen with an air of vast superiority. The sooner this impertinence is checked, the more satisfactory will be the traveller's subsequent relations with his guide; and the hints already given with reference to the traveller's intercourse with the natives may not unfrequently be applied to the dragomans themselves. On the successful termination of the journey travellers are too apt from motives of good nature to write a more favourable testimonial for their dragoman than he really deserves; but this is truly an act of injustice to his subsequent employers, and tends to confirm him in his faults. The testimonial therefore should not omit to mention any serious cause for dissatisfaction. Information with regard to dragomans (name, languages spoken, conduct, and charges) will always be gratefully received by the Editor of the Handbook for the benefit of later editions.

(8). Equipment for the Tour.

Dress. It is less important now than it formerly was to purchase every requirement for the journey before leaving home, as the traveller can easily supplement his outfit at some of the modern shops of Alexandria or Cairo. For all ordinary purposes a couple of light Tweed suits, a few flannel and soft cotton shirts, a supply of thin woollen socks, one pair of light and easy boots, one of shoes, and one of slippers, a moderately warm Ulster or long travelling cloak, a pith-helmet and a soft felt hat, together with the most necessary articles of the toilet, will amply suffice. Those who intend making a prolonged stay at the principal towns may add a dress-suit and a few white shirts. If a muslin 'puggaree' be used for covering the hat, it should be made to fall over the back of the neck and ears as broadly as possible. This favourite European head-dress, however, invariably attracts hosts of importunate candidates for 'bakhshish'. Some travellers prefer the fez or târbûsh, a red cloth skull-cap with black-silk tassel (4-15 fr.), over which, in native fashion, they tie a silk keffiyeh (manufactured in Egypt, 15-20 fr.), falling down behind in a triangle. This head-dress protects the neck and cheeks admirably against the scorching Egyptian sun, especially when a folded handkerchief or a white skull-cap (tâbi'iyeh) is worn under the târbûsh. In prolonged riding tours, a sun-shade is a fatiguing
encumbrance. All these articles should be new and strongly made, as it is often difficult and troublesome to get repairs properly executed in Egypt. White shirts, collars, and wristbands, which require frequent and skilful washing, should be as far as possible eschewed, as good laundresses are rare and expensive (2-4 fr. per dozen articles, irrespective of size). Few travellers walk in Egypt, except for very short distances, but sportsmen should add a stout pair of waterproof shooting-boots to their equipment.

For tours on horse or camel-back two small portmanteaus are much more suitable than a box or trunk of larger size.

Miscellaneous. Among the most important extras are a drinking cup of leather or metal, a flask, a strong pocket-knife, note-books, writing-materials, straps and twine, a thermometer, a pocket-compass of medium size, and a supply of magnesium wire for lighting caverns and dark chambers. To these may perhaps be added a 'remontoir', or keyless watch, as a watch-key lost during the journey is not easily replaced.

Health. Fine as the climate of Egypt generally is, the chilly mornings and evenings are often treacherous, and if cold is caught it is apt to result in a tedious intermittent or other fever. There are good chemists at Alexandria and Cairo, from whom small medicine-chests adapted for the climate may be purchased. In serious cases of illness a European doctor, when procurable, should always be consulted, as the traveller's own experience acquired at home is of little avail in the climate of Egypt.

Fits of shivering are the usual prelude to an attack of fever. Quinine is the best remedy, of which 1-3 doses should be taken on the days when the patient is free from fever. Rest and copious perspiration will also afford relief.

Diarrhoea, which is apt to turn to dysentery, is a very common complaint in this climate, and is generally the result of eating unripe fruit or of catching cold. The patient should first take a slight aperient, and afterwards tincture of opium or concentrated tincture of camphor. A simple farinaceous diet (such as well-boiled rice), with tea or well matured, unfortified, and unsweetened red wine, will be beneficial, while fruit, meat, and fatty substances should be avoided. In cases both of diarrhoea and fever all remedies are sometimes unavailing except change of climate, especially if the patient is in a marshy or unhealthy locality.

Sprains, which often result from exploring ruins and caverns, are most effectually treated with cold compresses, while the injured limb should be tightly bandaged and allowed perfect rest.

The sting of a scorpion (seldom dangerous) or bite of a snake is usually treated with ammonia.

Sunstroke is very common in Egypt, even in spring when the air is still cool. The head and neck should therefore always be carefully shielded in one of the ways above indicated. The usual remedies are rest and shade, cold compresses, and warm baths with cold douches applied to the head and neck.

Grey spectacles or veils may be used with advantage when the eyes suffer from the glare of bright weather. Zinc eye-wash, or some other innocuous lotion, should be used in such cases.

The sticking-plaster, lint, as well as all effervescing powders, and other medicines carried by the traveller should be carefully kept from exposure to moisture.
(9). Beggars. Bakhshish.

Most Orientals regard the European traveller as a Croesus, and sometimes too as a madman, — so unintelligible to them are the objects and pleasures of travelling. Poverty, they imagine, is unknown among us, whereas in reality we feel its privations far more keenly than they. That such erroneous notions prevail is to some extent the fault of travellers themselves. In a country where the requirements of the natives are few and simple, and money is scarce, a few piastres seem a fortune to many. Travellers are therefore often tempted to give for the sake of affording temporary pleasure at a trifling cost, forgetting that the seeds of insatiable cupidity are thereby sown, to the infinite annoyance of their successors and the demoralisation of the recipients themselves. As a rule, bakhshish should never be given except for services rendered, or to the sick and aged.

Sir Gardner Wilkinson has justly observed that the cry of 'Bakhshish, bakhshish, yā khawāghēh' (oh, sir! a gift!), with which Europeans are invariably assailed, is an insulting substitute for the 'good day' of other countries. The Arab reserves his pious benedictions for his own countrymen, but never hesitates to take advantage of what he considers the folly of foreign travellers. The best reply to such applications is 'mā fīsh, mā fīsh' (I have nothing for you), which will generally have the effect of dispersing the assailants. Or a beggar may be silenced with the words 'Allāh yā'tīk' (may God give thee!).

The word bakhshish, which resounds so perpetually in the traveller's ears during his sojourn in the East, and haunts him long afterwards, simply means 'a gift'; and, as everything is to be had in return for gifts, the word has many different applications. Thus with bakhshish the tardy formalities of the custom-house officer are accelerated, bakhshish supplies the place of a passport, bakhshish is the alms bestowed on a beggar, bakhshish means black mail, and lastly a large proportion of the public officials of the country are said to live by bakhshish or bribery.

Public Safety. The authority of the Khedive is so well established throughout the whole of Egypt that travellers are very rarely exposed to predatory attacks, even on the Sinai journey, and travelling is indeed safer than in some parts of Europe. The protection of an escort is therefore never necessary as it is in certain regions of Palestine and Syria. Travellers, however, who have scientific objects in view, and who require the co-operation of the natives or of the pasha or mudir of a district, or those who have reason to apprehend any difficulty or danger, may obtain through their consulates a viceregal recommendation (firmān or teskireh), which will often be found very useful.
Weapons for self-defence are an unnecessary encumbrance. Guns for purposes of sport, see p. 79.

Dogs, being regarded by the Muslims as unclean (p. 79), are never touched by them. Their barking is sometimes a source of alarm, especially in country places, but they fortunately never bite. As they are never domesticated in Oriental countries, it is quite useless to attempt to establish friendly relations with them.

Hotels. The traveller will find good, first-class hotels at Alexandria, Cairo, Isma'iliya, Port Sa'id, and Suez, kept by Germans, Frenchmen, or Greeks, with European waiters. The charges are generally high, 15-20 fr. per day being charged during the season for board, lodging, and attendance, whether all the meals are partaken of or not. For a prolonged stay a lower rate should be stipulated for in advance. Wine is generally extra. The waiter expects a fee of 2-3 fr. per week, his native assistant 1½ fr., and the porter about 2 fr.; for errands in the neighbourhood there is generally a separate tariff. Orientals attract the attention of waiters by clapping their hands, and sometimes with the exclamation — 'yâ weled' (ho, boy!). — Tolerable inns have also sprung up of late years at Tantâ, Mansûra, Zağazîk, and at Minyeh and Siût in Upper Egypt.

Hospitality. In all other parts of Egypt the traveller who is not provided with tents must apply to the principal natives or officials, or to European merchants for accommodation. The latter are to be met with in every part of the Delta, and will be found most courteous and hospitable. Letters of introduction may be obtained without difficulty at Alexandria and Cairo.

(12). Cafés.

Story-tellers, Musicians, Singers, etc.

European Cafés are to be found at the towns above mentioned, beer being one of the refreshments they afford (generally from Vienna or Gratz; ½ fr. per glass).

Arabian Cafés (kahwa) abound everywhere, even in the smallest and dirtiest villages. In the country they usually consist of wooden booths, with a few seats made of plaited palm-twigs (gerîd), and even in the large towns, like Cairo, they are very small and uninviting. The kâhwas are frequented by the lower classes exclusively. The front generally consists of woodwork with a few open arches. Outside the door runs a maštaba, or raised seat of stone or brick, two or three feet in height and of about the same width, covered with mats, and there are similar seats on two or three sides of the interior. Coffee is served by the kahwegî at 10 paras per cup (fingûn), and several nargâlehs and shîshehs or gûzehs (water-pipes) are kept in readiness for the use of customers. The
tumbâk (p. 27) smoked in the latter used sometimes to be mixed with the intoxicating hashish (hemp, Cannabis Indica), the sale of which is now prohibited in Egypt.

'The leaves and capsules of hemp, called in Egypt hasheesh, were employed in some countries of the East in very ancient times to induce an exhilarating intoxication. Herodotus (iv. 75) informs us that the Scythians had a custom of burning the seeds of this plant in religious ceremonies, and that they became intoxicated with the fumes. Galen also mentions the intoxicating properties of hemp. The practice of chewing the leaves of this plant to induce intoxication prevailed, or existed, in India in very early ages; thence it was introduced into Persia; and about six centuries ago (before the middle of the thirteenth century of our era) this pernicious and degrading custom was adopted in Egypt, but chiefly by persons of the lower orders. ... The preparation of hemp used for smoking produces boisterous mirth. Few inhalations of the smoke, but the last very copious, are usually taken from the gôzeh. After the emission of the last draught from the mouth and nostrils, commonly a fit of coughing, and often a spitting of blood, ensues, in consequence of the lungs having been filled with the smoke. Hasheesh is to be obtained not only at some of the coffee-shops: there are shops of a smaller and more private description solely appropriated to the sale of this and other intoxicating preparations: they are called mahsheshehs. It is sometimes amusing to observe the ridiculous conduct, and to listen to the conversation, of the persons who frequent these shops. They are all of the lower orders. The term hashshash, which signifies a smoker, or an eater, of hemp, is an appellation of obloquy: noisy and riotous people are often called hashshasheen, which is the plural of that appellation, and the origin of our word assassin; a name first applied to Arab warriors in Syria, in the time of the Crusades, who made use of intoxicating and soporific drugs to render their enemies insensible'.

'The use of opium and other drugs to induce intoxication is not so common in Egypt as in many other countries of the East: the number of Egyptians addicted to this vice is certainly not nearly so great in proportion to the whole population as is the relative number of persons in our own country who indulge in habitual drunkenness'.

'Buzeh or boozah, which is an intoxicating liquor made with barley-bread, crumbled, mixed with water, strained, and left to ferment, is commonly drunk by the boatmen of the Nile, and by other persons of the lower orders'. — Lane (1833-35).

Numerous taverns now exist exclusively for the sale of buzeh, kept chiefly by Nubians. It is usually dispensed immediately from a large boiler with a wooden ladle, which is passed from mouth to mouth, the customers being of both sexes. The liquor is intoxicating in a very slight degree.

Many of the kahwas are frequented, especially on the eves of festivals (p. 234), by story-tellers and musicians. The performances range from those of a very simple character to gorgeous entertainment with dancing, music, and fireworks; and these 'fantasiyas', as they are called by the modern Arabs, afford unbounded delight.

Story-tellers (who in private domestic circles are generally women) still form a characteristic Oriental institution. Wherever they make their appearance, whether in the public streets or the coffee-house, in the densely peopled alleys of the large towns, or in the smallest country villages, or among the tents of the wandering Arabs, they are sure to attract an attentive, easily pleased, and exceedingly grateful crowd. The more sensational the tale, the better, and the oftener is the narrator applauded with protracted cries of 'Aah', or 'Allâh', or 'Allâhu akbar!'.

The story-teller generally occupies a small stool on the mašţaba, whence he delivers his address. Most of the members of this class belong to the so-called sho'ara (sing. shā'ir), literally ‘singers’. They are also known as ‘Anātireh (sing. ‘Antari) or Abu-Zêdiyeh, according as their theme consists of tales and romances from the history of ‘Antar, a Beduin hero, or from that of Abu Zêd. Others again are called Mohadditin, i.e. narrators of history, their province being the recital in prose of passages from the history of Sultan Ez-Zâhir Bébars, who reigned over Egypt in 1260–77 (p. 104). The entertainments of the ‘alf lêleh u lêleh’ (thousand and one nights), too, are by no means out of fashion. There are also professional improvisors and travelling singers, whose performances are very popular; but the themes of the whole fraternity are too often of an immoral character.

Musicians by profession, called aldîtyeh (sing. aldîti), are indispensable on every festive occasion. The usual instruments are the relk or tambourine with little bells, the nakkârîch, or semi-spherical tambourine, the zemr or hautbois, the tabl beledi or drum, the tabl shômi or kettle-drum, and the darabukkeh, a kind of funnel-shaped drum (generally made of earthenware, but sometimes of mother-of-pearl and tortoise-shell, with a fish-skin stretched over the broad end), which last is accompanied by the zemmûra, a kind of double flute. A better class of instruments, used for chamber music, consists of the nài, a kind of flute, the kemengeh or two-stringed violin, the body of which consists of a cocoa-nut shell, the rebûbeh, or one-stringed violin with a square wooden body, the kûnûn, a kind of zither with strings of sheep-gut, and lastly the ‘ud, the lute or mandoline, the oldest of all the instruments.

The Egyptians consider themselves a highly musical people, and the traveller will indeed often be struck by the frequency of their singing. The Egyptian sings when indulging in his kêt (p. 22), whether sitting on his heels or stretched out on his mat, when driving his donkey, when carrying stones and mortar up a scaffolding, when working in the fields, and when rowing. He sings whether alone or in company, regarding his vocal music as a means of lightening his labour and of sweetening his repose. A peculiarity of the Egyptian songs, however, is that they have no tune, though they have a certain rhythm, which is always dependent on the text. They are sung through the nose on seven or eight different notes, on which the performer wanders up and down as he feels inclined. † The character of this so-called music is exceedingly monotonous, and to a European ear displeasing. The songs (maawal or shught) are all of a lyrical description, most of them are erotic and often grossly obscene, and many are at the same time pointless and meaningless. Some of them, however, extol the pleasures of friendship and rational enjoyment, or express derision of an enemy, or contempt for the rustic fellâh. Thus a favourite song of the donkey-boys derides a young fellâh called ‘Ali, the favourite of his village, and is usually sung in mockery of some one of the name.

† In the large work entitled the ‘Book of Songs’ an endeavour is made to reduce Arabic music to a system, and the notes are divided into seven different keys, each having the same notes, differently arranged; but the popular songs are sung without the least regard to these artificial rules.
FEMALE SINGERS.

Shuftum 'Ali ya nas
Labis 'amis wilbas
Wā'if 'ala-l-abbās
Yīlūh el-birgās
Wal 'an yaqarat el-haddīd
Nas it belie haggit
Kulluh 'ala shān 'Ali
Ya'ni ya'ni
Kulluh 'ala shān 'Ali.

1. Have you seen 'Ali, ye people, in shirt and drawers, standing on the bridge of 'Abbās and showing off his equestrian tricks? But the bridge is now destroyed, and half the village has flown away. And all this for 'Ali's sake, yes, for 'Ali's sake.

2. Have you seen 'Ali among you? If not, I will run off with your skull-caps (p. 14) and will go into one of the villages and remain there thirty days. All this for 'Ali's sake, yes, for 'Ali's sake.

The pleasures of hashish-smoking are thus extolled:

Gözeh min et-hind wumrakkeb 'alēha ghāb
Wumdandisheb bit wa' wumgamma el ʾabhab
Akhattel mehā nefes el-ʾakī minīn ghāb.
Baʾet abaldam xeet el gamal yuwaʾlghāb
Tup 'alēya yā tuwaʾāb
Min shurb el gözeh wat ghāb,
ha ha ha ✠
Min shurb el gözeh wat ghāb.

Oh cocoa-nut of India, in which is fixed the stem inlaid with shells, that collects friends around it. I have taken a whiff from it — and my understanding fled. I drew so that the tube gurgled like a camel. Oh! forgive me, thou Blotter out of sins! that I smoke out of the cocoa-nut with its stem.

Thwarted love is another favourite theme. One of these songs begins

'Ho, 'hoi, ya habibi! 'Ho, 'hoi, kun tabibi! (come, come, oh beloved! come and be my physician!). These songs also frequently describe the charms of the beloved object with great minuteness.

FEMALE SINGERS ('Awālim, sing. 'Almeh or 'Alimeh; i.e. 'learned women') of a good class are now very rare, and those who still exist perform only in the harems of wealthy natives, so that the traveller will seldom or never have an opportunity of hearing them. Others of a low class are frequently seen in the streets accompanied by one or two musicians, who are generally blind.

The FEMALE DANCERS, or caste of the Ghawāsi (sing. Ghāziyeh), which is quite distinct from that of the 'Awālim, were formerly one of the chief curiosities of Egypt, but for some years past they have been prohibited from performing in the streets. Really good dancers are said to be now rare, but on the Nile voyage the traveller will have an opportunity at Ḳenēh, Luḫṣor, and Esneh of seeing very curious and elaborate, though to his taste often ungraceful performances. Most of the dancers congregate at the fair of Ṭanṭa (p. 224), but the most skilful decline to exhibit unless paid with gold. The Ghāish, or young men in half-female attire, who frequently dance

✠ These syllables represent the coughing caused by the great quantity of smoke inhaled by the hashish smoker at intervals of 1/4-1/2 hour, after which he gradually becomes intoxicated and insensible.

✠✠ The water-pipe out of which the hashish is smoked has generally a cocoa-nut (gözeh) as a receptacle for the water through which the smoke passes.
at festivities instead of the Ghawâzi, present a most repulsive appearance.

The Snake Charmers (Rifâ'iye, sing. Rifâ'î), who form another distinct caste, exhibit performances of a very marvellous character, as credible European residents in Cairo have testified; but the traveller will rarely come in contact with them. The ordinary exhibition of dancing snakes may, however, occasionally be seen in the Uzbekiyeh. The boys who exhibit small snakes at the hotels must of course not be confounded with the Rifâ'iyeh.

The Jugglers (Howâli) of Egypt are similar to those of other countries. The performances of the Buffoons (Kurêdâti or Mohab-buzi), which are chiefly intended for the amusement of the young, are disgracefully indecent.

(13). Baths.

The baths of Egypt, with their hot-air chambers, are those commonly known as Turkish, but they are neither so clean nor so well fitted up as some of those in the larger cities of Europe.

The Harâra (see Plan), as well as the Maghtâs and Hanafiyeh, have flat ceilings in which are openings covered with stained glass. The maghtâs and the Hanafiyeh each contain marble basins for washing, provided with taps for warm water; the maghtâs contain besides a bath sunk in the pavement. Cold water is brought in ewers. The harâra, or general bath-chamber, is less heated than the separate rooms, and is filled with steam. All the chambers are paved with marble slabs and heated by flues under the pavement and behind the walls.

When a cloth is hung up at the entrance to the baths, it indicates that women only are admitted. The baths are always cleanest in the early morning. Fridays are to be avoided, as numerous Muslims bathe early on that day, which is their Sabbath.

The visitor first enters a large vaulted chamber covered with a cupola (meshlak), having a fountain of cold water in the centre (faskîye), and the bathing towels hung around on strings, these last being swung into their places or taken down with bamboo rods according to requirement. Having taken off his shoes and given them to the attendant, the visitor is next conducted to one of the raised divans (Pl. 4) which are still unoccupied, where he proceeds to undress. Valuables may, if desired, be entrusted to the bath owner. Wrapping a cloth round his loins, he leaves his divan, is provided with pattens or wooden shoes (kabkâb), and is conducted to the hot room (harâra) in the interior of the establishment. Near one of the basins here a linen cloth is spread for the bather, and he is now left to perspire. As soon as the skin is thoroughly moist, he calls for the attendant (comp. Arabic vocabulary, p. 196), who pulls and kneads the joints till they crack, a process to which Eu-
ropeans are not generally subjected. This is followed by the pleasant operation of shampooing, which is performed by the abu kîs or abu sâbûn, who is requested to do his duty with the word 'keyyisni' (rub me), and who then rubs the bather with the kîs, a rough piece of felt. The attendant next thoroughly soaps the bather, and concludes the operations by pouring bowls of warm water over his head. If the water is too hot the bather may ask for cold ('hât mûyeh bûrideh'), or say 'enough' (bes). After this process douches of hot or cold water may be indulged in according to inclination, but the most refreshing plan is to change the temperature gradually from hot to cold, the direction to the attendant being 'mûyeh bûrideh!' When desirous of leaving the hot room, the bather says to the attendant 'hât fûta' (bring a towel), whereupon he is provided with one for his loins, another for his shoulders, and a third for his head. The slippers or pattens are then put on, and the antechamber re-entered. When the kabkâhs are removed, cold water is sprinkled over the feet, fresh towels are then provided, and the bather at last throws himself down on his divan, wonderfully refreshed, yet glad to enjoy perfect repose for a short time. This interval of tranquil enjoyment is the favourite Oriental 'kêf' (i. e. luxurious idleness). Every bath contains a coffee and pipe establishment. Coffee and

hot eau sucrée are the favourite beverages. Before dressing, the bather is generally provided with two or three more relays of fresh towels, and thus the proceedings terminate. The whole of these operations need not occupy much more than an hour, but Orientals often devote a whole morning to the bath. — Many of the baths are charitable foundations, where the natives pay little or nothing. Europeans are generally expected to pay 5 piastres or more (including coffee and nargileh), and a fee of about 1 p. is given to the ‘soap man’. — A Turkish bath is particularly refreshing after a long journey, and is an admirable preventive of colds and rheumatism, but if too often repeated sometimes occasions boils.

'The women who can afford to do so visit the hammám frequently; but not so often as the men. When the bath is not hired for the females of one family, or for one party of ladies exclusively, women of all conditions are admitted. In general all the females of a house, and the young boys, go together. They take with them their own seggâdehs, and the napkins, basins, etc., which they require, and even the necessary quantity of sweet water for washing with soap, and for drinking; and some carry with them fruits, sweetmeats, and other refreshments. A lady of wealth is also often accompanied by her own bellâneh or mash’talah, who is the washer and tire-woman. Many women of the lower orders wear no covering whatever in the bath, not even a napkin round the waist; others always wear the napkin and the high clogs. There are few pleasures in which the women of Egypt delight so much as in the visit to the bath, where they frequently have entertainments; and often, on these occasions, they are not a little noisy in their mirth. They avail themselves of the opportunity to display their jewels and their finest clothes, and to enter into familiar conversation with those whom they meet there, whether friends or strangers. Sometimes a mother chooses a bride for her son from among the girls or women whom she chances to see in the bath. On many occasions, as, for instance, in the case of preparations for a marriage, the bath is hired for a select party, consisting of the women of two or more families, and none else are admitted; but it is more common for a lady and a few friends to hire a Khiltâveh: this is the name they give to the apartment of the hanâfiyeh. There is more confusion among a mixed company of various ranks; but where all are friends, the younger girls indulge in more mirth and frolic. They spend an hour or more under the hands of the bellâneh, who rubs and washes them, plaits their hair, applies the depilatory, etc. They then retire to the beyt-owwal or mêsâkh, and there, having put on part of their dress, or a large loose shirt, partake of various refreshments, which, if they have brought none with them, they may procure by sending an attendant of the bath to the market. Those who smoke take their own pipes with them. On particular occasions of festivity, they are entertained with the songs of two or more 'Al'mehs, hired to accompany them to the bath.' — Lane.

(14). Bazaars.

Shops in the East, which are frequently connected with the workshops where the wares are made, are generally congregated together according to handicrafts in a certain quarter of the town, or in a certain street or lane. They are named after the respective trades, such as 'Sûk en-Nâhâsin' (market of the copper-smiths), 'Gohargiyeh' (of the jewellers), Khurdagiyeh' (of the ironmongers), Kasâbin' (of the butchers), and sometimes after a neighbouring
mosque. These bazaars are generally crowded with customers and idlers, and afford the traveller an excellent opportunity of observing Oriental manners. In all the larger towns and villages there are extensive Khâns, or depôts of the goods of the wholesale merchants, who however often sell by retail to strangers.

The shop (dukkan) is a recess, quite open to the street, and generally about 6 ft. in width, the floor being on a level with the mastaba, or seat in front, on which the owner smokes his pipe, retails his goods, chats with his friends, and performs his devotions. The inscriptions over many of the shops do not announce the name or business of the occupant, but consist of pious phrases, such as ‘O Allah! thou who openest the gates of profit!’ ‘O Allah! thou who helpest us in want!’ ‘Aid from Allah, and rapid victory!’ These and similar ejaculations are invariably repeated by the shopkeeper as he takes down his shutters in the morning. When he leaves the shop he either hangs a net in front of it, or begs a neighbour to keep guard over it. The intending purchaser seats himself on the mastaba, and after the customary salutations proceeds to mention his wishes. Unless the purchaser is prepared to pay whatever is asked, he will find that the conclusion of a satisfactory bargain involves a prodigious waste of time and patience.

As a rule, a much higher price is demanded than will ultimately be accepted, and bargaining is therefore the universal custom. If the purchaser knows the proper price of the goods beforehand, he offers it to the seller, who will probably remark ‘kalîl’ (it is little), but will nevertheless sell the goods. The seller sometimes entertains the purchaser with coffee from a neighbouring coffee-shop in order to facilitate the progress of the negotiations. If the shopkeeper persists in asking too high a price, the purchaser withdraws, but is often called back and at last offered the article at a reasonable price. A favourite expression with Oriental shopkeepers is ‘khudû batâshî’ (take it for nothing), which is of course no more meant to be taken literally than the well known ‘bêtî bêtak’ (my house is thy house). When in the course of the bargaining the purchaser increases his offer in order to make a concession, he generally uses the expression ‘min shânak’ (for thy sake).

Nothing raises the traveller so much in the estimation of Orientals as firmness in resisting imposition; but even the most wary and experienced must be prepared to pay somewhat higher prices for everything than the natives themselves. The various prices mentioned in the Handbook will give the traveller a fair idea of what may be justly demanded, and will prove a safeguard against any serious extortion.

The dragomans and valets-de-place are always in league with the shopkeepers, from whom they receive 10-20 per cent on all articles purchased by travellers under their guidance.

Travellers are cautioned against purchasing antiquities, their
exportation being moreover strictly prohibited (p. 6). Spurious 'antiquities' (particularly scarabæi) are largely manufactured both in Egypt and Syria, and the name is unhesitatingly applied to everything in the seller's possession, especially in Upper Egypt, if he sees that the traveller is disposed to make purchases of the kind. Remains of mummies are frequently offered for sale in the neighbourhood of all the ancient burial-places.

Both at Alexandria and Cairo there are goods-agents (pp. 204, 233), who will undertake the transmission of all purchases to the traveller's home at moderate cost. Their services are especially recommended if the traveller intends making a tour through the continent of Europe on his return from Egypt, in which case every new article, or object not intended for personal use, is liable to duty at half-a-dozen different frontiers.

(15). Intercourse with Orientals.

Orientals reproach Europeans with doing everything the wrong way, such as writing from left to right, while they do the reverse, and uncovering the head on entering a room, while they remove their shoes, but keep their heads covered.

The following rules should be observed in paying a visit at an Oriental house. The visitor knocks at the door with the iron knocker attached to it, whereupon the question 'mîn' (who is there?) is usually asked from within. The visitor answers, 'iftah' (open). In the case of Muslim houses the visitor has to wait outside for a few minutes in order to give the women who happen to be in the court time to retire. He is then conducted into the reception-room, where a low divan or sofa runs round three sides of the room, the place of honour always being exactly opposite the door. According to the greater or less degree of respect which the host desires to show for his guest he rises more or less from his seat, and approaches one or more steps towards him. The first enquiries are concerning the health (see p. 197). The transaction of business in the East always involves a prodigious waste of time, and as Orientals attach no value whatever to their time, the European will often find his patience sorely tried. If a visitor drops in and interrupts the business, it would be an unpardonable affront to dismiss him on the plea of being engaged. Again, when a visitor is announced at meal-time, it is de rigueur to invite him, at least as a matter of form, to partake. At all other hours of the day visitors are supplied with coffee, which a servant, with his left hand on his heart, presents to each according to his rank. Under the coffee-cup (fingân) there is generally a zarf, or kind of saucer of egg-cup shape. To be passed over when coffee is handed round is deemed by the Beduins an insult of the gravest kind. Having emptied his cup, the visitor must not put it down on the ground, which is contrary to etiquette,
but keep it in his hand until it is taken from him by the servant, after which he salutes his host in the usual Oriental fashion by placing his right hand on his breast and afterwards raising it to his forehead, and pronouncing the word 'dâîman' (i. e. 'kahweh dâîman'; may you never want coffee). This custom originated with the Beduins, who only regard the persons of their guests as inviolable after they have eaten or drunk with them. When visited by natives, the European should in his turn regale them liberally with coffee. It is also usual to offer tobacco to the visitor, the cigarette being now the ordinary form. The long pipe (shibuk) with amber mouth-piece, and its bowl resting on a brazen plate on the ground, is more in vogue with the Turks. Visitors are often asked whether they prefer the nargileh, or water-pipe; and if they wish to try it, a servant brings it in and lights it for them. Visits in the East must of course be returned as in Europe. Those who return to a place after an absence receive visits from their acquaintances before they are expected to call on them.

Europeans, as a rule, should never enquire after the wives of a Muslim, his relations to the fair sex being sedulously veiled from the public. Even looking at women in the street or in a house is considered indecorous, and may in some cases be attended with danger. Intimate acquaintance with Orientals is also to be avoided, disinterested friendship being still rarer in the East than elsewhere. Beneath the interminable protestations of friendship with which the traveller is overwhelmed, lurks in most cases the demon of cupidity, the sole motive of those who use them being the hope of some gain or bakhshish. The best way of dealing with persons who 'do protest too much' is to pay for every service or civility on the spot, and as far as possible to fix the price of every article beforehand, a plan which is usually effectual in putting an end to their mercenary designs.

On the other hand the most ordinary observer cannot fail to be struck with the fact that the degraded ruffianism so common in the most civilised countries is unknown in Egypt. The people of the country, even the poorest and the entirely uneducated, often possess a native dignity, self-respect, and gracefulness of manner, of which the traveller's own countrymen of a far more favoured class are sometimes utterly destitute. Notwithstanding their individual selfishness, too, the different native communities will be observed to hold together with remarkable faithfulness, and the bond of a common religion, which takes the place of 'party' in other countries, and requires its adherents to address each other as 'yâ akhâya' (my brother), is far more than a mere name.

While much caution and firmness are desirable in dealing with the people, it need hardly be added that the traveller should avoid being too exacting or suspicious. He should bear in mind that many of the natives with whom he comes in contact are mere
children, whose waywardness should excite compassion rather than anger, and who often display a touching simplicity and kindliness of disposition. He should, moreover, do his utmost to sustain the well established reputation of the ‘kilmeh frengiyeh’, the ‘word of a Frank’, in which Orientals are wont to place implicit confidence.

(16). Tobacco.

Cigar-smokers will find it very difficult to become accustomed to the Oriental tobacco, but they will find tolerable cigar-shops at Alexandria and Cairo, most of which have been established quite recently. As a general rule smokers are recommended to carry with them, both in going to and returning from Egypt, as little tobacco as possible, especially if they travel by the overland route, as a rigorous search is often made and a heavy duty exacted, both at the Egyptian, and at the French, Austrian, and Italian frontiers. Travellers returning to England direct, with their luggage booked through, are allowed half-a-pound of tobacco or cigars free of English duty, or they may bring three pounds on payment of the duty (5s. per lb.) and a small fine.

Tobacco (dukhdān) is kept in good condition by covering it with a moist cloth, with which, however, it must not come in contact. Strong (hāmi) or mild (bārid) may be asked for according to taste. Stambūli is a long and fine cut tobacco, the best qualities of which (40-60 fr. per oḵkā = 2 lbs. 11½ oz.) come from Roumelia and Anatolia, and the inferior from the Greek islands. The Syrian tobacco (15-20 fr. per oḵkā), which is cut less regularly, and contains parts of the stalk, is considered less drying to the palate than the Turkish. It is of two kinds, the korāni, or light-brown, and the gebeli, or dark-brown, a mixture of which may be used. The latter, which derives its colour from being dried in the smoke of resinous woods, is known in Europe as ‘Latakia’, from the region of N. Syria where it is chiefly grown (Lādiḵiyeh), but that name is not applied to it in the East. The native Egyptian tobacco (dukhdān beledi, or aḵldur, green tobacco) is of very inferior quality (about 15 piastres tariff per oḵkā). The natives often gather the leaves from the plant, dry them in the sun, rub them to pieces, and smoke them quite fresh. Tumbāk, or Persian tobacco, is used in a moistened condition in the long nargilehs or water-pipes only, and is lighted with a particular kind of charcoal. The smoke of these pipes is drawn into the lungs.

The stems of these pipes, with their decorations, and the bowls alone are of native manufacture. The reservoirs and the amber mouth-pieces are imported from Europe, chiefly from Bohemia.

(17). Post and Telegraph Offices.

The Egyptian Postal System is admirably organised in the principal towns, but hardly anywhere else. The officials, who are
very civil, are generally Italians. The addresses of letters destined for Egypt should always be written very distinctly (particularly the initial letters), and they had better be directed to the hotel at which the traveller intends to stay, or to the consulate. Registered letters are not delivered to the person whose address they bear unless he gets a resident to testify to his identity. The forwarding of letters up the Nile or elsewhere in the interior may be entrusted to the landlord of the hotel. The General Post Office for the whole of Egypt is at Alexandria (Rue Chérif-Pacha, 97). Postage-stamps, bearing a sphinx and a pyramid, are issued at 5, 10 and 20 paras, and at 1, 2, 2½ and 5 tariff piastres. There are letter-boxes in the streets and at the hotels of the principal towns. Egypt is now a member of the Bernese Postal Union, and the postage for letters to other countries in the union (nearly the whole of Europe) is 1 piastre 20 paras tariff for every half-ounce (inland letters 1 piastre per one-third ounce), and for book-packets 20 paras for the same weight. No post cards have been issued as yet.

The Egyptian Telegraph System, the various lines of which are about 3750 English miles in length, extends northwards as far as Palestine, and southwards along the Nile to Kharṭūm, a town at the confluence of the Blue and White Nile, whence a line diverges to Kassala, and another by Kordofān to Dār-Fūr (comp. Map, p. 30). Another line is about to be constructed from Kharṭūm to the military stations farther to the south. All the larger towns in the Delta have telegraph-offices, and even the Fayūm is included in the system. Telegrams to Alexandria, Cairo, Ismāʿīliya, Port Saʿīd, and Suez may be sent in English, French, or Italian, but Arabic must be used for messages to all the smaller stations. Telegrams to Europe should be sent by the English wires, via Malta, and certainly not by the Egyptian, via Constantinople, a provokingly dilatory route. The following is the new tariff of 1st Jan. 1876: each word (not exceeding ten letters; if longer, it is reckoned as two words) to Algiers and Tunis 1s. 2d.; to Austria, France, or Montenegro 1s. 5d.; to Belgium, Germany, Luxembourg, or Portugal 1s. 6d.; to Denmark, Gibraltar, Holland, or Spain 1s. 7d.; to London from Alexandria 1s. 7d. (from other Egyptian towns 1s. 10d.); to other parts of Great Britain from Alexandria 1s. 8d. (from other parts of Egypt 1s. 11d.); to Greece 1s. 1d.; to Italy 1s. 3d.; to Malta 10d.; to Heligoland, Russia in Europe, or Sweden 1s. 8d. — To Cairo or Suez the charge for a telegram of ten words is 5 piastres tariff.

(18). Weights and Measures.

1 Dirhem = 3.92 grammes = 60.65 grains troy; 1 roṭl = 445.46 grammes = 1.034 lbs. avoirdupois (about 1 lb. 1/5 oz.); 1 okable = 1.237 kilogrammes = 2.7274 lbs. (about 2 lbs. 11 1/2 oz.); 1 ḫanṭjar = 100 roṭl = 44.54 kilogrammes = 101.31 lbs. (about 101 lbs. 5 oz.).
The usual weight of a bale of wool in Egypt is about 282 kilogrammes, or 5\(\frac{1}{2}\) cwt.

1 Rub'a = 3.75 litres = 6\(\frac{1}{2}\) pints; 1 wébeh = 30 litres = 6 gals. 22\(\frac{1}{2}\) qts.; 1 ardeb = 7 wébeh = 210 litres = 46 gals. 13\(\frac{1}{2}\) qt.

1 Pik = 0.67 mètre = 26.37 inches; 1 pik, land measurement, = 29.527 (about 29\(\frac{1}{2}\)) inches; 1 kassaba = 3.55 mètres = 11 ft. 7.763 (about 11 ft. 73\(\frac{3}{4}\)) inches.

1 Feddân = 4200 square mètres = about 5082 sq. yds. = 11\(\frac{1}{20}\) acre.

II. Geographical and Political Notice.

By Dr. Schweinfurth of Cairo.

Boundaries and Area (comp. Map, p. 30). The countries subject to the supremacy of the Khedive embrace by far the greater part of N.E. Africa, or nearly the whole of the territory adjacent to the Nile. The natural boundaries of the vassal kingdom founded by Mohammed 'Ali and bequeathed by him to his successor in 1848 are formed by the Mediterranean Sea on the N. from the Râs el-Kanâîs to El-'Arish, the Libyan Desert on the W., the Red Sea on the E., and Abyssinia, which may be called the Quito of Africa, on the S.E. These boundaries include Egypt Proper, with the five oases of the Libyan desert and part of the peninsula of Sinai, the Nubian Valley of the Nile, with the Nubian desert regions, and lastly the so-called Egyptian Sûdân, which consists of the districts of Tâku, Sennâr, and Kordofân. The present Khedive Isma'il, whose dominions have been secured to him as a fief hereditary in the male line, has extended his boundaries still farther to the S., S.E., and S.W. Thus he has purchased Sauâkin and Masau'a on the Red Sea, and Zêla' and Berbêra on the Gulf of 'Aden, four important seaports and commercial places, together with the coast districts adjoining them, which formerly belonged directly to the Turkish government; and in the same way he has acquired part of the coast of the Somâli, extending to the equator, where the Jûb separates it from the Galla territory to the S., a district replete with still untouched natural treasures, hitherto regarded as 'no man's land', although its occupation has been attempted both by the Arabs and the Portuguese. The districts of the Bogos and Galabat on the frontiers of Abyssinia have been occupied with a view to protect important commercial routes, and together with the Somâli territory of Harar have been annexed to the Egyptian empire. Dâr-Fûr, once an entirely independent principality in the Mohammedan Sûdân, and the terror of its neighbours, has lately been conquered by the Egyptians, and the empire of the Khedive has thus been increased by four very populous provinces, while Mohammed 'Ali, who was less fortunate in his designs on that region, succeeded in gaining possession of Kordofân only, the E. part of it.

The boundaries of Egypt have been still more boldly extended.
towards the S. during the present reign. They now comprise the whole course of the White Nile and the greater part of the river-region of the Bahr el-Ghazāl, where merchants from Khartoum had already for many years possessed settlements and by force of arms had subdued the heathen negro tribes. At the time of Mohammed ‘Ali’s death the S. boundary of the Egyptian dominions on the White Nile was formed by the corn-magazines of El-‘Esh and the wharves near it, situated about 13° N. latitude, while it now extends to the military station of Fauira (on the river connecting the Victoria and the Albert Nyanza), situated about 2°N. latitude, so that the whole length of the empire is now about 2000 English miles. The S. frontier, from Dār-Fūr to Berbera, a distance of 1560 M., now almost entirely surrounds the kingdom of Abyssinia.

The whole of the vast territory within these boundaries is, nominally at least, immediately subject to the Khedive, though but sparsely occupied by his comparatively small army, and it contains no tributary peoples mediatly subject to him. These enormous tracts, on the other hand, are utterly disproportionate to the population, the desert regions are immeasurably more extensive than the fertile districts, and the barbarous and unprofitable inhabitants far more numerous than the civilised and wealth-producing. The geographer and the political economist therefore would vary widely in their description of the real boundaries of the country. The country which owns no other master than the Khedive or his representatives is of immense extent, but the cultivable part of Egypt, which forms the sole source of its wealth, is of very limited area. The extensive dominions of the Khedive which lie to the S. of Egypt proper are still entirely profitless, and hence it is that he has of late done his utmost to extend the commerce in this direction, and to improve the means of communication.

Thus while Egypt is nominally as extensive as two-thirds of Russia in Europe, it shrinks to the size of Belgium when the Valley of the Nile, its only productive part, inhabited by a tax-paying population, is alone taken into consideration. The total area of the empire is nearly one and a half million square miles, including that part of the Libyan Desert which falls within the western boundary drawn from the oasis of Siwa to the west end of Dār-Fūr, and which alone measures 525,000 sq. M. in extent. On the other hand Egypt proper, extending towards the desert so far only as it is irrigated by the fertilising Nile, the ‘Bilād Maṣr’ (the Migraim of the Bible), though 550 M. in length, is the narrowest country in the world. The area of this cultivable tract, which has remained unaltered since the remotest antiquity, is about 11,342 sq. M. only (or 21 sq. M. less than Belgium), the Delta measuring about 6350 sq. M., and the Egyptian Valley of the Nile and the Fayum 4992 sq. M. The alluvial soil of the Nile Valley, in contradistinction to the desert, known among the natives by the Arabic word ‘Er-Rif’,
begins at the town of Khartūm, at the confluence of the White and the Blue Nile. Following the wide curve described by the Nile through Nubia, the length of the valley as far as the first cataracts is 989 M., but as the space between the river and its rocky banks is very limited, and the irrigation system is imperfectly developed, the cultivable area in this part of the valley is only about 1050 sq. M. in extent. The Nubian portion of the alluvial soil of the Nile is thus very insignificant; and when the ancient oracle described Egypt as the country watered by the Nile, and the Egyptians as the people who quenched their thirst with its water, the river below the first cataract must obviously have been meant.

Divisions and Administration. The ancient pre-historic Egyptians were at first subdivided into numerous tribes, who formed a number of distinct small and independent states, with their own laws and their peculiar tutelary gods. These states were afterwards gradually united into the two large principalities of Lower Egypt or the Northern Country (To Mera, or To Meḥ), and Upper Egypt or the Southern Country (To Res, or To Kemū). At a later period these two larger states, united under one sceptre, formed the empire of the Pharaohs, or the land of Kemi. The smaller states then constituted provinces or nomes (Egyptian hesoph; Greek nomoi). Each province, during the Greek period, was farther subdivided into districts (toparchiai), each of which again consisted of a number of inhabited sites or villages (topoi and komai). The ancient Egyptians divided each nome into four principal parts: — (1) The capital (Nut), the religious and administrative centre of the province; (2) The cultivated land (Un), subject to the annual inundation; (3) The marshy land which remained in a moist condition after the inundation; (4) The district traversed by canals conducted out of the Nile. The civil and military administration of the nome was presided over either by hereditary governors (ḥik), or by nomarchs (mer-nat-t'āt-to) appointed by the king. Under the Ptolemies these governors were called strategoi (nomu) or nomarchoi, and over a group of these presided an epistrategos. The chief authority in religious matters was the high priest of the temple, whose appointment was sometimes hereditary and sometimes elective; and his staff consisted of a prophet, a temple-scribe, a stolistes or custodian of the vestments, and an astrologer.

The number of the nomes varied at different periods. Most of the classical authors (thus Diodorus, liv. 3; Strabo, xxviii. 1, 3) enumerate thirty-six. The Egyptian lists, such as that of Edfu, mention forty-four, half of them being in Upper and half in Lower Egypt (but two of those in Upper Egypt and three in Lower Egypt are counted twice). The Greeks and Romans sometimes divided Egypt into three parts — Upper, Central, and Lower Egypt, or the Thebaïs, Heptanomis, and Delta.

The following is a list of the ancient Egyptian nomes —

Lower and Upper Egypt (the latter known as Saʿīd) are now each divided into seven provinces or Mudirīyeh. Those of Upper Egypt are: (1) Kalyūb, at the head of the Delta; (2) Sherkiyeh, i.e. ‘the eastern’, with Zaḵāzīk as its capital; (3) Dakhaliyeh, with Manṣūra as its capital; (4) Menūf; (5) Gharbīyeh, i.e. ‘the western’, with Tānta as its capital; (6) Behēreh, i.e. ‘of the lake’, with Damanhūr as its capital; (7) Gīseh, opposite to Cairo. The seven Upper Egyptian provinces are those of Beni-Suʿef, Minyeh, Siūt, Girgeh, Keneh, Esneh, and Wādi Ḥalf. The seat of the mudīr or governor of Girgeh has recently been transferred to the not far distant Ṣuhag. The Fayūm forms a mudirīyeh by itself. The following capitals and commercial towns are presided over by governors of their own, and are independent of the provincial administration: Cairo, Alexandria, Suez, Port Saʿīd, Damietta, Rosetta, Ismaʿiliya, and lastly the small seaport of Koșer on the Red Sea.

The administration of the Upper Egyptian provinces, and still more those of the Südān, is liable to frequent change, several of them being sometimes united under a governor-general, and at other times again disjoined, or managed by a commission appointed by the minister of the interior. The recently acquired seaports on the Red Sea have governors (mutirs) of their own, and they in their turn are under the supervision of a governor-general (hokmdār) resident at Kassala. The Südān is at present divided into the provinces of Kharṭūm, Sennār, Bahr el-Abyād, Kordofān, four of Dār-Fūr, and the region of the Upper White Nile under Gordon-Pasha. Besides the mudīr, there is a governor-general resident at Kharṭūm whose jurisdiction formerly extended over the whole of the provinces beyond the limits of Egypt in the narrower sense. Tāka and Gedāref, the other provinces of the Südān, together with the coast districts of the Red Sea, now belong to the jurisdiction of the above-mentioned governor-general of Kassala. Lastly, the Nubian part of the Valley of the Nile is divided into the provinces of Donkola and Berber, which are administered independently of each other, the capital of the former being El-ʿOrdeh, that of the latter El-Mekhērīf (or Berber).

The chief official in every province is the Mudīr, or governor, who is assisted by a council, or ‘diwān’, of other officers. This council consists of a Wekil, or vice-governor; a chief clerk, tax-gatherer, and accountant, who is always a Copt; a Kūdi, or supreme judge, and the chief authority in spiritual matters; sometimes the president of a chamber of commerce and chief authority in civil affairs; a superintendent of police; an architect for the supervision of canals and other public works; and lastly the chief physician of the province. The sub-governors in the smaller towns, who are under the jurisdiction of the Mudīr, are sometimes called Kāshīf, or Nāzir el-Kism. Subordinate to the nāzīr again is the Shēkh el-Beled,
or chief magistrate or mayor of the village, usually known simply as shēkh (plur. shi’ākh).

In the larger towns there is a magistrate of this kind in each quarter (at Cairo fifty-three), over whom are placed prefects of larger sections (shēkh et-tūnm). Over the whole of these presides the Mu-dīr, and lastly over the latter in some cases a Hokmār with very extensive powers. Other provinces again are governed by specially appointed inspectors, who occupy the highest rank in their respective jurisdictions.

The Duties of the Mu-dīr are very multifarious. He presides over the administration, the finances, and the police of his province. He is required to watch over the public safety, to superintend public works, to regulate all sanitary matters, to register all transfers of property, contracts of sale, title-deeds, and mortgages, to pronounce judgment in all law-suits which do not fall exclusively within the jurisdiction of the spiritual court (the Mehkemeh), and lastly to collect the taxes. These taxes consist of three different kinds: (1) Land-tax (kharāg), levied from the Arādī et-Miṣrīyeh (see below; the Jādiyeh pay ten per cent only, while the Shi’ākh is entirely exempt). It is levied monthly by the sarrāf. A faddan of the best land in Lower Egypt pays about 25s. per annum, but medium and inferior land is taxed at a lower rate. A valuation is made annually, and the different estates and farms registered under one of these three classes. (2). Income-tax, paid by merchants, bazaar-keepers, and artisans (warka, i.e. the Turkish vezgi, jirdeh, or ‘tax'), and varying from 4 to 20 per cent. (3). Market-tax (kiml), levied according to a certain tariff on all produce brought to the markets, at an average rate of 1½ per cent.

Distribution of Land. The Khedive and his family possess about one million and a half faddāns of landed property, or about one-fourth of cultivable Egypt; valued at about forty million pounds sterling, and practically forming his private property. This land is officially called Shi’ākh (or properly shi’ālik, the Turkish for ‘estates’, or ‘farm’). These vast estates came into the hands of the reigning monarch by the confiscation of the fēts (kha’dāt) held by the Mamelukes, who were exterminated by Muhammed ‘Ali on 11th March, 1811, and the appropriation of all family foundations (irsād), estates belonging to mosques (mistaf), and land which in consequence of the depopulation caused by the Mameluke régime had ceased to have any owner.

Another kind of landed property is called Jādiyēh, by which is meant the uncultivated land presented by the Khedive to suitable persons with full right of property on condition of its being reclaimed or cultivated. Estates of this kind pay no taxes for the first three years, after which 10 per cent on the value of the produce is levied (‘ushr). The rest of the land is officially known as Et-Arādī et-Miṣrīyeh, i.e. government estates. Nearly the whole of the soil of Egypt is thus either in the hands of the reigning family or of government. The fellāhin or peasants are thus merely tenants for life, or so long as they continue to pay their ground-rent (kharāg). According to the Korān, an estate on the death of the life-tenant reverts to the bêt el-imāl, or government treasury, as the common property of all Moslems; but a humane law of 1857 provides that it may be claimed by the next of kin of both sexes on payment of 24 tarif’ piastres per faddan for registration of the title. The trees planted by the life-tenant, and the buildings and irrigating apparatus erected by him, are his property, and pass to his heirs. The right of occupation, or usufruct, of these lands may also be sold, let, or mortgaged; but the contract must be ratified by government in each case; and where mortgaged lands are not redeemed within fifteen years, they continue in possession of the mortgagee and become his property. A piece of land may at any time be taken possession of by government for public purposes (railways, canals, embankments), in which case the oc-
cupant receives another piece of land somewhere else by way of compensation.

The ground-tax (kharāj) is in some cases as high as 20 per cent. Instead of a certain tax being imposed on each village as formerly, the tax payable by each estate is now fixed by the Mudirīyah or chief authorities of the province. To facilitate the collection of taxes, all landed estates are formed into groups, generally consisting of properties taxed at the same rate, and known in Lower Egypt as ḫod, and in Upper Egypt as kabāţeh.

In certain poor districts where there was a difficulty in collecting the taxes in the reign of Mohammed 'Ali, payment was undertaken by a number of capitalists, who were empowered to recover them from the fellāḥīn. This right, however, was not transferable, and it could be resumed by the government at any time. Groups of estates where this system still prevails are called ‘udhēh.

Population. The population of Egypt has been ascertained to have been much greater in ancient than in modern times; for, disregarding the exaggerated calculation of Theocritus, based on a mere assumption, it appears to have numbered at least 71 1/2 million souls in the time of Herodotus, and, according to Josephus, as many during the reign of Nero, after it had in the interim somewhat diminished during the decline of the Ptolemaic dynasty. It is estimated that the country could support 8-9 million inhabitants, but the present number hardly exceeds 5 millions. This number, though lower than that of ancient times, contrasts favourably with the state of the population after the overthrow of the Mamelukes, and even at the close of Mohammed 'Ali's reign. Between 1838 and 1873 the population increased by upwards of two millions, notwithstanding the constantly diminishing and now strictly prohibited importation of slaves; and this improvement is in a great measure due to the wiser system of administration introduced by Isma'il Pasha, the present Khedive.

According to the most recent official statistics the present population of Egypt proper is 5,250,000, or about 463 per square mile, and is therefore denser than that of most European states. For various obvious reasons, however, it is extremely difficult to obtain accurate statistics in Mohammedan countries. In the country villages, however, owing to the more uniform system of taxation, the number of the inhabitants is more easily calculated. The population of the provinces beyond the limits of Egypt proper, on the other hand, has never been ascertained by any regular census, and can therefore only be estimated in a conjectural way. The densest population is that of Dār-Fūr (between 3 and 4 millions), and that of the province of Bahr el-Abyad, where in the case of the Shilluk tribe, numbering about one million 'souls, the proportion of inhabitants to the square mile is the same as in Egypt proper. The total population of the empire, including Dār-Fūr and Harar, is now estimated at between 16 and 17 millions.

Origin and Descent of the Egyptians. For thousands of years the banks of the Nile have been occupied by the Egyptians, the oldest nation known to history, and still exhibiting many of their
ancient personal characteristics unaltered. Notwithstanding the indefinite series of immigrations and other changes affecting the character of the inhabitants, the Egyptian type has always predominated with marvellous uniformity. As Egypt is said to be the ‘gift of the Nile’, so has the character of its inhabitants been apparently moulded by the influences of that river. No country in the world is so dependent on a river which traverses it as Egypt, and no river presents physical characteristics so exceptional as the Nile; so, too, there exists no race of people which possesses so marked and unchanging an individuality as the Egyptians. It is therefore most probable that this unvarying type is the product of the soil itself, and that the character of the peoples who settled at different periods on the bank of the Nile, whatever it may originally have been, has in due course of time been moulded to the same constant form by the mysterious influences of the river. In all countries, indeed, national characteristics are justly regarded as the natural outcome of soil and climate, and of this connection no country affords so strong an illustration as Egypt, with its sharply defined boundaries of sea and desert, and in its complete isolation from the rest of the world. These considerations tend to throw serious doubts on all the current theories as to the origin of the Egyptians. According to the Bible, Mizraim (Mïrâîm) was the son of Ham and brother of Canaan and the Ethiopian Cush; and, as his name was applied by the Hebrews to Egypt, it is probable that he migrated with his sons from Asia to the banks of the Nile. The name, moreover, of Ludim, his eldest son, corresponds to the word Rotu, or Lotu, the hieroglyphic name for the Egyptians. Philologists, who have discovered points of resemblance in the roots and inflexions of the ancient Egyptian and the Semitic languages, likewise come to the conclusion that the Egyptians originally came from Asia, either by way of Suez, or across the Red Sea from Arabia. The ethnographer†, on the other hand, who observes that many of the domestic utensils employed by the ancient Egyptians, as well as many of their customs, are similar to those of the dwellers on the banks of the Zambezi and Niger, but totally different from those seen on the banks of the Indus or Euphrates, will always maintain an opposite view. The considerations already mentioned, however, tend to show that the truth lies between these extremes. Even those who most strongly maintain the Asiatic origin of the Egyptians will probably admit that the immigrants found an aboriginal race already settled on the banks of the Nile, which

† No inference can legitimately be drawn from the fact that the skulls of the ancient and modern Egyptians, which are very similar in form, have no affinity with those which are usually described as of the negro type, as our craniological collections are very incomplete, and our knowledge of the negro races imperfect. The fact is, that several negro races, such as the Nubians and the Shilluk, might be named, whose characteristics undoubtedly belong to the negro type, while their skulls are just as little prognathous as those of the Egyptians.
in its persistent opposition to all foreign influences was doubtless similar to the race usually known as the Egyptian. We start with the cardinal fact, that, although the country has been at various periods overrun by Hyksos, Ethiopians, Assyrians, Persians, Greeks, Romans, Arabs, and Turks, and although the people were tyrannised over, ill-treated, and in most cases compelled to intermarry with these foreigners, the Egyptians have for thousands of years retained the same unvarying physical types, while their character has been but slightly modified by the introduction of Christianity and Mohammedanism. If it now be borne in mind that these foreigners generally invaded the country in the form of an army, that they formed but a small body compared with the bulk of the population, and that they either married native women or sought wives in other countries, it is obvious that they would either continue to exist for a time as a foreign caste, a condition apparently repugnant to nature and necessarily transient, or that they would gradually succumb to the never-failing influences of the soil and be absorbed in the great mass of the aboriginal inhabitants. An excellent illustration of this process is afforded by the Arabian invasion, with the circumstances and results of which we are better acquainted than with the history of the other foreign immigrations; for, disregarding the Beduin tribes, who are entirely distinct from the Egyptian population, we now find that the Arabian element has entirely disappeared, and we meet with genuine Arabs in the towns only, where the merchants, pilgrims, and other members of that people form a class entirely distinct from the natives, and where their existence is only maintained by means of reinforcements from abroad. Another proof of the transforming influences of the Egyptian climate is afforded by the uniform character of the domestic animals. The oxen, in particular (which, however, are gradually being replaced by the buffalo), though they have often been repeatedly exterminated in a single century by murrain, and have been succeeded by foreign races from every quarter of the globe, invariably after a few generations assume the well-known Egyptian type with which the representations on the ancient temples render us so familiar.

The Modern Egyptians. The population of Egypt is composed of the following ten different elements.

(1). The Fellâhin (sing. fellâh), the ‘tillers’ or ‘peasants’, form the bulk of the population, and may be regarded as the sinews of the national strength. They are generally slightly above the middle height; their bones, and particularly their skulls, are strong and massive; and their wrists and ankles are powerful and somewhat clumsy. In all these respects the fellâhin, as well as their domestic animals, contrast strongly with the inhabitants of the desert, the fellâh and the Beduin differing from each other precisely in the same points as their respective camels. Notwithstanding this
largeness of frame, however, the fellâh never grows fat. The woman and girls are particularly remarkable for their slender build, and they often speak of each other as ‘zei el-habl’, or slender as a rope. The men generally keep their heads shaved, but the hair of the soldiers and the long tresses of the girls, though always black and often curly, is by no means of the short, woolly negro type.

The chief peculiarity of the Egyptians is the remarkable close-ness of their eyelashes on both lids, forming a dense, double, black fringe, which gives so animated an expression to their almond-shaped eyes. The very ancient and still existing custom of blackening the edges of the eyelids with antimony (‘kohl’), which is said to serve a sanitary purpose, contributes to enhance this natural expression. The eyebrows are always straight and smooth, never bushy. The mouth is wide and thick-lipped, and very different from that of the Beduin or inhabitant of the oases. The high cheek-bones, the receding forehead, the lowness of the bridge of the nose, which is always distinctly separated from the forehead, and the flatness of the nose itself, are the chief characteristics of the Egyptian skull; but, as the jaws project less than those of most of the other African coloured races, it has been assumed that the skull is Asiatic, and not African in shape. The Egyptian peasantry have a much darker complexion than their compatriots in the towns, and their colour deepens as we proceed southwards, from the pale brown of the inhabitant of the Delta to the dark bronze hue of the Upper Egyptians. There is also a difference between the tint of the Nubians and that of the Upper Egyptians, even where they live in close contiguity, the former being more of a reddish-brown.

The dwelling of the fellâh is of a miserably poor description, consisting generally of four low walls formed of crude bricks of Nile mud, and thatched with a roof of dura straw, rush, rags, or old straw-mats. In the interior are a few mats, a sheep’s skin, several baskets made of matting, a copper kettle, and a few earthenware pots and wooden dishes. Instead of using the crude bricks, the fellâhîn in Upper Egypt often form the walls of their huts of a mixture of mud and straw. The dark, windowless interior is entered by a small opening, in front of which the proprietor usually forms an enclosure of circular shape, with a wall of mud about 5 ft. in height. This is the court-yard of the establishment, and the usual resort of the family and their domestic animals in summer. The walls of the yard generally contain round hollows, used as receptacles for the grain which forms the food of the family. Within the yard are usually placed a square pillar, about 5 ft. in height, with openings in its sides as receptacles for objects of value, and a thick column of the same height, terminating in a platform shaped like a plate, with the edges bent upwards, which is used by the proprietor as a sleeping-place in hot weather. The fact is, that beneath an Egyptian sky, houses are not of the same paramount
importance as in more northern regions, all that is wanted being shelter for the night.

The poorer peasant's mode of life is frugal in the extreme. The staple of his food consists of a peculiar kind of bread made of sorghum flour in Upper Egypt, or of maize in the Delta, wheaten bread being eaten by the wealthier only. This poor kind of bread often has a greenish colour, owing to an admixture of bean-flour (Pœnum Grœcum). Next in importance in the bill of fare are broad beans (fül). For supper, however, even the poorest cause a hot repast to be prepared. This usually consists of a highly salted sauce made of onions and butter, or in the poorer houses of onions and linseed or sesame oil. Into this sauce, which in summer acquires a gelatinous consistency by the addition of the universal bâmia (the capsular fruit of the Hibiscus) and various herbs, each member of the family dips pieces of bread held in the fingers. Both in town and country, goats', sheeps', or buffaloes' milk also forms a daily article of food, but always in a sour condition or half converted into cheese, and in very moderate quantities only. In the height of summer the consumption of fruit of the cucumber and pumpkin species, which the land yields in abundance, is enormous. In the mouth of Ramaḍān alone, when a rigorous fast is observed during the day, and on the three days of the great Beirâm festival (Korbân Beirâm), even the poorest members of the community indulge in meat, and it is customary to distribute that rare luxury to beggars at these seasons.

The dress of the Egyptian peasant calls for little remark, especially as he usually works in the fields divested of everything. The chief articles of his wardrobe at other times are an indigo-dyed cotton shirt (kamîṣ), a kind of cloak of brown, home-spun goats' wool (za'bût, 'abâyeh, or 'a mafia), or simply a blanket of sheep's wool (hirâm), and lastly a close-fitting felt skull-cap (libdeh). He is generally barefooted, but occasionally wears pointed red (zerbûn), or broad yellow shoes (balgha). The shîks and wealthier peasants, when they go to market, wear wide, black woollen cloaks and the thick red 'Tunisian' fez (tarbûsh) with a blue silk tassel, round which they coil a white or red turban ('imme). In their hands they usually carry a long and thick stick (nabbût), made from the central stalk of the palm leaf.

The sole wealth of Egypt is derived from its agriculture, and to the fellâhîn alone is committed the important task of tilling the soil. They are, indeed, neither fitted nor inclined for other work, a circumstance which proves how completely the stationary character of the ancient Egyptians has predominated over the restless Arabian blood, which has been largely infused into the native population ever since the valley of the Nile was conquered by the armies of El-Islâm. The modern Egyptians, moreover, resemble the ancient in the lot to which they are condemned. In ancient times the
fellâh, pressed into the service of the priests and the princes, was compelled to yield up to them the fruits of his toil, and his position is nearly the same at the present day. save that the names of his masters are changed, and he has obtained some relief owing to the almost entire abolition of compulsory work. The sacrifice made by the Egyptian government in giving up the right to dispose at pleasure of the persons of the fellâhîn, who form the great bulk of the population, must not be underrated, and it is a gratifying fact, though not generally known, that even the poorest is exempt from compulsory labour as soon as he has learned to read and write. In early life the Egyptian peasant is remarkably docile, active, and intelligent, but at a later period this freshness and buoyancy is crushed out of him by care and poverty and his never-ceasing task of filling the pitcher of the Danaïdes. He ploughs and reaps, toils and amasses, but he cannot with certainty regard his crops as his own, and the hardly earned piastre is too frequently wrested from him. His character, therefore, becomes like that of a gifted child, who has been harshly used and brought up to domestic slavery, but at length perceives that he has been treated with injustice, and whose amiability and intelligence are then superseded by sullenness and obstinacy. Thus, as in the time of Ammianus Marcellinus, the fellâh will often suffer the most cruel blows in dogged silence rather than pay the taxes demanded of him.

In his own fields the fellâh is an industrious labourer, and his work is more continuous than that of the peasant of more northern countries. He enjoys no period of repose during the winter, and the whole of his spare time is occupied in drawing water for the irrigation of the land. Notwithstanding his hard lot, however, he is an entire stranger to any endeavour to better his condition or to improve his system of farming. As soon as he has accomplished the most necessary tasks he rests and smokes, and trusts that Allâh will do the remainder of his work for him.

The fellâh is a believer in the religion of Mohammed, although he knows but little of the prophet's doctrines and history. Followers of all other religions he believes to be doomed to eternal perdition; but travellers are not on that account disliked by him. We serve rather to confirm his belief in eternal justice, for he is convinced that all the comforts and luxuries we now enjoy will be counterbalanced by torments hereafter. At the same time he admires and overrates our knowledge, which is so superior to his own. Every well-dressed European is in the estimation of the natives a prodigy of wisdom; and, as their ideas of a scholar and a physician are identical, they place implicit reliance on our ability to heal the sick and to save the dying. The traveller who comes in contact with the fellâhîn will often be applied to for medicine; and they not unfrequently beg for 'raki' (arrac, or brandy) under the pretext that it is to be administered to a sick person.
(2). Copts (kiibt, übt). While we have regarded the fellâhin as genuine Egyptians in consequence of their uninterrupted occupation of the soil, the religion of the Copts affords us an additional guarantee for the purity of their descent. The Copts are undoubtedly the most direct descendants of the ancient Egyptians, there being no ground for the assumption that their ancestors were foreign immigrants who embraced Christianity after the conquest of the country by the Mohammedans, while on the other hand the obstinacy with which they defended their monophysite Christianity for several centuries against the inroads of the creed of Byzantium affords another indication of their Egyptian character. The Coptic population is officially stated as 250,000, but these figures are obviously too low, and the number is more probably about 300,000, i.e. about a tenth of the purely indigenous population of the valley of the Nile. They are most numerous in the towns of Northern Egypt, around the ancient Coptos, at Negâda, Luksor, Esneh, Dendera, Girgeh, Tahta, and particularly at Siut and Akhmim, the latter of which is said to contain 40,000 Copts. A large proportion of the population of all these places is Coptic.

The Coptic Patriarch is elected by a council of priests at the Monastery of St. Antony (in the eastern desert), assisted by the bishops of Egypt. Even the 'Abûna' ('father'), or patriarch of Abyssinia, has a voice in the election. If, however, the patriarch nominates a successor before his death, he is elected by the synod without opposition. Choice is usually made of a young, eloquent, and energetic priest of imposing personal appearance. The investiture of the patriarch is a prerogative of the Khedive. The present patriarch was formerly a monk in one of the monasteries near the Natron Lakes.

Most of the Copts are dwellers in towns, and are chiefly engaged in the more refined handicrafts (as watchmakers, goldsmiths, jewellers, embroiderers, tailors, weavers, manufacturers of spurious antiquities, etc.), or in trade, or as clerks, accountants, and notaries. Their physique is accordingly materially different from that of the fellâhin. They are generally somewhat below the middle height, and of delicate frame, with small hands and feet; their skulls are higher and narrower than those of the peasantry, and with less protruding cheek-bones; and, lastly, their complexion is fairer. These differences are sufficiently accounted for by their mode of life; for, when we compare those Copts who are engaged in rustic pursuits, or the Coptic camel drivers of Upper Egypt, with the fellâhin, we find that the two races are not distinguishable from each other.

Few nations in the East embraced the Gospel more zealously than the dwellers on the Nile. Accustomed as they had long been to regard life as a pilgrimage to death, as a school of preparation for another world, and weary of their motley and confused Pantheon of divinities, whose self-seeking priesthood designedly disguised the truth, they eagerly welcomed the simple doctrines of Christianity, which appeared so well adapted to their condition and promised them succour and redemption. Like Eutyches, they revered the
divine nature of the Saviour only, in which they held that every human element was absorbed; and when the Council of Chalcedon in 451 sanctioned the doctrine that Christ combined a human with a divine nature, the Egyptians, with their characteristic tenacity adhered to their old views, and formed a sect termed Eutychians, or Monophysites, to which the Copts of the present day still belong.

The name of the Copts is an ethnical one, being simply an Arabic corruption of the Greek name of Egyptians. The theory is now exploded that they derive their name from a certain itinerant preacher named Jacobus, who according to Makrizi was termed El-Berâďî, or ‘blanket-bearer’, from the old horse-cloth worn by him when he went about preaching. This Jacobus promulgated the monophysite doctrine of Eutyches, which had found its most zealous supporter in Dioscurus, a bishop of Alexandria, who was declared a heretic and banished after the Council of Chalcedon; and his disciples were sometimes called Jacobites. If this name had ever been abbreviated to Cobit or Coht, it would probably have occurred frequently in the writings of Monophysites; but there we find no trace of it. It is, on the other hand, quite intelligible that the word Copt, though originally synonymous with Egyptian, should gradually have come to denote a particular religious sect; for, at the period when the valley of the Nile was conquered by 'Amr, the native Egyptians, who almost exclusively held the monophysite creed, were chiefly distinguished by their religion from their invaders, who brought a new religious system from the East.

These Egyptian Christians strenuously opposed the resolutions of the Council of Chalcedon, and thousands of them sacrificed their lives or their welfare in the fierce and sanguinary conflicts of the 6th century, the causes of which were imperfectly understood by the great majority of the belligerents. The subtle dogmatic differences which gave rise to these wars aroused such hatred among these professors of the religion of love, that the defeated Monophysites readily welcomed the invading armies of El-Islâm, or perhaps even invited them to their country.

After the conquest of Egypt by 'Amr the Copts were at first treated with lenity, and were even appointed to the highest government offices; but they were soon doomed to suffer persecutions and privations of every description. These persecutions were mainly due to their unbounded arrogance and their perpetual conspiracies against their new masters, and their Mohammedan contemporaries even attributed to them the disastrous conflagrations from which the new capital of the country so frequently suffered (p. 240). Accustomed for many ages to regard themselves as the most civilised of nations, and the Greeks as their inferiors, they perhaps imagined, that, if they succeeded in throwing off the yoke of the barbarous children of the desert, they could prevent the revival of the hated Byzantine supremacy. Their hopes, however, were doomed to bitter disappointment, and their national pride to utter humiliation. Their conquerors succeeded in maintaining their position, and though apparently at first inclined to moderation, were at length driven by the conduct and the previous example of the Copts themselves to persecute and oppress them to the uttermost.

In spite, however, of all these disasters, a numerous community
of Copts has always existed in Egypt, a fact which is mainly to be accounted for by the remarkable tenacity and constancy of the Egyptian character. Owing, however, to the continual oppression and contempt to which they have been subjected, the grave disposition of the subjects of the Pharaohs has degenerated into sullen gloom, and their industry into cupidity. The rancour which they have so long cherished has embittered their character, while the persecutions they have suffered have taught them to be at one time cringing, and at another arrogant and overbearing. They are in very few respects superior to their Mohammedan countrymen. They generally possess an hereditary aptitude for mathematical science, and are therefore in great request as book-keepers and accountants, but on the other hand they are entirely destitute of the generous and dignified disposition of the Arabs. They obey their law which forbids polygamy, but constantly abuse that which permits them to indulge in spirituous liquors, drunkards being frequently met with, even among their priests. Their divine worship will strike the traveller as strange, and anything but edifying or elevating.

The traveller may distinguish the Copts from the Arabs by their dark turbans, which are generally blue or black, and their dark-coloured clothes. This costume was originally prescribed by their oppressors, and they still take a pride in it as a mark of their origin, though now permitted to dress as they please. A practised eye will also frequently detect among them the ancient Egyptian cast of features. Towards strangers the Copt is externally obliging, and when anxious to secure their favour he not unfrequently appeals to his Christian creed as a bond of union. Many Copts have recently been converted to Protestantism by American missionaries, particularly in Upper Egypt, chiefly through the foundation of good schools and the distribution of cheap Arabic Bibles. Even the orthodox Copts have a great reverence for the sacred volume, and it is not uncommon to meet with members of their sect who know the whole of the gospels by heart. The Roman propaganda, which was begun by Franciscans at the end of the 17th and beginning of the 18th cent., has been less successful among the Copts, and there now exist a few small Roman Catholic communities in Upper Egypt only (at Girgeh, Akhmim, and Negāda). To the Romanists, however, is partly due the preservation of the old Coptic language, into which they caused the gospels to be translated by the most learned scholars of the day (accompanied by a preface asserting the supremacy of the pope) for circulation in Egypt. Notwithstanding the serious defects to which we have alluded, the Coptic community boasts of a number of highly respectable members, and in spite of the frequent heavy contributions levied from the sect by previous governments, it contains several wealthy landowners and merchants, some of whom we shall hereafter have occasion to name.
3. Beduins. *Bedu* (sing. *bedawi*) is the name applied to the nomadic Arabs, and *Arab* to those who immigrated at a later period and settled in the valley of the Nile. They both differ materially from the dwellers in towns and from the fellâhîn, who usually call themselves ‘Sons of the Arabs’ (*Ibn et-Arab*). The subdivisions of the Beduin tribes are called *Kabîleh* (whence the name Kabyles, applied to some of the Algerian Beduins). Though differing greatly in origin and language, the wandering tribes of Egypt all profess Mohammedanism. Again, while some of them have immigrated from Arabia or Syria, partly in very ancient, and partly in modern times, and while others are supposed to be the aboriginal inhabitants of the territories claimed by them (as the Berbers of N. Africa and the Ethiopians or Blemmyes of Nubia), or former dwellers on the Nile expelled from their homes by foreign invaders, they all differ greatly from the stationary Egyptian population; and this contrast is accounted for by the radical difference between the influences of the desert and those of the Nile valley. The Beduins may be divided into two leading groups: (1) Beduins in the narrower sense, *i.e.* Arabic speaking tribes, most of whom have probably immigrated from Arabia or Syria, and who occupy the deserts adjoining Central and Northern Egypt, or who are to be found in different regions of Southern Nubia as a pastoral people; (2) ‘Bega’, who range over the regions of Upper Egypt and Nubia situated between the Nile and the Red Sea, and extending to the frontiers of the Abyssinian mountains (their territory being known as ‘Edbai’). To these last the name of Ethiopians may as accurately be applied as that of Arabs to the first group; and they are believed by Dr. Lepsius to be the descendants of the Blemmyes, who occupied the Nubian part of the valley of the Nile down to the 4th cent. after Christ, when they were expelled by ‘Nubian’ invaders from the south. The second group consists of three different races, the *Hadendoa*, the *Bisharîn*, and the *Ababdeh*. The last-named, who are widely scattered in the valleys of the desert between the tropics and the latitude of Keneh and Kosar, and who lead a poverty-stricken life with their very scanty stock of camels and goats, are those with whom alone we have to deal as inhabitants of Egypt. Though closely resembling the other Bega tribes in appearance, the *Ababdeh* (sing. *Abâdi*, the *Gebadei* of Pliny) possess an original language of their own (‘to-bedyawiyyeh’), which, however, they have long since exchanged for bad Arabic. Besides the girdle round their loins they wear a kind of long white shirt, and in winter a light-coloured striped woollen mantle, while the Bisharîn and Hadendoa tend their large flocks of sheep and herds of camels in a half-naked condition, girded with a leathern apron and wrapped in a kind of blanket (mellâyeh). All these ‘Ethiopians’ are *Dolichocephali*, with orthognathous skulls, and are remarkable for their fine and almost Caucasian cast of features, their
very dark, bronze-coloured complexion, and their luxuriant growth
of hair, shading their heads like a cloud, or hanging down in num-
berless plaits over their necks and shoulders, while in front it is
short and curly. Their figures are beautifully symmetrical, and
more or less slender in accordance with their means of subsistence,
and their limbs are gracefully and delicately formed. In other re-
spects they resemble all the other children of the desert, as in the
purity of their complexion, the peculiar thinness of their necks,
and the premature wrinkling of the skin of their faces. Com-
pared with their bold and quarrelsome neighbours the Bisharin, the
Ababdeh, who are armed with a dagger worn in a sheath attached
to the upper part of the left arm; or with a long, straight sword,
but never with a gun, are exceedingly gentle and inoffensive. The
Egyptian government has put an end to the old feuds between the
Bisharin and the Ababdeh by entrusting to the latter the superin-
tendence of the great commercial route through the Nubian desert
(from Korusko to Abu Hammel), and by placing the nine tribes of
the Bisharin under the jurisdiction of the chief shekh of the Abab-
deh, who is personally responsible for the safety of the routes through
the desert, and is therefore obliged to reside in the valley of the
Nile. (His present head-quarters are at the small village of Behereh,
at the foot of the hill of Redesiyeh, opposite to Edfu.) The total
number of the Ababdeh amounts to about 30,000. The chief
shekh whose dignity is hereditary, appoints over the principal vil-
lages a number of sub-chiefs, who are appealed to as judges in family
quarrels which the head of the family has been unable to settle.

The dwellings of the Ababdeh consist of low and miserable hovels
constructed of stakes covered with ragged straw-mats, and placed in
groups of not more than 4-8 together. They also sometimes live in
caves, like genuine Troglodytes, although exposed to danger from
snakes. Like the other Bega tribes, they are chiefly occupied as
shepherds and camel-drivers. The wealthier purchase a little sorgh-
num grain, which they eat either raw, or roasted, or in the form of
unleavened cakes, but the poorer seem to have a marvellous power of
sustaining life on homoeopathically minute quantities of goats' milk
and the game which they occasionally capture. The Bisharin also live
exclusively on milk and a little meat, while the Arabian Beduins
of the North cultivate the land to some extent when an opportunity
offers.

A considerable number of the Ababdeh and Bisharin who
live near the coast and possess no cattle or other property, subsist
precariously on the produce of the sea. They are not fishermen, as
they possess no boats or other appliances, with the exception of
spears and landing-nets, but merely ‘Ichthyophagi’, who pick up
shell-fish, octopoda, or small fish thrown up on the beach. Occasion-
ally they make a prize of turtle’s eggs, and sometimes succeed in
reaching the sandy islands of the Red Sea where the sea-swallow
(sterna) lays its eggs. This poor mode of life of course has an influence on their mental capacity, which is not of a very high order; but they are intelligent in their own affairs, and remarkably skilful trackers, so much so that they are often employed by the government in pursuing criminals. They are nominally Mohammedans, but they do not pray, or keep the fast of Ramadân, or make pilgrimages, except on rare occasions. Nor do they, like orthodox Mohammedans, fear 'ginn' and 'ghûls', but they permit polygamy, observe the rite of circumcision, and worship saints.

Besides the Bega, there are numerous Beduins who inhabit the steppes and deserts belonging to the region of the Nile, but beyond the limits of Egypt, and range as far as the confines of the heathen negro-races on the left bank of the Nile, nearly to 9° N. latitude; but with these we have not at present to deal. Among the Arabian Beduins of the North, there are three important tribes in the peninsula of Mount Sinai: the Terâbiyân, who carry on a brisk caravan traffic between Suez and Cairo, and claim territorial rights as far as the banks of the Nile near Basâtîn above Cairo; the Tihâya, who occupy the heart of the peninsula, between Suez and ʿAkaba; and the Sawârkeh or El-ʿArayişh, to the north of the latter. In Upper Egypt, besides the Ababdeh, the only Beduins who occupy the eastern bank of the Nile are the Benî Waṣel and the Atûni, or Hawâdât, who, however, have now settled on both banks of the Theban Nile valley and are gradually blending with the fellâhîn, and the Mûţâzeh (about 3000 in number), who dwell in groups among the limestone mountains between Suez and Keneh, where there are good pastures at places. Most of the Arabian Beduins, on the other hand, who belong to Egypt, confine themselves to the western bank of the Nile. They occupy the whole of this side of the river from the Fayûm as far as Abydus near Girgeh, and it is mainly with their aid that communication is maintained with the western oases, peopled by a totally different race (p. 65), who till the ground and possess no camels, being probably allied to the Berbers of Northern Africa (one of the numerous Libyan tribes mentioned in ancient inscriptions).

The Beduins of the North have inherited with comparative purity the fiery blood of the desert tribes, who achieved such marvellous exploits under the banner of the prophet, but the traveller will rarely come in contact with them unless he undertakes a journey across the desert. The looters who assist travellers in the ascent of the pyramids and pester them to buy antiquities, which are generally spurious, call themselves Beduins, but, even if originally of that race, they have entirely lost all its nobler characteristics in consequence of their intercourse with strangers and their debasing occupations. Genuine Beduins are to be found nowhere except in their desert home, where to a great extent they still retain the spirit of independence, the courage, and the restlessness of their ancestors.
As in the time of Herodotus, the tent of the Beduin is still his home. Where it is pitched is a matter of indifference to him, if only the pegs which secure it be firmly driven into the earth, if it shelter his wife and child from the burning sunshine and the chilly night air, and if pasturage-ground and a spring be within reach. In consequence of the frequent wars waged between the different tribes, every Beduin is a warrior. Most of them, too, as might be expected, are extremely poor. Thus at Ramleh on the coast, near Alexandria, the traveller will have an opportunity of seeing a whole colony of the poorest class encamped in their tents, where they live in the most frugal possible manner, with a few miserable goats and the fowls which subsist on the rubbish in their neighbourhood. Though professors of El-Islâm, they are considerably less strict in their observances than the fellâhin of the valley of the Nile, who are themselves sufficiently lax, and above all they sadly neglect the religious duty of cleanliness.

The traveller will occasionally observe Beduins in the bazaars of the armourers and leather-merchants, and will be struck with the proud and manly bearing of these bronzed children of the desert, whose sharp, bearded features and steady gaze betoken firmness and resolution. In Egypt the traveller need never be apprehensive of their predatory propensities, but they have frequently attacked travellers in Turkish Tripolitania and in the eastern part of Arabia Petraea.

(4). Arabian Dwellers in Towns. Those Arabs with whom the traveller usually comes in contact in towns are shopkeepers, officials, servants, and donkey-attendants, or perhaps these last only, as most of the best shops are kept by Europeans, while in official and legal matters his intercourse with the natives is carried on through the medium of his consul. The indolence and duplicity of these Arabs, which proceed to some extent from the character of their religion, have often been justly condemned, while their intelligence, patience, and amiability are too often ignored. They are generally of a much more mixed origin than the fellâhin, as the various conquerors of Egypt usually made the towns their headquarters. Alexandria, for example, was chiefly favoured by the Greeks and Arabs, and Cairo by the Arabs and Turks. It thus happens that the citizens of the Egyptian towns consist of persons of every complexion from dark brown to white, with the features of the worshippers of Osiris or the sharp profile of the Beduins, and with the slender figure of the fellâ or the corpulence of the Turk. Among the lower classes frequent intermarriage with negro women have darkened the complexion and thickened the features of their offspring; while the higher ranks, being descended from white slaves or Turkish mothers, more nearly resemble the European type. As the inhabitants of the towns could not be so much oppressed by their rulers as the peasantry, we find that they exhibit a more in-
dependent spirit, greater enterprise, and a more cheerful disposition than the fellâhîn. At the same time they are not free from the dreamy character peculiar to Orientals, nor from a tinge of the apathy of fatalism; and their indolence contrasts strongly with the industry of their European rivals in political, scientific, artistic, and all business pursuits. A glance at the offices of the ministers, the bazaars of the merchants, the schools of the Arabs, and the buildingyards and workshops constructed by natives will enable the traveller to observe with what deliberation and with what numerous intervals of repose they perform their tasks. From such workers it is in vain to expect rapidity, punctuality, or work of a highly finished character, and the caustic remark of Prince Napoleon that the Egyptians are ‘capable of making a pair of pantaloons, but never of sewing on the last button’, was doubtless founded on experience. The townpeople profess Islamism, but, in their youth particularly, they are becoming more and more lax in their obedience to the Korân. Thus the custom of praying in public, outside the house-doors and shops, is gradually falling into disuse. The European dress, moreover, is gradually superseding the Oriental, which is far more picturesque, and better suited to the climate. On the whole, however, they are bigoted Mohammedans, and participate in the contempt with which the fellâhîn regard all other religious. Their daily intercourse with unbelievers and their dread of the power of the Christian nations tend, however, to keep their fanaticism, which otherwise would be unbounded, in check, and has even induced them to admit strangers to witness the most sacred ceremonies in their mosques.

(5). Berbers. The name Berberi (plur. barâbra) is believed by many authorities to be identical with ‘barbarians’, a word which is said to have been adopted by the Greeks from the Egyptians, who used it to denote all ‘non-Egyptians’, and to be derived from brr, i.e. ‘to be unable to speak’, or ‘to speak imperfectly’. The ‘Berbers’ of N. Africa and the town of ‘Berber’ in S. Nubia also doubtless have the same origin. In Egypt the name is applied in a half contemptuous way to the numerous immigrants from the Nubian part of the valley of the Nile, who form the largest foreign element of the community, and who never entirely assimilate with it, as the Nubians make it a rule never to marry Egyptian wives. The Nubians, on the other hand, speak slightly of the Egyptians as ‘Wod-er-Rif’, or sons of the Nile valley (comp. p. 30). The two races entertain a great dislike to each other, and their dispositions are

About the year 1865 a kind of uniform called the ‘Stambulina’ was prescribed by the government for all the officials of the higher classes (black coat with a row of buttons and low upright collar), but they are allowed to wear ordinary European clothing in their offices. All the officials, however, in the pay of the Egyptian government, including Europeans, and even the members of the mixed court of justice, must wear the red fez (tarbush).
fundamentally different. The Nubians are inferior to the Egyptians in industry and energy, especially in tilling the soil, and also in physical strength; and they are more superstitious and fanatical, as is indicated by the numerous amulets they wear round their necks and arms. They are, however, superior to the Egyptians in cleanliness, honesty, and subordination, and possess a more highly developed sense of honour. The Nubian doorkeepers who are to be found in all the mercantile houses of Alexandria and elsewhere are noted for their honesty. The traveller must not expect to find them very sincerely attached or grateful, any more than the native Egyptians (comp. pp. 12, 25), but as servants they are certainly preferable. The inhabitants of the Nubian part of the valley of the Nile are not all strictly Nubians; for in the southern parts of that region a colony of Shēgiyeh and other Arabian tribes has settled in comparatively recent times. The genuine Nubians (a name unknown to themselves, and of ancient origin) occupy the valley of the Nile from Gebel Barkal near the fourth cataract down to the first cataract, and are divided in accordance with the principal idioms of their language into Muhās, Kenūs, and Don-kolas. Their language belongs to the Libyan group of the N. African tongues, and Dr. Brugsch is of opinion that it may afford a clue to the interpretation of the still undeciphered Ethiopian (Meroitic) inscriptions of the Nubian part of the Nile valley. Dr. Lepsius, on the other hand, maintains that the 'to-bedyawiyeh' language of the Bega (p. 45) is more likely to be cognate with that of the inscriptions, as he believes that the Blemmyes, the ancestors of the Bega, were the original inhabitants of the region in question, and were expelled by the handsome and intelligent 'Nuba' negroes from the district to the S. of Kordofān. Those Berbers who do not learn Arabic grammatically never speak it thoroughly well; but it is generally, though imperfectly, understood in Nubia. The traveller must therefore not expect to learn good Arabic from his Nubian servants. In their native country they till the banks of the Nile, but their land is of very limited extent and poorly cultivated; and as their harvests are scanty they are rarely able to support large families. They accordingly often emigrate at an early age to the richer lowlands, chiefly to the large towns, and particularly to Alexandria, in quest of employment; and they find no difficulty in attaining their object, for they are generally active, intelligent, and honest, while the older emigrants, who are strongly attached to their country, are always zealous in procuring them work and rendering them assistance. When the Berber has succeeded in amassing a moderate fortune, he returns to settle in his native country, of which throughout his whole career he never entirely loses sight, and to which he frequently remits his hardly earned savings for the benefit of his relations. The cold winter nights in Egypt are very trying to the poor Berbers, who often have to sleep in the open air
outside the doors, and many of them are attacked by consumption. They are most commonly employed as doorkeepers (bawwâb), as house-servants (khaddâm), as grooms and runners (sâis), for which their swiftness renders them unrivalled, as coachmen (‘arbagi), and as cooks (ṭabbâkh). Each of these five classes is admirably organised as a kind of guild, with a shâkh of its own, who levies a tax from each member, and guarantees the character and abilities of members when hired. Thefts are very rarely committed by the Nubians, but in cases of the kind the shâkh compels the whole of his subjects to contribute to repair the loss, and cases have been known in which several hundred pounds have been recovered in this way. The result is that there is a strict mutual system of supervision, and suspected characters are unceremoniously excluded from the fraternity.

(6.) Negroes. Like the Berbers, most of the negroes in Egypt are professors of El-Islâm, to the easily intelligible doctrines of which they readily and zealously attach themselves. Most of the older negroes and negresses with whom the traveller meets have originally been brought to Egypt as slaves, and belong to natives, by whom they are treated more like members of the family than like servants. Although every slave who desires to be emancipated may now with the aid of government sever the ties which bind him to his master, most of the negroes prefer to remain on the old footing with the family which supports them and relieves them of the anxiety of providing for themselves. The eunuchs, who also belong almost exclusively to the negro races, but are rapidly becoming rarer, very seldom avail themselves of this opportunity of regaining their liberty, as their emancipation would necessarily terminate the life of ease and luxury in which they delight. The slave-trade is now very rapidly approaching complete extinction in Egypt, not so much owing to the penalties imposed (which the rapacious officials take every opportunity of enforcing), as from changes in the mode of living, and the growing preference of the wealthy for paid servants. Down to 1870 the trade was still carried on in secret with some success, but since then it has been at a standstill, and the Khedive himself is strongly in favour of its total suppression.

The negroes, who voluntarily settle in Egypt in considerable numbers, form the dregs of the people and are employed in the most menial offices. Their race indeed appears incapable of independent and intelligent exertion. Negresses, however, are frequently employed as domestic servants, and are said to be faithful and trustworthy. Most of the negro races of Central Africa to the N. of the equator are represented at Cairo.

Ethnographers, linguists, or other scientific men who desire to see specimens of as many different races as possible should obtain an introduction to an Arabian merchant in the Gammelîyeh, who will conduct them to merchants from every part of the interior and of the African coast, each attended by his staff of negro servants. The latter, however,
especially if long resident in Egypt, cannot give trustworthy information about their country and their origin. Some of them have forgotten their mother tongue and even the name of their native country.

Foreigners are prohibited from taking negro servants out of the country, but if through the intervention of their consul they obtain permission, they must find security for their subsequent restoration.

(7). Turks. Although the dynasty of the viceroys of Egypt is of Turkish origin (see p. 106), a comparatively small section of the community belongs to that nation (barely 100,000 souls), and their numbers appear to be diminishing. The Turks of Egypt are chiefly to be found in the towns, where most of them are government officials, soldiers, and merchants. The Turks thus form a kind of privileged aristocracy. Almost all the more important officials, who are empowered to use the government seals, are either Turks or 'abdelâwi, i.e. descendants of Turks born in Egypt. Many of these Turks are emancipated white Circassian slaves, who once served in the fleet or in the army, and who have received their civil appointments without the slightest previous training for their duties. These officials are much to blame for the mal-administration which so long paralysed the rich productiveness of the valley of the Nile, having always with few exceptions been actuated in their proceedings by motives of reckless cupidity without regard to ulterior consequences. Now, however, that the government of the Khedive has adopted more enlightened principles, it has admitted other nationalities also to its highest civil appointments, some of which are held by able Europeans and by Armenians educated in France, Germany, or England, and under their auspices a brighter future is probably in store for Egypt. The Turkish merchants are generally a prosperous class, and, although fully alive to their pecuniary interests, they are dignified and courteous in their bearing, and are often remarkable for the handsomeness of their features.

(8). Levantines. A link between the various classes of dwellers in Egypt and the visitors to the banks of the Nile is formed by the Syrian Christians, known as Levantines, who have been settled here for several generations, and form no inconsiderable element in the population of the larger towns. Most of them profess the Latin form of Christianity, and Arabic has now become their mother-tongue, although they still speak their old national dialects. They are apt linguists, learning the European languages with great rapidity, and good men of business, and owing to these qualities they are often employed as shopmen and clerks. Their services have also become indispensable at the consulates as translators of documents destined for the native authorities, and as bearers of communications between the respective offices. A large proportion of them are wealthy. Being Christians, the Levantines all live under the protection of the different consuls, and thus unfairly escape payment of taxes, although they derive the whole of their wealth from the country.

(9). Armenians and Jews. This section of the community is
about as numerous as the last, and in some respects contrasts favourably with it. The Armenians generally possess excellent abilities, and a singular aptitude for learning both Oriental and European languages, which they often acquire with great grammatical accuracy. Many of them are wealthy goldsmiths and jewelers, and they are sometimes appointed to important government offices.

The Jews are often distinguishable by their red hair from the native Egyptians, as well as by other characteristics. Most of them are from Palestine, but many have recently immigrated from Wallachia. All the money-changers in the streets (ṣarrāf), and many of the wealthiest merchants of Egypt, are Jews, and notwithstanding the popular prejudice entertained against them, owing as is alleged to their disregard of cleanliness, they now form, thanks to the impartiality of the present government, one of the most highly respected sections of the community.

(10). Europeans. The number of European residents and visitors in Egypt now amounts to about 100,000, the proportion of the principal nationalities being as follows: 50 Greeks, 25 Italians, 12 French, 8 English (including Maltese), 4 Austrians (including many Dalmatians), to 1 German. The numerous Swiss residents in Egypt, who are not represented by a consul of their own, are distributed among the above leading classes (French, Italian, German). Beside these nationalities, there are also a few representatives of Russia, America, Belgium, Scandinavia, and other countries. Of late years there has been a great influx of Italians in Alexandria, chiefly from the Neapolitan provinces. Each of the above leading nationalities shows a preference for one or more particular occupations, in which they sometimes enjoy a complete monopoly. The Greeks of all classes are generally traders. They constitute the aristocracy of Alexandria, and the victual-dealers (bakkāl) in all the other towns are mostly Greeks. They are the proprietors of the numerous small banks which lend money on good security, both to the peasantry and the government officials, at a rate of interest sometimes amounting to 6 per cent monthly, the maximum permitted by law; and they are the only Europeans who have established themselves permanently as merchants beyond the confines of Egypt proper. The Greeks also have the unenviable notoriety of committing numerous murders, thefts, and other crimes, but it must be borne in mind that they are by far the most numerous section of the European community, and that some 30,000 of them belong to the lowest class of emigrants from an unhappy and ill-conditioned country. Many of these crimes must, moreover, be regarded as the outcome of the sadly misdirected daring and ability which characterise their nation. The superiority of the Greeks to the Orientals is nowhere so strikingly manifested as in Egypt, where it affords a modern reflex of their ancient, world-renowned supremacy.
Most of them are immigrants from the various Greek islands, and the purity of their type is specially noteworthy.

The Italian residents consist chiefly of traders of a humble class, advocates, and musicians, from the operatic singer down to the Calabrian itinerant. Of French nationality are all the artizans of the higher class, who are generally noted for their skill, trustworthiness, and sobriety, and indeed form the most respectable stratum of the European community. Most of the better shops are kept by Frenchmen, and the chief European officials of the government, including several architects and engineers, are French. The specialities of the English settlers are the manufacture of machinery and the construction of railways and harbours. A large majority of the residents who enjoy the protection of the British consulate are Maltese, and to them apply even more forcibly most of the remarks already made regarding the Greeks. It has been ascertained that the Maltese settlers in foreign countries are more numerous than those resident in their two small native islands, and of these a considerable proportion belongs to Egypt. At home, under the discipline of British institutions, they form a pattern little nation of their own, but in Egypt, where they are freed from the restraint of these influences, they are very apt to degenerate and to swell unduly the ranks of the criminal class. Many of the Maltese, however, are enterprising tradesmen and industrious artizans, such as shoemakers and joiners. To the Austrian and German community belong a number of merchants of the best class, all the directors of the principal banks, many physicians and teachers, innkeepers, musicians, and lastly handicraftsmen of humble pretensions.

With regard to the capability of Europeans of becoming acclimatised in Egypt, there are a number of widely divergent opinions. Much, of course, must depend on the nature of the climate of their own respective countries. It has been asserted that European families settled in Egypt die out in the second or third generation, but of this there is no sufficient proof, as the European community is of very recent origin, and many examples to the contrary might be cited. The climate of Egypt is less encraving than that of most other hot countries, an advantage attributed to the dryness of the air and the saline particles contained in it; while the general struggle for existence and pursuit of gain among most of the foreign residents constitutes another safeguard against its prejudicial influences.

The Nile (comp. Map, p. 30). Next to the Amazon, which is about 4000 miles in length, the Nile is the longest river in the world. About 3500 miles of its course are already known, and when its true source is discovered the total length will probably be found to surpass that of its American rival. Throughout nearly the whole of that distance the river is navigable, with two great interruptions only (at Abu Ḥammed-Barkal and Dongola-Wadi Ḥalfa). Though
it is greatly surpassed by the Amazon in volume, neither the latter nor any other river in the world can vie in historical and ethnographical interest with the ‘father of rivers’.

The discovery of the true sources of the Nile and the cause of its annual overflow are two scientific problems which for upwards of 2000 years European scholars laboured to solve, while the Egyptians themselves regarded the river as a deity, and its origin and properties as the most sacred of mysteries, to be revealed to the curious spirit of man only when he should have quitted this earthly scene. As it is the Egyptian Nile only with which we have at present to deal, we shall advert but briefly to the subject of the sources of the river, and mention the principal affluents only which affect Egypt.

The Nile is formed by the confluence of the White and the Blue Nile at the town of Khartum, from which point to its principal mouths at Damietta and Rosetta, a distance of upwards of 1800 miles, it traverses an absolutely barren country, and receives one tributary only, the Atbara, on the east side, about 180 miles below Khartum. Throughout the whole of this distance, in the course of which it falls 1240 ft., the river has to contend against numerous absorbing influences, for which it receives no compensation beyond the rare showers attracted in winter by the mountains between its right bank and the Red Sea. Notwithstanding the immense length of the river, it very rarely presents the picturesque appearance of some of the great European and other rivers, as its banks are generally flat and monotonous, and it contains hardly a single island worthy of mention. The broadest parts of this portion of the Nile are a little below Khartum, a little above its bifurcation near Cairo, and also near Minye, at each of which places it attains a width of about 1100 yds., while the White Nile is of greater breadth throughout a long part of its lower course. As the river pursues its tortuous course through thirsty land, for a distance of 150 degrees of latitude, much of its water is consumed by evaporation and infiltration (a process by which it is probable that Libyan oases are supplied with water from the Nubian Nile), and still more so by the extensive system of artificial canals requisite for the irrigation of a whole kingdom. At the confluence of the White and Blue Nile their average volumes are in the proportion of three to one, but the latter assumes far greater importance when swollen by the Abyssinian rains. The Blue Nile is in fact a species of mountain-torrent, being liable to rise suddenly and sweep away everything it encounters on its rapidly descending course. It is therefore called the Bahr el-Azrak, i.e. the blue, ‘dark’, or ‘turbid’, in contradistinction to the Bahr el-Abyad, i.e. the white, or rather the ‘clear’ river, whose water descends from clear lakes and is farther filtered by the vast grassy plains and occasional floating plants through which it passes. The Blue Nile (together with its coadjutor the Atbara) may there-
fore be regarded as the sole origin of the fertility of Egypt, and also as the cause of the inundation, while on the other hand the regular and steady supply of water afforded by the White Nile performs the very important office of preventing the lower part of the river from drying up altogether in summer. The White Nile is not only much larger than the Blue in average volume, but is, with its tributaries, more than double the length. It does not, however, remain very long undivided. Higher up, in 9° N. latitude, it receives on the east side the waters of the Sobât, a stream descending from the mountains to the south of Abyssinia, and resembling the Blue Nile in character, though much smaller. A little farther up on the same side, the White Nile is joined by the Giraffe River, the source of which is unknown. Still higher (about 110 miles from the Sobât), on the opposite side, is the influx of the Bahr el-Ghazâl, or Gazelle River, a very sluggish stream, fed by numerous springs rising in the Nyam-nyam and Kredy regions, between 4° and 5° N. latitude. Higher up the river takes the name of Bahr el-Gebel, and is considerably smaller in volume, and beyond 5° N. latitude it ceases to be navigable, as it descends in a series of rapids from the Albert Nyansa or Mwutan Lake. This sheet of water is connected by another river, the 'Somerset', which may be regarded as the continuation of the White Nile, with the Victoria Nyansa or Ukerewe Lake. The great and still unsolved question as to the sources of the Nile thus resolves itself into the enquiry — which of these two reservoirs has the most distant sources. Thanks to the unwearied investigations of recent travellers, the final solution of the problem cannot now be far distant.

The Valley of the Nile from Kharţûm to the Delta, although from its great length (15° of latitude) necessarily possessing great varieties of climate, forms one long unbroken tract of country, the fertilising soil of which is brought down by the Blue Nile from the Abyssinian mountains.

The breadth of the Valley of the Nile, including the barren land immediately flanking it, varies from 41/2 to 10 miles in Nubia, and from 14 to 32 miles in Egypt. The banks, of which the eastern is called the 'Arabian', and the western the 'Libyan', rise at places to upwards of 1000 ft., resembling two large canal embankments, between which the river has forced its passage through the plateau of 'Nubian sandstone' (which extends to the Gebel Selseleh above Edfu), and through the nummulite limestone of Upper and Central Egypt. The breadth of the cultivable alluvial soil corresponds with the above varying width, but nowhere exceeds 9 miles. The soil deposited by the Nile averages 33–38 ft. deep in Egypt, but near Kalyûb at the head of the Delta it increases to about 50 ft., the bottom of it being at places below the level of the sea. The bed of the river is also of considerable depth, and at low water the mud-banks (gef) rise above its surface to a height of 25 ft. in Upper
Egypt, and 14 ft. at Cairo. These are also the depths of the various irrigation wells.

Throughout the whole of Egypt the Nile mud rests on a bed of sea-sand. The whole country between the first cataract and the Mediterranean was formerly a narrow estuary, which was probably filled by degrees during the pleiocene period with lagoon deposits, washed down from the crystalline Habesh. At a later period, when Egypt had risen from the sea (and after the isthmus had been formed), the river forced its passage through these deposits of mud, sweeping away many of the loose particles at one place and depositing them again farther down. (Fraas.) The Nile soil is unlike any other in the world in its composition. According to Regnault it contains 63 per cent of water and sand, 18 per cent of carbonate of lime, 9 per cent of quartz, silica, felspar, hornblende, and epidote, 6 per cent of oxide of iron, and 4 per cent of carbonate of magnesia.

Nothing certain is known regarding the average increase of the alluvial land, all the calculations regarding it having hitherto been based on erroneous or insufficient data. Thus the Nilometer of antiquity furnishes the depth relatively to the level of the sea, but not absolutely. The thickness of earth accumulated around buildings of known age has also been found a fallacious guide; and locally local measurements lead to no result, as the river often capriciously washes away what it has deposited in previous years. An approximate calculation might possibly be made if the proportion of solid matter annually brought down by the river could be ascertained, but no investigation of this kind has ever been made. It has sometimes been asserted that the desert has begun to encroach upon the cultivated part of the valley, but Sir Gardner Wilkinson has shown, that, while the sand of the desert may be advancing at places, the cultivable bed of the valley is steadily increasing in thickness and width.

The Inundation, as is obvious from what has already been said, is more or less favourable according to the greater or less amount of rain that falls among the Abyssinian mountains, for that which falls in Central Africa is a more constant quantity, being regulated by the influence of the trade-winds. Like the waterspouts which descend on equatorial Africa, the overflow always recurs at the same season of the year, varying in its advent by a few days only, and in its depth by several yards. At the beginning of June the river slowly begins to swell, and between the 15th and 20th of July the increase becomes very rapid. Towards the end of September the water ceases to rise, remaining at the same height for a fortnight or more, but during the first half of October it rises again and attains its highest level (comp. p. 237). After having begun to subside, it generally rises again for a short time, sometimes regaining and even passing its first culminating point. At length it begins to subside steadily, and after a time the decrease becomes more and more rapid. In January, February, and March the fields from which the water has receded gradually dry up, and in April, May, and the first few days of June the river is
at its lowest. The height of the inundation most favourable for agriculture at the present day has been ascertained by long observation to be 23 cubits 2 inches (i.e. about 41 ft. 2 in., the cubit being 21.385 inches), while in the time of Herodotus 16 cubits sufficed, and the god of the Nile in the Vatican is therefore represented as surrounded by sixteen children. A single cubit more is apt to cause terrible devastation in the Delta, and elsewhere to cover many fields destined for the autumn crop (nabāri, p. 74), while a deficiency of two cubits causes drought and famine in Upper Egypt. As health depends to a great extent on the regularity of the pulsations of the heart, so the welfare of the whole of this singular country is jeopardised by a too powerful or a too scanty flow of the great artery on which its very existence depends. An excessive overflow, especially if it does not give notice of its approach in due time, is far more disastrous now than formerly, as the extensive cotton-fields in the Delta will not bear flooding, and have to be protected by embankments.

Egypt is now no longer a vast lake during the inundation as it formerly was, nor does the overflow of the fields take place in a direct manner as is commonly supposed. The water is conducted into a vast network of canals, and distributed as required (comp. p. 71), and special engineers are appointed for their supervision. The whole of the cultivable land is divided into huge basins, in which the water introduced by the canals is maintained at a certain height until it has sufficiently saturated the soil and deposited the requisite quantity of mud. After the water in the river has subsided, that in the basins may either be discharged into the river or into the canals, or it may be used for filling other basins lying at a lower level. During these operations many of the villages are connected by means of embankments only, while others can only be reached by boat, and the whole country presents a very peculiar and picturesque appearance.

If the river and the system of canals connected with it are in any way neglected, the consequences are very disastrous, as was notably the case during the latter part of the Byzantine supremacy and under the disgraceful sway of the Mamelukes, when the fertile soil of Egypt yielded less than one-half of its average produce. The mean difference between the highest and the lowest state of the river is about 25 ft. at Cairo, 38 ft. at Thebes, and 49 ft. at Assuān. Even in March and April the traveller will have an opportunity of observing how powerful and rapid the flow of the river still is, although its fall from Assuān (by the first cataract) to Cairo is 299 ft. only, or about seven inches per mile. The rapidity of the stream, however, which averages 3 miles an hour, is not so serious an impediment to the navigation as the frequent changes which take place in the formation of its channel, sometimes occasioning difficulties which the most careful of captains is unable to foresee.
If we now enquire what influence this remarkable river has exercised on the history of civilisation, we can hardly avoid the conclusion that it was the Nile, with its unique character, that stimulated the ancient Egyptians to those great physical and intellectual exertions which rendered them the most famous and the most civilised among the nations of antiquity. The necessity of controlling its course and utilising its water taught them the art of river-engineering and the kindred science of land-surveying, while in the starry heavens they beheld the eternal calendar which regulated the approach and the departure of the inundation, so that the river may perhaps have given the first impulse to the study of astronomy. As the annual overflow of the water obliterated all landmarks, it was necessary annually to measure the land anew, and to keep a register of the area belonging to each proprietor; and above all it became an important duty of the rulers of the people to impress them with a strong sense of the sacredness of property. Every succeeding year, however, there arose new disputes, and these showed the necessity of establishing settled laws and enforcing judicial decisions. The Nile thus led to the foundation of social, legal, and political order, and it is also natural that the mighty and mysterious river on which the welfare of the entire population depended should have awakened their religious sentiment at a very early period. Subsequently, when the engineers and architects, in the service of the state or in the cause of religion, erected those colossal structures with which we are about to become acquainted, it was the Nile which materially facilitated the transport of their materials, and enabled the builders of the pyramids and the other ancient Egyptians to employ the granite of Assuân for the structures of Memphis, and even for those of Tanis, on the coast of the Mediterranean. As the river, moreover, not only afforded a convenient route for the transport of these building materials, but also an admirable commercial highway, we find that the Egyptians had acquired considerable skill at a very early period in constructing vessels with oars, masts, sails, and even cabins and other appliances.

From the earliest historical period down to the present time the course of the Nile from the cataracts down to its bifurcation to the north of Cairo (the ancient Kerkasoros, i.e. the mutilation of Osiris), has undergone very little change. This, however, is not the case with its Bouchées; for, while ancient writers mention seven (the Pelusiac, the Tanitic, the Mendesian, the Bucolic or Phatnitic, the Sebennytic, the Bolbitinic, and the Canopic), there are now practically two channels only through which the river is discharged into the sea. These are the mouths at Rosetta (Reshid) and Damietta (Dumyât), situated near the middle of the Delta, while the Pelusiac and Canopic mouths, the most important in ancient times, lay at the extreme east and west ends of the coast respectively. The water was afterwards gradually compelled to seek other outlets. The Pelusiac arm found a convenient exit through the Phatnitic near Damietta, while the Canopic was artificially conducted into the Bolbitinic. All the principal arms of ancient times at length entirely disappeared, combining to form the modern outlets. These last
will in their turn be abandoned, as the river will doubtless again force
for itself a more direct passage with a greater fall.

Geological Notice (by Prof. Zittel). (1) Egypt Proper. There is no
exaggeration in the often repeated saying that Egypt is 'the gift of the
Nile'. But for the bounties dispensed by the river, what is now the most
fertile country in N. Africa would be a wilderness of bare rock or sand.
With the greatest height attained by the inundation and the extreme
length of the irrigation canals, corresponds precisely the line which di-
vides the Sahara from the cultivated land. The whole of the alluvial
soil deposited by the Nile is an entirely foreign element in the geologi-
cal structure of N. Africa, and its geological character is uniform and
easily determined.

The origin, composition, and thickness of the alluvium has already
been stated. The perpendicular, black, and furrowed mud-banks, which
often rise to a height of 25-35 ft., are composed of distinct parallel strata
of somewhat different colours, with thin layers of sand occasionally in-
tervening. In Lower Egypt the mud is rather more thinly spread over
the whole Delta, in the form of a blackish or reddish-brown laminated
mass, a few isolated spots only remaining uncovered.

Wherever the ground is denuded of its alluvium, apart from which
there is no permanent soil in Egypt, it is absolutely sterile; for in this
hot and dry country there is no winter, with its protecting mantle of
snow, to retard the decomposition of vegetable matter, and to promote
its admixture with disintegrated rock, so as to form fertile soil. Owing
to the want of vegetation and moisture, without which the progress of
disintegration is reduced to a minimum, the surface of the naked rock
in Egypt and the neighbouring deserts retains its character almost un-
altered. The huge masses of debris observed at the foot of the rocks in
the valley of the Nile, and particularly at the mouths of the wādies, and
the curious isolated hills with which every traveller through the desert
is struck, could not possibly have been formed during the present state
of the Egyptian climate. They prove that at some pre-historic period
the now parched and sterile ground must have been overflowed by cop-
ious volumes of water which produced these and various other effects
on the appearance of the earth's surface.

The geologist will find little to attract his attention in the alluvial
soil of Egypt; but on the sea-coast, and in that part of the isthmus which
is intersected by the canal, there are several points of interest.

On entering the harbour of Alexandria the traveller will observe the
massive blocks of stone from the quarries of Meks of which the quays
are constructed. They consist of recent tertiary, light-coloured, sandy
limestone, composed chiefly of innumerable broken fragments of con-
chylia, a kind of rock which extends far to the W. of Alexandria, and
probably constitutes the greater part of the lofty Cyrenaean plain. This
rock forms the building-stone generally used at Alexandria, and is also
employed in the harbour-structures of Port Sa'id.

Amidst the desert sand of the isthmus, which even in Lower Egypt
forms a substratum underlying the Nile mud, and which in the E. part of
the desert is nearly covered with a solid gypseous and saline crust, the
rock occasionally crops up, or has been uncovered in the course of the
cexcavation of the canal. Near the Shalāf station (p. 419) a greenish-grey,
gypseous marl overlies the solid limestone, which contains the tertiary
marine conchylia, sharks' teeth, and remains of crocodiles and am-
phibious mammalia. The same formation occurs in other places also,
and ridges of the early tertiary nummulite limestone likewise occasionally
rise from the plain. At several points on the coast of the Red Sea,
particularly near Koṣēr, at a height of 600-900 ft. above the sea-level, we
find rock of the late tertiary or diluvial era containing coral, which
shows how much the land must have risen since that period. With these
coral-reefs the petroleum Wells of Gebel ez-Zêt and the sulphur which
occurs on the Rās el-Gimsāh appear to be closely connected.

To the miocone, or middle tertiary period, belong several isolated
deposits of sandstone near Cairo, in which are found the beautiful fossil sea-urchins (Cythereaster Aegyptiacus) frequently offered for sale near the Pyramids. The place where they occur, on the margin of the desert, about 2 M. to the S. of the Sphinx, has been visited and described by Prof. Fraas.

One of the principal geological curiosities near Cairo is the Petrified Forest (comp. p. 325). About 5 M. to the E. of the town begins the Khashab ("wood") desert, the surface of which for many miles is sprinkled with whole trunks and fragments of silicified wood. Few travellers go beyond the 'small' petrified wood; the 'great' lies about 20 M. to the E. of Cairo. 'The desert here is so completely covered with trunks, that, except the fine sand itself, no other kind of stone is visible than the flint into which the Nicolias have been converted.' (Fraas.) Trunks of 60-90 ft. in length and 3 ft. in thickness have sometimes been found. These have been described by Unger as Nicolias Aegyptiaca (of the family of the Sterculiaceae), but, according to more recent investigations, it would seem that the forest contained various other trees also (palms and dicotyledonous plants). Whether the trunks have grown and been silicified on the spot, or were brought here by inundations from the south, is still an open question. At all events these remarkable deposits date from the late tertiary period.

Above Cairo, to the S., the Nile is flanked by ranges of hills, the valley between which is generally 4-9 M. in width. On the east side of the Nile begins the Arabian, and on the west side the Libyan desert, both of which are very inhospitable, being ill provided with water, and covered at places only with scanty vegetation. From the northernmost spur of the Arabian desert (the Mokattam near Cairo) to a point above Edfu, both banks of the Nile consist of early tertiary nummulite limestone. The strata dip gradually from south to north, so that the farther we ascend the Nile the older are the strata that we meet with. The limestone of the Mokattam, with its millions of nummulites, is the material of which the new buildings of the European suburbs of Cairo are constructed, and it was from the venerable quarries of Turra and Mafagara that the ancient Egyptians obtained the stone for their pyramids. The blocks for these stupendous structures were conveyed to them by means of a huge stone dyke, of which all trace has now disappeared. On the Mokattam, near Minyeh, Beni Hasan, Siut, Thebes, Esneh, and at other places the limestone is rich in fossils, and in the vicinity of Cairo geologists will have no difficulty in forming a considerable collection of them. The quarrymen on the Mokattam offer visitors fossil crabs (Xanthopsis Paulino-Würtembergicus) and 'sharks' teeth for a moderate bakhchish.

To the south of Edfu the nummulite limestone disappears, being replaced by marl and rocks of calcareous and sandy character, which, according to Figari-Bey, contain chalk fossils. After these we come to quartzose sandstone, belonging to the middle chalk formation, and forming considerable cliffs at the Gebel Selseleh, which confine the river within a narrow bed.

This last formation, known as 'Nubian sandstone', which covers many thousands of square miles of Nubia and the Sudán, was the material almost exclusively used for the construction of the ancient temples of Upper Egypt; and near Selseleh, and in the Arabian desert between Keneh and Kóčer, are still to be seen the extensive quarries which yielded the material for the colossal structures of Thebes.

From Assuán to Selseleh the Nile flows through Nubian sandstone, but near the ancient Syene a transverse barrier of granite and 'syenite' advances from the east, forming the boundary between Egypt and Nubia. This barrier extends eastwards for about 160 miles, forming a very irregular chain of barren hills 900-1300 ft. in height.

The Nile has forced a passage for itself through this hard rock, exposing to view at places the beautiful red felspar crystals which it contains, and forms a wild cataract at Assuán. Near the cataracts are the deserted quarries of the ancient Egyptians, where to this day we still
observe a number of unfinished gigantic obelisks, and columns half hewn out of the solid rock.

(2) The Arabian Desert. Parallel with the coast of the Red Sea, a broad and massive range of mountains, consisting of crystalline rocks (granite, syenite, diorite, porphyry, hornblende slate, gneiss, mica-slate, etc.), runs through the Arabian Desert, sending forth numerous ramifications into the interior of the country. At Hammâmat, on the caravan-route from Kôser to Thebes, we pass the quarries whence the dark-coloured stone (aphanite, diorite, and verde antico) used for the ancient sarcophagi and sphinxes was obtained by the Egyptian sculptors. Near the Red Sea, almost opposite the southern extremity of the peninsula of Sinai, rises the Gebel Dukhân, which yielded the beautiful red porphyry (porfido rosso) so highly prized by the Greeks and Romans at a later period, and used by them for vases, columns, sarcophagi, busts, and mosaics. The granite quarries of the Gebel Fatireh yielded both building stone and copper. Most celebrated of all, however, were the emerald mines of the Gebel Zebâra, situated on the Red Sea in the latitude of Selseleh.

This extensive range of mountains of crystalline formation, rising to a height of 6600 ft., of which those of the peninsula of Sinai form a counterpart, terminates towards the east in roof-shaped, stratified formations. At first there occurs a considerable stratum of Nubian sandstone, next to which we find a series of clayey and calcareous strata, identified by Figari-Bey with the Triassic and Jura formations, probably erroneously, as the collection of specimens of the rock at Florence shows that apparently the chalk alone is completely developed. These strata are succeeded by extensive masses of limestone, belonging to the nummulite formation, and stretching to the Nile. Among these last formations is found the pale yellow, brownish, and snow-white alabaster, a kind of limestone composed of nodulous masses, which was formerly quarried at the ancient Alabastron near Siût, and still occurs on the Gebel Urakam near Beni-Suêf. In the reign of Mohammed 'Ali this alabaster was largely used in the construction of his alabaster mosque (p. 261), and it was extensively exported in ancient times for the embellishment of buildings and for sculptural purposes. Blocks of it are even found among the ruins of the Oasis of Ammon.

These extensive mountains, with their numerous profound ravines and boldly shaped masses of rock, impart a most imposing character to the Arabian Desert. This region is by no means so destitute of vegetation as is usually supposed; for, although without oases, it contains, particularly in the N. part, a number of springs and natural cisterns, which are filled by the rare, but often copious, rains of winter.

(3). The Libyan Desert. This region again presents an entirely different character. It consists of an immense, monotonous, and stony table-land, 650-1000 ft. above the level of the Nile, extending between the Nile and the oases of Khârgeh, Dâkhel, Farâfra, and Bahriyeh. Throughout this vast area there occur neither mountains, nor valleys, nor even isolated hills of any considerable height; and there is no trace of crystalline or volcanic formations. The surface of the desert rises in gradations, each preceded by a broad girdle of isolated mounds, which have been obviously formed by erosion, the materials having been washed down from the adjoining plateau. The whole of this stony and absolutely unwatered plain, the monotony of which is only varied by a few solitary ranges of sand-hills, consists of nummulite limestone. In the direction of the oases it descends in precipitous slopes, furrowed with numerous ravines, and occasionally nearly 1000 ft. in height. The different strata of the earlier nummulite formation, as well as those of the upper chalk, are here exposed to view, and generally contain numerous fossils. The oases, particularly those of Dâkhel and Khârgeh, are remarkable for their fossil wealth. The soil of the deep depressions in which these oases lie, partly below the level of the Nile, consists of the variegated clayey or sandy strata of the upper chalk. The ground is so strongly impregnated with alum at places that it was thought worth while about
thirty years ago to erect manufactories for its preparation, but the undertaking was afterwards abandoned owing to the difficulties of transport. Numerous thermal springs well up from the upper strata of the chalk, and the soil thus irrigated is luxuriantly clothed with vegetation (see p. 64).

The barrier of Nubian sandstone which abuts on the valley of the Nile at Selenseleh extends far into the Libyan desert. It forms the south-western boundary of the oases of Khârgeh and Dâkkel, beyond which it stretches for an unknown distance into the heart of the desert. This formation contains silicified wood and iron and manganese ores in abundance.

About six days' journey to the W. of the oases begins a complete ocean of sand. As far as the eye can reach we discover nothing but a vast expanse of loose yellow sand, which generally forms itself into ranges of sand-hills, many miles in length, and occasionally rising to a height of 300 ft. or upwards above the level of the plain.

The oasis of Farafra lies in a recess eroded in the nummulite limestone, and enclosed by precipitous slopes, except on the S. side where there is an opening. To the N. and W. of Farafra extends the eocene limestone plateau as far as the neighbourhood of Siwa, between which oasis and Bahriyeh it is remarkable for its numerous basin-shaped and sharply defined depressions. These basins, especially those which are filled with salt-lakes, impart a peculiarly attractive character to the scenery. The whole of the desert around the Oasis of Ammon consists of recent tertiary deposits, the fossil wealth of which was once extolled by Herodotus and Eratosthenes.

Approximately speaking, the Libyan Desert consists of Nubian sandstone, the upper chalk, the nummulite limestone, and the more recent tertiary formations, arranged in this sequence, and extending in broad successive strips from S.S.E. to N.N.W.

The Oases (by Prof. P. Ascherson). In the midst of the Libyan desert, the most bleak and desolate part of the whole of the African Sahara, at a distance of several days' journey to the W. of the Nile, there have existed since hoar antiquity a number of highly favoured spots, which are abundantly irrigated by subterranean supplies of water, and richly covered with vegetation almost vying in luxuriance with that of the valley of the Nile. The Coptic word 'Wâh', according to Brugsch, is of ancient Egyptian origin, and signifies an inhabited station; in its Greek form 'oasis' (properly ὀασίς or Αἰασίς), the word is used as the geographical term for irrigated and cultivable spots, or islands of vegetation, in the midst of the stony and sandy ocean of the desert.

Four of the five Egyptian oases lie in a somewhat curved line drawn from S.E. to N.W., and converging at the S. end to the valley of the Nile: — (1) Wâh el-Khârgeh, i.e. 'the outer oasis' (already so named by Olympiodorus in the 5th cent. A.D.), or Oasis Major of antiquity, situated 3-4 days journey from Thebes or from Girgeh on the Nile. (2) Wâh ed-Dâkkeliyeh, or more commonly Dâkkel, i.e. the 'inner oasis' (also so named by Olympiodorus), 3 days' journey to the W. of Khârgeh, and about 6 days' journey from the valley of the Nile near Siût. (3) Farâfrâ (i.e. the bubbling springs), about 5 days' journey to the N.N.W. of Dâkkel, and 8-10 days' journey from the valley of the Nile near Siût. (4) Siwa, anciently the celebrated oasis of Jupiter Ammon, 16 days' journey to the W.S.W. of Alexandria and about 14 from Cairo. The direct route from Siwa to Farâfrâ (traversed by Rolfis and Zittel in 1874 in 10½ days) is little known as yet, as most European travellers make the long circuit towards the E. via — (5) Wâh el-Bahriyeh, i.e. 'the northern oasis', or Oasis Minor of antiquity, situated 5½ days' journey to the S.W. of Medinet el-Fayûm, about 4 days' journey from Behneseh in the valley of the Nile, 9 days from Siwa, and 5 days from Farâfrâ.

The oases always lie at a considerably lower level than the stony plateau of the desert, which rises above them in picturesque rocky precipices, and the oasis of Siwa is about 78 ft. below the sea-level.
The flat surfaces of these depressions do not always form a single cultivated area, but consist, even in the case of the smallest oases like Farafra, of a number of comparatively small parcels of cultivable soil, separated by belts of sterile ground. One of the large oases, like that of Kharga, when surveyed from the neighbouring heights, presents the appearance of a large expanse of desert, flecked with isolated spots of light and dark green, the former being fields of corn and other crops, and the latter palm-groves. These islands of vegetation, the extent of which depends on the copiousness of the springs in their midst and the amount of care used in the distribution of the water, have often since the time of Strabo been not inaptly compared to the spots on a panther's skin, but the simile applies to the oases individually, and not to those of the Libyan desert as a whole, as they are but few in number and very far apart.

As already observed, these Libyan oases owe their fertility to the copiousness of their water supply. Inexhaustible subterranean channels, or an immense reservoir, perhaps common to all the oases, are believed to connect them with the Nubian Nile, or possibly with the Sudán; and of this supply it is probable that a very limited portion only comes to the surface in the form of springs. Within the last twenty years Hasan-Elfendi, a well-digger from the valley of the Nile, and formerly servant to a French engineer, has sunk about sixty new wells in the oasis of Dakhel, some of which, though close to older wells, do not seem to diminish the copiousness of the latter. With the aid of this additional supply a large area of sterile soil has been brought under cultivation, and it is therefore probable that by means of Artesian wells, such as those sunk by the French in the Algerian oases, the extent of the cultivable soil might still be largely increased. The high temperature of the water, both in the natural springs and in the wells, shows that it comes from a great depth; and it is strongly impregnated with mineral ingredients, as in the case of the bath-springs of Ksar Dakhel and Bahriyeh (37° Fahr.) and the beautiful sun-spring (Ain Hammâm) at Siwa (23°), the curative properties of which, owing to their remote situation, are seldom utilised. At Bahriyeh the stratum from which the water more immediately bursts forth seems to lie at no great depth below the surface of the soil. The thermal waters of Dakhel contain iron, and, like those of Farafra and Kharga, are not unpleasant to drink when cooled; but the water of Siwa is brackish and nauseous to the taste. The wells are generally very deep (90-230 ft. and upwards), and in ancient times the inhabitants of the oases, as we are informed by Olympiodorus, were celebrated for their skill in sinking them. The invasion of the Arabs, however, was succeeded by several centuries of barbarism, during which the art of boring wells was well nigh forgotten; many wells were filled up, and extensive tracts of cultivated land, still traceable by the old divisions of the fields, were abandoned; but, as above mentioned, the practice is beginning to be revived. The considerable force with which the water comes up from its profound reservoirs enables the inhabitants to construct wells or artificial dams on the highest parts of the oases. The fields are always arranged in terraces of picturesque appearance, over which the fertilising element is conducted downwards in succession, so that the laborious system of sakiyehs and shadhâfs used in the valley of the Nile is dispensed with. Among the southern oases, on the other hand, we frequently observe extensive water-conduits, carried by artificial embankments to long distances for the purpose of conveying the precious liquid over sterile salt ground to good soil, or necessitated by the requirements of the curiously involved rights of property. These conduits not infrequently cross each other at different levels. The springs are generally the property of the communities, rarely that of wealthy individuals; and it is in proportion to their number, and that of the date-palms, that the inhabitants have to pay taxes while the soil itself is nominally free. Where the springs are common property, the periodical distribution of the water has from time immemorial formed the subject of statutory regulations. The cultivable land consists of open fields and of gardens,
which are carefully enclosed with earthen walls about 6 ft. in height, crowned with twisted palm-leaves, for the purpose of keeping out intruders, or are more rarely hedged in with branches of the șunt or other thorny plant.

In the oases, as in the valley of the Nile, a regular rotation of winter and summer crops is observed (comp. p. 72), although, with their uniform supply of water, there is not the same necessity for it. The winter crops are wheat and barley; those of summer are rice, dura (Sorghum vulgare), and a small proportion of dukhn (Penicillaria spicata), while in Dakhel and Khârgeh indigo is grown in considerable quantities. Cotton is also cultivated to a small extent, but the yield is hardly adequate for even the local requirements. By far the most important fruit yielded by the gardens is that of the date-palm. The delicious dates are very superior to those of the Nile valley, and they form, particularly at Dakhel and Siwa, the only important article of export. Olive-trees also occur in all the oases, especially in Farâfra, Bahrîyeh, and Siwa, where they yield a considerable quantity of oil, besides which there are apricots, oranges, lemons, and melons, but very few other fruit trees. The ordinary vegetables grown in the valley of the Nile, such as lettuces, cabbages, and ƙulkâş, are never met with; nor have the recently introduced sugar-cane and the beautiful lebbek acacia (p. 76) yet found their way to the oases. The venerable șunt-trees (p. 77) form a very characteristic feature of the southern oases. They generally shade the wells, or the sites of old wells now filled up owing to neglect, and they indicate the course of the water-conduits to the still distant traveller.

The most prominent of the indigenous plants of the oases is the ƙoshr (Calotropis procera), which is also common on the banks of the Nile in Upper Egypt. It is a broad-leaved shrub or small tree, attaining a height of 6 ft. or more, with a copious milky and very poisonous sap, and round fruit of the size of a large apple containing woolly seeds, and known on the banks of the Dead Sea as the 'apple of Sodom'.

The indigenous animals of the oases are much fewer in number than those of the valley of the Nile. The only large mammal that occurs is the gazelle, which is also found in the sterile parts of the Libyan desert. The only beasts of prey are several varieties of jackals (Arab. dib) and foxes (Arab. ta'leb). To the latter species belongs the pretty fenek, which is only half the size of the European fox, yellowish-grey in colour, and with ears longer than the breadth of the head. Hyenas seem to be unknown, except in Bahrîyeh. The timid ostrich rarely visits the Libyan oases.

The domestic animals kept by the inhabitants of the oases consist of a few horses, numerous donkeys of a small and weakly type, which will not bear comparison with their strong and active congeners of Alexandria and Cairo, and a few oxen, sheep, and goats. Buffaloes are also kept in Khârgeh and a few in Bahrîyeh. It is surprising how few camels are to be found in the oases, but it is said that the bite of a certain fly endangers their lives in the summer months. Turkeys and chickens are plentiful.

The population of the oases is not of a uniform character. According to Brugsch, the original inhabitants were Libyan (or Berber) tribes, but after the oases were annexed to Egypt many new settlers were introduced from the valley of the Nile and from Nubia. The Berber nationality of the inhabitants of the oasis of Ammon, notwithstanding its having been connected with Egypt for several thousand years and its reception of immigrants from the west in the middle ages, is still very marked, while the population of the other oases, like that of the Nile valley, has adopted the Arabic language. In Bahrîyeh (where, besides the natives of the place, there is a colony of Siwanese who still speak the Berber dialect) and Farâfra the physiognomic type of the Berber race still predominates; in Dakhel the features of most of the population are not materially different from the fellâh type; while in Siwa, through which the great caravan route from Alexandria and Cairo via Murzuk to the Sûdân leads, and in Khârgeh, which lies on the route to Dâr-Fûr, the

Baedeker's Egypt I.
admixture of negro blood imparts its unmistakable stamp to the features of the inhabitants. There are no Coptic settlers in the oases, but they are sometimes temporarily met with there in the capacity of merchants or government clerks; and Europeans are still more rarely encountered. The population of the oases is comparatively small (Khârgeh, according to Schweinfurth, possessing 6340 souls; according to Rohlfs, Dakhel 17,000, Farâfra 320, Bahriyeh about 6000, and Siwa 5600), and the narrow limits of the cultivable soil prevents it from increasing; but a more auspicious era may now be in store for these isolated communities if they follow the example set by the inhabitants of Dakhel by sinking fresh wells and thus extending their territory. As a rule, even in the most favourably circumstanced oasis of Dakhel, the physique of the population is poor and stunted, owing partly to their almost exclusive vegetable diet (of which Prof. Virchow has found evidence in the condition of the teeth of skulls from the ancient tombs of Dakhel), and partly to the unhealthiness of the climate, which has been notorious from the remotest antiquity. In the early Egyptian period, and also during the domination of the Roman emperors, the oases were generally used as places of banishment, partly because their isolation rendered escape well nigh impossible, and partly perhaps because the climate was expected to aggravate the misery of the exiles. The overplus of the water used for agricultural purposes forms a series of marshes, ponds, and lakes on the saline soil, and these last contribute greatly to the picturesqueness of the landscape in Siwa, which is further enhanced by a number of isolated rocky heights; but the exhalations of these watery tracts in summer are very unhealthy. Within the last few centuries this evil has been aggravated by neglect, and the artificial swamps required for the rice cultivation are fraught with additional danger. Some measure for utilising the superfluous water, or at least rendering it harmless, is perhaps more urgently needed for the well-being of the oases than an increase of the water supply. Under present circumstances Europeans had better abstain from visiting the oases from the beginning of April till the end of November, but in the winter months they may visit them safely. With regard to the construction of the dwellings in the oases it may be remarked that they all have more or less the character of town-houses, as, even at the present day, the unsafe state of the country requires them to be strongly built in close proximity to each other. Instead of the low hovels of the Nile valley, we therefore find in all the oases houses of several stories in height, somewhat rudely built of mud (and sometimes of stone, as at Bahriyeh) and palm logs. A curious feature of these towns (recurring in the other oases of the Sahara also, as, for example, in the famous commercial town of Ghadames, to the S.W. of Tripoli) is the covered streets running under the upper stories of the houses, and sometimes of such length as to be perfectly dark. As, moreover, like most Oriental streets, they are generally crooked, it is hardly prudent for a stranger to venture into them without a guide. The main street of the town of Siwa winds in this manner up the rocky eminence on which the houses are built, and the place is indeed in this respect one of the most curious in the East.

As is usually the case with places lying at a distance from the outer world, the government of these communities is in the hands of the most respectable and wealthy members; and at Farâfra this paternal oligarchy is under the control of no government. Even at Siwa the Mudir appointed by the Egyptian government finds it difficult to assert his authority, and it is only the interminable and sometimes bloody quarrels of the leading parties of the Lifâyeh and the Gharbin (of whom the latter, as the name indicates, are immigrants from the west) that afford him an opportunity of interposing in his judicial capacity. In the other oases also, down to the middle of the present century, the power of the government officials was always to a great extent paralysed by that of the obstinate sheiks; but after the repression of the Beduin revolt Sa'id Pasha succeeded in firmly establishing the viceregal authority in the oases also. Since that period peace has reigned throughout the oases, and as the pressure
of taxation is not nearly so heavily felt here as in the valley of the Nile, the inhabitants are comparatively wealthy. Of late years, however, they have occasionally suffered from the predatory attacks of nomadic marauders from the Cyrenaica, and even by the Arabs of the Nile valley. A new disturbing element, too, has unfortunately sprung up within the last ten years in Siwa, Bahriyeh, and Farâra, in the establishment and rapid spread of the Senûsi order of Mohammedans, by whom the introduction of all Christian culture is bitterly opposed. This religious order was founded about the middle of the present century by Sidi Snûsi (or Senûsi, as the name is pronounced in Eastern Africa, where the vowels are more distinctly pronounced than by the Moghrebins of Algeria and Morocco), a fâlib (or scripture scholar) of Temsén in Algeria, for the purpose of restoring the observance of Islâm to its original purity, and, above all, of warring against Christianity. Although the members of the order are regarded by other Mohammedan sects as Khoms, or heretics, they have rapidly acquired great power in the districts surrounding the eastern Sahara, and, like the Jesuits in Christian countries, have amassed considerable wealth, their principal treasury being at Sarabûb, the chief seat of the order, two days' journey to the W. of Siwa. Sarabûb is also the residence of Sidi-Mâhdi, the general of the order and son of its founder, who has succeeded in obtaining certain privileges from the Sultan of Turkey. At Siwa he has established a richly endowed Zâwiyeh, or school of religion; at Farâra the Zâwiyeh is all-powerful, having within the ten years of its existence bought up a considerable part of the landed property there; and at Bahriyeh the order has succeeded in monopolising the schools, so that the rising generation may be expected to succumb to their influence. The hostility of this new sect to all modern culture is obviously a serious obstacle to the progress which the Egyptian government is now anxious to promote.

**Climate.** The climate of Egypt is to some extent influenced by the great artery on which the country's life depends, but the desert may be regarded as its chief regulator. But for the immense absorbing power of the desert the winter rains of the Mediterranean regions would extend far up the Nile valley; and, but for its proximity, the great expanse of nearly stagnant water at the mouths of the Nile, covering an area of upwards of 2500 sq. M., would render the Delta one of the most unhealthy and uninhabitable regions in the world. The air of the desert is pleasantly cool, and possesses the most refreshing and health-giving qualities; indeed to borrow Bayard Taylor's expression, it is a true 'elixir of life'. To the delicious purity of the air† of the desert a kind of parallel is afforded by the excellence of the water of the life-giving Nile.

Rain, throughout a great part of Egypt proper, is a very rare phenomenon. At Cairo the fogs of winter are rarely condensed into showers of any duration, and the rain occasionally blown inland from the sea seldom lasts long. The unusual frequency of rain during the last few years has been absurdly attributed to the great increase of the area planted with trees, a boon which the country owes to the government of the Khedive Isma'il. The winters of these same years were also unusually wet in Greece and other regions

† It may be noticed here that the air is largely impregnated with saline particles from the limestone rocks of the desert, and it is chiefly to their presence that the beneficial effect of the air on the respiratory organs is supposed to be due.
adjoining the Mediterranean where but little rain generally falls, so that the weather of these exceptional seasons was doubtless affected by unknown climatic influences extending far beyond the limits of Egypt. A perceptible change in the climate, however, has been caused by the recent formation of the extensive Bitter Lakes in the Isthmus of Suez; but their influence merely affects their own immediate neighbourhood. The whole of the base of the Delta lies within the region of the winter rains, which from January to April are blown inland by the then prevailing sea-breezes to a distance of 30-50 English miles. In Upper Egypt, on the other hand, rain is almost unknown, and it is not uncommon to meet with adult natives who have never seen a single shower. In that part of the country a thunder-shower, or perhaps the extreme fringe of the tropical rains, falls at rare intervals in April or May to the no small wonder of the natives. These showers are more frequent above the first cataract, and they recur regularly a little to the N. of New Donkola or 'Ordeh (19° N. lat.), while to the S. of Shendi there is annually a short wet season, with its concomitants of malaria and fever. The rainfall in the deserts on each side of the Nile is very unequally distributed, but of these regions also it is approximately true that rain is of very partial and sporadic occurrence. Thus there are vast tracts of the Libyan desert which for years together derive their sole moisture from the damp north and north-westerly winds, and when the wind is in any other quarter they are even deprived of their nightly refreshment of dew. On the Arabian side the case is materially different. There, along the coast of the Red Sea, runs a range of mountains 4800-10,000 ft. in height, where occasional, but very violent showers fall between October and December, hollowing out the deep valleys which descend to the Nile and often accompanied by hail. Although these desert rains are of too short duration permanently to affect the character of the country, their fertilising effect on the light and loose soil is far greater than if they had to penetrate a heavier soil covered with thick vegetation.

As the year is divided in the valley of the Nile by the rise and fall of the river into two well-defined seasons, one when the soil is moist and easily cultivated, and the other when nothing will grow without artificial irrigation, so also it may be divided in accordance with the prevalent winds into two different periods of eight and of four months. North winds prevail as a rule from the middle of June to the middle of February, and south (S.E. and S.W.) during the rest of the year (while in the Red Sea the prevalent winds at these seasons are almost exactly in the reverse directions). Early in the afternoon of a day during the second of these seasons the wind, as is the case in all tropical regions, sometimes rises to a hurricane, in which case it is called a 'Samūm'. Of this wind there are two or three different varieties: (1) It is called a 'Shōbeh' when it blows chiefly from the east, and (2) a
'Merisi' when it comes directly from the south. In the latter case it is also sometimes called a 'Khamsin', but this name more properly applies to the very hot, dry, and dust-laden winds which frequently blow unremittingly for one or two whole days together, and render the climate peculiarly trying in March and April (comp. p. 2).

The name Khamsin, signifying 'fifty', is applied to these winds in consequence of the fact that they prevail only during a period of fifty days before the summer solstice, after which they invariably cease. The wind to which the name is applied in winter affords but a feeble idea of the Khamsin of the hotter season, which forms the only disagreeable feature of the Egyptian climate, and one from which there is no escape. The impalpable sand finds its way into the most carefully closed rooms, boxes, and even watches, and the parching heat is most destructive to the blossoms of fruit-trees.

In accordance with the Temperature the Egyptian year may also be divided into two seasons, a period of hot weather, lasting eight months (April to November), and a cool season of four months (December to March). Throughout the whole country the heat gradually increases from April till the middle or end of June, and many of the superstitious natives believe that a perceptible freshening of the air takes place on the night of the 'dropping' (17th June; see p. 237). The maximum heat in the Delta is about 95° Fahr. in the shade, in Upper Egypt about 109°. At Cairo the thermometer sometimes rises as high as 104° during the prevalence of the Khamsin. In December, January, and February the temperature is at its lowest, falling in the Delta to 35° and in Upper Egypt to 40°. The quicksilver rarely sinks to the freezing-point, except in the desert and at night. On 16th Feb. 1874, during Rohlf's expedition in the Libyan desert, the thermometer fell to 23°. About sunrise the traveller will sometimes find a thin coating of ice in his basin, or on neighbouring pools of water, where, owing to the rapid evaporation, the temperature falls several degrees lower than in the surrounding air. As a rule, throughout the whole country, and at every season, the temperature is highest from 1 to 5 p.m., and lowest during the two hours before sunrise. The result of the observations of ten years has been that the mean temperature in the Delta and at Cairo is 55° Fahr. in winter, 80° in spring, and 89° in summer and autumn; on the coast near Alexandria 58° in winter, 86° in spring, and in summer 79° only. At Alexandria the summer days are much cooler and the winter nights much warmer than at Cairo, but the moisture of the air makes the heat much more oppressive. In the drier air the constant absorption of moisture from the skin keeps the body at a much lower temperature than that of the surrounding air, and thus renders the great heat of the desert much more bearable than one would expect.

As three different thermometers are used in Europe, — those of Fahrenheit, Celsius, and Réaumur (1° F. = 5/9° C. = 4/9° R.), — the traveller may find the following table convenient for reference.
Agriculture. I. Capabilities of the Soil. In the time of the Pharaohs the Egyptian agricultural year was divided into three equal parts, the period of the inundation (from the end of June to the end of October), that of the growing of the crops (from the end of October to the end of February), and that of the harvest (from the end of February to the end of June). At the present day there are two principal seasons, corresponding to our summer and winter, besides which there is a short additional season, corresponding with the late summer or early autumn of the European year. The land is extremely fertile, but it is not so incapable of exhaustion as it is sometimes represented to be. Many of the crops, as elsewhere, must occasionally be followed by a fallow period; others thrive only when a certain rotation is observed (such as wheat, followed by clover and beans); and some fields require to be artificially manured. Occasionally two crops are yielded by the same field in the same season (wheat and saffron, wheat and clover, etc.). The recent great extension of the cultivation of the sugar-cane, which requires a great deal of moisture, and of the cotton-plant, which requires extremely little, has necessitated considerable modifications in the modes of irrigation and cultivation hitherto in use. As both of these crops are of a very exhausting character, the land must either be
more frequently left fallow, or must be artificially manured. The industry and powers of endurance of the Egyptian peasantry are thus most severely tried, and no imported agricultural labourers could ever hope to compete with them, as has sometimes been thought possible. Although the homogeneous soil of the valley of the Nile breaks up of its own accord after its irrigation, and requires less careful tilling and ploughing than ours, it exacts more uniform attention throughout the whole year, while its irrigation involves a great additional amount of labour to which the European farmer is quite unaccustomed. The increasing use of artificial manures, which were formerly but little known, is another source of great labour. As the country is thickly peopled and supports numerous cattle, there ought to be no lack of natural manure; but, as the dung of the domestic animals is used as fuel throughout Egypt, where wood is very scarce, that of pigeons (p. 79) is almost the only kind available for agricultural purposes. An abundant source of manure is afforded by the ruins of ancient towns, which were once built of unbaked clay, but now consist of mounds of earth, recognisable only as masses of ruins by the fragments of pottery they contain. Out of these mounds, which conceal the rubbish of thousands of years, is dug a kind of earth sometimes containing as much as 12 per cent of saltpetre, soda, ammonia, and other salts. This manure possesses extremely fertilising properties, but if used at the wrong time or place is very injurious to the soil.

II. Irrigation. The whole of the cultivable soil of Egypt is divided into two classes in accordance with its relative height above the surface of the Nile: (1) The 'Rei', or fields which retain their moisture after the subsidence of the overflow long enough (or nearly long enough) to admit of the ripening of the crop without additional irrigation; (2) The 'Sharâki', or those which always require artificial irrigation. The irrigation is effected by means of: (1) The 'Sâkiyeh', or large wheels (rarely exceeding 30 ft. in diameter), turned by domestic animals of various kinds, and fitted with scoops of wood or clay, resembling a dredging-machine. (In the Fayûm a peculiar kind of water-wheel is in use, so contrived as to be turned by the weight of the water.) According to Figari-Bey, the number of sâkiyehs used in Central and Lower Egypt in 1864 was about 50,000, which were turned and superintended by 200,000 oxen and 100,000 persons, and which irrigated 4,500,000 acres of land. (2) The 'Shâdûf', an apparatus resembling that of an ordinary well, set in motion by one person only, and drawing the water in buckets resembling baskets in appearance; as a substitute for the sâkiyeh several shâdûfs are sometimes arranged one above the other. (3) When it is possible to store the water in reservoirs above the level of the land to be watered, it is allowed to overflow the fields whenever required. This is the only method available in the oases, where fortunately the water rises from the springs with such force.
AGRICULTURE. Agricultural Seasons.

as to admit of its being easily dammed up at a sufficiently high level. (4) Pumps driven by steam are also used, particularly when a large supply of water is required, as in the case of the sugar-plantations on the 'Gefs' of the Nile in Northern Egypt, where they are seen in great numbers. (5) Lastly the 'Tābūt', a peculiar, very light, and easily moved wooden wheel, which raises the water by means of numerous fans, is used in the Lower Delta only and in places where the level of the water in the canals remains nearly the same. In order to distribute the water equally over flat fields, they are sometimes divided into a number of small squares by means of embankments of earth, 1 ft. in height, which, owing to the great plasticity of the Nile mud, are easily opened or closed so as to regulate the height of the water within them.

Before describing the different Egyptian agricultural seasons, we must first observe that they are no longer so sharply defined as they probably were in ancient times. Besides the old crops, there are now four or five others of recent introduction, and so extensively grown as in some measure to revolutionise the modes of cultivation. These are maize, rice, the sugar-cane, cotton, and indigo. (This last plant was known to Pliny, but it was probably grown in his time only to a very limited extent.) The agrarian measures of the Egyptian government are all directed towards the emancipation of farming from its dependence upon the inundations, in order that every crop may be cultivated at the season in which it thrives best. Of late years the present Khedive has constructed embankments and various apparatus for the regulation of the water supply, and laid the foundation of others, which vie in importance with the greatest ancient works of the kind; and it is these undertakings, tending to develop the enormous agricultural resources of the country, that constitute the chief merit of his reign.

III. Agricultural Seasons. (1) The Winter Crop, or 'Esh-Shitāwī', grown exclusively on the 'Rei' land (p. 71), is sown immediately after the subsidence of the inundation, which takes place progressively from S. to N. In Upper Egypt seed-time accordingly begins as early as the middle of October, in Central Egypt (from Siūt to Cairo) at the beginning of November, and in the Delta about the end of December. The ground is seldom prepared for sowing by the use of the plough. The seed is scattered over the still soft and moist soil, and is then either pressed into it by means of a wooden roller, beaten into it with pieces of wood, or trodden in by oxen. Throughout the whole country a period of four

† The Agricultural Implements of the Egyptians are exceedingly primitive and defective. The chief of these is the plough (mihrāt), the form of which is precisely the same as it was 5000 years ago; and the traveller will recognise it on many of the monuments and in the system of hieroglyphics. It consists of a pole about 6ft. long, drawn by an ox, buffalo, or other beast of burden, attached to it by means of a yoke, while to the other end is fastened a piece of wood bent inwards at an
months elapses between seed-time and the completion of the harvest. The winter harvest is, therefore, over in Upper Egypt about the middle of February, in Central Egypt about the middle of March, and in the Delta towards the end of April. In Upper and Central Egypt this is the most important harvest of the whole year. The principal crop everywhere is wheat (occupying 50% of the fields in Upper Egypt and 30% in the Delta), next to which are barley (in the proportion of 10% and 14% in these regions respectively), clover (10% and 24% respectively), and broad beans (20% and 12% respectively).

(2) The Summer Crops ('Es-Sefi' or 'El-Kedi') are much more varied than those of winter, but they are comparatively unimportant in Upper and Central Egypt, as the cultivable land in these regions is very narrow, and belongs chiefly to the 'Rei' category, two-thirds of it being under water during summer. In the Delta, on the other hand, summer is the farmer's most important season. The vegetation with which its whole surface is densely clothed in June and July is marvellously rich and beautiful, thousands of magnificent trees clustered in groups afford delightful shelter from the fierce rays of the sun, and the eye ranges over an immense expanse teeming with luxuriant crops. Another charm of the country in summer consists in its abundantly stocked gardens and orchards: but of all these attractions the traveller who, like a bird of passage, merely seeks refuge in Egypt from the cold and rains of a northern winter cannot possibly form any adequate idea. At this season every district of Egypt has its favourite crop; in Upper Egypt, between Assuán and Esneh, the penicillaria, and in the Delta rice are chiefly cultivated; while the peculiar looking indigo-plant, a rich profusion of grapes, and a plentiful growth of cucumbers and melons are seen in every part of the country. The summer cultivation, of which the 'Sharâkî' land alone is capable, is carried on from April to August; but many of the plants grown at this season require a longer period of development, extending throughout the whole of the autumn and even part of the winter. This is particularly the case with the...
rarely seen in Egypt, but common in the Sûdân and Nubia, is the tropical Sesame from which oil is largely prepared.

4. Farm Produce of Egypt. The following is an enumeration of all the most important industrial crops cultivated within the boundaries of Egypt. On hearing the names of those with which he is unacquainted, the traveller may identify them with the aid of the Egyptian names given below. The various products are enumerated in the order of their importance.

a. Cereals. 1. Wheat (kamh; that from the Delta, kamh bahri; from Upper Egypt, kamh sa'di). 2. Maize (dura shami, i.e. Syrian; called in Syria dura only). 3. Barley (sha'ir). 4. Rice (ruz), cultivated only in the lower part of the Delta of Alexandria and Rahmâniyeh, as far as Mansûra, Zakâzîk, Sâlihiyeh, and in the Wâdi Tumilât, and also in the Fayûm and in the oases of the Libyan desert. 5. Sorghum vulgare (dura beledi, i.e. dura of the country; simply called dura in the Sûdân; Ital. sorgho, Engl. caffecorn, and the Tyrolese sirc). 6. Penicillaria (dakhm). 7. Sorghum saccharatum

c. Green Crops. 1. White Egyptian clover (bersim). 2. Foenum Græcum (helbeh), frequently ground into flour and used in making bread; also generally eaten raw by the natives in winter; not to be confounded
Trees and Plantations.

Trees and Plantations.

e. Textile Materials. 1. Cotton (koṭa), introduced from India in 1821, but extensively cultivated since 1863 only. 2. Flax (kṛtān). 3. Hemp (til).

f. Dyes. 1. Indigo argentea, a peculiar kind (nitē), 2. Lawsonia inermis (henna), used for dyeing the nails, the palms of the hands, and the soles of the feet yellowish red (a very ancient custom, which has recently been prohibited); properly a tree, but, like the tea-plant, cultivated in fields in the form of a dwarfed bush. 3. Saffron (karbat or 'osfur). 4. Madder (fühl), cultivated in small quantities. 5. Reseda Luteola (biya), used as a yellow dye.

i. The Sugar CANE (kasab es-sūkār) has of late been largely cultivated in the N. part of Upper Egypt for the purpose of being manufactured into sugar. An inferior variety, which is eaten raw, introduced from India in the time of the khalīfs, is cultivated in every part of the country.

A variety of other vegetables are cultivated in small quantities in gardens, exclusively for the use of European residents.

5. Trees and Plantations. Under the auspices of the present Khedive, new avenues and parks have been so extensively planted that Egypt will soon present a far greener and more richly wooded appearance than formerly. In ancient times every square foot of arable land seems to have been exclusively devoted to the cultivation of industrial crops, the natives preferring to import from foreign countries the timber they required for ship-building purposes, and probably also the small quantity employed in the construction of their temples. The best proof of the scarcity of good timber in Egypt is afforded by the fact that sycamore-wood, one of the worst possible kinds owing to the knottiness and irregularity of its grain, has been laboriously manufactured into coffins and statues. Muḥammed 'Ali, a great patron of horticulture, at one time offered prizes for the planting of trees, but his efforts were unattended with success, as the climatic and other difficulties at-
tending the task were then but imperfectly understood in Egypt. His successors were sworn enemies to trees of every kind, and they were content that their palaces should be exposed to the full glare of the sun. The Khedive Isma'il, however, at length revived the plans of his celebrated ancestor, and by the engagement of M. Barillet (1869), superintendent of the gardens of Paris, one of the most skilful landscape-gardeners of the day, introduced an entirely new feature into Egyptian scenery. This enterprising and able man unfortunately died (1874) before all his plans had been carried out, but the eye of every new-comer will rest with pleasure on the parks and gardens for which Egypt is indebted to him. While, for example, the traveller had formerly to ride all the way to the Pyramids over sterile soil, exposed to the scorching rays of the sun, he now drives comfortably thither in a carriage on a well-shaded road. M. Barillet's most important works are the Ezekiyeh Garden at Cairo, the extensive pleasure-grounds at Gezireh, and the plantation of trees which shades the roads on the left bank of the Nile, opposite the city. Hundreds of thousands of trees were planted within a few years, and their annually increasing shade has converted many of the dusty and stifling roads in and around Cairo into pleasant promenades. The finest of all these trees, both on account of its unbrageousness and the excellence of its wood, and one which thrives admirably, is the lebbek (Albizzia Lebbek), which has long been erroneously called by travellers the acacia of the Nile (the latter being properly the sunt tree). Within forty years the lebbek attains a height of 80 ft. and a great thickness, while the branches project to a long distance over the roads, densely covering them with a dense leafy canopy within a remarkably short time. Thus, an avenue planted in 1866 near the German Protestant church already forms a complete arcade over the road. Another very valuable and interesting property of the tree is, that cuttings consisting of branches more than a foot thick, and even portions of the trunk, will strike root and thrive, while in the case of most other trees the cuttings must consist of mere twigs. In the course of a single summer the shady avenues leading to the Pyramids were thus formed. The lebbek was introduced from the E. Indies during the régime of Mohammed 'Ali, and out of four hundred other species of trees imported at the same time it has pre-eminently asserted its claim to naturalisation in the land of the Pharaohs. About two hundred different kinds of trees, chiefly of E. Indian origin, are now planted in the new parks of the Khedive (about twenty in number), and they are constantly multiplied in nurseries laid out for the purpose (under the superintendence of M. Delchevallerie, a Belgian, the director of the gardens). The most important of these are the magnificent 'Flamboyer des Indes' (Poinciana pulcherrima) and the rapidly growing Eucalyptus, both of which bid fair to occupy a very prominent position in the future arboriculture of Egypt.
The commonest trees of an earlier period which the traveller will encounter in every town in Egypt are the following: — The Acacia Nilotica (sunt), the thorn-tree of antiquity, the pods of which, resembling rosaries (gârâv), yield an excellent material for tanning purposes. Next to the palm, this is the tree most frequently seen by the way-side and in the villages. The Acacia Farnesiana (fatneh), with blossoms of delicious perfume. The sycamore (gimmêz), ancienly considered sacred. The zizyphus, or Christ’s thorn-tree (nebk). Tamarisks (târfa; not to be confused with tamarinds). The Parkinsonia (sîsebân, a name also applied to the wild Sesbania shrub). Mulberry-trees (tâd), in lower Egypt only. Carob-trees, or bread of St John (kharrâb). The cypress, olive, poplar, plane, myrtle, Aleppo pine, Shimus, Melia, and various fig-trees of Indian origin are of less frequent occurrence.

Among the fruit trees the most important is the date-palm (nakhteh; the date, balāh; the rib of the leaf, gerid; the leaf, lif; the points of the leaf, saʿaf; the crown, gummâr). There are no fewer than twenty-seven kinds of date commonly offered for sale. The largest attain a length of three inches, and are called iibrîm; or sunkhâti, as they come from N. Nubia. The Beduins offer for sale at the hotels a kind of date-preserve packed in what professes to be gazelle-skins, but is usually goats’ leather (âqîbî). Palm-wine (legbi) obtained by boring the heart of the crown of the palm, whereby the tree is killed, is met with in the oases only. Excellent brandy, however, is distilled from the fruit. The value of the dates exported annually amounts to about one million francs only, as they realise too high a price in the country itself to remunerate the exporter. The date-palms blossom in March and April, and the fruit ripens in August and September. Fresh dates are rough in appearance, blood-red or pale yellow in colour, and harsh and astringent in taste. Like the medlar, they become more palatable after fermentation has set in.

The vine thrives admirably in Egypt, and grapes (ânâb) abound from July to September. Wine was extensively made from them in ancient times, and this might still easily be done, were it not that Egypt is already amply supplied with cheap and excellent wines from every part of the Mediterranean. The vine blossoms in March and April, like the palm, and the grapes ripen in June and July. Oranges are abundant and cheap (the harvest beginning in September), and so also are mandarins and lemons (the small and juicy fruit of the Citrus limonium); citrons, and cedros are of less frequent occurrence. Among other fruit-trees we may also mention the pomegranate (rummân), which is specially cultivated for the benefit of the Turks, who are very partial to them, and which yields a handsome return. Apricots are common, but quite destitute of flavour, and the same remark applies to the peaches (khôkh); almonds (dûz) are also frequently seen. Throughout the whole of Lower Egypt figs (tîn) abound in summer, and the cactus-hg (tîn-shôk) is also a favourite fruit. Apples, quince, pears, and plums abound, particularly in the region of Girgeh and in the Fayûm, but these last are perfectly tasteless; these fruits, moreover, are so abundantly brought to the market from the Mediterranean regions that no attempt is made to extend their cultivation in Egypt. Within the last ten years the banana (môz) has gradually become naturalised in Egypt, but it is still a somewhat expensive fruit (1 1/2 francs per pound). A delicacy imported from the W. Indies for the benefit of strangers is the Anona squamosa (kishîfâ, i.e. cream). Pine-apples are very rarely seen. Fine tropical fruits of this kind (including also the mango) are only to be found in the gardens of the Khedive, where, however, their capability of acclimatisation has been abundantly proved.

The principal decorative plants are roses (ward; of which the Rosa Damascena moschata and the sempervirens are specially cultivated for the manufacture of ottol of roses), oleanders of astonishing height, carnations, and geraniums, all of which have been grown in Egypt from a very early period. A bushy tree, which in its half leafless condition attracts the attention of every traveller on landing at Alexandria in winter, is the Poinsettia pulcherrima. The insignificant blossom is surrounded by leaves
of the most brilliant red, presenting a very picturesque and striking appearance. Natural forests, or even solitary wild trees, are never met with in the valley of the Nile or in the valleys of the northern deserts. On the embankments and on the brink of the rivers we occasionally find wild tamarisks and willows (ṣufsīf), but always in the form of mere bushes. In the desert-valleys of Upper Egypt, however, grow five different kinds of acacia and several other shrubs of inferior interest. Another tree of considerable importance is the beautiful dhūm palm, which grows wild in the valleys of S. Nubia and even in the oases, but those which occur in N. Egypt are always planted. Even in Lower Egypt it is not met with beyond 27° N. latitude (indeed hardly beyond Keneh), and attempts to acclimatise it at Cairo have never been successful. Lastly we may mention two circumstances which throw some light on the botanical position of Egypt. One of these is, that the commonest weeds associated with the industrial crops of Egypt, and which occur nowhere else, are of E. Indian origin; and the other, that numerous plants cultivated by the Egyptians are only now to be found in their wild condition in the central regions of Africa.

The Animal Kingdom in Egypt. (By Dr. M. Th. v. Heuglin.)

I. Domestic Animals. The Horse (ḥoṣān; horses, ḫēl; mare, faras; foal, muha; the rider ḫaqqūd) was probably unknown to the most ancient Egyptians, and was first introduced by the Hyksos (p. 88). It is now to be met with throughout the whole of the valley of the Nile, and even in the oases. Owing to want of proper care and insufficiency of food, the Egyptian horses are generally of insignificant appearance.

The Egyptian Donkey (Arab. ḫomār; comp. p. 11) is noted for its power of endurance, its spirited temper, and its moderate requirements.

The Mule (Arab. baghl, or baghleh), although admirably adapted for carrying heavy burdens, is less frequently bred in Egypt, but is sometimes imported from Abyssinia, Spain, and other parts of southern Europe, Syria, and Asia Minor.

The Camel (Arab. gemel, fem. nāka; the camel for riding, ḫagin), was not unknown to the ancient Egyptians, as it is mentioned in several papyri, but it was probably rarely used, particularly during the early monarchy. During the hottest weather the camel can dispense with water for three days or more, while its scanty provender consists of a few handfuls of maize or beans, of the dry and wiry desert grass, of straw, or of prickly acacia leaves.

The Buffalo (Arab. gūmūs) seems to have been long domesticated in Egypt. Its flesh is not esteemed, but the cows yield milk and butter. The buffalo requires little food and attention, but does not thrive except in swampy ground or in the vicinity of flowing water. The hide forms strong and valuable leather.

The Ox (Arab. tūr; cow, bakara; calf, 'iql; milk, leben; sweet milk, ḥalib; sour milk, hāmed or rūb) thrives in Egypt on the dry soil of the arable land, and is also reared in the oases. Down to the year 1863 Egypt possessed a long-horned race of oxen which is often represented on the monuments; but the breed was entirely swept away by a cattle-plague during that year. The fellāhin make both butter and cheese from the milk. Instead of a churn they use a leathern bag suspended from a rope (kirbeh).

The Goat (Arab. mēṣa or 'anseh; he-goat, tēs; kid, gīdə) is to be found in every cottage on the banks of the Nile, and in every tent in the desert. Its milk is palatable and wholesome. The hide makes durable and waterproof water-bags.

Sheep (Arab. khurṣ, na'gah, ghanam, rams; ram, kebēh) are almost as generally kept by the Egyptian peasantry as goats, the most esteemed being the fat-tailed varieties (ovis pachyceara recurvicauda and ovis platyura). The wool of the Egyptian sheep is harsh and wiry, while many of those in the desert have stiff, straight hair, and are altogether destitute of wool.
The Pig (Arab, khanzir), which was regarded by the ancient Egyptians as the emblem of Typhon, and is considered unclean by the Arabs, can hardly be called one of the domestic animals of Egypt, but it is kept by the Greek tavern-keepers.

The Dog (Arab, kelt) throughout the whole of the East is a masterless and half-wild animal. The usual breed resembles the jackal type, its colour being of a light rusty tint. Every canine family has its regular beat, from which intruders are rigorously excluded. Most of the Egyptian dogs feed on street refuse.

The Cat (Arab, kotāt, kotteh), which was one of the sacred animals of the ancient Egyptians (comp. p. 134), is now domesticated in almost every Egyptian and Beduin family.

The Weasel (mustela semipal mata; Arab, 'ersa, or abu 'arās), is occasionally kept, like the cat, for the purpose of keeping in check the mice of numerous kinds with which the country is infested. It is chiefly met with in a half-wild condition in Central and Lower Egypt, in the towns, farm-buildings, warehouses, and deserted dwellings.

Foremost among the various kinds of poultry kept by the Egyptians is the domestic Hen (Arab, farkha; cock, dik), the usual breeds of which are of small size. The artificial hatching establishments in Egypt are of very ancient origin.

The Turkey (Arab, farkha 'rāmī) is imported.

The domestic Goose (Arab, wanzech) is chiefly met with in Lower and Central Egypt, but nowhere in large numbers. The Egyptian Domestic Pigeon (Arab, hamām) is very common throughout the Nile Valley. The peasants erect large dovecots for these pigeons, which they keep solely for the sake of the manure they yield.

II. WILD ANIMALS. As there are no game-laws in Egypt, any one provided with a license from the police to carry fire-arms is at liberty to shoot anywhere and at any season, provided enclosed gardens be not entered, and growing crops respected. Permission to shoot on Lake Menzaleh, however, must be obtained from the farmer of the fishings, an introduction to whom may easily be procured from the traveller's consul at Cairo.

Tolerable guns and other requirements for the chase may be purchased at Cairo (p. 233), but gunpowder is bad and dear. Sportsmen who bring their own guns will find it very troublesome to clear them at the custom-house.

One of the favourite objects of the chase is the Arabian Mountain Goat (Ibex beden; Arab, beden or wa'dal), which still frequents the mountains between the Nile and the Red Sea.

Another inhabitant of the mountains is the 'Maned Sheep' (Ories trago- taphus; Arab. kebāb el-mā, or kebāb el-gebēl), which is occasionally met with among the rocky hills near Minyeh and in the neighbourhood of the Fayūm.

A denizen of the plains between Cairo and Suez, and of the sand-hills and heights which bound the valley of the Nile and the oases, is the Dorcas Gazelle (Antilope dorcas; Arab. ghazāl), particularly during the dry and hot season.

On the Libyan side of the Nile, in the region of the Natron Lakes and the Fayūm, and the tract extending thence to the oases, occur also the 'Spear Antelope' (Antilope leptoceros; Arab. abu'l harāb) and the Addax Antelope (Antilope addax; Arab. a'kas, or bakār el-wāsh), besides which the Arabs mention a kind of 'Coe Antelope' (perhaps the Antilope bubalis).

The Wild Boar (Arab, hallāf) now occurs in a few districts only in the Delta and the Fayūm.

In similar localities the sportsman will also meet with the Marsh Lynx (Felis chaus; Arab. tifāh), the small-footed Wild Cat (Felis municalta; Arab. koff), the Egyptian Wolf (Canis variegatus; Arab. dib), and the Ichneumon (Herpestes ichneumon; Arab. nīma), which last, however, prefers gardens and the neighbourhood of farms and villages.

The Genet (Viverra genetta; Arab. kott zebād) is said to be met with
occasionally in Egypt. Among the beasts of prey common in the lower part of the Nile Valley we may also mention the various species of Foxes and Jackals (Canis vulpes, C. mesomelas, C. niloticus, C. aureus, C. famelicus, and Megalotis zerda; Arab. abi-'l-husin, al-ṭeb, taṭlab, abi šhôm or bashôm, and abi ṣaf) and the Skunk (Rhabdognale mysticnta; Arab. abi ʿafen). The fox and the jackal haunt cliffs, quarries, ruins, and heaps of rubbish. The long-eared Fennec (Arab. Finēk, Zerdo), a kind of fox which subsists partly on vegetable food, lives gregariously in extensive burrows which it excavates in the sand of the desert.

Another beast of prey of frequent occurrence is the striped Hyena (Hyaena striata; Arab. ẓāb'a), which usually secretes itself among ruins, quarries, or rocks during the day, and scours the country at night in search of dead or disabled domestic animals. The professional Egyptian hyena hunters (Arab. ẓabbā'a), who are to be met with in many parts of the country, will generally undertake to catch any wild animal of which the traveller desires a specimen, and their services as guides to the sportsman will often be found useful.

An animal of rare occurrence in Egypt, being confined to the side of the Egyptian coast-hills next to the Red Sea, is the Porcupine (Hystrix cristata; Arab. abi shî'ā, or hanhan, or en-nis), which lives in deep hollows excavated by itself.

On the banks of the Nile, and particularly in Upper Egypt, the Egyptian Hare (Lepus aegyptiacus; Arab. arnab) is frequently met with. It usually haunts those tracts which are overgrown with tamarinds.

Among the mountains of Sinai we frequently observe the Daman, or Cony (Hyrae syriacus; Arab. ṭobr), which lives in troops on the cliffs and stony slopes, and often lies basking in the sun on overhanging rocks, especially in the forenoon.

Wild fowl abound in Egypt, and frequently come within range of the sportsman's gun. Among these are the Ganga or Sand Grouse (Pterocles exustus, Pt. guttatus, and in Upper Egypt the Pt. coronatus also; Arab. Ṭaṭa), and the Red Partridge (Ammoperdix Heyi; Arab. ḥagel), which frequents the hills around the cataracts at Assuān, the E. slopes of the Arabian mountains in the direction of the Red Sea, and Mt. Sinai and its environs, extending as far as the Dead Sea. A kind of Red-legged Partridge (Arab. abi zerād, or se'ma) is also found in the Sinai range.

The Quail (Coturnix communis; Arab. summān, or sētā) usually visits the Nile valley during its spring and autumn migrations only.

On the N. coast of Egypt the Little Bustard (Otis tetrax) is frequently seen in winter, and farther to the W. occurs the ‘Collared Bustard’ (Otis hubara; Arab. ḥubāra).

We may also mention the Nile Goose and the Turtle Dove (Turtur senegalensis and T. isabellinus; Arab. ḵīnrī) as natives of Egypt. The Nile Valley and the lagoons of the Delta are also largely visited by Birds of Passage. Many of these proceed still farther to the S., but by far the greater number remain for three or four months among the swamps of Lower Egypt, and in the region of the Natron Lakes and the Birket el-Kurūn in the Fayūm.

Among the numerous water-fowl, including ducks and flamingoes, several species of heron, and perhaps swans also, which breed in the Delta and partly in the Fayūm, are the superb ‘Sultan Bird’ (Porphyrio smaragdonotus; Arab. dikmeh) and the beautiful Golden Snipe (Ryncheeae capensis).

Lastly we must mention the Crocodile (Arab. ṭinṣâḥ), the largest and most famous of Egyptian reptiles, which sometimes attains a length of thirty feet. Although gradually disappearing before the march of modern civilisation, it is still sometimes to be found in the valley of the Nile above Girgeh, and more frequently between the cataracts of Assuān and the Wādī Halfa, while occasionally, having lost its way during the inundation, it descends to the vicinity of the Delta. Crocodiles are sometimes seen fast asleep, often with widely opened jaws, basking in the sun on flat sandbanks or on the ends of low islands, to which they most
frequently resort after cool nights. In Egypt, however, where it is oftener hunted than in more southern regions, the crocodile is generally too wary to be caught napping, though it sometimes becomes entangled in the nets and falls a prey to the fishermen. The Arabs of the Sudan, who eat the flesh of the reptile and prepare a kind of musk from its glands, frequently angle for it with large hooks baited with meat.

It is seldom worth while to fire at crocodiles when swimming, as they usually disappear in the turbid water, even when mortally wounded. The sportsman should therefore endeavour to get within range of one of these monster saurians when on shore. As they always keep within easy reach of the water, they are occasionally observed on the banks of the river by the traveller navigating the Nile, in which case they should be approached in a small boat as noislessly as possible. Success is most likely to be achieved in cases where the haunt of the reptile is known, so that the sportsman may lie in ambush at some convenient spot in the vicinity. Unless, as rarely happens, the first bullet kills the animal on the spot, it generally contrives to find its way back to the water, and thus effects its escape.

Another saurian of great power, and extremely rapid in its movements, is the Monitor (Arab. waran), which attains a length of 4-5 ft., and derives its name from its supposed habit of giving warning of the approach of a crocodile.

III. Other Mammalia and Birds. Although not indigenous to Egypt, several varieties of Apes, which are imported from the S. and W. provinces, are seen in the larger towns. Among these are the Cynocephalus hamadryas and C. amibus (both called šird by the Arabs), the Inus ecaudatus (Arab. nisna), the Ceroplastes ruber; C. griseo-biritis, and, more rarely, the C. pyrrhonotus.

The Nile Valley and the neighbouring desert hills are largely infested by Bats (Arab. watwát). The commonest kinds are the Kalony (Pteropus), the Long-eared Bat (Plecotus, Vespertilio, Taphozous, Nyctinomus), and the Spectre Bat (Rhinolophus, Nycteris, Rhinopoma).

Besides the beasts of prey already enumerated (p. 79), we may also mention the Mustela africana, several kinds of Hedgehog (Erinaceus; Arab. ṣanafud), and the Shrew (Arab. umm širī).

Egypt contains numerous species of the Rodentia. The fields, dwelling-houses, and sailing-vessels are often infested with Mice and Rats (Mus, Acromys), and in the Sinai Peninsula is found the Dormouse (Zisomys melanurus), all of which are called ċār by the Arabs. The Jumping Mouse (Dipus; Arab. yerbūda) and the Sand Mouse (Meriones; Arab. gebelī) live in the desert, and the ‘Fat Rat’ (Psammomys obesus) in the sand-hills around Alexandria.

Besides the Birds indigenous to Egypt, there are, as already mentioned, a great number which winter there, while others merely pass through the country when on their way to other regions. About 360 different species have been ascertained to occur in Egypt, but we shall merely enumerate a few of the most important of those which remain permanently in the country.

The commonest Birds of Prey are the Golden Vulture (Cypnàtus meridionalis; Arab. biq), the White-headed Vulture (Vultur fulvus; Arab. nisr), the Eared Vulture (V. auricularis), the Goose Vulture (V. cinereus), which, however, is a bird of passage only, the Carrion Vulture (Neophron percnopterus; Arab. rakhameh), the Harrier (Milvus aegyptiacus; Arab. khdēyeh), and the Elean (Elanus melanopterus). The white-tailed Sea Eagle (Haliaetus albicilla; Arab. ṣābāb, or šomēța) breeds in the Delta, the River Eagle (Pandion haliaetus; Arab. mawṣār or kētaft) on the cliffs of the Red Sea, the Dwarf Eagle (Aquila pennata) among the palm-groves of Lower Egypt, and the Lanner Falcon (Falco laniarius variet.; Arab. shāhīn) and Falco barbareus on the pyramids and rocky heights. Great numbers of ‘Screaming Eagles’ pass the winter in Egypt. Of rarer occurrence are the Imperial Eagle, the Hawk Eagle, the Migratory Falcon, the Stone and Red-footed Falcons, the white-tailed Buzzard, the Hawk, and the Sparrow-hawk (Arab. bāz). Several species of the European Har-
ANIMAL KINGDOM.

rrier are more common than these last. The Tower Falcon breeds in every part of Egypt, and probably the Castrel Hawk (Falco cenchris) also. The Gabar (Nisus gabbar) is said to be sometimes met with in Upper Egypt. The commonest Owls are the sub-tropical Church Owl (Athene noctua var.; Arab. umm këk) and the Eagle Owl (Bubo ascalaphus; Arab. bâm, or bâfa).

The family of Goatsuckers is represented in Egypt by the peculiar Caprimulgus aegyptiacus. A small Swift (Cypselus parvus), the chief representative of its family, frequents the regions planted with the dûm palm. The Snailloves (khottaf, or 'asfûr et-yennêh) most frequently seen are the red-breasted Hirundo calirica, which remains permanently in the country, and a kind of Rock Swallow (Cotite obsoleta).

Of the Fishing Birds the most common is the Kingfisher (Ceryle rudis), which frequents the banks of every part of the Nile.

The Bee Eaters are represented by the Merops apiaster, the M. aegyptiacus, and the M. viridissimus, all of which breed in Egypt; but the last only, which is called shebagh by the natives, and chiefly occurs in Central and Upper Egypt, remains throughout the year.

The most numerous of the Thin-billed Birds are the Hoopoes (Arab. hûdûd), and to the Promeropides belongs the pretty, lustrous Honey-sucker (Nectarina metallica), which frequents the frontiers of Upper Egypt.

Singing Birds ('asfûr) are not numerous in Egypt, with the exception of numerous species of Larks and Stonechats. We may next mention the Drymae, or Drymaeus gracios, the Cisticola curtissans, the Tree Nightingale (Aëdon galeatactorides), the Acrocephalus stentoreus, the African Water-egoat (Motacilla vidua), the Wedgetail (Argia acaciae), and the Bulbul (Pycnonotus Arsinoe), found in the Fayûm and N.Nubia, while a second species, the P. zanthopygius occurs in Arabia Petraea and the valley of the Jordan.

There are no Flycatchers peculiar to Egypt. Among the Butcher-birds we may mention the 'Masked Shrike' (Lanius nubicus), and among the Ravens (ghurbâb), the Short-tailed Raven (Corvus affinis) and the Desert Raven (C. umbrinus). The lofty mountains of the Sinai Peninsula are the haunt of the Red-legged Crow (Fregilus gracula); and among the tamarisk bushes and on the rocky margins of the valleys of Arabia Petraea occurs the Starling (Amydrus Tristramii).

Among the Finches peculiar to Africa is the 'Desert Trumpeter' (Bucanistes githagines). On the upper part of the Nile, beyond the Wâdi Halfa, occur several species of a more tropical character, such as the Fire-finch (Euplectes franciscana), the Steel-finch (Hypochera nitens), the 'Lone catcher' (Uroloncha cantans), and the Dwarf Bloodfinch (Lagonosticta minima).

Woodpeckers are not met with on the Lower Nile. The Wryneck and grey Cuckoo occur as birds of passage, and the Spurred Cuckoo (Centropus aegyptiacus; Arab. abu burbur) as a denizen of the Delta. The Jay (Coccytes glandarius) is more widely diffused throughout the country.

Among the native Running Birds we may mention the Desert Runner (Cursorius isabellinus), the Stone Curlew (Oedionemus crepitans; Arab. kerân), the Crocodile-Watcher (Pluvianus aegyptiacus; Arab. têr et-timsâh), and the sprightly Spurred Plover (Hoplopterus spinosus; Arab. sîkâsh). The commonest of the Herons are the 'Cow Heron' (Ardea Ibis; Arab. abu kerîn) and the white 'Great Heron' (Ardea ãlba and Ardea gorrêla). Near the Wâdi Halfa occurs the Abûdim Stork (Ciconia Abûdîmî; Arab. sînbiîch). To the family of the Ardeidae belong the rare Ibis Tantalius and the Sacred Ibis (Ibis aethiopica; Arab. na'ayeh herës, or abu mingal).

Besides the European aquatic and other birds already enumerated, which frequent the lagoons, lakes, and marshes (p. 81), we may also mention the Great Black-headed Pelican (Pelecanus rufescens) of N.Nubia, the curious Scissor-beak (Rynchops Plaiceirostris; Arab. abu mokîd) and the Fox Goose (Chenalopex aegyptiacus; Arab. wuz), which are found throughout the whole of the Nile Valley, the former especially in summer, and the Brown Booby (Sula fiber; Arab. sheket), several peculiar species of Gulls and Sea Swallows (Larus leucophthalmus, Larus gelatex, Larus Hemprichii, Sterna media, Sterna Bergii, Sterna albigena, Sterna infuscata, and Anous
ANIMAL KINGDOM.

83

stolidus), and the singular-looking Dromas (Arab. ḥankūr), on the shores of the Red Sea. The Flamingo (Phoenicopterus antiquorum; Arab. bāša rosh) haunts the Red Sea and the lagoons of the Delta throughout the whole year, usually congregating in enormous flights, and breeds in the region to the E. of Lake Menzāleh.

IV. REPTILES. Of this class of animals there are but few species peculiar to Egypt. The Salamanders and Batrachians (Arab. ḏufda'a) are but scantily represented. There are about twenty species of Snakes (Arab. ta'bān), including the Horned Viper (Cerastes; Arab. mokāreneh) which appears in the ancient inscriptions as a hieroglyphic, the Echis (Arab. ghariḥeb or dashshāsha), the Cobra da Capello, Hooded, or Spectacle Snake (Naja Haje; Arab. nāsher), the Telescopus (Arab. abu 'ayān), the Psammophis (Arab. abu siyiṣr), the Tropidonotus, the Pērisops (Arab. arqam), the Zamenis (Arab. gidār[i]), and the Eryx (Arab. dassās). The horned viper, the echis, and the hooded snake are highly venomous, and their bite is often fatal; the other snakes are not venomous, but their bite is sometimes dangerous. The Egyptian snake-charmers (Arab. hāwā'), all of whom belong to a gipsy tribe (ghagar), usually exhibit a number of cobras, the teeth in which the venom is secreted having been extracted (comp. p. 81).

To the order of the Sauropsids belong the Crocodile (Crocodylus vulgaris; Arab. ṭumsāḥ), of which there are several varieties, and the Monitor (Varanus niloticus; Arab. warān), both of which have been already mentioned (pp. 80, 81). Other species occurring in Egypt are the Ablepharus, the Gon-gylus, the Plestiodon, the Euprepes, the Scincus (Arab. saqān-kūr), the Ophiops, the Eremias and Acanthodactylus (Arab. shālīyeh), the Psammo-saurus griseus (Arab. warān, a name also applied to the monitor), the Uromastix spinipes (Arab. ṭāb), the Uromastix viridis, the Stellio vulgaris (Arab. ḥardūn), several kinds of Agama, the Chameleon (Arab. ḥarbā'ayeh), and numerous Ascalabotes (Arab. abu būrs). To the Turtle Family belong the Nile Turtle (Trionyx aegyptiaca; Arab. tārs) and a small Tortoise (Testudo marginata; Arab. zālī'ēf), while in the Red Sea occur six varieties of Chelonias (Arab. bīsā or ṣākar), several of which yield excellent tortoise-shell (Arab. bāgha).

V. FISH OF THE NILE (by Dr. C. B. Klunzinger). The finny inhabitants of the Nile are in keeping with the palms growing on its banks, being of a tropical and African type. They are generally the same as those found in the Senegal and other African rivers, while European species are very rare. There are in all about 70-80 varieties. The following sketch is merely designed to afford an idea of the commonest species, particularly of those brought to market. Many of them are represented and described in the 'Description de l'Égypte' (p. 198).

The fish of the Nile are most abundant during the time of the inundation, when a number of varieties, not found at other seasons, are brought down from the higher regions to Lower Egypt. At these seasons the canals yield abundant spoil, especially after the subsidence of the water. The flesh is generally soft, watery, and insipid, but the mode of cooking it is perhaps partly in fault. The colours are wanting in variety, white with a dark-coloured back predominating.

To the Perch Family (scaly fish with serrated head-bones) belongs the Keshr, and to the Carp Family (scaly fish without teeth) belong the Lebis, or Debs, and the Binnāt, with a thorn in its dorsal fin. The various kinds of Siluridae are very abundant (fish without scales, with barbels, and generally with an adipose fin). Among these are the Shīlbeh (a fish with a high neck, a short dorsal fin near the head, and without the adipose fin), which is of three kinds, the shīlbeh 'arabi, the shīlbeh shīrīyeh, and the shīlbeh wudnī (the first two with, the last without a spinous ray in its dorsal fin). The Shāl, called Kurkār in Upper Egypt owing to the sound which they emit, is easily recognised by the bony armour covering its head and its fringed barbels. The varieties are the shāl belyāt, the shāl senīn or shōlīn, and the shāl kamārī or bātīn sūā, the last of which has a blackish stomach. The shāl kārafshēh, or samr, has a layer of bone over its neck. The shāl abu riḍāl more nearly resembles the following varieties. The Bayād' and the Dokmāl, provided with very long
barbels, and generally of large size, are abundant. Another important member of the Siluridae is the long and large Karmat, with its long dorsal and posterior fins. The karmat hâleh has an adipose fin, while the karmat 'arabi has none. To the same family belongs also the famous Ra'd, or electric eel (with one adipose fin on its back, and black spots on its skin).

The following families are peculiar to the tropics. The Characini (salmon of the Nile) are scaly and provided with an adipose fin. Among these are the high-backed and almost rhombic Kanu el-Bahr; the oblong Ray, with its small and somewhat flat teeth; the Roshd, or Kab el-Bahr (river-dog), with strong, conical teeth protruding from its mouth; and the Nefish, with its small, narrow, and closely-set teeth with double points, and somewhat high shoulders. To the family of the Chromides (scaly fish with spinous fins and sides of irregular shape) belongs the Boli.

A family occurring in Africa only is that of the Mormyridae, or scaly fish with remarkably small mouths, and heads covered with a thick and bare skin. Among the members of this family is the well-known Mormyrus oxyrrhynchus (Kawma, or Khashm el-Banâl), with its long snout turned downwards, which was so frequently represented by the ancient Egyptians; then the blunt-mouthed Banes, including the Kashua and Kasha kamâra, or 'Ersat el-Bahr, the last of which has an almost square muzzle.

An interesting, but not common, fish is the Finny Pike (Polypterus; Arab. abu bishir), with its numerous dorsal fins and rhomboidal scales covered with enamel, forming one of the few surviving members of the abundant antediluvian Ganoids. The Ball Fish (Tetrodon; Arab. jatakâ), which is not an edible variety, is frequently offered for sale, either fresh or stuffed (p. 234), on account of its curious shape and its singular faculty of puffing itself out like a bladder. It differs from the common ball-fish of the Red Sea in having seven brown or blackish oblique stripes on its sides. The Red Sea contains many fish of a similar kind, but they are not known to exist in the Mediterranean. From the latter sea the Harder (Mugil), Böri, or Gharâna, frequently ascend the Nile, where they form the herrings of the Arabs (jesikh). The same remark applies to the Finte (sabûgha), a fish resembling the herring, and which occurs in many of the seas, rivers, and lakes of Europe. The Eel of the Nile (ta'bân el-bahr) does not differ from that of European waters.

VI. Insects. Butterflies are very rare in Egypt, but Moths are much more numerous. Among the not very numerous Beetles we may mention the Ateuchus sacer, the celebrated Scarabaeus (p. 123) of the ancient Egyptians. This sacred beetle was believed to be of the male sex only, and its act of rolling the clayballs containing its eggs was supposed to be its manner of propagating its species (Plutarch de Iside, 1. x. 75). The Egyptians accordingly consecrated the scarabaeus to Ptab, the god of origin and creation, who is often represented on the monuments with a scarabaeus in place of a human head. Among other varieties occur the Bupestis, the Cicindela or sand-beetle, the Hister, the Dermestes, and numerous Water Beetles.

The various kinds of Wasps in Egypt attain a very large size. Bees are not often kept by the natives. The so-called black honey eaten by the lower classes is sugar-cane treacle. The white honey, which is the genuine produce of bees, is imported from Arabia.

The commonest of the Orthoptera are Grasshoppers and Cockroaches; and of the Neuroptera we may mention the Ephemerœ or day-flies, the beautiful and often reddish coloured Dragon-fly, and the White Ant (rare). Among the Diptera are the troublesome House-fly, and the Mosquito. Vermin of all kinds abound, such as Fleas, Bugs, Lice, Scorpions, Tarantulas, and Centipedes.
III. Outline of the History of Egypt.

CHRONOLOGICAL TABLE.

Introduction. There is no people in the world whose history is traceable to so remote a period as that of the Egyptians. Other nations may possibly have understood the art of writing as early as they, but no specimens of it have been preserved; whereas the Egyptian records, hewn in stone, burned in clay, or written on leather or on scrolls of papyrus, have survived the ravages of thousands of years. The preservation of these memorials, however, is mainly due to the dryness of the air in the rainless valley of the Nile, and to the property possessed by the hot sand of the desert of hermetically sealing everything committed to its keeping.

The remote dates with which Egyptian chronology has to deal seem mythical when judged by the standards of Jewish and Christian chronographers, and particularly when compared with the supposed date of the creation of the world; but they are derived from the lists given by Manetho, or Manethôn, which have been confirmed by the monuments themselves.

The priest Manetho (Manethôn, or Manethos; Egypt. Mai en Taphuti, i.e. ‘beloved of Thoth’) of Sebennytus (the modern Semennûd, p. 434), being acquainted with the Greek language, was employed by King Ptolemy II. Philadelphus (B.C. 284-246) to translate the ancient historical works preserved in the temples. This ‘Egyptian History’ of Manetho enjoyed a high reputation at a later period, but was subsequently lost, with the exception of his lists of kings and their dates, which have been transmitted to us partly by Flavius Josephus, the Jewish historian (1st cent. A.D.), and partly by Christian historians.

The monuments and inscriptions in some cases confirm, and in others supplement, the records transcribed by Manetho for the Ptolemies, our information being derived from the series of kings’ names inscribed on tablets found at Abydus, Karnak, and Saqqâra, from papyrus scrolls, particularly one in the Museum of Turin, and lastly from historical and genealogical notices on the walls of temples and tombs, on statues, implements, and trinkets. A methodical mode of utilising these fragmentary historical records was first taught by the learned Prof. Lepsius.

The lists of the Pharaohs are arranged in the families or dynasties of the Thinites, Memphites, and others. If it be assumed that these different houses reigned in succession, and their reigns be simply added together, the sum which results is very large. But if it be assumed that many of the dynasties mentioned by Manetho reigned contemporaneously in different parts of the country, the reigns of members of the leading dynasties alone have to be added together, and a comparatively moderate sum is the result. Adopting the former method of computation M. Mariette has fixed the date of Menes, the first King of Egypt, as B.C. 5004, while Sir Gardner Wilkinson, proceeding on the latter assumption, assigns the date B.C. 2700 to the same monarch. Lepsius, on the other hand, believes the true date to be B.C. 3892, as Manetho states that an interval of 3555 years (or 3553, taking into account the difference between the Egyptian and the Julian year) elapsed between the reign of Menes, the first King of Egypt, and that of Nectanebos II. (B.C. 340), the last of the native sovereigns. Our information becomes more definite after the beginning of the New Empire (B.C. 1701), while from the 26th Dynasty (B.C. 685) downwards the dates of the different kings are well ascertained.
In accordance with the arrangement of the history of Egypt given by Lepsius, and now generally accepted, the mythical period was succeeded by that of the Primæval Monarchy, the Hyksos Domination, and the New Empire, which were followed by the supremacy of the Persians, the Ptolemies, and the Romans in succession. These divisions, in conformity with the lists of Manetho, are again subdivided into Dynasties, or different families of kings, named after the districts or nomes (p. 32) of which their founders were natives.

Chronological Table.

Primæval Monarchy.

I. DYNASTY (Thinites, i.e. from This, or Thinis, near Abydus in Upper Egypt).

Menes (Egyptian Mena), the first earthly king of Egypt, who is said to have founded Memphis (see p. 359).

Athothis (Eg. Atahuti; p. 360).

Usaphis (Eg. Aesepti), who is said to have written anatomical works.

II. DYNASTY (Thinites).

III. DYNASTY (Memphites, from Memphis, which soon obtained precedence over the more southern royal city of This).

Tosorthros (Eg. Nebka), who studied medicine. In his reign the calendar is said to have been regulated, and the year of 365 days introduced (consisting of twelve months of thirty days, with five supplementary days).

IV. DYNASTY (Memphites; pp. 297, 330).

Snefru (pp. 330, 457, 468, 481), the founder of the 4th Dynasty, and the first king of whose reign we possess contemporaneous monuments. Long after his death he continued to be highly extolled, and was even revered as a god.

Khufu (the Cheops of the Greeks) Builders of the

Khâfrâ (the Chephren of the Greeks; pp. 157, 331).

Menkerâ (the Mycerinus of the Greeks) (p. 330 et seq.).

Khufu and Khâfrâ have been handed down to the detestation of posterity as profligate despisers of the gods, chiefly owing to the account of them given by Herodotus (ii. 124; see p. 330 et seq.), who, however, was ill informed with regard to the earliest period of Egyptian history. The monuments themselves bear testimony to the fact that the family and court of the builders of the Great Pyramids were pious worshippers of the gods, that they were prosperous and wealthy, and that they were industrious and persevering in their undertakings. At that period the fine arts, and particularly that of sculpture, attained a perfection which the Egyptians never again reached. The inscriptions on the monuments also exhibit a high degree of technical skill.

‡ M. is the initial letter of Mariette, L. of Lepsius, and W. of Wilkinson; comp. p. 85. — The most important names only in each dynasty are given.
V. DYNASTY (Memphites; pp. 354, 357, 375, 481).

VI. DYNASTY (Elephantines, from Elephantine, near Syene, the modern Assuān, situated in Upper Egypt; p. 481). 
Pepi (Eg. Papi).
Nitokris (Eg. Nitaqrit).

VII. DYNASTY (Memphites).

VIII. DYNASTY (Memphites).

IX. DYNASTY (Heracleopolites, from Heracleopolis Parva †, the Karba of Egyptian and Karbanis of Assyrian inscriptions, situated in the N.E. part of the Delta; see pp. 399, 442).

X. DYNASTY (Heracleopolites).

XI. DYNASTY (Diospolites, from Diospolis, i.e. Thebes, now Elušur-Karnak-Medinet Abu in Upper Egypt; pp. 158, 442).

On the coast of the Delta, which at this remote period was most probably a very swampy district, densely overgrown with marsh vegetation, and which was first brought under cultivation in the neighbourhood of This, and afterwards around Memphis, the towns of Tanis and Heracleopolis Parva had been founded at a very early epoch by seafaring peoples of Semitic origin. They thence penetrated into the interior of the country, where they came into collision with the Egyptians coming from the south, whose culture they adopted. At the same time, however, they retained their independence under kings of their own, who during the period of the 6th, 7th, and 8th Dynasties formed the 9th and 10th contemporaneous Dynasties of Heracleopolites, from the year 2691 onwards, and who ruled over the Delta and perhaps the whole of Lower Egypt. The 11th Dynasty, which put an end to the sway of the Heracleopolites, is called Diospolite, or Theban, but in the estimation of the Egyptians was not a strictly legitimate line.

XII. DYNASTY (Diospolites; pp. 158, 162, 320, 442).

Amenemhat I. (Grk. Amenemis).
Usortesen I. (Grk. Sesonchosis; pp. 320, 448).
Amenemhat II. (Grk. Ammanemis).
Usortesen II. (Grk. Sesostris; p. 481).
Usortesen III. (Grk. Lacharis).
Amenemhat IV. (Grk. Amenemis).
Sebck-nef-re-rā (Grk. Skemiophris).

Under this Dynasty the sceptres of Upper and Lower Egypt were united. All the kings were powerful and prosperous, and art again flourished. The Sun Temple at Heliopolis (see p. 320) was magnificently restored, and in the

† Heracleopolis, or City of Hercules. The Phoenician god Melkart was called by the Greeks Heracles, as he is said to have performed similar prodigies of strength. Brugsch identifies the Heracleopolitan with the Sethroitic nome (the capital of which was Pithom or Pi-Tum); see p. 398.
Fayûm the practice of building pyramids was revived (see p. 448 et seq.). Amenemhat III. was the constructor of Lake Mœris and the founder of the Labyrinth (p. 446). During this period, too, fortifications were erected on the N.E. frontier of the kingdom which appear to have extended across the whole of the present Isthmus of Suez (p. 443).

The Hyksos Period (pp. 295, 360, 442, 468).

In the 12th Dynasty we already hear of Semitic families applying for admission to Upper Egypt †, and in the 13th Dynasty these immigrations became more frequent. The new comers met with kinsmen in the seaports of the Delta, allied with whom and with Arabian tribes, they at length became so powerful as to defeat the armies of the Pharaohs and obtain possession of the whole of Lower Egypt. They made Tanis their capital, and under the name of Hyksos ruled over N.Egypt for five centuries, while the exiled royal family was compelled to retire to Upper Egypt. (The name of 'Hyksos', according to Josephus, Manetho, and others, is derived from ḫyk, a king, and sos, a shepherd, and thus signifies 'shepherd kings'; some modern authorities, however, derive it from ḫak shasu, signifying 'Robber Kings'.) The Hyksos soon conformed to the ancient culture of the valley of the Nile. They applied the name of the Egyptian god Set to their own gods (Beʿalîm); and the sphinxes preserved at Tanis with the portrait-heads of their kings (p. 295) prove that they took Egyptian artists into their service, and perhaps themselves acquired a knowledge of the Egyptian plastic art (p. 160). At the same time they adopted all the titles of the Pharaohs and the whole of the court ceremonies of the legitimate monarchs of Egypt. ‡‡

XIII. DYNASTY (Diospolites, p. 295).

XIV. DYNASTY (Xoîtes, from Xoïs, situated to the N.E. of Saïs).

† In the tomb of the governor Khnum-hotep, 'at Beni Hasan, Ašnâ, a Semitic chief, with his family and attendants, is represented approaching with gifts. The occasion was perhaps similar to that on which Abraham and Sarah were induced to visit Egypt (Gen. xii. 10). The record of their sojourn there forms the earliest notice of Egypt to be found in the Bible.

‡‡ From this it appears that, when Joseph came to Egypt at the end of the Hyksos period, he found on the throne a monarch of a race kindred to his own, though conforming in all respects to the ancient customs of the Pharaohs. A famine mentioned in a tomb at El-Kâb is perhaps identical with the one which brought Jacob and his family to Egypt. This tomb belonged to the father of Aahmes, a naval officer, who took part in the expulsion of the Hyksos about four centuries before the Exodus. The inscription runs thus: — 'When a famine prevailed for many years, then I gave the city corn during each famine'.
HISTORY.

We learn from a still existing papyrus that Apap (Grk. Aphophis), a Hyksos monarch of this dynasty, demanded the cession of an important well from Rásqenen, the king of Upper Egypt. This incident gave rise to the outbreak of a war of independence which lasted for eighty years.

The New Empire.

Aahmes I. (Amósis, or Amásis; p. 301) captures Abaris (Ha-uar) after a long siege by land and by water. The Hyksos (numbering, according to Manetho, 24,000 men capable of bearing arms) were now obliged to retreat and to seek a new territory, and most of them accordingly settled in S. Palestine. The successors of Aahmes penetrated far into Asia, subjugated one nation after another, exacted heavy tribute from the vanquished, and embellished Thebes, their capital, with magnificent edifices.

Tahutmes III. (Thothmes) extended his conquests as far as the vicinity of the Tigris (pp. 218, 295, 349, 512).

Amenhotep III. (Grk. Amenophis; pp. 371, 392) not only continued to exact tribute from the Oriental nations as far as Mesopotamia, but succeeded in extending his dominions towards the south. He was also remarkable for his extraordinary building enterprise.

Amenhotep IV. (Grk. Amenophis) returned to the earlier and ruder religion of worshipping the sun. For his name Amenophis ('peace of Ammon') he therefore substituted Khu-en-aten ('reflection of the sun's disc').

Hor-em-heb (Horus).

Seti I. (Menepthah; pp. 414, 423, 442) undertook several campaigns against the Aramaic tribes, who had formed a league under the hegemony of the powerful Kheta (or Khittim, the Hittites of the Bible), and penetrated as far as the Orontes. He erected the Memnonium at Abydus, and caused a sepulchre to be hewn for himself in the rock at Thebes. He caused Ramses, his son and successor, to be educated along with other young Egyptian nobles, and it is possible that Moses formed one of the number (Exod. ii. 10). Seti devoted special attention to the Delta and to Tanis, the ancient
capital of the Hyksos, where he erected extensive buildings with the aid of the Semites, among whom the Israelites must also be included. During this reign a great canal was completed in Goshen (see p. 397), leading from the Nile to the E. frontier of the kingdom, and probably thence through the Bitter Lakes to the Red Sea, but chiefly destined for the irrigation of the land of Goshen.

**Ramses II.** (popularly called Sesturâ, and by the Greeks Sesostris; pp. 361, 396, 398, 400, 414, 442, 470), with a view to vindicate his supremacy over the nations subjugated by his ancestors, undertook campaigns towards the S. to Donkola, towards the N. to Asia Minor, and towards the E. to the Tigris, to commemorate which he erected monuments of victory in various parts of the conquered countries. He exhibited great zeal as a builder, and was a patron of art and science. He erected the Ramesseum at Thebes, and presented it with a library. Pentaur, Amenemapt, and other poets flourished during this reign. Ramses II. was the Pharaoh who oppressed the Israelites (Exod. i. 11).

**Menepthah I.** (pp. 294, 442, 470). During this reign (in the year 1325, according to Brandis) the termination of a Sothis period † was celebrated. A conflict which broke out between this monarch and the Israelites settled in Goshen resulted in his discomfite, and when he attempted to pursue the emigrants he perished ignominiously (Exod. xiv. 28).

XX. DYNASTY (*Diospolites*; p. 468).

**Ramses III.** (the Rhampsinitus of Herodotus, ii. 121; see also pp. 320, 394), though successful in his campaign against the Libyans and in other warlike enterprises, could not vie with his ancestors in military glory, but endeavoured to surpass them in the magnificence of his buildings. His monument at Bîbân el-Mulûk, near Thebes, is one of the finest now in existence. Most of the rock-tombs in this city of royal mausolea were founded by his successors of the same Dynasty, all of whom also bore the name of Ramses (IV–XIV.).

† The course of Sothis, or the dog-star, afforded the Egyptians a means of ascertaining the true astronomical year. They began their first year with the early rising of this star, at the beginning of the inundation (on 1st Thoth). The Egyptian solar year, being six hours too short, differed from the Sothis year by a quarter of a day. This discrepancy soon became very perceptible. After 40 years the end of the solar year fell by 10 days, and after 400 years by 100 days, short of the end of the true Sothis year, and festivals recurred at seasons to which they did not properly belong. At length, after $365 \times 4$ years, the error corrected itself, and the beginning of the new year again coincided with the rise of Sothis. Thus in a period of 1460 fixed, or 1461 variable, years the error in the Egyptian calendar was rectified.
XXI. DYNASTY (Tanites, from Tanis, in the N.E. part of the Delta; pp. 360, 442).

The throne of the Ramessides was now usurped by ambitious hierarchs of Tanis, headed by Herhor, the chief prophet of Ammon; and Thebes was thus deprived of her ancient pre-eminence. This dynasty of priest-kings reigned ingloriously. Being unable to exact obedience from their Asiatic vassals by force, they endeavoured to maintain their suzerainty by a conciliatory policy. (See also the relations of Solomon with Egypt: 1 Kings iii. 1; ix. 16; x. 28.)

XXII. DYNASTY (Bubastites, from the Bubastis of the Greeks, the Pibeseth of the Bible, the Pibast of the Egyptian monuments, the modern Tell Basta in the Delta; pp. 161, 396, 446).

Sheshonq I. (the Sesonchis of the Greeks, the Shishak of the Bible; p. 443) assisted Jeroboam against Rehoboam, and besieged and captured Jerusalem.

Osorkon (Grk. Osorthon, the Zerah of the Bible, 2 Chron. xiv. 9; xvi. 8; see p. 446) invaded Palestine, but was signally defeated by Asa.

XXIII. DYNASTY (Tanites; p. 442).

XXIV. DYNASTY (Saïtes, from Saïs, the modern Sa el-Hager; p. 435).

Tafnekt (Grk. Tephnachtos) undertook a campaign against Arabia.

Bok-en-ranf (Grk. Bocchoris) vainly endeavoured by a new legislation to arrest the decline of the empire. In 730 Egypt at length fell into the hands of the hitherto despised Ethiopians. — Interregnum.

XXV. DYNASTY (Ethiopians). This dynasty reigned for forty years contemporaneously with the last named. Shâ-baq (Grk. Sabacon) conquered Nubia and Upper Egypt, and resided at Thebes, but made no alteration in the religion or the constitution of the country.

Taharqa (Grk. Tearco; the Tirhakah of the Bible, the Tarku-u of the Assyrian monuments; pp. 295, 299) defeated Senacherib, King of the Assyrians, near Altaku, relieved Jerusalem, and delivered Hezekiah from his oppressors, but was himself defeated in Egypt by Esarhaddon, the son and successor of Sennacherib, and driven back to Ethiopia. Taharqa afterwards endeavoured to regain his supremacy, but was again defeated by Assurbanipal (Sardanapalus), the son of Esarhaddon. The Assyrians then took Thebes, and divided the country into twenty provinces, each of which was presided over by a satrap. When the Egyptians again attempted to throw off the foreign yoke, Nego (the Nechoh...
of the Bible), one of the rebellious magnates of Lower Egypt, and a scion of the 24th Dynasty, was carried off to Assyria, but was soon sent back to Egypt with an army, as an Assyrian vassal.

Urdamen (Mer-amen Piankhi), the son-in-law of Taharqa (pp. 302, 360), captured Memphis, defeated Neqo, and delivered the country from the foreign yoke, but was in his turn defeated by Sardanapalus, who again invaded Egypt.

A new insurrection of twelve vassal princes, known as the ‘Dodekarchs’, against the Assyrians, was now headed by Psametik, the son of Neqo, and was crowned with success, chiefly owing to the aid rendered by Greeks of Asia Minor. Psametik then ascended the throne and founded the —

Psametik I. (the Psammetichus of the Greeks; p. 371), in order to consolidate his empire, assigned dwellings to the Greek (Ionian and Carian) mercenaries in the fertile region of Bubastis, and favoured foreigners in many ways. The warrior caste of Egypt, highly offended at this proceeding, emigrated to Ethiopia, and there founded the kingdom of the Sembrides. Profiting by the decline of the power of Assyria, Psametik made war against the wealthy Phoenician seaports, but was stoutly opposed by the Philistines.

Neqo (Grk. Nechos, or Nechao; p. 414), the son of Psametik, was more concerned for the domestic welfare of the country than for military glory. During his reign the S. extremity of Africa was circumnavigated for the first time (Herod. iv. 42). Neqo began to construct a canal from the Nile to the Red Sea, but discontinued the work on being informed by an oracle that it would only benefit ‘strangers.’ Hearing of the campaign of the Medes and Babylonians against the Assyrians, he also marched against Assyria, and defeated Josiah, King of Judah, the ally of the Assyrians, who opposed him at Megiddo. Meanwhile, however, Nineveh had fallen, and the Assyrian empire been divided by Cyaxares, King of Media, and Nabopolassar, King of Babylon; and Neqo’s further progress was arrested by Nebuchadnezzar, King of Babylon and son of Nabopolassar, who defeated him at Karkemish (Circesium). Neqo thus lost his possessions in Syria and Palestine.

Psametik II. (Psammis, or Psammuthis).

Uhabra (Grk. Apries, or Uaphres; the Hophrach of the Bible; p. 301), observing that the Babylonians were encroaching on Palestine, fitted out an army and fleet, captured Sidon, defeated the Cyprians and the Tyrians in a naval battle, and marched to the relief of Zedekiah, King of
Judah, who was besieged in Jerusalem by Nebuchadnezzar. That city having been again besieged by Nebuchadnezzar and captured, Uaphres accorded an asylum to its exiled inhabitants. He afterwards sustained a defeat from Battus II., King of Cyrene, in consequence of which his army rebelled against him. Amāsis, who had been dispatched by him to treat with the insurgents, was then proclaimed king, and he himself was dethroned.

570-526. Aahmes II. (Grk. Amasis; p. 372) succeeded in securing his supremacy by alliances with Cyrene, with the tyrant Polycrates of Samos, and with the Greeks. He assigned land to foreign colonists, granting them religious toleration, and diverted the stream of commerce from the semi-Phoenician cities of the Delta (Tanis, Mendes, and Bubastis) towards the Greek city of Naucratis (see p. 205). During his reign the country enjoyed peace and prosperity, but the balance of power among the great nations of that era underwent a considerable change. Cyrus had meanwhile founded the vast Persian empire, and consolidated it by means of the conquest of the Babylonian and Lydian kingdoms. His son Cambyses next marched against Egypt, the only great power which still rivalled Persia. Having advanced to Pelusium with a large army, he there defeated Psametik III., son of Amasis, who was now dead (p. 360), captured Memphis, and took the king prisoner. Psametik was afterwards executed for attempting to organise an insurrection to shake off the foreign yoke.

The Persian Domination.

XXVII. DYNASTY (Persians).

525-521. Cambyses (Pers. Kambusiya II., Egypt. Kambath; pp. 360, 372, 435) at first behaved with great moderation. He tolerated the Egyptian religion, and to his own name he added the Egyptian agnomen of Ramesut, or ‘child of the sun’. After, however, he had failed in several rash enterprises, such as his campaigns against the inhabitants of the oasis of Ammon and against the Ethiopians, his temper became soured, and his conduct violent and cruel. He died at Agbatana in Syria, while marching to Persia against Gaumata, a usurper who personated Bardiya (Grk. Smerdis), the deceased brother of Cambyses, who had been assassinated long before this period by order of the king himself.

521-485. Darius I. (Pers. Darayavus), son of Hystaspes (Vistaspa), became king of the Persian empire on the dethronement of the usurper Gaumata (the personator of Smerdis). His policy consisted in modifying his rule over each part of his territory in accordance with its own special requirements. He endeavoured to promote the prosperity of Egypt in every
possible way. He established new commercial routes from Koptos in Upper Egypt to the Red Sea, and from Siūt and Abydus to the Sūdān; he resumed the construction of the canal from the Nile to the Red Sea (p. 414); he improved the roads of Egypt; he sent a strong garrison to the oasis of Khargeh (p. 63), and erected a temple to Ammon there; he coined money for the use of the Egyptians, whose currency hitherto consisted of stamped rings and weights; and he appointed Amasis, a scion of the 26th Dynasty, his satrap in Egypt. Hearing that the Persians had been defeated by the Greeks (in 492 and 490), the Egyptians revolted against the Persian yoke under the leadership of Khabbash, a descendant of the family of Psametik. The insurrection, however, was soon quelled by —

Xerxes I. (Pers. Khshayarsha), son of Darius; Khabbash disappeared, and Achaimenes, the king’s brother, was appointed satrap.

Artaxerxes I. (Pers. Artakhshathra), surnamed Makrocheir, or Longimanus, next ascended the Persian throne. During his reign the Egyptians again revolted. Prince Inarus of Marea, aided by the Athenians, defeated Achaimenes, the Persian satrap, but the allied Egyptians and Greeks were in their turn defeated by the Persian general Megabyzus near Prosopitis, an island in the Nile, and Inarus was crucified. Amyrtæus, a scion of a princely Egyptian family, and a partizan of Inarus, then sought an asylum in the marshy coast district, where he succeeded in maintaining his independence.

Herodotus travels in Egypt.

Darius II. (Pers. Daryavus), surnamed Nothos, or the Bastard. The Egyptians now revolted for the third time. Pausiris, son of the Amyrtæus above mentioned, had meanwhile been succeeded by a second Amyrtæus, who still maintained the independent position of his predecessors in the Delta. This Amyrtæus headed the new insurrection, which became general in 404; and he was soon recognised as king of the whole of Egypt. He founded the 28th Dynasty, which, however, lasted for six years only. Naifaurut (Nepherites) of Mendes at length succeeded in completely throwing off the Persian yoke, and became the founder of the 29th Dynasty. His chief endeavour was to secure the friendship of the Greeks, with a view to strengthen himself against the Persians.

Artaxerxes II., surnamed Mnemon.

The Persian king endeavoured to recover Egypt, but Hakori (Grk. Acorís), the successor of Naifaurut, threw obstacles in his way by supporting his enemies, parti-
cularly Euagoras, the tyrant of Salamis in Cyprus, and by
improving the defences of his country.

383-382. Psemuth (Psammutis) and —

382-378. Naifāurut (Nepherites) II., the successors of Hakori, reigned for short periods only.

378-364. Nakht-hor-heb (Nectanēbes), however, the next native monarch, a Sebennytic prince, the founder of the 30th Dynasty, completed the warlike preparations of the Egyptians, and entrusted the chief command of his troops to Chabrias, an Athenian general, who signally defeated Pharmabazus, the Persian general, at Mendes.

364-361. Takho (Grk. Tachos or Teos), who succeeded Nakht-hor-heb, invaded Syria, but being too proud to entrust the chief command of his army to his ally, the Spartan Agesilaus, was deserted by the latter in favour of Nakht-nebef (Grk. Nectanabis), the nephew of Takho, who laid claim to the crown in Egypt. Takho then surrendered to the Persians.

361-345. Nakht-nebef (Nectanabis) now prepared to prosecute the war in Syria on his own account, but was compelled to give up his intention in consequence of the revolt of his governor at Mendes. Aided by Agesilaus, however, he succeeded in defeating the insurgents, and with the assistance of Diophanes, an Athenian, and Lamios, a Spartan, he even repulsed the Persian army of Artaxerxes (351). Instead of following up these successes, he devoted himself to his favourite artistic pursuits, and when the Persians again invaded Egypt he fled with his treasures to Ethiopia. Egypt now surrendered to Artaxerxes, and again became a Persian satrapy (345).

332-323. Alexander the Great, after having defeated Darius on the Granicus (334), and at Issus (333), and captured the Philistine town of Gaza, marched to Pelusium, and was received with open arms by the Egyptians, who regarded him as their deliverer from the Persian yoke. He tolerated the native religion, visited the Oasis of Ammon, and founded Alexandria (p. 205), which, under the Ptolemies, became the great centre of Greek culture and of the commerce of the whole world.

In the lists of the Pharaohs we find the 28th, 29th, and 30th Dynasties mentioned as contemporaneous with the 27th or Persian Dynasty.

405-399. XXVIII. Dynasty (Saites): Amyrtaeus.

399-378. XXIX. Dynasty (Mendesites): —

399-393 Naifāurut (Nepherites) I.
393-393 Hakori (Acoris).
383-382 Psemuth (Psammutis).
382-378 Naifāurut (Nepherites) II.
XXX. Dynasty (Sebennytes): —

364-361. Takho (Teos).

361-345. Nakht-nebef (Nectanabis, or Nectanebos II.).

Period of the Ptolemies.

Ptolemy I. Soter (p. 210), son of Lagus, and one of Alexander's generals, now became Macedonian governor of Egypt. He defeated Antigonus and Perdiccas, who threatened the independence of his province, and in 305, after the assassination of Alexander II. Ægus, the son of Alexander the Great, he assumed the title of King of Egypt. In consequence of the foundation of the Alexandrian Museum (p. 205) for the reception of learned men, as well as of literary treasures, Alexandria soon superseded Athens as the chief nursery of Greek literature. Before his death, which took place in 284, Ptolemy I. abdicated in favour of his son,

Ptolemy II. Philadelphus (pp. 85, 210, 430).

Ptolemy III. Euergetes I. (p. 210, 296), in the course of two campaigns, conquered the empire of the Seleucides and Cilicia in Asia Minor. The power of Egypt abroad was now at its zenith.

Ptolemy IV. Philopator. Under this king and his successors, a series of degenerate monarchs, the great empire of the Ptolemies hastened to its destruction. He defeated Antiochus the Great of Syria, who had marched towards the Egyptian frontier, at the Battle of Raphia, but concluded a dishonourable peace with him.

Ptolemy V. Epiphanes (p. 439) ascended the throne, when five years of age, under the guardianship of Agathocles and Ænathe, the mother of the latter. In consequence of revolts at Alexandria and Lycopolis, and an attack by Antiochus the Great of Syria, his guardians were obliged to resign their office in favour of the Roman Senate, by whom Ælesyria and Palestine were ceded to Antiochus, while Egypt continued to be independent. Ptolemy V., having been prematurely declared of full age in 196, married Cleopatra I., daughter of Antiochus the Great. This alliance not only secured peace abroad, but caused a portion of the revenues of Ælesyria, Phœnicia, and Judæa again to flow into the treasury of Alexandria. The internal affairs of the country, however, fell into a state of deplorable confusion; one rebellion succeeded another, and anarchy prevailed everywhere.

193. Ptolemy V. was poisoned.

182. Ptolemy VI. Eupator, his son, died the same year.

182-146. Ptolemy VII. Philometor, the second son of Ptolemy V.
HISTORY.

(p. 394), when six years of age, ascended the throne under the protectorate of his mother Cleopatra I.

171. Battle of Pelusium. Philometor is taken prisoner, and Memphis captured, by Antiochus IV. of Syria.

170-117. Ptolemy VIII. was now placed on the throne, but was immediately assassinated by Ptolemy IX. Euergetes II. (nick-named Physcon, or 'big belly').

170-165. Ptolemy VII. Philometor and Ptolemy IX. Physcon, having become reconciled, reign jointly.

165. The brothers quarrel; Philometor flies to Rome, is reinstated by the Roman senate, and thenceforth reigns alone; while Euergetes, by command of the Roman senate, reigns at Cyrene.

146. Philometor dies.

Ptolemy Physcon besieges Alexandria, and becomes the guardian of the heir-apparent, a minor.

132. He is overthrown by a revolution, and retires to Cyprus.

125. He regains possession of the throne.

117. Physcon dies. Cleopatra III. Cocece, his niece and widow, and her son Ptolemy X. Soter II. Philometor II. (Lathyrus) reign jointly.

106. Lathyrus is banished, and his brother Ptolemy XI. Alexander I. becomes co-regent in his stead.

89. Alexander is exiled by insurgents.

87. Alexander is slain in a naval battle, and Lathyrus is recalled.

Thebes rebels and is destroyed.

Lathyrus dies. Alexander marries Berenice III., with whom he reigns jointly, under the name of Ptolemy XII. Alexander II.

81. He assassinates his wife, and is himself slain.

81-52. Ptolemy XIII. Neos Dionysos (or Auletes, the 'flute-player'), an illegitimate son of Lathyrus, ascends the throne, and is formally recognised by Rome (59).

60. Diodorus visits Egypt.

57. Auletes flies from Alexandria to Rome, but is reinstated by Gabinius.

52. Auletes dies, leaving a will by which he appoints his eldest children —

52-48. Cleopatra VII. (pp. 445, 211, 217) and Ptolemy XIV. Dionysos II. his joint heiresses, commands them to marry each other, and nominates the Roman senate their guardian.

Pompey is appointed to that office.

Ptolemy XIV. banishes Cleopatra. Pompey, having been defeated by Caesar at the Battle of Pharsalia, seeks an asylum in the territory of his wards, but on landing in Egypt is slain at the instigation of Ptolemy.
Cæsar lands at Alexandria, takes the part of the banished Cleopatra, and defeats the rebellious Ptolemy. Ptolemy XIV. is drowned in the Nile. Cæsar, having meanwhile become dictator of Rome, appoints Ptolemy XV., the brother of Cleopatra VII., a boy of eleven, co-regent. Ptolemy XV. is assassinated at the instigation of Cleopatra, and Ptolemy XVI. Cæsarian, her son by Cæsar, is appointed co-regent.

Caesar is murdered. Antony, having summoned Cleopatra to Tarsus to answer for the conduct of her general Allienus, who contrary to her wishes had aided the army of Brutus and Cassius at Philippi, is captivated by her beauty and talent. After having spent years of debauchery with the Egyptian queen, he is at length declared by the Roman senate to be an enemy of his country. Octavianus marches against him, defeats him at Actium, and captures Alexandria.

Antony commits suicide, and Cleopatra is said to have caused her own death by the bite of an asp. Egypt now became a Roman province, and was governed by prefects down to A.D. 362.

- Roman Period.

Caesar Octavianus, under the title of Augustus, becomes sole ruler of the vast Roman empire (p. 211). The Egyptian priesthood accord to the Roman emperors the same privileges as those enjoyed by their own ancient monarchs, and in their temple-inscriptions style them autocrator (absolute sovereign).

The Ethiopians, under their queen Candace, invade Egypt. Strabo travels in Egypt.

Tiberius erects the Sebasteum at Alexandria (p. 218).

Germanicus visits Egypt.

Caligula. A persecution of the Jews takes place, to which we are indebted for the historically valuable treatise of Josephus in answer to Apion, who had written against the Jews.

Claudius. Rights of citizenship guaranteed to the Jews. Lake Moeris gradually dries up.

Nero. Egypt acquires a new source of wealth as a commercial station between India, Arabia, and Rome.

Annianus, first bishop of Alexandria.

Vespasian (p. 211) visits Alexandria. From this city Titus starts on his expedition against Palestine, which terminates with the destruction of Jerusalem in the year 70.
Domitian (p. 432) encourages the worship of Isis and Serapis at Rome.

Trajan (p. 415). The canal connecting the Nile with the Red Sea is re-opened (Amnis Trajanus).

Rebellion of the Jews at Alexandria.

Hadrian (p. 211) visits Egypt (twice according to some accounts). His letter to Servianus (p. 214).

Termination of a Sothis period (comp. 90).

Marcus Aurelius.

Rebellion of the Bucolians, or cowherds of Semitic origin who had long been settled among the marshes of the Delta, quelled by Avidius Cassius.

Avidius Cassius is proclaimed emperor by the Egyptian legions, but is assassinated in Syria.

Marcus Aurelius visits Alexandria (p. 211).

Demetrius, first patriarch of Alexandria.

Commodus.

Septimius Severus. The philosopher Ammonius Saccas founds the Neo-Platonic School.

Severus visits Egypt.

Edict prohibiting Roman subjects from embracing Christianity. The Delta at this period is thickly studded with Christian communities. Schools of Catechists flourish at Alexandria (Pantæenus, Clement, Origen).

Caracalla (p. 211) visits Egypt. Massacre at Alexandria. Caracalla is assassinated by the prefect of his guards —

Macrinus, who is proclaimed emperor by the Egyptians. After his death a series of contests for the possession of the throne take place at Alexandria.

Decius (p. 212).

Persecution of the Christians under Decius. Beginning of the anchorite and monastic system, perhaps in imitation of the hermit life led by the devotees of Serapis (370). The history of these Christian ascetics (Paul the Hermit; Antonius, pp. 371, 469) soon came to be embellished with myths of every kind.

Valerianus. Persecution of the Christians (p. 212).

Gallienus accords religious toleration to the Christians. Plague in Egypt.

Rebellion of Macrianus, who is recognised as emperor by the Egyptians. He marches into Illyria against Domitian, the general of Gallienus.

AEmilianus (Alexander) is proclaimed emperor by the army at Alexandria and recognised by the people, but is defeated and put to death by the Roman legions.

Egypt invaded by an army of Queen Zenobia of Palmyra.

Claudius II.
100 HISTORY.

270-275. **Aurelian.**
270. Renewed invasion of the Palmyrenes. Zenobia recognised as Queen of Egypt.
276-282. **Probus** obtains the purple at Alexandria (p. 212).
278. His successful campaign against the Blemmyes.
284-305. **Diocletian** (pp. 212, 216).
292. Rebellion in Upper Egypt.
294. Insurrection of the Alexandrians.
295. Diocletian takes Alexandria and —
304. Persecution of the Christians.
307-313. **Maximinus.** Beginning of the Arian controversies.
324-337. **Constantine the Great**, first Christian emperor.
325. Council of Nice. The doctrine of the presbyter Arius of Alexandria (p. 212) that Christ was begotten by God before all time, and was godlike, but not very God, is condemned; while the teaching of Alexander, bishop of Alexandria, to the effect that Father and Son are homoousios, or of the same nature, is sanctioned, chiefly owing to the powerful eloquence of his deacon Athanasius, who accompanied him to the Council.
328. Constantine founds Constantinople as a new metropolis of Greek art and science.
337. Death of Constantine.
337-361. **Constantius** favours Arianism. Athanasius is deposed, and Georgius, who is made bishop of Alexandria, opposes the followers of Athanasius with the sword.
373. Athanasius dies, after having spent the last years of his life in the midst of his flock.
379-395. **Theodosius I. the Great.** He formally declares Christianity to be the religion of the empire. Persecution of the Arians and heathens (pp. 212, 360).
395. Partition of the Roman empire, Arcadius being emperor of the East, and Honorius of the West.

395-638. The Byzantines.

395-400. **Arcadius** permits Theophilus, the bigoted patriarch of Alexandria (p. 212), to exterminate with fire and sword the opponents of the doctrine that God must be considered to have a human form.

408-450. **Theodosius II.**
413. Theophilus, patriarch of Alexandria, dies, and is succeeded by Cyril (p. 212).
431. The view of the patriarch Cyril, that Christ and the Virgin (as η Θεότοκος) possess a double nature, prevails over that of the patriarch of Constantinople at the third oecumenical Council, held at Ephesus.
Death of Cyril.

Marcianus (p. 213).

At the fourth oecumenical Council, that of Chalcedon, the doctrine of the archimandrite Eutyches of Constantinople, to the effect that Christ possessed a double nature before his incarnation, but that this human nature was afterwards absorbed by his divine, is condemned, chiefly through the influence of Pope Leo the Great. At the same time the doctrine that Christ possesses two natures, ἀυτοτρόπος and ἀνάπραξις, but at the same time ἀναπράξις and ἀυτοτρόπος, i.e. unmixed and unchangeable, but also indistinguishable and inseparable, is formally accepted by the Church.

The Egyptians, to this day, adhere to the monophysite doctrine of Eutyches.

Zeno.

With a view to put an end to these doctrinal controversies, Zeno issued the so-called Henoticon, in which the question whether Christ possessed a single or a double nature was evaded. The doctrine stated, however, was so vague, that this attempt at reconciliation proved entirely fruitless.

Anastasius.

Famine in Egypt.

Rebellion of the Alexandrians on the occasion of the election of a patriarch.

Justinian (p. 213). New administration.

The emperor appoints a new orthodox patriarch. The Monophysites, who far outnumbered the orthodox party, separate from the dominant church and choose a patriarch of their own. They were afterwards called Copts (p. 342).

Heracleius (p. 213).

The Persians expelled by Heracleius.

Mohammedan Period.

‘Amr Ibn el-‘Asi, general of Khalif ‘Omar (pp. 239, 310, 360, 415), conquers Egypt and founds Fostât.

‘Amr enters Alexandria.

‘Omar is assassinated.

‘Othmân. A number of Arabian tribes settle in the valley of the Nile, and many Copts embrace El-Islâm. Fostât becomes the capital of the new government.

‘Othmân is put to death.

‘Omayyades. The last of this dynasty was —

Merwân II., who, having been defeated by Abu’l-‘Abbâs, fled to Egypt, and was put to death there. The Omayyades were then exterminated, with the exception of ‘Abd er-Rahmân, who fled to Spain, and founded an independent Khalifate at Cordova.

The ‘Abbasides govern Egypt.

Mâmûn (p. 338), the son of Harûn er-Rashîd, visits Egypt, promotes scientific pursuits of all kinds, and in particular
supports the school of learned men which had sprung up at Fostat.

Ahmed ibn Tulun, governor of Egypt (p. 240), profiting by the weakness of the 'Abbasides reigning at Baghda'd, declares himself an independent sultan, and founds the dynasty of the Tulunides. Arabian writers extol Tulun for his fabulous wealth and love of magnificence. Numerous buildings were erected during this reign (pp. 240, 263).

Khamarwayeh (p. 240), son of Tulun.

The 'Book of Lands', a geographical work by Ja'kubi, published about the year 891, informs us that Fostat occupied about one-third of the area of Alexandria at that period, that Alexandria was the most important commercial city in Egypt, that Askumun in Upper Egypt (see vol. ii. of the Handbook) was noted for its extensive cloth factories, Tins for its weaving and gold embroidery, Alexandria, Damiet, and Shatta for their brocades and cloth of gold (dabiki, kasab, washy), the Fayum for its canvas (khash), Siot for its carpets, Akhmim for its straw mats and leather-work, and Taha for its pottery. The chief export at that period, as in ancient times, was corn, which was chiefly sent to the Hijaz.

The Tulunides are put to death by the 'Abbaside Khalif Muktafi, who marched with an army to Egypt.

The Shi'ite Fathimites, who had gained possession of the supreme power at Tunis, commanded by 'Obdallah, attack Egypt, but are defeated.

Mohammed el-Ikhshid, a Turk, and governor of Egypt, takes possession of the throne.

Kafur, a black slave, who had for a time conducted the government for the second son of El-Ikhshid, usurps the throne, and recognises the suzerainty of the 'Abbasides.

Johar conquers Fostat for his master, the Fathimite Mu'izz, great-grandson of 'Obdallah. Mu'izz (p. 240) assumes the title of khalif and transfers his seat of government to Egypt, after having founded the city of Masr el-Kahira (Cairo) as a residence for himself near Fostat (p. 240). Egypt now becomes the most important part of the territory of the Fathimites.

Fathimite sovereigns of Egypt. The earlier of these governed the country admirably. The population increased with wonderful rapidity, and the whole of the commerce of India, as well as that of the interior of Africa, flowed to Egypt.

Mu'izz dies.

'Aziz, his son, distinguishes himself by his tolerance and his love of science (p. 285).

Hakim (pp. 240, 277), son of 'Aziz, a fanatic, declares himself to be an incarnation of Ali, and becomes the founder of the sect of the Druses (see Baedeker's Palestine and Syria, p. 100).
Zahir, Hākim's son, rules with sagacity.

Abu Tamim el-Mustansir, a weak and incapable prince, is practically governed by his viziers. A fierce feud breaks out between the negro-guards of his mother and the Turkish mercenaries under Nāṣir ed-Dauleh. The country is ravaged by a pestilence. Bedr el-Jemālī, governor of Damascus, is summoned to Egypt to act as chief vizier. The Turcomans, headed by 'Aziz, invade Egypt, but are expelled by Bedr.

Mustāli, son of Mustansir, conquers —

Jerusalem and the towns on the Syrian coast, but is deprived of his conquests by the army of the First Crusade. King Baldwin of Jerusalem attacks Egypt unsuccessully. 'Adid Ledinallāh, the last Fāṭimite.

Contests for the office of vizier take place during this reign between Shawer and Dargham. The former, being exiled, obtains an asylum with Nūreddīn, the ruler of Aleppo, who assists him to regain his office with Kurd mercenary troops, commanded by the brave generals Shirkuh and Salāḥeddīn (Saladin). Shawer, quarrelling with the Kurds, invokes the aid of Amalarīch I., King of Jerusalem (1162-73), who comes to Egypt and expels the Kurds. A second army of Kurds, which was about to invade Egypt, is driven back in the same way, whereupon Amalarīch himself endeavours to obtain possession of Egypt. Shawer next invokes the aid of his enemy Nūreddīn, whose Kurdish troops expel Amalarīch. Egypt thus falls into the hands of the Kurds Shirkuh and Salāḥeddīn. Shawer is executed. Shirkuh becomes chief vizier, and after his death Salāḥeddīn continues to rule in the name of the incapable khalif. On the death of the latter Salāḥeddīn becomes sole ruler of Egypt, and founds the dynasty of the —

Eyyūbides.

Salāḥeddīn (pp. 240, 260, 262, 432, 508), being a Sunnite, abolishes the Shi'ite doctrines and forms of worship.

After Nūreddīn's death he gains possession of the whole of that sovereign's Syrian dominions.

By the victory of Hīttin he overthrows the Christian kingdom in Palestine.

Death of Salāḥeddīn.

Melik el-'Adil, his brother and successor, preserves intact the dominions bequeathed to him; but the empire is dismembered at his death, and Egypt falls to the share of his son —

Melik el-Kāmil (pp. 339, 428), in whose reign the country began to play a prominent part in the history of the Crusades.
1219. Damietta (Dumyat) is captured by the army of the Fifth Crusade, but is compelled to surrender in 1221 (p. 432). While the sons of the last sultan are fighting with each other and with other relations for the throne of Egypt, the Mameluke —

1240-1249. Melik eš-Sâleḥ usurps the supreme power, and founds the Mameluke Dynasty.† His power being somewhat kept in check by his body-guard of Bahrite Mamelukes, he endeavours to extend his supremacy abroad. He attacks his uncle Isma‘îl, the ruler of Damascus. The latter allies himself with other Syrian princes and with the Christians of Palestine, but is defeated by Melik eš-Sâleḥ, whose army has been reinforced by the Turkish mercenaries of the prince of Khârezmîa, who had recently been dethroned by the Mongols. The Egyptians take Jerusalem, Damascus, Tiberias, and Ascalon.

1249. Louis IX., the Saint, of France, roused by the loss of Jerusalem, and with a view to prevent the Egyptians from further encroaching on the Holy Land, undertakes a campaign against Egypt, takes Damietta (p. 432), but while marching to Cairo is taken prisoner together with his army at Muṣṭura, and is only released on payment of a heavy ransom.

1250-1260. Bahrite Mameluke Sultans. The first of these monarchs was Mu‘izz Eibeq.

1260-1271. Bēbars, who had risen from being a slave to the position of leader of the Mamelukes, was one of the ablest of this dynasty. In the course of four campaigns he annihilates the last remnants of the kingdom of Jerusalem, and rules with sagacity, moderation, and justice. He brings to Cairo the last representative of the ‘Abbaside khalîfs, who had recently been dethroned by the Mongols, recognises his authority, and permits him nominally to occupy the throne.

1277-1290. Kalaûn (Kilâwûn, p. 273) successfully opposes the Mongols, and conquers Tripoli.

1291. El-Ashraf Khalîl (pp. 253, 276, 280), captures ‘Akka, the last place in the Holy Land held by the Christians.

† The Mamelukes were slaves (as the word mamlûk imports), purchased by the sultans and trained as soldiers, for the purpose of forming their body-guard and the nucleus of their army. They placed Melik eš-Sâleḥ on the throne, hoping to govern him without difficulty. But when the new sultan found his authority sufficiently well established, he dismissed them from his service, and formed a new body-guard of the Bahrite Mamelukes (who were so called from the fact that their barracks were situated in the island of Rûda in the Nile or Bahr). Ere long, however, the new guards succeeded in gaining possession of almost the whole of the supreme power.
HISTORY. 105

Hasan, who like all the other Bahrite Mamelukes was a patron of art and science, is distinguished as the builder of the finest mosque at Cairo (p. 258).

Circassian Mameluke Sultans (Burgites). The founder of this dynasty was —

Barkuk (pp. 240, 280), who overthrew the Bahrite Mamelukes. The reigns of these sultans present a series of revolutions and atrocities (see p. 240).

Bursbey (Berisbai, p. 232) conquers Cyprus.

Kait Bey (pp. 266, 284).

El-Ghuri (p. 272).

Tumân Bey (pp. 241, 270) is dethroned by the Osman Sultan Selim I. of Constantinople (pp. 213, 319). Cairo is taken by storm. Egypt thenceforth becomes a Turkish Pashalic. Selim compels Mutawakkil, the last scion of the family of the 'Abbaside khalifs, who had resided at Cairo in obscurity since the time of Bëbars, to convey to him his nominal supremacy, and thus claims a legal title to the office of Khalif, the spiritual and temporal sovereign of all the professors of El-Islâm.†

The authority of the Osman sultans soon declined, and with it that of their governors also. The Egyptian pashas were now obliged, before passing any new measure, to obtain the consent of the twenty-four Mameluke Beys (or princes) who governed the different provinces, and who merely paid tribute to the pasha. The most distinguished of these beys was —

'Ali Bey, originally a slave, who raised himself to the dignity of an independent sultan of Egypt by taking advantage of the difficulties of the Turks, who were involved in war with Russia. He conquers Syria and Arabia, but on his return to Egypt is imprisoned by order of his own son-in-law Abu Dabad, and dies a few days afterwards. Abu Dabad obtains a ratification of his authority from the Turkish sultan. After his death, the beys —

Murâd and Ibrâhîm share the supremacy, and render themselves almost independent of Turkey.

† The Turkish Khalifs, however, have never been recognised by the Shi'ites, as not being descended from 'Ali. Most of the Sunnites also, especially among the learned Arabs, regard them merely as temporal monarchs. Relying on an ancient tradition, they maintain that none but descendants of the Koreishites, the family to which Mohammed belonged, can attain the office of Imâm, or spiritual superior. They accordingly regard the great Sherif of Mecca as their true Imâm.
The French Occupation.

Napoleon Bonaparte (pp. 223, 241, 416) arrives at Alexandria, hoping to destroy the English trade in the Mediterranean, and, by occupying Egypt, to neutralise the power of England in India.

1801, Sept.

The Mameluke Bey Murâd defeated.

21st July.

Destruction of the French fleet at Abûkîr by the English fleet commanded by Nelson (p. 436).

25th July.

Central and Upper Egypt conquered.

1st Aug.

Defeat of the Turks at Abûkîr.

13-25th Sept.

Napoleon returns from Abûkîr to France, leaving general Kléber in Egypt.

1799, Jan., May.

Kléber defeats the Turks at Matâriyeh (p. 319).

24th Aug.

Kléber is assassinated at Cairo (p. 241). Menou assumes the command.

14th June.

The French are compelled by an English army to capitulate in Cairo and Alexandria, and to evacuate Egypt.

Mohammed 'Ali and his Successors.

1803.

In the year 1803 the French consul Matthieu de Lesseps was commissioned by his government to seek for some suitable man to counteract the influence of the English and the Mamelukes in Egypt, and he accordingly recommended for the purpose Mohammed 'Ali, who was born at Kavala in Roumelia in 1769, and who was at that period colonel (bîmbashi) of an Albanian corps of 1000 men in Egypt.

1803-1848.

Mohammed 'Ali, having succeeded in removing most of his enemies, is appointed Pasha of Egypt. In 1807 he frustrates an attempt of the English to take possession of Egypt, and on 1st March, 1811, causes the Mameluke beys, who prevented the progress of the country, to be treacherously assassinated, together with their followers (470 in number). His son, Tusûn Pasha, wages a successful war against the Wahhabites in Arabia, and deprives them of Mecca and Medina. Mohammed improves the agriculture of Egypt by introducing the cotton-plant, and by restoring the canals and embankments, appoints Frenchmen and other Europeans to various public offices, and sends young Egyptians to Paris to be educated. During the Greek war of independence he sends 24,000 men to the aid of the sultan, as a reward for which he is presented with the island of Candia at the close of the war.

1811.

In 1831, aiming at complete independence, he makes war against the Porte. His son Ibrâhîm invades Syria, and cap-
HISTORY.

1832. tures ‘Akka (27th May, 1832), Damascus (8th July), and Haleb (21st Dec.), destroys the Turkish fleet at Könyeh (Iconium), and threatens Constantinople itself. His victorious career, however, was terminated by the intervention of Russia and France. Syria is secured to Moḥammed by the peace of Kutāḥyeh, but he is obliged to recognise the suzerainty of the Porte. At the instigation of the English, Sulṭān Maḥmūd renews hostilities with Egypt, but is decisively defeated by Ibrāḥīm at Nisibī on 24th June, 1839. In consequence of the armed intervention of England and Austria, however, Ibrāḥīm is compelled to quit Syria entirely, and Moḥammed is obliged to yield to the Porte a second time.

1839. By the so-called firman of investiture in 1841 Sulṭān Abdu’l-Medjid secured the hereditary sovereignty of Egypt to the family of Moḥammed ‘Ali, the pasha renouncing his provinces of Syria, Candia, and the Hijāz, and binding himself to pay an annual tribute of 60,000 purses (about 306,000£.) to the Porte and to reduce his army to 18,000 men. During the last years of his life Moḥammed fell into a state of imbecility, and died on 2nd Aug. 1849 in his palace at Shubra.

1846. Ibrāḥīm Pasha, Moḥammed ‘Ali’s adopted son, had already taken the reins of government, in consequence of Moḥammed’s incapacity, in January 1848, but he died in November of the same year, and before his adoptive father.

1849-1854. ‘Abbās Pasha, a son of Ṭusūn Pasha and grandson of Moḥammed ‘Ali, was a brutal, vicious, and rapacious prince, whose chief object in life was to amass money. He dismissed the European officials of his grand-father, and closed the schools founded by him. He was strangled by his own ḵawwāṣes in his palace at Benha.

1854-1863. Sa’id Pasha, his successor, was Moḥammed ‘Ali’s third son. Thanks to his enlightened government and his taste for European civilisation, Egypt made considerable progress during his reign, although her finances were far from being in a satisfactory condition. He equalised the incidence of taxation, abolished monopolies, improved the canals, and completed the railways from Alexandria to Cairo and from Cairo to Suez, which had been begun in 1850, during the reign of his predecessor. He was also a zealous supporter of the scheme of M. Ferdinand de Lesseps, with whom he had been on intimate terms in early life, for constructing a canal through the Isthmus of Suez. During the Crimean war he was obliged to send an auxiliary army and considerable sums of money to the aid of the Porte. He rendered important service to the cause of science by founding the museum of Bulāk, and by instituting excavations at Tanis, Sais, Thennis, Kynopolis, Bubastis, Athribis, Heliopolis,
Memphis, Saḥkāra, Abydos, Dendera, Thebes, and Edfu. He died on 18th Jan. 1863, and was succeeded by his nephew —

1863. Ismā‘īl Pasha, the second son of Ibrāhīm Pasha, who was born on 31st Dec. 1830. During this reign Egypt has unquestionably made great progress. Railways, canals, and locks have been constructed, manufactories established, the postal and telegraph systems re-organised, schools of every kind opened, and the administration of justice reformed. To this prince also European science is much indebted for the liberality with which he has supported scientific undertakings within his dominions. In 1866, in consideration of a large sum of money, he obtained the sanction of the Porte to a new order of succession based on the law of primogeniture, and in 1867 he was raised to the rank of Khedive, or viceroy, having previously borne the title of wālī, or governor of a province only. His relations to the Porte were of an unfriendly character in 1869, but harmony was restored through his personal exertions and by the payment of an additional sum of money. On 20th Sept. 1872 the Khedive obtained a new firman confirming and extending his privileges (succession according to the law of primogeniture; independence of administration and judicatures; right of concluding treaties with foreign countries; right of coining money; right of borrowing money; permission to increase his army and navy at pleasure). The annual tribute payable to the Porte was at the same time raised to 133,635 purses (about 681,538$.). With regard to the warlike successes of the Khedive and the extension of his dominions, see pp. 29, 30.

IV. Hieroglyphics.

By Professor G. Ebers of Leipzig.

The ancient Egyptians used three kinds of writing, the Hieroglyphic, the Hieratic, and the Demotic, to which, within the Christian era, was added the Coptic. The first and earliest is the pure Hieroglyphic writing, which consists of figures of material objects from every sphere of nature and art, together with certain mathematical and arbitrary symbols. Thus [owl, 1 snail, 2 axe, 3 square, 4 question mark, senti. This is the monumental writing, which is oftener found engraved on stone than written with a pen. For the speedier execution of long records the Egyptians next developed the Hieratic writing, in which the owl (3, i.e. 2) almost ceases to be recognisable, and in which we possess literary
works of every kind except dramas. The most ancient hieratic papyrus now extant was written in the third millennium before Christ. The language used in the hieroglyphic and hieratic writings alike was the ancient sacred dialect of the priests. The Demotic writing, which was first employed in the 9th century before Christ, diverges so widely from the hieroglyphic that in some of the symbols the original sign from which they were derived is either not traceable, or can only be recognised with difficulty. The sign of the owl, for example, was curtailed to ♂. This writing was chiefly used in social and commercial intercourse; as, for example, in contracts and letters, whence it was sometimes termed the ‘letter character’ by the Greeks. The more the spoken language diverged from the sacred dialect, which assumed a fixed form at a very early period, the more urgent became the want of a new mode of writing appropriate to the living language. Thus arose the demotic style, and lastly, in the 3rd century after Christ, the Coptic, in which the language spoken at that time by the Christian Egyptians was written, the characters being Greek, with a few supplementary symbols borrowed from the demotic (such as ñ s, ñ f, ñ ch, ñ h, ñ c, ñ j, and the syllabic ñ ti). Many Coptic writings, chiefly of a religious character, have been handed down to us, the finest of them being the books of the Old and New Testament.

Down to the end of the 18th century scholars had been misled in their endeavours to find a clue to the hieroglyphic writing by a work of the Egyptian grammarian Horapollon, translated into Greek, who represented the characters as being purely symbolical, and as having each an independent meaning of its own. At length in 1799 M. Boussard, a French officer of artillery, discovered at Rosetta a trilingual inscription (pp. 438 et seq.), in hieroglyphic and demotic characters and in Greek. The demotic part of the inscription was examined by M. Silvestre de Sacy, a French savant, and Hr. Ackerblad, a Swede, in 1802, and, chiefly owing to the exertions of the latter, the signification of a number of the symbols was ascertained. In 1814-18 the hieroglyphic part of the inscription was studied by Dr. Th. Young, an English scholar, who, by comparing it with the demotic part, succeeded in dividing it into a number of corresponding groups, and, by directing his attention to the cartouches (p. 115), discovered the signification of several of the hieroglyphic symbols. In 1821 François Champollion, usually sur-named Le Jeune, who possessed an intimate acquaintance with the Coptic language and literature, directed his attention to the hieroglyphics, and in the course of the following year discovered the hieroglyphic alphabet, which afforded him a clue to the whole of the ancient Egyptian literature. His method, which he has explained in his hieroglyphic grammar, though at first vehemently opposed, soon obtained able adherents, who after his early death in 1832 zealously took up and prosecuted the same line of research.
Among these were the French savants MM. Ch. Lenormant, Nestor l'Hôte, and Emmanuel de Rouge, the last of whom was the first to translate with philological accuracy a hieroglyphic text of any length, and the Italian scholars MM. Salvolini, Ungarelli, and Rosellini. The most distinguished English Egyptologists of the same school are Messrs. Osburn and Hineks, and Dr. Birch, who has compiled the first complete dictionary of the ancient language, and has translated numerous inscriptions. The most celebrated German Egyptologist is Prof. Richard Lepsius, the founder of the critical method of prosecuting philological and historical research. Thanks to the discoveries of these savants and others of the same school, the study of the subject has progressed so rapidly that the time is probably not far distant when students will be able to translate a hieroglyphic inscription with as great philological accuracy as the work of a Greek or Latin author.

A glance at a single temple wall, or even at the annexed list of the names of the Egyptian kings, will show the traveller that we have not to deal here with an alphabetical mode of writing, the signs (about 2000 in number) being far too numerous. The ancient Egyptian writings were based on two different, but intimately connected systems: (1) the Ideographic, which, by the use of well-known objects as symbols of conceptions, sought to render its meaning intelligible to a certain class of the community; and (2) the Phonetic, which represents words by symbols of their sounds. Although we cannot now trace the rise and progress of hieroglyphic writing, as even the earliest specimens manifestly belong to an already perfected system, we may at least safely assert that the ideographic element preceded the phonetic; for, as a child employs gestures earlier than speech, so nations use a symbolical form of writing before they arrive at a method of expressing sounds. The newer and more serviceable phonetic system must ultimately have superseded the ideographic, although occasionally calling in its aid as an auxiliary. In the perfected system, therefore, the symbols for sounds and syllables are to be regarded as the foundation of the writing, while symbols for ideas are interspersed with them, partly to render the meaning more intelligible, and partly for ornamental purposes, or with a view to keep up the mystic character of the hieroglyphics.

The Phonetic signs are divided into alphabetical letters, such as

\[ a, b, q \text{ or } k, f\] etc., and syllabic signs, such as

\[ ar, h\hat{a}, seh, \text{ankh, aner}, \text{etc.} \]  

The syllable signs may, in order to fix their sounds with greater precision, have as 'phonetic complements' one, several, or all of those sounds which the name of the syllable representing the sign in
question contains. Thus \( \text{ ank } \), which stands for \( \text{ ank } \), may also be represented by (1) \( \text{ ank } \), (2) \( \text{ ank } \), (3) \( \text{ ank } \), or (4) \( \text{ ank } \). The reading is, however, facilitated by the fact that, in order to ensure the correct pronunciation of each syllabic sign, none but the most definite sounds were added to it. The symbol \( \text{ men } \), for example, is never written \( \text{ men } \), as it might be, but almost invariably \( \text{ men } \) or \( \text{ men } \). It represents a chess-board with figures. The ideographic signs, or determinatives, are placed as explanatory adjuncts after the phonetically written groups. They are indispensable in elucidating the signification, for the Egyptian language, having been arrested in its development, is poor, and full of homonyms and synonyms. The symbol \( \text{ ank } \), for example, means 'to live', 'to swear', 'the ear', 'the mirror', and 'the goat'. The reader would easily fall into errors, such as mistaking \( \text{ ank } \) for 'a beautiful life' instead of 'a beautiful goat', if the determinative, or class, sign did not come to his aid, and show to what category of ideas the object belonged. Thus, after \( \text{ ank } \), the goat, the Egyptians either placed a figure of that animal, or a piece of hide with a tail \( \text{ ank } \), which served as a common symbol for all quadrupeds. The symbol used to represent a particular word is termed a special, while one chosen to denote a class is termed a general, determinative. An elephant \( \text{ ank } \) placed after the group of \( \text{ ank } \), \( \text{ ank } \), 'the elephant', is a special determinative, while a lock of hair \( \text{ ank } \) placed after \( \text{ ank } \), 'the mourning', is a general determinative, a lock of hair being the conventional emblem of grief, as the men were in the habit of cutting off their hair in token of sorrow. A word is frequently followed by several determinatives. Thus \( \text{ ank } \) is 'the cedar'; but the wood of the tree being scented, the group representing \( \text{ ank } \) was not only followed by the figure of a tree \( \text{ ank } \), but also by the symbol \( \text{ ank } \), which signifies that a perfumed object is spoken of. The special determinative always precedes the general. Symbols that were not capable of being very clearly engraved on stone were sometimes omitted, and the special determinative given alone. Instead of
Hieroglyphics.

112

semsem, 'the horse', often stands alone. In such cases we know the sense of the word, while its pronunciation must be gathered from other and fuller forms of it. The following words, which are written in various ways, may be given as an illustration.

(1)  
\[
\begin{array}{cccc}
\text{ahu-u} & \text{apet-u} & \text{arp-u} & \text{Wine} \\
\text{Bullocks} & \text{Geese} & & \\
\end{array}
\]

(2)  
\[
\begin{array}{ccc}
\text{Bullocks} & \text{Geese} & \text{Wine} \\
\end{array}
\]

In the first of these groups ahu corresponds to the Coptic \(\text{epo\text{y}}\) ehou, and signifies bullocks, as the determinative symbol shows. (The three strokes are the sign of the plural.) In the next place apet-u signifies geese, and is determined by the figure of that bird. Lastly ap (Coptic \(\text{rp}\)) means wine, and is associated with the general determinative, i.e. the jars in which the juice of the grape used to be kept. In the second form of the sentence the syllabic writing is omitted, and the plural, instead of being denoted by three strokes, is expressed by the repetition of the special determinative. This leaves no doubt as to what is meant, while the first form gives us the actual words.

We now give the most important symbols of sound of the ancient Egyptian writing, and also a few syllabic signs.

29.  ba.
The form of the hieroglyphic signs is not invariable. During the primæval monarchy they were simple and large, while under the new empire they diminished in size but increased in number. The writing of the reigns of Thothmes III. and of Seti I. (18th and 19th dynasties) is remarkably good. In the 20th and following dynasties the hieroglyphics show symptoms of decadence. The writing of the 24-26th dynasties is distinct and elegant, but has not the boldness peculiar to the primæval monarchy. Under the Ptolemyes the symbols acquired characteristics peculiar to this period alone, while many new hieroglyphics were added to the old; the individual letters are, as a rule, beautifully executed, but the eye is offended by their somewhat overladen and cramped style. The method of writing, too, is changed. The phonetic element makes large concessions to the ideographic, and acrophony
becomes very predominant: i.e., a number of symbols are used to stand for the first letter only of the word they represent. Thus the syllabic symbol \( \text{ser} \) (‘the prince’) is used for the letter \( s \) alone; \( \text{nehem} \) (‘the lotus-bud’) for \( n \) alone; and so on.

The frames within which the groups of hieroglyphics are enclosed are termed ‘cartouches’. Where they occur, the inscription generally records the names of kings, and occasionally, but very rarely, those of gods. Above them usually stands the group \( \text{suten sekhet} \), i.e. ‘king of Upper and Lower Egypt’, or \( \text{neb taui} \), ‘sovereign of both lands’, or \( \text{neb khâ-u} \), ‘lord of the diadems’.

When the name of a king is to be deciphered, the alphabetical signs must first be noted, and then the syllabic symbols. The following examples will illustrate this.

The builder of the great pyramids is named —

\[
\begin{align*}
\text{Khufu} & \quad \text{(25) being } \text{kh;} \\
\text{f} & \quad \text{(24) } u; \\
\text{thut} & \quad \text{(5) } \text{f; and } \text{khafra.}
\end{align*}
\]

The builder of the second pyramid was \( \text{Menkera} \). Here \( \text{O} \) is the 3rd syllabic sign \( \text{ra} \); \( \text{kh} \), the 4th syllabic sign \( \text{kha} \); \( \text{f} \) the letter. This would give us \( \text{râ-khâ-f} \); but it is to be read \( \text{khâ-f-râ} \), or Khafra, as the syllable \( \text{ra} \), wherever it occurs in the name of a king, is always placed first without regard to its proper place in the structure of the word. This was done out of respect for the holy name of Ra, the god of the sun, to which the Egyptians thus piously gave precedence. On the same principle the name of the builder of the Third Pyramid, \( \text{O} \) (3), \( \text{mes} \) (1), and \( \text{ra-men-ka} \), is to be read Menkara or Menkera. — Several celebrated kings of the 18th Dynasty are termed

\[
\begin{align*}
\text{Thut-mes} & \quad \text{the Greek form of which was Tuthmosis (commonly known as Thothmes).}
\end{align*}

VI. Religion of the Ancient Egyptians.

The difficulty of thoroughly comprehending the fundamental ideas which underlay the religion of the ancient Egyptians is increased by two important circumstances. The first of these is, that the hierarchy of Egypt studiously endeavoured to obscure their dogmas by the use of symbolical and mysterious language; and the second is, that each nomos possessed its own local divinity and colleges of priests, and invented its own cosmological and metaphysical allegories. This accounts for the differences of doctrine in a number of forms of worship bearing the same name, and for the frequency with which the attributes of one god trench on those of another. The primitive religion, moreover, underwent great changes as the capacity of the hierarchy for more profound speculation increased, until at length the relations of the divinities to each other and to the fundamental ideas represented grew into a complicated system, understood by the limited circle of the initiated alone. This was styled the Esoteric Doctrine†; the leading idea of which was, that matter, though liable to perpetual modifications, was eternal and fundamentally immutable, incapable of increase or decrease, but endowed with intelligence and creative power. In the opinion

† Esoteric (from ἐσωτερικός, inner, hidden) is a term applied to a mysterious doctrine, known to the initiated only, the antithesis of which is the exoteric doctrine (from ἐξωτερικός, external, popular).
of those who held this doctrine there could be no original act of creation, and no plurality of gods; but a metaphysical conception so difficult of apprehension could not be propounded to the great body of the people. For the use of such persons it was, therefore, simplified, and clothed with allegorical forms, through the medium of which they might behold it as through a veil, somewhat obscured, but at the same time embellished and shorn of its terrors. This constituted the Exoteric Doctrine, with which was connected the theogony, or theory of the origin and descent of the divinities who represented the various forces and phenomena of nature. These gods, however, though not existent from all eternity, were neither created nor begotten, but were regarded as having been self-created in the wombs of their own mothers, and are therefore spoken of as 'their own fathers', 'their own sons', and the 'husbands of their mothers'. The deities accordingly are seldom spoken of as single individuals, but in triads, as father, mother, and son (comp. p. 128).

The primary source from which all life proceeds, the first cause of all things, was clothed with a personal form, called Nun. The principle of light, and the creative power of nature, which implants in matter the germs of existence and light, was Khepera, or the scarabæus with the sun's disc, whose emblem was the beetle (scarabæus sacer). As that insect rolls up into a ball the eggs which produce its offspring, and was supposed to have no female, so this deity was believed to have concealed within the globe of the world the germs of organic life. Ptah is the greatest of the gods, and is the embodiment of the organising and motive power developed from moisture (Nun). It is he who imparts form to the germs sown by Khepera, and under the name of Sekhem Nefer breaks the ball rolled along by the scarabæus, or in other words the egg of the universe, from which emerge his children, the elements and the forms of heaven and earth. Ra, a deity who bears seventy-five different forms, at first appears in the Nun under the name of Tum, or the evening sun; during his passage through the lower hemisphere, that of night, he is known as Khnum, and is born anew on the next morning of the creation, bursting forth in the form of a child (Harmakhis) from a lotus-flower floating on the Nun. Evening and night precede the morning and day; and Amenthes, or the infernal regions, were believed to have existed before the upper regions which formed the scene of human life.

After the breaking of the egg of the world, the universe is resolved into three empires: (1) The heavenly Nut, represented as a woman ( ), bending over the earth, on whose back float the vessel of the sun, the planets, and the constellations. (2) Seb, or the earth, which possesses the power of eternal rejuvenescence, and was regarded by the Egyptians as the symbol of eternity, a deity somewhat resembling the Greek Chronos. (3) The Infernal Regions, which are presided over by Ptah, the power productive of
new forms, the germinating principle of seeds, and god of light and heat (sometimes represented in the shape of a deformed child), and, after him, by Ra, who appears from the inscription on the royal tombs at Thebes to have been a purely pantheistic conception, the 'frame of the universe' and 'the universe', and whose sphere therefore embraced the lower as well as the upper regions. (See also Ra and Ammon.)

The Sacred Animals and the Mixed Forms, which generally consist of human bodies with the heads of animals, frequently recur as companions of the gods, or are used as emblems of the deities themselves. In each case those animals were selected whose inherent dispositions and habits corresponded to the power or phenomenon of nature personified in the god. Specimens of these animals were kept in and near the temples, and the finest of them were embalmed after death and revered in the form of mummies. Thus, the maternal deities were appropriately represented by the cow, the patient mother and nurse; the goddess of love, the bride of Ptah, was represented with the head of a fierce lion or a cat; the crocodile was sacred to Sebek, the god who caused the waters of the Nile to rise; and the hawk, which soars towards heaven like the sun, was dedicated to Ra. The symbol of Ptah was the black Apis bull, whose great power of generation seemed analogous to the never ceasing creative energy of the black soil of Egypt.

The Egyptian Gods. The chief of the gods, as we have already mentioned, was Ptah, the Greek Hephæstus. He was the ancient god of Memphis, who delivered to Ra the germs of creation, and was assisted in his labours by the seven Khnumu or architects. As from him were supposed to emanate the laws and conditions of existence, he is also styled 'lord of truth'. He is represented in the form of a mummy, but with his hands protruding from the bandages, and grasping the symbol of life $\mathtt{\text{m}}$, that of stability $\mathtt{\text{n}}$, and the sceptre $\mathtt{\text{r}}$. The neck-ornament called 'menat' is generally attached to his back, and on his head he usually wears a smith's cap. He sometimes occurs with a scarabæus instead of a head. In view of his connection with the doctrine of immortality and with the infernal regions, he sometimes appears in the inscriptions as Ptah-Sokar-Osiris, who prescribes to the sun that has set, as well as to the mummies of the dead, the conditions under which they may rise again and enter on a new life. The 'primeval Ptah' is also spoken of as the head of the solar gods, and also occasionally as the creator of the egg, from which, according to an older myth, the sun and the moon came forth. Thence, too, is derived his name, which signifies 'the opener'. By his side are often placed the goddess Sekhet (Pasht), and his son Imhotep (Æsculapius).

His sacred animal was the Apis bull, which was the offspring
of a white cow impregnated by a moonbeam. In order to represent Apis worthily, a bull had to be sought which possessed a black hide, a white triangle on his forehead, a light spot on his back in the form of an eagle, and under his tongue an excrescence shaped like the sacred scarabæus. After his death the representative of Apis was embalmed and preserved in a sarcophagus of stone (p. 372). He was the symbol of the constantly operative fashioning power of the deity, and is on that account represented as the son of the moon, which, though never changing, appears to re-fashion itself every hour. The era of time named after Apis was a lunar period, containing 309 mean synodic months, which almost exactly corresponded with 25 Egyptian years.

Ra, the great god of Heliopolis (On) in Lower Egypt, as the king of gods and men, ranks next to Ptah, and is, from the exoteric point of view, the sun who illumines the world with the light of his eyes, and the awakener of life. He rises as a child, under the name of Harmachis (Har-em-khuti), at midday he is called Ra, and at sunset he is represented as Tum, an old man subduing the enemies of Ra, who obstruct his entrance to the lower regions which he traverses at night. During his course through the nether world he becomes the ram-headed Khnum (p. 127), or the nocturnal link between Tum and Harmachis, or evening and morning. As man in the region of the shades has to undergo many trials, so the ship of the sun, as soon as he has crossed the western horizon, no longer sails along the blue back of the goddess Nut, but along the sinuosities of the serpent A'pep, the enemy of the setting sun, who is subdued and held in bondage by the companions of Ra.

In rising Ra is born, and in setting he dies; but his life is daily renewed by an act of self-procreation taking place daily in the bosom of nature, which was termed Isis, Muth, or Hathor. This goddess is frequently called the ruler of the nether regions, and is represented with the head of a cow, or in the form of a cow, which every morning gives birth to the young sun. Twelve human figures, each bearing the orb of the sun or a star on his head, represent the hours of the day and night. The animals specially sacred to Ra were the hawk; the Upper Egyptian light-coloured Mnevis bull, which also belonged at a later period to Ammon Ra, and a specimen of which had even before that time been kept in the temple of the sun at Heliopolis; and, lastly, lions with light skins. The Phænix, or bird from the land of palms, called by the Egyptians bennu, which,
according to the well known myth, awakes to new life after being burned, and brings its ashes to Heliopolis once every five hundred years, was also associated with the worship of Ra. As Apis is associated with Ptah, so this bird by the side of Ra is a symbol of the soul of Osiris. — Ra is generally represented with the head of a hawk, and coloured red. He holds in his hands the symbols of life and sovereignty, and wears on his head a disc with the Uraeus serpent, or basilisk. According to the esoteric and pantheistic construction of the inscriptions on the tombs of the kings, Ra is the great Universe (τὸ πᾶν), and the gods themselves are merely so many impersonations of his various attributes (see Ammon Ra, p. 136).

Tum, or Atum, a manifestation of Ra, whose name is perhaps akin to temt, signifying the universe, was first worshipped in Lower Egypt, particularly at Heliopolis and at the city of Pa-tum, that is, ‘the place of Tum’, the Pithom of Scripture. His rites were also celebrated in Upper Egypt at an early period. He is one of the oldest of the gods, having existed ‘on the waters’ in the dark chaos of the embryonic world, prior to the first sunrise, or birth of Harmachis from the lotus flower. According to the later esoteric views he was the setting sun, the harbinger of the coolness of evening. Under his guidance mankind was created by Khnum, and he was the dispenser of the welcome northerly breezes. He was also the approved warrior against the dark powers of the infernal regions which obstruct the progress of the sun’s bark, and is represented as a bearded man with a combined Upper and Lower Egyptian crown, or the orb of the sun, on his head, and the emblems of sovereignty and life in his hands. As the creator he sometimes has a scarabæus for a head; as Nefer-Tum he has the head of a lion, surmounted by a hawk crowned with lotus flowers, and holds an ut’a eye in his hand. As representing the setting of the sun preparatory to its rising again, he
is also regarded as the god of the resurrection, as the hawk on his head indicates.

**Khnum** (Greek Chnubis, Knuphis, or Kneph), one of the most ancient of the gods, who, while retaining his own attributes, was often blended with Ammon, was chiefly worshipped in the region of the cataracts and in the oases of the Libyan desert. Being regarded as a link between the setting and the rising sun, he receives the sceptre of Ra beyond the western horizon (in which direction also lay the oases), and takes the place of that god during the progress of the sun through the nether world. Khnum (‘khnem’, the uniting) was also the power which united the days of sterility with those of fecundity, and was therefore specially revered in the island of Elephantine, near the first cataract, where the fertilising Nile first enters Egypt, as the god of the inundation and the dispenser of the gift of water. By his side usually stand the goddesses Anuqa and Sati. Khnum is one of the cosmic gods, who created the inhabitants of heaven. He and his assistants are associated with Ptah, and he is sometimes represented as moulding the egg of the world on a potter’s wheel out of matter furnished by Ptah, and fashioning mankind. He is generally represented with the head of a ram, and coloured green. He occurs as often sitting as standing, wears the atef crown on his head, and wields the sceptre and the symbol of life; while from his hips, proceeding from his girdle, depends a generative organ resembling a tail, which is appended to the most ancient form of his apron.

**Ma**, the goddess of truth and justice, is the radiant daughter of the god of the sun. She is easily recognised by the ostrich feather on her head, while in her hands she grasps the flower-sceptre and the symbol of life. In the more recent form of the ancient language she is termed T-mei (with the article),
from which name an attempt has been made to derive that of the Greek goddess Themis, like whom Ma is represented as blind, or at least with bandaged eyes.

**Gods of the Osiris and Isis Order.** We owe to Plutarch a detailed account of this myth, which has been uniformly corroborated by the monuments, and which may be briefly told as follows.

Isis and Osiris were the children of Rhea and Chronos, that is, of Nut, the goddess of space, and of Seb, the god of the earth, which, owing to its eternal rejuvenescence and imperishableness, symbolises time. While still in the womb of their mother, that is, in the bosom of space, the children became united, and from their union sprang Horus. Typhon and Nephthys, children of the same parents, likewise married each other. Osiris and Isis reigned as a happy royal pair, bestowing on Egypt the blessings of wealth and prosperity.

Typhon conspired against Osiris, and at a banquet persuaded him to enter a cunningly wrought chest, which he and his seventy-two accomplices then closed and threw into the Nile. The river carried the chest northwards, and so down to the sea by way of the estuary of Tanis; and the waves at length washed it ashore near the Phœnicians Byblus. Meanwhile Isis roamed in distress throughout the country, seeking her lost husband; and she at length succeeded in discovering his coffin, which she carried to a sequestered spot and concealed. She then set out to visit her son Horus, who was being educated at Buto. During her absence Typhon, while engaged in a boar-hunt, found the body of the god, cut it into fourteen pieces, and scattered them in every direction. As soon as Isis learned what had happened, she collected the fragments, and wherever one had been found erected a monument on the spot to its memory; and this accounts for the numerous tombs of Osiris mentioned as existing in Egypt and elsewhere. Osiris, however, was not dead. He had continued his existence and his reign in the lower regions, and after his burial he visited his son Horus, whom he armed and trained for battle. The young god soon began a war against Typhon, and was at length victorious, although he did not succeed in totally destroying his enemy.
Osiris is the principle of light, while Typhon is that of darkness which Osiris defeats and banishes to the infernal regions. Isis Hathor mourns over his disappearance, follows him towards the West, where she gives birth to Horus, who annihilates darkness and restores his father to his lost position. When Ra is termed the soul of Osiris, the meaning is that he renders visible the hidden principle of light (Osiris). When, on the other hand, Osiris is regarded as emblematical of the principle of moisture, the most perfect embodiment of which is the god Hapi, or the Nile, Typhon and his seventy-two companions represent the days of drought. Like the dead body of Osiris, the water flows towards the North, and the languishing Isis, that is, the fruitbearing earth, mourns over the loss of the fertilising power; but this is for a short period only, for Horus soon vanquishes Typhon in the southern districts, and the rising Nile again begins to impregnate the black soil with abundant fertility. Lastly, when Osiris is regarded as the principle of life, Isis, the earth, is the scene of the operation of that principle, while Typhon represents death, and Horus the resurrection. If we regard Osiris, as the monuments so frequently do, as a pure and perfect being, the principle of the good and the beautiful, in which case he receives the surname of Un-Nefer, we recognise in Typhon the discords with which life is so replete, but which seem to be permitted only in order that the purity of the harmonies into which they are resolved through the intervention of Horus may be the more thoroughly appreciated. Osiris, according to the exoteric doctrine, is also the sovereign of the lower regions and the judge of souls, which, if found pure, are permitted to unite with his. The dead, therefore, do not merely go to Osiris, but actually become Osiris. Osiris is always represented with a human head. He either sits as a king on his throne, or appears in the form of a mummy. He always wields the scourge and crook, and sometimes other emblems also. The crown of Upper Egypt which he wears on his head is usually garnished before and behind with the ostrich feathers of truth. Beside him, even in very ancient representations, stands a kind of thrysus or entwined...
rod, to which a panther-skin, the garb of his priests, is attached. In consequence of his function of promoting vegetable life, his wanderings, and perhaps also on account of this staff and skin, he was termed Dionysos (or Bacchus) by the Greeks.

Typhon-Seth. The name Typhon is most probably of Greek origin. The Egyptians named him Seth, or Sutekh, and represented him as a fabulous animal, or with the head of this animal, and subsequently as an ass, an animal which was sacred to him, or with an ass's head. His name is met with in the most remote period, but he appears originally to have been worshipped merely as a god of war and the tutelary deity of foreigners. He is usually styled the brother of Horus, and the two are called the Rehehui, or hostile twins, who wounded each other in the battle above described. At a later period, after the god of battles and of foreigners had shown himself permanently unfavourable to the Egyptians, they ceased to render service to him, and erased his name from the monuments on which it occurred, and even from the cartouches of the most-highly extolled kings. With regard to his connection with the myth of Osiris and Isis, see p. 128.

Nephthys, the wife of Seth, was called by the Greeks Aphrodite or Nike (Victory), probably on account of her being the wife of the god of war. Her proper sphere was the nether world. In the upper world she occurs as the nurse or instructress of the youthful Horus, and she appears with Isis, mourning and beating her forehead, at the funeral rites of Osiris, whom she had loved, and to whom, being mistaken by him in the dark for Isis, she had borne Anubis. She is also associated with Osiris and Isis, with the youthful Horus and Isis, and even, as one of a tetrad, with Osiris, Isis, and Horus. She is usually represented with the symbol (i.e. neb-hat, mistress of the house) on her head, which is adorned with the vulture cap, and grasping in her hands the flower-sceptre and the symbol of life.

Anubis was the guide of the dead to the infernal regions and the guardian, of Hades, of which he is termed the master. In the form of a jackal, or with the head of a jackal, he presides over funeral rites and guards the kingdom of the West.

Horus, who occurs in many different forms, invariably represents the upper world or region of light, and also regeneration, resurrection, and the ultimate triumph of good over evil, of life over death, of light over darkness, and of truth over falsehood. He is
constantly called the 'avenger of his father'; and detailed illustrations of his contest with Typhon, dating chiefly from the period of the Ptolemies, have been handed down to us. In the form of a winged disc of the sun he opposed Typhon and his companions, being aided by the Uraeus serpents entwined on the disc. As the god of light (Harmachis, i.e. Horus on the horizon) he merges into Ra, as he personifies the resurrection of the young light from darkness. The 'young Horus' springs in the form of a naked child with the lock of infancy from the lotus flower. Under the name of Hor-hut (Horus, the wing-expander) he overthrows Seth and his associates in behalf of Ra Harmachis, who, as a god of light, is considered equal to Osiris. Ra is equivalent to the Helios of the Greeks, and the young Horus and Hor-hut to Apollo. The hawk, with whose head he is represented, is the animal sacred to him, and the bird itself with a scourge on its back sometimes stands for him.

Thoth (Egyptian Tahuti, Greek Hermes) is primarily revered as the god of the moon, and in this capacity often takes the place of Khunsu (p. 136). As the phases of the moon formed the
basis of the earliest reckoning of time, Thot was regarded as the
dispenser of time and the god of measures, numbers, and indeed
of everything subject to fixed laws. Lastly he was also regarded as
the mediator by whose aid human intelligence manifests itself, as
the god of writing, of the sciences, of libraries, and of all the arts
which tend to refine life. In the infernal regions he records the re-
sult of the weighing of hearts, keeps a register of the trials of the
dead, and exhorts their souls to return to the radiant spirit of the
universe. He is represented as an ibis on a standard ♦, or with
the head of an ibis, and frequently crowned with the disc of the
moon and the ostrich-feather of truth. In his hands are a reed and a
writing tablet, or, instead of the latter, a palette. He sometimes appears with a
crown and sceptre, but very rarely has a human head. The animals sacred to him
are the dog-headed ape and the ibis.

Safekh. A goddess who is associated with Thoth, but whose
precise name is unknown, is always designated as Safekhu, i.e.
one who has laid down her horns, as she bears these appendages re-
versed over her forehead. She is the tutelary deity of libraries, of
sacred writings and lists, and therefore of history also. She holds
in her left hand a palm-branch with innumerable notches marking
the flight of time, and with her right she inscribes on the leaves of
the persea tree all names worthy of being perpetuated,
Isis. Muth. Hathor. These three goddesses, although externally regarded as separate, were really different modifications of the same fundamental idea. As a counterpart of the male generative principle, they all represent the female element, the conceiving and gestative principle, or the receptacle in which the regeneration of the self-creating god takes place. Muth, whose name signifies mother, is represented as a vulture, or with a vulture's head. She is the great birth-giver, who protects Osiris and Pharaoh with her outspread wings, and she guards the cradle of the Nile, whose mysterious source is defended by a serpent. The functions of Isis (p. 128), who endows everything that is capable of life on earth with the good and the beautiful, have already been mentioned. She wears on her head the vulture cap, cow's horns, and the disc of the moon, or the throne, or all four combined. As Isis Selk, she is represented with a scorpion hovering over her head, as Isis Neith, who is also equivalent to Muth, usually with a weaver's shuttle, while as Isis Sothis, or the dog-star, she sails in a boat. She is also represented as suckling the infant Horus in her lap. Her sacred animal is the cow, which belongs also to Isis Hathor. The name Hathor signifies 'house of Horus', for within the bosom of this goddess the young god gave himself new life. She is the goddess of love, the great mother, who accords her divine protection to all earthly mothers, the dispenser of all the
blessings of life, the beautiful goddess who fills heaven and earth with her beneficence, and whose names are innumerable. At a later period she was regarded as the muse of the dance, the song, the jest, and even of the wine-cup. The cord and tambourine in her hand denote the fettering power of love and the joys of the festivals over which she presided. Her sacred animal was the cow, and she generally appears in the form of a youthful woman with a cow's head, bearing the disc between her horns; and she is even spoken of as the mother of the sun (p. 125). Hathor also plays an important part as mistress of the nether world, where she is usually called Mer-Sekhet.

Sekhet. Bast (or Pasht). These goddesses likewise coincide more or less with the many-named Hathor; but the lion or cat-headed deity known by these and many other names possesses several characteristics entirely peculiar to herself. She is called the daughter of Ra and the bride of Ptah, and personifies sexual passion. Represented as a Uraeus basilisk of the crown of Ra, she is a symbol of the scorching heat of the orb of day; in the nether regions she fights against the serpent Apep, and in the form of a lion-headed woman or a cat, brandishing a knife, she chastises the guilty. But she also possesses kindly characteristics. ‘As Sekhet’, we are informed by an inscription at Philæ, ‘she is terrible, and as Bast she is kind.’ The cat, her sacred animal, was long an object of veneration. She wears on her head the disc with the Uraeus serpent, and holds in her hands the sceptre and the symbol of life.

Sebek, a god who also appears in union with Ra as Sebek
Ra, is represented with the head of a crocodile, and was chiefly revered in the region of the cataracts at Silsili, Kôm-Ombu, and in the Fayûm (p. 446). At Kôm-Ombu Sebek forms a triad in conjunction with Hathor and Khunsu. His crocodile head is crowned with the disc, the Uraeus basilisks, and the double feather. He grasps the sceptre and the symbol of life in his hands, and is coloured green. His sacred animal, the crocodile, was kept in his honour, but a certain Typhonic character was attributed to the reptile, as the sacred lists omit those nomes where it was worshipped.

Ammon-Ra. Ra (p. 125), with whose worship the rites of many other divinities were combined, and whose attributes were frequently merged in those of Osiris, reigned, according to the later inscriptions, as the great monarch of the gods, but Ammon, who was revealed to the exoterics as a son of Ptah, obtained possession of the throne of this world, while Ra continued his sovereignty in Amenthes, or the nether regions. Ammon, whose name signifies ‘the hidden one’, is a deity of comparatively late origin, having been at first merely the local god of Thebes; but after the valley of the Nile had been delivered from the Hyksos under his auspices, and after Upper Egypt and Thebes had gained the supremacy over Lower Egypt and Memphis, he was raised to the rank of king of all the gods. The attributes of almost the entire Pantheon of Egypt were soon absorbed by this highly revered deity. He reposes as a hidden power in Nun, or the primordial waters, and during
the process of his self-procreation he is termed Khem. As soon as
he has manifested himself, he, as 'the living Osiris', animates and
spiritualises all creation, which through him enters upon a higher
stage of existence. On the human beings fashioned by Tum he
operates mysteriously, disposing them to a love of discipline and
order, and to an abhorrence of all that is irregular, evil, and unsightly.
Justice, which punishes and rewards, is subject to him, and even
the gods 'prostrate themselves before him', acknowledging the
majesty of the great Inscrutable. Every other god now came to be
regarded as little else than a personification of some attribute of the
mysterious Ammon, god of the gods, standing in the same relation to
him as models of parts of a figure to the perfect whole. The monu-
ments at Thebes represent him enthroned or standing, coloured
blue or black, generally adorned with the long feather head-dress
termed shuti, sometimes with the crown of Upper Egypt alone
\[\text{Ammon-Ra, King of the gods.}\]
\[\]
\[\]
\[\]

, or with that of Upper and Lower Egypt, and sometimes with
a helmet or diadem on his head. In his hands he wields all kinds
of royal insignia, such as the sceptre, the scourge, the crook, and
the symbol of life. When represented with a ram's head he is
termed Ammon-Khnum, Knuphis, or Kneph (p. 127). Beside
him in the great triad of Thebes stand Muth, the maternal principle
(p. 133), and Khunsu or Khons, who represents the operation of
divine intelligence in the external world, and particularly in its
RELIGION.

137

relation to human affairs. He is the 'destroyer of enemies', he aids mankind in the battle of life, and he heals the sick. To his head the moon is attached by the infantine lock. From his wanderings as the god of the moon, and from the vigour with which he destroyed evil spirits, he was identified with Heracles by the Greeks.

_Doctrine of Immortality._ From the account of the worship of Isis and Osiris it is obvious that the Egyptians believed in the immortality of the soul (whence arose the prevalent worship of ancestors), in a moral responsibility, and in a future state of rewards and punishments. The doctrine with regard to the life of the soul after death was not, however, at all times and in all places the same. According to the Egyptian belief, every human being consisted of three distinct parts, which during the period of life were closely united: (1) the body, a portion of matter; (2) the 'sahu', or soul, which belonged to the nether world and ultimately returned thither; and (3) the 'khu', an emanation of the divine intelligence. Each of these elements could be separated from the others, but whatever changes it underwent, it was immutable in quantity and quality. As the god of the sun is always the same and yet hourly different, being at first Horus, then Ra, next Tum, and finally Khnum, so it was with the soul and the intelligence which fills and illuminates it, and which, as soon as the gates of the tomb are opened for its reception, speaks and acts for it. Once within the gates of Amunthes, the soul had to undergo many trials. Ferocious beasts had to be conquered, demons to be subdued, and castles to be stormed, and all this was to be done with the aid of texts and hymns written on papyrus and scarabæi, _utu_ eyes, and other amulets swathed in the bandage of the mummy. At length the soul reached the hall of double justice, where the heart in its vase 🌅 was placed in one scale and the goddess of truth in the other. Horus and a cynocephalus conducted the process of weighing, Anubis superintended, Thoth recorded the result, and Osiris with forty-two counsellors pronounced sentence. If the heart was found too light, the soul was condemned so suffer the torments of hell, or to continue its existence in the bodies of animals, within a certain period after which it returned to its original body to begin life anew, and had afterwards to undergo another trial by the judges of Hades. If the heart was found sufficiently heavy, Osiris restored it to the soul; the 'sahu' might then return to its mummy; its intelligence, after a period of purification in the regions of the blessed, might unite with the divinity from which it had emanated, and, merged in Horus, Osiris, etc., might traverse the heavens in the boat of the sun, or walk anew among the living in any form it pleased. Finally both the 'sahu' and the intelligence were reunited to the dead body they had quitted, which its mumification had preserved from decay, and which awaited the return of the soul from Amunthes or from its sojourn in the bodies of animals.

VII. Doctrines of El-Islâm.

Manners and Customs of the Mohammedans.

Calendar of Festivals.
(By Prof. Socia, of Tübingen.)

Mohammed †, as a religious teacher, took up a position hostile to the 'age of ignorance and folly', as he called heathenism. The revelation which he believed it was his mission to impart was, as he declared, nothing new. His religion was of the most remote antiquity, all men being supposed by him to be born Muslims, though surrounding circumstances might subsequently cause them to fall away from the true religion. Even in the Jewish and Christian scriptures (the Thorah, Psalms, and Gospels), he maintained, there were passages referring to himself and El-Islâm, but these passages had been suppressed, altered, or misinterpreted. So far as Mohammed was acquainted with Judaism and Christianity, he disapproved of the rigour of their ethics, which were apt to

† Mohammed ('the praised', or 'to be praised') was a scion on the paternal side of the family of Hāshim, a less important branch of the noble family of Kuireish, who were settled at Mecca, and were custodians of the Ka‘ba. His father ‘Abdallah died shortly before his birth (about 570). In his sixth year his mother Amina took him on a journey to Medina, but died on her way home. The boy was then educated by his grandfather ‘Abd el-Mu‘talib, and, after the death of the latter two years later, by his uncle Abu 'Tálib. For several years Mohammed tended sheep. He afterwards undertook commercial journeys, at first in company with his uncle, and then, when about twenty-five years of age, in the service of the widow Khadija, who became his first wife. On one of these journeys he is said to have become acquainted with the Christian monk Bahira at Bogra.

About that period a reaction in the religious life of the Arabs had set in, and when Mohammed was about forty years of age he too was struck with the vanity of idolatry. He suffered from epilepsy, and during his attacks imagined he received revelations from heaven. He can scarcely, therefore, be called an impostor in the ordinary sense. A dream which he had on Mt. Hira, near Mecca, gave him the first impulse, and he soon
DOCTRINES OF EL-ISLÂM.

degenerate into a body of mere empty forms, while he also rejected their dogmatic teaching as utterly false. Above all he repudiated whatever seemed to him to savour of polytheism, including the doctrine of the Trinity, as 'assigning partners' to the one and only God. Every human being who possesses a capacity for belief he considered bound to accept the new revelation of El-Islâm, and every Muslim is bound to promulgate this faith. Practically, however, this stringency was afterwards relaxed, as the Muslims found themselves obliged to enter into pacific treaties with nations beyond the confines of Arabia. A distinction was also drawn between peoples who were already in possession of a revelation, such as Jews, Christians, and Sabians, and idolaters, the last of whom were to be rigorously persecuted.

The Muslim creed is embodied in the words: 'There is no God but God (Allâh ﷺ), and Mohammed is the prophet of God' (lâ ilâha illâ Allâh, wa Muhammedu-r-rasûl-Allâh). This formula, however, contains the most important doctrine only; for the Muslim is bound to believe in three cardinal points: (1) God and the angels, (2) written revelation and the prophets, and (3) the resurrection, judgment, eternal life, and predestination.

(1). God and the Angels. According to comparatively modern inscriptions ('Syrie Centrale', pp. 9, 10) it would appear that the emphatic assertion of the unity of God is by no means peculiar to Mohammedanism. As God is a Spirit, embracing all perfection within Himself, ninety-nine of his different attributes were afterwards gathered from the Korân, each of which is represented by a bead of the Muslim rosary. Great importance is also attached to the fact that the creation of the world was effected by a simple effort of the divine will. (God said 'Let there be', and there was.)

The story of the creation in the Korân is taken from the Bible, with variations from Rabbinical, Persian, and other sources. God first created his throne; beneath the throne there was water; the

began with ardent enthusiasm to promulgate monotheism, and to warn his hearers against incurring the pains of hell. It is uncertain whether Mohammed himself could read and write. His new doctrine was called Islâm, or submission to God. At first he made converts in his own family only, and the 'Muslims' were persecuted by the Meccans. Many of them, and at length Mohammed himself (622), accordingly emigrated to Medina, where the new religion made great progress. After the death of Khadija, Mohammed took several other wives, partly from political motives.

He now endeavoured to stir up the Meccans, and war broke out in consequence. He was victorious at Bedr, but lost the battle of the Uhud. His military campaigns were thenceforth incessant. He obtained great influence over the Beduins, and succeeded in uniting them politically. In 630 the Muslims at length captured the town of Mecca, and the idols in it were destroyed. Mohammed's health, however, had been completely undermined by his unremitting exertions for about twenty-four years; he died on 8th June, 632, at Medina, and was interred there.

† Allâh is also the name of God used by the Jews and Christians who speak Arabic.
earth was then formed. In order to keep the earth steady, God caused it to be supported by an angel, placed on a huge rock, which in its turn rests on the back and horns of the bull of the world. And thus the earth is kept in its proper position.

Simultaneous with the creation of the firmament was that of the Ginn (demons), beings occupying a middle rank between men and angels, some of them believing, others unbelieving. These ginn are frequently mentioned in the Koran, and at a later period numerous fables regarding them were invented. To this day the belief in them is very general. When the ginn became arrogant, an angel was ordered to banish them, and he accordingly drove them to the mountains of Kaf by which the earth is surrounded, whence they occasionally make incursions. Adam was then created, on the evening of the sixth day, and the Muslims on that account observe Friday as their Sabbath. After the creation of Adam came the fall of the angel who conquered the ginn. As he refused to bow down before Adam he was exiled, and thenceforward called Iblis, or the devil. After this, Adam himself fell, and became a solitary wanderer, but was afterwards re-united to Eve at Mecca, where the sacred stone in the Ka'ba derives its black colour from Adam's tears. At Jidda, the harbour of Mecca, the tomb of Eve is pointed out to this day. Adam is regarded as the first orthodox Muslim; for God, from the earliest period, provided for a revelation.

Besides the creative activity of God, his maintaining power is specially emphasised, as being constantly employed for the preservation of the world. His instruments for this purpose are the angels. They are the bearers of God's throne, and execute his commands. They also act as mediators between God and men, being the constant attendants of the latter. When a Muslim prays (which he does after the supposed fashion of the angels in heaven), it will be observed that he turns his face at the conclusion first over his right and then over his left shoulder. He thereby greets the recording angels who stand on each side of every believer, one on the right to record his good, and one on the left to record his evil deeds. The traveller will also observe the two stones placed over every grave in a Muslim burial-ground. By these sit the two angels who examine the deceased, and in order that the creed may not escape his memory it is incessantly chanted by the conductor of the funeral.

While there are legions of good angels, who differ in form, but are purely ethereal in substance, there are also innumerable satellites of Satan, who seduce men to error and teach them sorcery. They endeavour to pry into the secrets of heaven, to prevent which they are pelted with falling stars by the good angels. (This last is a notion of very great antiquity.)

(2). Written Revelation and the Prophets. The necessity for a revelation is based on the dogma of original sinlessness, and
on the natural inclination of every human being towards Islamism. The earliest men were all believers, but they afterwards fell away from the true faith. A revelation therefore became necessary, and it is attained partly by meditation, and partly by direct communication. The prophets are very numerous, amounting in all, it is said, to 124,000; but their ranks are very various. Some of them have been sent to found new forms of religion, others to maintain those already existing. The prophets are free from all gross sins; and they are endowed by God with power to work miracles, which power forms their credentials; nevertheless they are generally derided and disbelieved. The greater prophets are Adam, Noah, Abraham, Jesus, and Mohammed.

Adam is regarded as a pattern of human perfection, and is therefore called the 'representative of God'. — Noah's history is told more than once in the Korân, where it is embellished with various additions, such as that he had a fourth, but disobedient son. The preaching of Noah and the occurrence of the Deluge are circumstantially recorded. The ark is said to have rested on Mt. Jûdi, near Mossul. The giant 'Uj, son of 'Enak, survived the flood. He was of fabulous size, and traditions regarding him are still popularly current.

Abraham (Ibrâhîm) is spoken of by Mohammed as a personage of the utmost importance, and in the Korân, as well as in the Bible he is styled the 'friend of God' (comp. James ii. 23). Mohammed professed to teach the 'religion of Abraham', and he attached special importance to that patriarch as having been the progenitor of the Arabs through Ishmael. Abraham was therefore represented as having built the Ka'ba, where his footprints are still shown. One of the most striking passages in the Korân is in Sûreh vi. 76, where Abraham is represented as first acquiring a knowledge of the one true God. His father was a heathen, and Nimrod at the time of Abraham's birth had ordered all new-born children to be slain (a legend obviously borrowed from the Slaughter of the Innocents at Bethlehem); Abraham was therefore brought up in a cavern, which he quitted for the first time in his fifteenth year. 'And when night overshadowed him he beheld a star, and said — This is my Lord; but when it set, he said — I love not those who disappear. And when he saw the moon rise, he said again — This is my Lord; but when he saw it set, he exclaimed — Surely my Lord has not guided me hitherto that I might go astray with erring men. Now when he saw the sun rise, he spake again — That is my Lord; he is greater. But when it likewise set, he exclaimed — O people, I will have nothing to do with what ye idolatrously worship; for I turn my face steadfastly towards Him who created heaven and earth out of nothing; and I belong not to those who assign Him partners!'

Besides the slightly altered Bible narratives, we find a story of
Abraham having been cast into a furnace by Nimrod for having destroyed idols, and having escaped unhurt (probably borrowed from the miracle of the three men in the fiery furnace).

The history of Moses, as given in the Koran, presents no features of special interest. He is called the ‘speaker of God’; he wrote the Thorah, and is very frequently mentioned. — In the story of Jesus Mohammed has perpetrated an absurd anachronism, Mary being confounded with Miriam, the sister of Moses. Jesus is called ‘Isâ in the Koran; but ‘Isa is properly Esau, a name of reproach among the Jews; and this affords us an indication of the source whence Mohammed derived most of his information. On the other hand, Jesus is styled the ‘Word of God’, as in the Gospel of St. John. A parallel is also drawn in the Koran between the creation of Adam and the nativity of Christ; like Adam, Jesus is said to have been a prophet from childhood, and to have wrought miracles which surpassed those of all other prophets, including even Mohammed himself. He proclaimed the Gospel, and thus confirmed the Thorah; but in certain particulars the latter was abrogated by him. Another was crucified in his stead, but God caused Jesus also to die for a few hours before taking him up into heaven.

Modern investigation shows with increasing clearness how little originality these stories possess, and how Mohammed merely repeated what he had learned from very mixed sources (first Jewish, and afterwards Christian also), sometimes entirely misunderstanding the information thus acquired. The same is the case with the numerous narratives about other so-called prophets. Even Alexander the Great is raised to the rank of a prophet, and his campaign in India is represented as having been undertaken in the interests of monotheism. Alexander is also associated with the Khidr, or animating power of nature, which is sometimes identified with Elijah and St. George. The only other matter of interest connected with Mohammed’s religious system is the position which he himself occupies in it. Moses and Christ prophesied his advent, but the passages concerning him in the Thorah and Gospels have been suppressed. He is the promised Paraclete, the Comforter (St. John xiv. 16), the last and greatest of the prophets; but he does not profess to be entirely free from minor sins. He confirms previous revelations, but his appearance has superseded them. His whole doctrine is a miracle, and it therefore does not require to be confirmed by special miracles. After his death, however, a number of miracles were attributed to him, and although he was not exactly deified, the position assigned to him is that of the principal mediator between God and man. The apotheosis of human beings is, moreover, an idea foreign to the Semitic mind, and it was the Persians who first elevated ‘Ali and the imâms (literally reciters of prayers) who succeeded him to the rank of supernatural beings.

The Korán itself was early believed to be of entirely super-
natural origin. The name signifies 'rehearsal', or 'reading', and the book is divided into parts called Sûrehs. The first revelation vouchsafed to the Prophet took place in the 'blessed night' in the year 609. With many interruptions, the 'sending down' of the Korân extended over twenty-three years, until the whole book, which had already existed on 'well-preserved tables' in heaven, was in the prophet's possession. During the time of the 'Abbaside khalifs it was a matter of the keenest controversy whether the Korân was created or uncreated. (The Oriental Christians have likewise always manifested a great taste for subtle dogmatic questions, such as the Procession of the Holy Ghost.) The earlier, or Meccan Sûrehs, which on account of their brevity are placed at the end of the book, are characterised by great freshness and vigour of style. They are in rhyme, but only partially poetic in form. In the longer Sûrehs of a later period the style is more studied and the narrative often tedious. The Korân is nevertheless regarded as the greatest masterpiece of Arabic literature. The prayers of the Muslims consist almost exclusively of passages from this work, although they are entirely ignorant of its real meaning. Even by the early commentators much of the Korân was imperfectly understood, for Mohammed, although extremely proud of his 'Arabic Book', was very partial to the use of all kinds of foreign words. The translation of the Korân being prohibited, Persian, Turkish, and Indian children learn it entirely by rote.

The Korân has been translated into English, French, German, Italian, and Latin. The best English translations are those of Sale (1734; with a 'preliminary discourse' and copious notes; published in a cheap form by Messrs Warne & Co., London) and Rodwell (London, 1861).

(3). Future State and Predestination. The doctrine of the resurrection has been grossly corrupted by the Korân and by subsequent tradition; but its main features have doubtless been borrowed from the Christians, as has also the appearance of Antichrist, and the part to be played by Christ at the Last Day. On that day Christ will establish El-Islâm as the religion of the world. With him will re-appear El-Mehdi, the twelfth Imam (p. 151), and the beast of the earth (p. 140), while the peoples of Gog and Magog will burst the barrier beyond which they were banished by Alexander the Great (p. 142). The end of all things will be ushered in by the trumpet-blasts of the angel Asrâfî; the first of these blasts will kill every living being; a second will awaken the dead. Then follows the Judgment; the righteous cross to Paradise by a bridge of a hair's breadth, while the wicked fall from the bridge into the abyss of hell. Some Muslims believe in a kind of limbo, like that of the Hebrews and Greeks, while others maintain that the souls of the dead proceed directly to the gates of Paradise. At the Judgment every man is judged according to the books of the recording angels (p. 153). The good have the book placed in their right hands, but it is placed in the left hands of the wicked, bound behind
their backs. The scales in which good and evil deeds are weighed play an important part in deciding the soul's fate, a detail which gave rise to the subsequent doctrine of the efficacy of works. This doctrine is carried so far that works of supererogation are believed to be placed to the credit of the believer. The demons and animals, too, must be judged. Hell, as well as heaven, has different regions; and El-Islâm also assumes the existence of a purgatory, from which release is possible. Paradise is depicted by Mohammed, in consonance with his thoroughly sensual character, as a place of entirely material delights.

The course of all events, including the salvation or perdition of every individual, is, according to the strict interpretation of the Korân, absolutely predestined; although several later sects have endeavoured to modify this terrible doctrine. It is these views, however, which give rise to the pride of the Muslims. By virtue of their faith they regard themselves as certainly elect, and as a rule they make no attempt to convert others, as they have no power to alter the irrevocable decrees of God.

In the second place the Korân is considered to contain, not only a standard of ethics, but also the foundation of a complete code of law.

The Morality of El-Islâm was specially adapted by its founder to the character of the Arabs. Of duties to one's neighbour, charity is the most highly praised, and instances of its practice are not unfrequent. Hospitality is much practised by the Beduins, and by the peasantry also in those districts which are not overrun with travellers. Frugality is another virtue of the Arabs, though too apt with them to degenerate into avarice and cupiditity. The law of debtor and creditor is lenient. Lending money at interest is forbidden by the Korân, but is nevertheless largely practised, the lowest rate in Syria being 12 per cent. The prohibition against eating unclean animals, such as swine, is older than El-Islâm, and, like the prohibition of intoxicating drinks, is based on sanitary considerations. Wine, however, and even brandy, are largely consumed by the upper classes, especially among the Turks.

Although Polygamy is sanctioned, every Muslim being permitted to have four wives at a time, yet among the bulk of the population monogamy is far more frequent, owing to the difficulty of providing for several wives and families at once. The wives, moreover, are very apt to quarrel, to the utter destruction of domestic peace, unless the husband can afford to assign them separate houses. Few men remain unmarried. The treatment of women as mere chattels, which is of very remote Oriental origin, constitutes the greatest defect of the system of El-Islâm, although the position of the female sex among the Oriental Christians and Jews is little better than among the Muslims. It is probably owing to this low estimate of
women that the Muslims generally dislike to see them praying or occupying themselves with religion. The practice of wearing veils is not confined to the Muslim women, but is universal in the East. An Oriental lady would, indeed, regard it as an affront to be permitted to mingle in society with the same freedom as European ladies. Even in the Christian churches, the place for women is often separated from the men’s seats by a railing. The peasant and Beduin women, on the other hand, are often seen unveiled. The ease with which El-Islâm permits divorce is due to Môhammed’s personal proclivities. A single word from the husband suffices to banish the wife from his house, but she retains the marriage-portion which she has received from her husband. The children are brought up in great subjection to their parents, often showing more fear than love for them.

The repetition of Prayers five times daily forms one of the chief occupations of faithful Muslims. The hours of prayer (adân) are proclaimed by the mueddins (or muezzins) from the minarets of the mosques: (1) Maghrib, a little after sunset; (2) 'Ashâ, nightfall, about 1½ hour after sunset; (3) Subh, daybreak; (4) Duhr, midafternoon, about 1½ hour before sunset. These periods of prayer also serve to mark the divisions of the day. The day is also divided into two periods of 12 hours each, beginning from sunset, so that where clocks and watches are used they require to be set daily. Most people however content themselves with the sonorous call of the mueddin: Allâhu akbar (three times); asshadu an lâ ilâha ill’âllah; asshadu anna Muhammeda rasûlullâh (twice); heyya 'ala-ssalâh (twice); heyya 'ala'l-falâh (twice), Allâhu akbar (twice), lâ ilâha ill'allâh; i. e. ‘Allâh is great; I testify that there is no God but Allâh, and Mohammed is the prophet of Allâh; come to prayer; come to worship; Allâh is great; there is no God but Allâh’. This call to prayer sometimes also reverberates thrillingly through the stillness of night, to incite to devotion the faithful who are still awake. The duty of washing before prayer is a sanitary institution, and tanks are provided for the purpose in the court of every mosque. In the desert the faithful are permitted to use sand for this religious ablution.

The person praying must remove his shoes or sandals and turn his face towards Mecca, as the Jews and some of the Christian sects turn towards Jerusalem or towards the East. The worshipper begins by putting his hands to the lobes of his ears, and then holds them a little below his girdle; and he intersperses his recitations from the Korân with certain prostrations performed in a given order. On Fridays the midday recital of prayer takes place three quarters of an hour earlier than usual, and is followed by a sermon, preached from the Mimbar (p. 182) by a respectable, but unlearned, layman, whose audience sits on the ground in rows before him. Friday is not, however, regarded as a day of rest, business being transacted as on
other days, and it is only of late that the courts of justice have been closed in imitation of the Christian custom of keeping Sunday.

The Muslims frequently recite as a prayer the first Sūre of the Korān, one of the shortest, which is used as we employ the Lord's prayer. It is called el-fātha (‘the commencing’), and is to the following effect: — ‘In the name of God, the merciful and gracious. Praise be to God, the Lord of creatures, the merciful and gracious, the Prince of the day of judgment; we serve Thee, and we pray to

Thee for help; lead us in the right way of those to whom thou hast shown mercy, upon whom no wrath resteth, and who go not astray. Amen’.

Another important duty of the believer is to observe the Fast of the month Ramāḍān. From daybreak to sunset throughout the month eating and drinking are absolutely prohibited, and the devout even scrupulously avoid swallowing their saliva. The fast is for the most part rigorously observed, but prolonged repasts during the night afford some compensation. Many shops and offices are entirely closed during this month. As the Arabic year is lunar, and therefore eleven days shorter than ours, the fast of Ramadān runs through all the seasons in the course of thirty-three years, and its observance is most severely felt in summer, when much suffering is caused by thirst.

The Pilgrimage to Mecca, which every Muslim is bound to undertake once in his life, is also deserving of mention. Most of the pilgrims now perform the greater part of the distance by water.

† The conduct of the caravan, with the gifts presented to the town of Mecca, the escort, and other items, costs the Egyptian government 13,000 purses (about 66,300£) annually.
On approaching Mecca the pilgrims undress, laying aside even their headgear, and put on aprons and a piece of cloth over the left shoulder. They then perform the circuit of the Ka'ba, kiss the black stone, hear the sermon on Mt. 'Arafat near Mecca, pelt Satan with stones in the valley of Mina, and conclude their pilgrimage with a great sacrificial feast. On the day when this takes place at Mecca, sheep are slaughtered and a festival called the Great Beiram (el-'id el-kabir) observed throughout the whole of the Mohammedan countries. (The 'Lesser Beiram', Arab. el-'id es-ṣughayyr, follows Ramaḍān.) The month of the pilgrimage is called Dhul-Hijjah (that 'of the pilgrimage'), and forms the close of the Muslim year. For an account of the feast in connection with the pilgrimage see p. 234. — In order approximately to convert a year of our era into one of the Muslim era, subtract 622, divide the remainder by 33, and add the quotient to the dividend. Conversely, a year of the Mohammedan era is converted into one of the Christian era by dividing it by 33, subtracting the quotient from it, and adding 622 to the remainder. On 5th Jan., 1878, began the Muslim year 1295. The Gregorian calendar has recently been introduced into Egypt, but is used by government in the finance department only.

Most of the Arabic literature is connected with the Korān. Commentaries were written at an early period to explain the obscure passages in it, and there gradually sprang up a series of exegetical writings dwelling with elaborate minuteness upon every possible shade of interpretation. Grammar, too, was at first studied solely in connection with the Korān, and a prodigious mass of legal literature was founded exclusively upon the sacred volume. Of late years, however, some attempts have been made to supersede the ancient law, and to introduce a modern European system. The Beduins still have their peculiar customary law.

With regard to theological, legal, and still more to ritualistic questions, El-Islām has not always been free from dissension. There are in the first place four Orthodox sects, the Hanefites, the Shāfe'-ites, the Malekites, and the Hambalites, who are named after their respective founders. In addition to these must be mentioned the schools of Free Thinkers, who sprang up at an early period, partly owing to the influence of Greek philosophy. The orthodox party, however, triumphed, not only over these heretics, but also in its struggle against the voluptuousness and luxury of the most glorious period of the khalīfs.

Ascetism and fanaticism were also largely developed among professors of El-Islām, and another phase of religious thought was pure Mysticism, which arose chiefly in Persia. The mystics (ṣūfī) interpret many texts of the Korān allegorically, and their system therefore frequently degenerated into Pantheism. It was by mystics who still remained within the pale of El-Islām (such as the famous Ibn el-'Arabi, born in 1164) that the Orders of Dervishes were founded,
DERVISHES (darwish, plur. dardwish). The love of mysticism which characterises Mohammedans is due partly to the nature of El-Islâm itself, and partly to external circumstances. That earthly life is worthless, that it is a delusion, and at best a period of probation, are sentiments of frequent recurrence in the Korân. This pessimist view of life has been confirmed by Mohammed’s conception of the Supreme Being, on whose awe-inspiring attributes he has chiefly dwelt, thus filling his adherents with a profound dread of their Creator. The result of this doctrine was to induce devout persons to retire altogether from the wicked world, the scene of vanity and disappointment, and to devote themselves to the practice of ascetic exercises, with a view to ensure their happiness in a future state. The fundamental aim of this asceticism was to strive after a knowledge of God by cultivating a kind of half-conscious and ecstatic exaltation of mind. A mystic love of God was deemed the great passport which enabled the worshipper to fall into this ecstatic trance, and to lose himself so completely in contemplation as to destroy his own individuality (fana) and blend it with that of the Deity (iltihâd). As in Europe the monastic system and the mendicant orders sprang from the example of penitents and hermits who had denounced the world, so in the Mohammedan world asceticism was rapidly developed into an organised system of mendicancy, although in the Korân Mohammed had expressed his strong disapproval of the Christian monastic system. At an earlier period many noble thinkers (such as the Persians Sâ’di and Hâfiz) and talented poets enrolled themselves in the ranks of the ascetics; but the dervishes who represent the sect at the present day have entirely lost the spirit of their prototypes, and have retained nothing but the mere physical capacity for throwing themselves into a mechanical state of ecstasy and rendering themselves proof against external sensations.

The following are the principal orders of dervishes (tarîkhât ed-dardwîsh) in Egypt: —

(1) The Rifâ’îyeh (sing. rifâ’î), an order founded by Seyyid Ahmed Rifâ’a el-Kebir, possess a monastery near the mosque of Sultan Hasan (see p. 258), and are recognisable by their black flags and black or dark blue turbans. The best-known sects of this order are the Aulad ‘Ilmân, or ‘Ilmânîyeh Dervishes, and the Sa’diyyeh Dervishes. The former are noted for their extraordinary performances at festivals, such as thrusting iron nails into their eyes and arms, breaking large stones against their chests, as they lie on their backs on the ground, and swallowing burning charcoal and fragments of glass. The Sa’diyyeh, who usually carry green flags, are snake-charmers (p. 21), and on the Friday on which the birthday of the prophet is celebrated allow their shêkh to ride over them on horseback (the dôseh; p. 234).

(2) The Kâdirîyeh (sing. kâdirî), an order founded by the celebrated Seyyid ’Abd el-Kâdir el-Gilâni, have white banners and white turbans. Most of them spend their time in fishing, and in their processions they carry nets of different colours, fishing-rods, and other insignia of their chief pursuit.

(3) The Ahmedîyeh (sing. ahmedî), the order of Seyyid Ahmed el-Bedawi, are recognised by their red banners and red turbans. This order is very numerous and is much respected. It is divided into many sects, but of these the two most important only need be mentioned. One of these is the Shihâmiyeh, who play an important part in the ceremonies at the tomb of Seyyid Ahmed at Jânta (p. 224). The other sect is that of the Aulad Nâh, who are generally young men, wearing high pointed caps with a plume of strips of coloured cloth, and a number of small balls strung across their breasts, and carrying wooden swords and a kind of whip made of a thick plait of rope.

There are also many other orders which it is unnecessary to enumerate. The ceremony of the admission of members to all these orders is a very simple matter. The candidate (el-murîd) performs the customary ablution, sits down on the ground beside the superior (el-murshid, or spiritual leader), gives him his hand, and repeats after him a set form of words, in which he expresses penitence for his sins and his determination to
DOCTRINES OF EL-ISLÂM.

reform, and calls Allâh to witness that he will never quit the order. The ceremony terminates with three recitals of the confession of faith by the murîd, the joint repetition of the fathâ (p. 146), and a kissing of hands.

The religious exercises of all the dervîshes consist chiefly in the performance of Zikrs (i.e. pious devotions, or invocations of Allâh; see below, and p. 237). Almost all the dervîshes in Egypt are small tradesmen, artizans, or peasants. Most of them are married men, and they take part in the ceremonies peculiar to their order at stated seasons only. Some of them, however, make it their business to attend festivals and funerals for the purpose of exhibiting their zikrs. These last are called fûkara (sing. fâkîr), i.e. 'poor men'. Others again support themselves by drawing water (hêmalî; see p. 246). Those who lead a vagrant life and subsist on alms are comparatively few in number. The dervîshes of this class usually wear a kind of gown (dîlî) composed of shreds of rags of various colours sewn together, or a shaggy coat of skins, and carry a stick with strips of cloth of various colours attached to the upper end. A considerable number of them are insane, in which case they are highly revered by the people, and are regarded as specially favoured by God, who has taken their spirits to heaven, while he has left their earthly tabernacle behind.

The Zikrs (see p. 237) to which the traveller will most conveniently obtain access are those of the Dancing and the Howling Dervîshes. The dancing dervîshes are called Merlucis after the founder of their order, the Môla Jetâl el-dîn er-IÊmithi of Balkh in Persia (who flourished about A.D. 1288). mevlawi being the Turkish form for mûlawî, or adherent of the Môla or learned master. They perform their zikr within a circular space about 20 ft. in diameter and enclosed by a railing. With slow, measured tread the shêkh comes forward, followed by a dervîsh, and takes his seat on a carpet opposite the entrance. The other dervîshes next enter the circle one after another, in the order of their ages, wearing long gowns and conical hats. They walk solemnly up to their superior, make him a profound obeisance, kiss the hem of his robe, and take up their position to his left. From the galleries is presently heard a rude and weird kind of music, consisting of a single prolonged tone of a stringed instrument accompanied by a flute and a human voice rising and falling in cadences. Time is beaten by a tambourine, with varying rapidity and vigour. The singer recites a hymn expressing the most ardent love of God. As soon as the singing

Dancing Dervîshes.
ceases, the dervishes rise, and walk in procession three times round the circle, headed by the shekh. Each of them, including the shekh himself, makes a low bow in passing the spot from which the shekh has just risen. They then resume their seats, and the shekh, with closed eyes, and in a deep, sepulchral voice, begins to murmur a prayer, in which the word Allah alone is audible. When the prayer is over the dervishes divest themselves of their gowns, under which they wear a long, loose, light-coloured skirt or kilt, reaching down to their ankles, and a more closely fitting vest. They then present themselves before the shekh, each in his turn, make him a profound obeisance, and begin to move slowly round in a circle. They turn on the left foot, propelling themselves by touching the waxed floor from time to time with the right. Most of them make about forty gyrations per minute, but some of them accomplish sixty and even more. The whole of the zikr is performed by the dervishes noiselessly, with closed eyes, and outstretched arms, the palm of one hand being turned upwards and the other downwards, and their heads either thrown back or leaning on one side. During the dance soft strains of music are heard, while the beat of the tambourine gradually accelerates, and the skirts of the performers fly out in a wide circle. The tones of the flute become shriller and shriller, until on a signal given by the shekh the music ceases, the dancers stop, cross their arms over their chests, and resume their seats. The dance is performed three times by all except the superior. The latter, however, walks several times noiselessly through the midst of the dancers, who, although their eyes are closed, touch neither him nor one another. The whole zikr occupies about an hour.

The howling or shouting dervishes perform their zikr in a kneeling or crouching posture, with their heads and chests bent downwards. In this attitude they sometimes remain for hours, incessantly shouting the Muslim confession of faith — 'la ilâha', etc., until they at length attain the ecstatic condition, and finish by repeating the word Allâh, i.e. 'he' (God) alone. On the occasion of great festivals some of them fall into a kind of epileptic convulsion, and foam at the mouth; but no notice is taken of them, and they are left to recover without assistance. It need hardly be added that the European traveller will find these performances unpleasing and painful.

The Worship of Saints and Martyrs was inculcated in connection with El-Islâm at an early period. The faithful undertook pilgrimages to the graves of the departed in the belief that death did not interrupt the possibility of communication with them. Thus the tomb of Mohammed at Medina, and that of his grandson Hûsên at Kerbela, became particularly famous, and every little town soon boasted of the tomb of its particular saint. In many of the villages of Syria the traveller will observe small dome-covered buildings, with grated windows, and surmounted by the crescent. These are the so-called Wîli's, mausolea of saints, or tombs of sheikhs. In the interior there is usually a block of stone, hewn in the shape of a sarcophagus and covered with a green or red cloth, on which texts from the Korân are embroidered in gold or silver. The walls are generally embellished with paintings representing the sacred cities of El-Islâm, and executed in an amusingly primitive style. Suspended from the ceiling by cords and threads are little boats, ostrich eggs, and numerous paper bags filled with sacred earth from Mecca. In one corner are a thick wax candle and a heap of bones of all kinds. The tomb is usually surrounded by a burial-ground, where certain persons have the privilege of being interred. Schools are also frequently connect-
ed with these welī's. Shreds of cloth are often seen suspended from
the railings of these tombs, or on certain trees which are consid-
ered sacred, having been placed there by devout persons. This
curious custom is of ancient origin.

About the end of the 18th century a reaction against the abuses
of El-Islām sprang up in Central Arabia. The Wahhabites, or
Wahhabees, named after their founder ‘Abd el-Wahhāb, endeav-
oured to restore the religion to its original purity; they destroyed
all tombs of saints, including even those of Moḥammed and Ḥūsēn,
as objects of superstitious reverence, and sought to restore the
primitive simplicity of the prophet’s code of morals; and they even
forbade the smoking of tobacco as being intoxicating. They soon
became a great political power, and had not Moḥammed ‘Ali deemed
it his interest to suppress them, their influence would have been
far more widely extended than it now is. — As to the Senūsi
order, see p. 67.

We have hitherto spoken of the doctrines of the Sunnites (from
ṣunna, ‘tradition’), who form one great sect of El-Islām. At an early
period the Shiʿītes (from shīʿa, ‘sect’) seceded from the Sunnites.
They assigned to ‘Ali, the son-in-law of Moḥammed, a rank equal
or even superior to that of the prophet himself; they regarded him
as an incarnation of the Deity, and believed in the divine mission
of the imāms descended from him. El-Mehdi, the last of these,
is believed by them not to have died, but to be awaiting in
concealment the coming of the last day. The Persians are all
Shiʿites. Towards the West also Shiʿītism was widely disseminated
at an early period, particularly in Egypt under the régime of the
Fāṭimite sovereigns. The Shiʿites are extremely fanatical, refus-
ing even to eat in the society of persons of a different creed.
The other sects, which are chiefly confined to Syria (the Metāwīleh,
the Ismaʿīlyeh, the Nosairīyeh, the Druses, etc.), are noticed in
Baedeker’s Syria and Palestine.

Remarks on Mohammedan Customs.

Calendar of Festivals.

The birth of a child is celebrated on the seventh day of its life
by a domestic festival, attended by the kādi or some learned theo-
logian, who dissolves in his mouth a piece of sugar-candy presented
to him by the host and drops a little of his sweetened saliva into
the infant’s mouth, as if to give it a sweet foretaste of the world’s
gifts, and also for the purpose of ‘giving it a name out of his mouth’.
Muslims, it is well known, are usually named by their pronouns
only. If a more precise designation is desired, the name of the
father is placed after the pronomen, with or without the word ibn
(‘son of’) placed between the names. Nicknames, such as ‘the one-
eyed’, etc., are also not uncommon.
When the child is forty days old the mother takes it to the bath, and causes forty bowls of water (thirty-nine in the case of a girl) to be poured over its head. This bath forms the purification of both mother and child.

The rite of circumcision is performed on boys up to the age of six or seven, or even later, the ceremony being attended with great pomp. The child is previously conducted through the streets in holiday attire, the procession being frequently united with some bridal party, in order to diminish the expense of the proceedings. The boy generally wears a turban of red cashmere, girls' clothes of the richest possible description, and conspicuous female ornaments, which are designed to attract attention, and thus avert the evil eye from his person. A handsomely caparisoned horse is borrowed to carry him; he half covers his face with an embroidered handkerchief; and the barber who performs the operation and a noisy troop of musicians head the procession. The first personage in the procession is usually the barber's boy, carrying the 'heml', or barber's sign, a kind of cupboard made of wood, in the form of a half-cylinder, with four short legs. The flat front of the heml is adorned with pieces of looking-glass and embossed brass, while the back is covered with a curtain. Two or more boys are often thus paraded together, being usually driven in a carriage and attended by music.

Girls are generally married in their 12th or 13th, and sometimes as early as their 10th year. A man in search of a bride employs the services of a relative, or of a professional female match-maker, and he never has an opportunity of seeing his bride until the wedding-day, except when the parties belong to the lowest classes. When everything is arranged, the affianced bridegroom has to pay a bridal-portion (mahr) amounting to about £25l., more being paid when the bride is a spinster than if she is a widow. Generally speaking, about two-thirds of the sum, the amount of which always forms a subject of lively discussion, is paid down, while one-third is settled upon the wife, being payable on the death of the husband, or on his divorcing her against her will. The marriage-contract is now complete. Before the wedding the bride is conducted in gala attire and with great ceremony to the bath. This procession is called 'Zeffet et Hammâm'. It is headed by several musicians with hautbois and drums; these are followed by several married friends and relations of the bride in pairs, and after these come a number of young girls. The bride is entirely concealed by the clothing she wears, being usually enveloped from head to foot in a cashmere shawl, and wearing on her head a small cap, or crown, of pasteboard. The procession moves very slowly, and another body of musicians brings up the rear. The hideous shrieks of joy which women of the lower classes utter on the occurrence of any sensational event are called zaghrît. The bride is afterwards conducted with the same formalities to the house of her husband.
The ceremonies observed at funerals are not less remarkable than those which attend weddings. If the death occurs in the morning, the funeral takes place the same day; but if in the evening, it is postponed till next day. The body is washed and mourned over by the family and the professional mourning women (nedđâ-behs; a custom prohibited by Mohammed, but one dating from the remotest antiquity); the fîkîh, or schoolmaster, reads several Sûrehs of the Korân by its side; after this, it is wrapped in its winding sheet, placed on the bier, covered with a red or green cloth, and then carried forth in solemn procession. The foremost persons in the cortège are usually six or more poor, and generally blind, men, who walk in twos or threes at a slow pace, chanting the creed—

'There is no God but God; Mohammed is the ambassador of God; God be gracious to him and preserve him!' These are followed by several male relatives of the deceased, and sometimes by a number of dervishes with the flags of their order, and then by three or more schoolboys, one of whom carries a copy of the Korân, or of parts of it, on a stand made of palm-branches, covered with a cloth. The boys usually chant in a loud and shrill voice several passages from the 'Hashiriyyâ', a poem describing the last judgment. The bier, with the head of the deceased foremost, comes next, being borne by three or four of his friends, who are relieved from time to time by others. After the bier come the relations and friends in their everyday attire, and the female relatives, with dishevelled hair, sobbing aloud, and frequently accompanied by professional mourning women, whose business it is to extol the merits of the deceased. If the deceased was the husband or father of the family, one of the cries is—'O thou camel of my house', the camel being the emblem of the bread-winner of the household.

The body is first carried into that mosque for whose patron saints the relatives entertain the greatest veneration, and prayers are there offered on its behalf. After the bier has been placed in front of the tomb of the saint, and prayers and chants have again been recited, the procession is formed anew and moves towards the cemetery, where the body is let down a perpendicular shaft to a spacious vault excavated on one side of it, and there placed in such a position that its face is turned towards Mecca. The entrance to the lateral vault is then walled up, and during this long process the mourners recite the words: — 'Allâhu mughfir el-muslimîn wa'l-muslimât, el-mûminîn wa'l-mûminât' (God pardons the Muslim men and the Muslim women, the faithful men and the faithful women). A Khaṭîb, i.mâm, or other person then addresses a few stereotyped words to the deceased, informing him how he is to answer the two examining angels who are to question him during the ensuing night (p. 143). A fâṭâ having again been whispered, and the perpendicular shaft filled up, while the mourners incessantly repeat the words — 'bismillâh er-raḥîmir ruḥmâmi' (in the name
of God, the merciful), the bystanders shake hands, and the male mourners disperse. The women, however, who have stood a little on one side during the ceremony, now come forward and inspect the tomb.

Another custom peculiar to the Muslims is that the separation of the sexes is as strict after death as during life. In family vaults one side is set apart for the men, the other for the women exclusively. Between these vaults is the entrance to the tomb, which is usually covered with a single large slab. The vaults are high enough to admit of the deceased sitting upright in them when he is being examined by the angels Munkar and Nekîr on the first night after his interment (see p. 153); for, according to the belief of the Muslims, the soul of the departed remains with his body for a night after his burial. For particulars regarding the tombs, see p. 183.

The Religious and Popular Festivals of the Egyptians may all be seen to the best advantage at Cairo. For farther particulars, see p. 234. Fair at Tânta, see p. 224.

The table lists the dates of various religious and popular festivals in Egypt, including those of the Egyptians, Greeks, Romans, Copts, and Muslims, along with the corresponding dates in the year 1878 and 1879.
VIII. Historical Notice of Egyptian Art.

In the ancient Egyptian poem which extols the achievements of Ramses the temples in the valley of the Nile are called ‘everlasting stones’; and the works of Egyptian art do indeed seem to lay claim to perpetuity. Some of the monuments have existed for forty or even fifty centuries, so that, compared with them, the works of all other nations appear recent and modern; and a still greater marvel is that the skill displayed in the execution of these monuments must have been the growth of many antecedent ages, all memorials of which are now buried in the obscurity of the remotest antiquity.

The Egyptian people belonged to the so-called Chamite race, and, like the Semites and, the Indo-Germanians, had their original home in Asia (comp. pp. 36-38). Whether they brought any of their arts to the Valley of the Nile, or whether their taste for art and their imagination were awakened for the first time by the Father of Rivers, must of course remain for ever unknown. Some of the very earliest of the products of Egyptian art are indeed more akin to those of Asia than the later, but Egyptian art as a whole presents so peculiar and unique a character that its origin was most probably local. The question might indeed be settled if we were in a position to compare early Egyptian art with that of the Oriental nations of the same period; but of the latter we can now find no trace. The only sources from which we can form any opinion regarding the original condition and the earliest development of Egyptian art are the technical execution of the oldest known monuments and the forms and style of decoration employed in them. Thus the ceiling-painting in the pyramidal tombs reveals its indebtedness to the textile handicraft; for it is in the art of weaving alone that the margins and seams there represented have any use or significance. Again, the walls of the most ancient tomb-chambers contain horizontal and vertical bands and convex mouldings, the design of which has obviously been borrowed from a system of building in wood. The sloping ridges of the pyramids point to an original style of building with crude brick, as walls of that material required to be tapering in form to ensure their durability. We thus gather that the Egyptians of a very remote period were weavers and potters, familiar with the arts of building in wood and in brick. If we go a little farther, and venture to draw inferences from the subjects and forms of their earliest works of art, we find that the Egyptians of the remotest traceable period must have been a cheerful and contented people, free from that taste for the mystic and the symbolical which afterwards characterised all their exertions in the sphere of art, and endowed with a love of life and nature which they zealously manifested in the earliest products of their imagination.

An attempt to gather a history of Egyptian art from the in-
formation we possess regarding the various dynasties of the Egyptian monarchs has led to the following results, which, however, may be much simplified or modified by future discoveries. The first period of the steady development of Egyptian art closes with the sixth dynasty, and the monuments of Memphis are the most important, though not the only structures of the early dynasties. Some of these (such as the pyramid of Cochemis, p. 368) are supposed to date as far back as the time of the fourth king; and there is reason to believe that they were originally built of sun-dried bricks encrusted with stone, instead of, as subsequently, in solid stone. This would also account for the mode of construction observed in the stone pyramids, which consist of repeated incrustations of tapering courses of ma-

![Pyramid Diagrams]

sonry. According to the well-known hypothesis of Dr. Lepsius, the famous German Egyptologist, these different layers or crusts, like the concentric rings in the trunk of a tree, perhaps corresponded to the number of years during which the deceased monarch reigned. Besides the pyramids of the usual regular form (Fig. I. a), there are others with sides forming an obtuse angle, and others again with sides in steps. Of the pyramid with bent sides there is an example at Dahshur (Fig. I. b), and of the pyramid in steps one at Saqqara (Fig. I. c). The terrace, or step, form seems, however, to have been uniformly used in all the pyramids up to the apex (which was probably tapered), and in most of them the angles formed by the steps were afterwards filled up with stone. There can now be no reasonable doubt that the pyramids were intended to form the inaccessible tombs of great monarchs, near which their courtiers and magnates erected mortuary.
chapels for themselves (Maṣṭaba) in the form of blunted pyramids, in order, as it were, to pay homage to the memory of their illustrious masters. The pictorial decorations of these temples, as well as the plastic works of the same period, serve most impressively to complete the artistic effect of the pyramids. While their marvellously perfect execution alone indicates a high state of artistic development, our admiration is specially aroused by the striking fidelity to nature and expressiveness of the sculptures. The unfavourable criticisms on Egyptian sculpture formerly current may indeed now be regarded as entirely refuted. Even in European museums an opportunity is afforded to the traveller of becoming acquainted with the noble style by which the early Egyptian art alone is characterised. What visitor to the Louvre, for example, can fail to remember the striking impression produced by the statue of the ‘Writer?’ The expressive eyes are formed of dark quartz containing a transparent pupil of rock crystal fixed with a small knob of metal, while the attitude is remarkable for its lifelike fidelity and strong individuality. This statue dates from the fifth or sixth dynasty, and the museum at Bûlâk contains other plastic works of the same period in which an almost overdrawn realism is still more apparent. The limestone statue of Ra-Nefer, a priest of Ptah-Sokar at Memphis, and the wooden figure of the ‘village sheikh’ (p. 298), which the Paris Exhibition of 1867 has brought into so favourable notice, are the best-known specimens of a style of art of which the very existence was unsuspected a few decades ago, and the discovery of which has tended greatly to modify the old supposition that the Egyptian sculptors executed their works in mere mechanical accordance with a prescribed canon. The chief merit of the earliest Egyptian sculpture is the faithfulness of the portraiture, which is such that the identity of the person represented by two different statues may often be determined by the similarity of the features, even when executed at different periods of the person’s life. In this way have been identified eight statues of Khafra, the third king of the fourth dynasty, although all differing in measurement, material, and the age represented. Observation of nature in the case of these earliest works has evidently been carried into the minutest details. The race of men represented is uniformly of the same character, somewhat resembling that of the modern fe 할인; the figures are of a powerful, thickset type, and their muscles are faithfully represented, occasionally to exaggeration. These early sculptors, however, were incapable of producing works of a more complex character, where excellence of general effect required to be superadded to accuracy of detail, and in this respect they were far surpassed by their successors. Even the reliefs in the tomb-chambers of Memphis are executed in a singularly fresh and unsophisticated style, and the spectator will hardly regret the absence of the mystic symbolism of the later period.

After the sixth dynasty there occurs a sudden falling away from
this vigorous style of art, occasioned perhaps by political dissensions, by internal wars, and possibly by a change of religious convictions. It was not until the rise of the Eleventh Dynasty that the state of the country became more settled, and that art began to revive. The new style, however, differed materially from the old. As the ancient capitals of Memphis and This now began to yield precedence to Thebes, the new centre of the kingdom, and as the system of writing, the laws, and the constitution, had all undergone material alteration, so, too, it may rather be said that the cultivation of art began anew than that the style then practised was a development of that of the fourth and sixth dynasties. Of this second efflorescence of art no great monuments have been handed down to us, the most important works being the obelisks of Heliopolis and the Fayûm and several colossi dug up at Tanis and Abydus. The rock tombs of Beni Hasan are also interesting relics of the period of the Twelfth Dynasty. In these we find a reversion to the rock-building style, which, according to Lepsius, is nearly identical with that of the grotto architecture, and owed its origin to the prevalence of ancestor-worship, and to the popular desire, arising from the Egyptian doctrine of immortality, for the preservation of the bodies of the dead. The rock-tomb was safe from the overflow of the Nile, while its equable temperature arrested the decay of the corpse, and a chapel connected with it afforded the relations an opportunity of paying homage and presenting offerings to the deceased. The division of the tomb into a series of chambers, leading at length to the actual sepulchre, soon led to their being architecturally decorated. Where there were several chambers, one behind the other, it was natural that openings should be made in the walls for the sake of admitting light. The next step was to convert the remaining portions of wall into pillars for the support of the roof, and to plane off their corners, part of the pillar being, however, left square at the top so as to blend the octagonal column with the roof. In the next place the octagonal pillar was sometimes converted into one of sixteen sides, so as to resemble a column, and in some cases the flat surfaces were grooved or fluted, a sharp angle being thus formed between each of them. Polygonal columns of this character, which occur in the first tomb of Beni Hasan, have been called Proto-Doric or Egypto-Doric by Champollion and Falkener, from their resemblance to the Doric columns of the Greeks (Fig. II). The points of resemblance are the marked fluting, the tapering, and the absence of bases; but the Proto-Doric differs from the Greek Doric in being destitute of the 'echinus', a member resembling an overhanging wreath of leaves, and forming the capital of the Doric column. In some cases there is the still greater difference that the Proto-Doric columns are unfluted, the surfaces being left smooth for the reception of coloured inscriptions. In such cases the column loses its structural significance, being degraded to a mere surface for
inscriptions, and presents a marked contrast to the Doric, where each member and each line fulfils a definite requirement of the building.

The architects of the tombs of Beni Hasan, however, were not unacquainted with a light and elegant mode of building above ground, which cannot have originated in the grotto architecture.

II. Section of the N. Tomb and Columns of Beni Hasan.

This is proved by their use of the lotus-column (Fig. III), the prototype of which is a group of four lotus-stalks bound together and secured at the top by rings or ligatures, the capital being formed by the blossoms. These columns, which contrast strongly with the massive Proto-Doric, suggest a light style of garden architecture in wood.

While the architecture of the eleventh and twelfth dynasties bears some slight resemblance to the earlier style, the sculpture of the same period presents an almost total deviation from the ancient traditions. The primitive, lifelike realism to which we have already alluded is displaced by the rigorous sway of the Canon, by which all proportions are determined by fixed rules, and all forms
are necessarily stereotyped. There seems, however, to have been no retrogression in point of technical skill; for, as in the time of Khafra, the hardest materials still became compliant, and the difficulties of the minutest detail were still successfully overcome by the sculptors of the Pharaohs.

Another considerable break now took place in the progress of Egyptian art. This dreary interval began with the invasion of the Hyksos or Shepherds, and lasted throughout the whole of their domination. To them is attributed the destruction of the older monuments, and they themselves have left no architectural remains behind them. They were not, however, entirely insensible to the charms of art, and after the first terrors of the invasion were over, they did not prevent the Egyptian artists from prosecuting their calling. As the Normans in Sicily adopted the culture of the conquered Arabs, so the Hyksos turned to account the knowledge of art and the technical skill possessed by the Egyptians. The sculptures excavated at Tanis, the capital of the Hyksos (four sphinxes and particularly a group of river-gods in granite), are of Egyptian workmanship, and there is nothing to betray their origin in the Hyksos period except the type of the features, the bushy beards, and the thick tufts of hair.

With the expulsion of the Hyksos begins a new period, in the history of art as well as in that of politics. The warlike and victorious monarchs of the Eighteenth and Nineteenth Dynasties, in particular, have perpetuated their memory by astonishingly numerous monuments. The compulsory labour of captive enemies afforded the architects an opportunity of carrying out their most gigantic designs, while the achievements of their sovereigns, such as the campaigns of Thothmes, Amenophis, and Ramses, supplied the sculptors with an inexhaustible theme for the decoration of the façades of their temples. To this period of the new empire belong most of the Theban monuments. The taste for the great and the colossal, and for symmetry of proportion had attained its culminating point, but the stagnation of the lifesprings of art, the dependence of the drawing and colouring on formal rules, and the over-loading of the ornamentation with symbolical signs (such as the Uraeus and the Hathor masks) become unpleasingly apparent. It can hardly, however, be said that the decline of Egyptian art had yet begun; for this period lasted so long as to give rise to a general belief that the Egyptians had never possessed any other style, and entirely to obliterate the recollection of the
more ancient and materially different period of development. At the same time a careful inspection of the monuments of this period will convince the observer that no farther development could be expected afterwards to take place on the basis of a system so lifeless and entirely mechanical. Shortly before the conquest of the country by the Persians, however, a slight improvement in artistic taste appears to have taken place. While the monuments of the Twenty-second and following Dynasties are unattractive, being mere reproductions of earlier works, the sculptures of the Twenty-sixth Dynasty (such as the alabaster statue of Queen Ameniritis of the XXV. Dynasty) exhibit a considerable degree of elegance and refinement. But this revival was of brief duration. After the establishment of the Ptolemaeæan dynasty the native art became entirely extinct, though for a time a semblance of life was artificially maintained. Political interests required the restoration of the temples, and numerous artists were employed for the purpose; the traditional style continued to be practised, and every branch of art was liberally patronised. The style of this period, however, had well-nigh degenerated into mere mannerism, and therefore does not possess the historical interest attaching to the earlier stages of Egyptian art.

The art of the Ptolemaeæan era, moreover, in spite of all its richness and apparent vigour, not only shows manifest symptoms of decline, but was threatened with the loss of its originality and independence owing to foreign influences. As soon as Hellas came into contact with Egypt, the innate charms of Hellenic art, which even remote India was unable to resist, began to affect the hitherto strongly conservative and self-satisfied Egyptians.

Having thus given a slight chronological outline of the progress of Egyptian art, we must now endeavour to supplement it by a description of the chief characteristics of each period. Our attention will be chiefly directed to the monuments of the new empire, owing to their great number and extent.

The Column in Egypt, as elsewhere, constitutes the most important of all architectural members. Its absence indicates a very elementary stage of the art of building, when artistic development has yet to begin. The column imparts to the edifice an appearance of organic life, it lightens and breaks the outline of its different masses, and affords strength and support. When compared with the Greek columnar orders, the Egyptian column is of a very imperfect character. Its decoration and its form do not immediately and exclusively express its proper office, as is the case with the Greek column, and the Doric in particular. Its dependence on its natural prototype, the wreath-crowned canopy-support, still continues apparent, and its proportions, though not altogether independent of rule, still appear too arbitrary. Lastly, the height and thickness of the columns do not stand in an appropriate
ratio to the weight they have to bear. It must, nevertheless, be admitted that the eye is delighted with the brilliance of their colouring and the perfection of their execution.

Egypt possesses a considerable number of different orders of columns. Some of these occur in the old empire only, while others are found for the first time in monuments of the new empire, without, however, belonging to a higher grade of art. In the tombs of Beni-Hasan (XII. Dynasty) we have become acquainted with the polygonal or Proto-Doric column, and also with that with the bud-capital. The latter was perhaps suggested by a form of pillar which occurs in the tombs of the VI. Dynasty near Antinoë (the modern El-Bersheh). The surfaces of the pillars are hollowed out, and in the hollows rise lotus stalks, crowned with a bunch of buds or closed blossoms (Fig. IV). Akin to the lotus columns of Beni

Hasan is an order of column of the new empire, which was adorned partly with sculpture and partly with painting, and which afterwards gradually adopted the conventional form. This column tapers at its base, where it is encircled with a slight wreath of reed leaves. It also tapers again upwards, and in some cases presents a shaft painted with horizontal bands and hieroglyphics, and in others a shaft grooved so as to imitate the stalks of a plant (the
papyrus) which are bound together at the top with a ligature. The capitals, somewhat simple in form, and tapering upwards, are sometimes decorated on the lower part with a wreath of upright reed leaves, and sometimes, like the shafts, are treated as surfaces for painting, in which case their origin in the vegetable kingdom is indicated by a few painted buds only (Fig. V. a, b).

VI. Calyx Capitals.

While the columns hitherto described performed the structural function in temples and tombs of supporting massive stone roofs, the order of columns with Calyx Capitals was chiefly used for the decorative purpose of enclosing the processional approach in the anterior halls of the temples, and was required to support but little weight. The shafts of these columns rest on round bases resembling discs, they taper downwards, and are treated as surfaces for painting. The flowers and leaves on the capitals sometimes seem to be attached superficially only (Fig. VI. a), while in other cases the leaves appear to form a wreath, growing out of a columnar stem, and leaning slightly outwards so as to assume the calyx form. Of this style the papyrus (Fig. VI. b) and the palm (Fig. VI. c) formed the natural prototypes, and even at a late period several other very pleasing types were added. Another kind of column, which seems to have been much in vogue during the latest period of independent Egyptian art, is of inferior importance and artistic merit. It has a shaft terminating at the top in masks attached to four sides, usually representing the goddess Hathor with the cow's ears, and above these are placed miniature temple façades, forming a kind of abacus. Both in this case and in that of the Osiris pillars (Fig. VII), where the figure of the god,
with the crook in his left hand and the scourge in his right, stands quite detached from the pillar, and bears no part of the weight, the structural function has been treated as a matter of very subordinate importance.

Immediately connected with the columns are the beams above them. The inner apartments of the temples were ceiled with stone beams exclusively, extending from the abacus (or crowning slab) of one column to that of another; and the rectangular spaces thus formed were filled with slabs of stone, adorned sometimes with astronomical designs. The chief characteristics of the outer parts of the beams are, that the architrave rests immediately on the abacus, and that there is a furrow hollowed out above it, forming a deep shadow. The architrave is generally inscribed with hieroglyphics, so that its structural office is rendered less apparent; but the concave moulding above it presents the appearance of a proper crowning cornice (Fig. VIII, b), thus serving to counterbalance the effect of the inwardly sloping walls, and giving the building an appropriate finish. The hollowed cornice is usually embellished with upright leaves or staves; and, when it crowns a portal, a winged sun-disc generally hovers over the centre. The architectural idea embodied in the entablature of the tombs of Beni Hasan is materially different. Above the architrave lies a straight projecting slab, which presents the appearance of being borne by a series of beams (Fig. VIII, a). The resemblance here to cognate Oriental modes of building is very apparent, while the entablature above described is peculiar to Egyptian art. The crowning of the walls with the concave cornice, and its frame-like embellishment of roll-moulding, constitute the chief articulation of the edifice; but this would have afforded insufficient relief had it not been supplemented with colouring, whereby the cold surface of the walls was covered with a pattern resembling that of a gorgeous carpet.

In order that the traveller may thoroughly understand and appreciate Egyptian architecture, he should make himself acquainted,
not merely with the different modes of building and their details, 
but with the peculiarities of the national religious rites. The costly 
stone edifices of the ancient Egyptians were used exclusively for 
religious purposes. It is an error to suppose that the temples con-
tained the royal residences within their precincts; the nature of the 
climate alone would have rendered them uninhabitable. The kings' 
palaces, as we learn from the representations of them in tombs, were 
edifices of a very light and airy description, adorned with balconies, 
colonnades, and surrounded by gardens and ponds. They were built of brick and wood, and, as the sole object of the 
architects was to provide a convenient and pleasant dwelling, they 
were richly decorated with colouring.

With regard to the architecture of the temples, it is important 
to keep in view the fact, that they were neither destined for the 
reception of a congregation like Christian churches, nor, like the 
Greek temples, erected as mere receptacles for the image of the god.
The Egyptian worshippers approached the temple precincts in 
solemn procession, and the profane remained outside, while the ini-
tiated and the ordained penetrated to different parts of the interior 
in accordance with the degree of their knowledge of the divine 
mysteries, the high priest alone being privileged to enter the 
innermost sanctuary.

The multitude would first arrive in their festively decorated 
boats by the great highway of the Nile, and they would then traverse 
the avenue leading to the temple, which was flanked by sphinxes 
on each side. The sphinxes consist of a lion's body with the 
head of a man (Androsphinx), or that of a ram (Krionphinx), and 
according to an inscription at Edfu they were intended to sym-
bolise the conflict of Horus with Typhon-Seth. The sphinx avenue 
led to the precincts of the temple proper, the Temenos of the 
Greeks, which were completely enclosed by a wall, built of bricks 
of the Nile clay, or, as at Edfu, of solid stone. The sacred lakes, 
generally two in number, and the sacred grove were usually the only 
accessories of the temple which lay without the precincts. At the 
end of the avenue the eye is confronted by two huge towers with the 
entrance between them, called the Pylons, which are in the form of 
truncated pyramids, with walls divided into sections by round 
stakes, and affording admirable surfaces for plastic or pictorial de-
coration. The pylons and the portal between them are both crowned 
with the usual hollowed cornice. Under ordinary circumstances 
these pylons present a very imposing appearance, but their 
grandeur must have been much enhanced when they were festively 
decorated (as in Fig. IX) on solemn occasions, and when gaily hung 
with flags to welcome the arrival of the worshippers. Within the 
pylons, in the larger temples, lay a large open court (Peristyle), 
flanked on two or three sides with colonnades, and beyond it a 
large hall borne by columns (Hypostyle), of which those in the
centre, differing in size and form of capital, marked out the route to be followed by the procession. In many of the temples a smaller columnar hall, and chambers of smaller size and decreasing height, all lying in the line of the processional route (and together called the *Prosecus*) separated the hypostyle from the small, dark, and secluded sanctuary, called the *Adytum* or *Secus*, sometimes consisting of a single huge hollowed block of stone, where behind rich curtains lay the symbol of a god and a sacred animal. The sanctuary was surrounded by a number of chambers of various sizes, and staircases led to the roof and to other apartments which either served as dwellings for the custodians and receptacles for the temple furniture, or for the celebration of sacred rites.

Having thus glanced at the internal arrangements of the temple, we may now retrace our steps and rejoin the devout procession. The lower classes of the people (the 'Pasu'), forming the great bulk of the procession, were not permitted to advance beyond the sacred grove and the courtyard, where on certain days they offered sacrifices. The 'Patu', or lowest grade of the instructed, the 'Rekhiu', or esoterics, who were initiated into the sacred mysteries, and the 'Ammiu', or enlightened, advanced into the great hall, and from

**IX. Decorated Portal and Pylons.**
the portal of the Prosekos, or hall 'of the manifestation of majesty', they were permitted to behold from afar the sacred emblem of divinity. These worshippers were now passed by the king and the officiating priests, who ascended in solemn procession to the roof, while the high priest entered the small and sombre chamber of the god. The annexed ground-plan of the S. temple at Karnak will render the foregoing description more intelligible (Fig. X), and analogous arrangements might easily be pointed out in the temples of other nations, such as those of Semitic race. The erection of obelisks or colossi (or both) in front of the pylons is also susceptible of easy explanation. The obelisks, the form of which was well adapted to break the monotonous outline of the walls, record in hieroglyphic inscriptions the victorious power bestowed on the Pharaohs by the god, while the royal statues remind beholders of the duty of monarchs to show their gratitude by erecting temples to the gods. The winged disc of the sun with the heads of the Uraeus serpent over every entrance has also a noteworthy signification. It symbolises the victory of Horus over Typhon, and the triumph of good over evil; and an inscription at Edfu informs us that, after the victory of Horus, Thoth (reason) commanded this symbol to be placed over all entrances. On the other hand the way in which architecture is constantly made subservient to painting, for the purpose of obtaining surfaces for symbols and inscriptions, is unpleasing. Every column, every pillar, every roof-beam, and every wall is embellished with raised or engraved figures and characters, all of which are painted. The scenes which portray the victories of the Pharaohs, and their intercourse with the gods, are always accompanied by explanatory inscriptions, and even the simplest ornaments used under the new empire have some symbolical signification.

The form of temple above described sometimes required to be varied in consequence of the nature of the site. In Lower Nubia the sandstone rocks approach so near the Nile that the temples had to be partially or wholly excavated in their sides. At Girgeh, for example (Fig. XI), the pylons and the colonnaded courtyard were built in the open air in front of the temple, while the hypostyle and
the sanctuary were excavated in the rock. The larger temple of Abu Simbel, on the other hand, including the pylons and the colossi, is entirely excavated in the rock. During the Ptolemaic era other deviations from the traditional types came into vogue. Differences in

the forms of the capitals, in the ornamentation, and other details, as well as a more arbitrary disposition of the temple arrangements themselves, now clearly betray the invasion of Greek influences.

Several of these late buildings, entirely enclosed by columns, with intervening walls rising to half the height of the columns, or even higher, so strongly resemble the Greek peripteral temples externally, that some internal similarity is involuntarily expected. The probable object of some of these edifices, namely to serve as enclosures for sacred animals, proves them to be of purely Egyptian origin; but, owing to the abnormal disposition of the different members, it is difficult to conceive them to be products of purely native art. Besides the temples in the island of Philae, the imposing edifices of Edfu (Apollinopolis Magna), Kôm Ombu (Ombos), Esneh (Latopolis), Tentyris (Dendera), and Erment (Hermonthis), afford ample opportunities for the study of the Ptolemaic style of architecture, the impression produced by which is apt to procure for Egyptian art a less favourable general verdict than it strictly deserves.

While the edifices dedicated to the service of the gods belong exclusively to the period of the new empire, there still exist Mortuary Temples the origin of which may be traced back to the remotest periods of the ancient empire. The oldest of these temples are called Mastabas (comp. p. 365), and contained a chapel for the celebration of sepulchral rites, as well as a tomb. The kings, however, were not satisfied with a monument in which their tombs and mortuary chapels were united, but adjacent to their pyramids erected temples in which sacrifices were to be offered for the welfare of their souls. The handsome pillar-structure of granite
and alabaster near the great Sphinx appears to have been a temple of this kind in connection with the pyramid of Chefren. Under the new empire also the kings constructed their actual burial-places at a distance from the monuments dedicated to their memory. The deep rock vaults in the ravines of the royal tombs were the resting-places of their remains, while the great 'Memnonia' (which are placed exclusively on the W. bank of the Nile at Thebes) were the temples where rites were celebrated in their memory. The most interesting feature of the mortuary temples is their pictorial decoration. The subjects of those in the memnonia are of course the power and prosperity, the victories and achievements, of the monarchs, while the private chapels contained scenes from the domestic life of the deceased. The memnonia sometimes covered a very extensive area, like that of Ramses II., which contained a library and a school. Most of them have pylons and large colonnaded halls, but it cannot now be ascertained whether they were uniform in their arrangements.

By far the greater number of Egyptian sculptures are in immediate connection with architectural works. Colossal statues mount guard over pylons and pillars, and every available surface is adorned with reliefs. If these plastic works are to be fairly judged, they must be regarded as component parts of the building they adorned. Speaking of the colossal statues, Dr. Lepsius justly remarks: — 'The features of these statues, which even received divine honours, and were enthroned in, or in front of, temples in a commanding position, either as structural supports, or detached from the pillars behind them, wear the same character of monumental repose as the statues of the gods themselves, and yet without the possibility of their human individuality being confounded with the universally typical features of the divine images'. — This is chiefly the case with the colossal sitting statues, whose position (with their legs bent at a right angle, their arms firmly pressed against their sides, and their heads looking in a perfectly straight direction) may well be called stiff, but not properly conventional. Many peculiarities of Egyptian art, especially during the earlier period, are apt to be attributed to the imperative requirements of sacerdotal authority, but they are perhaps rather to be accounted for by the imperfection of artistic development. The sculptors exhibit great skill in detail, but they seem incapable of making their skill subserve the general effect of their works. They have obviously striven to represent each member of the body with the utmost fidelity, but they were incapable of combining them harmoniously. Thus, we generally see reliefs with the faces in profile, the chest nearly facing us, and the legs again in profile, a peculiarity which recurs in the works of other Oriental nations, and even in those of the Greeks of the early period. This defect was at length overcome by the Greeks, but of the Egyptian artists it continued permanently characteristic,
just as their heroes invariably retain the primitive distinction of being delineated in much larger proportions than other persons. Hampered by these immutable rules as to proportion (which were modified twice only in the course of several thousand years), Egyptian art appears to have been seriously checked in its growth, and to have entered, after a brief period of efflorescence, on a long era of what may be termed Byzantinism, — and yet in many respects the Egyptian sculptures merit our highest admiration. The artistic effects capable of being produced in any given material, such as granite, were always calculated with the nicest discrimination; nothing capable of achievement is left undone, and beyond this nothing is attempted. The sculptors are notable for their knowledge of anatomy, for their accuracy in the delineation of muscle, for their skill in portraiture, and for their fidelity in representing animal life. Of all the Egyptian works the figures of the gods are perhaps the least happy. To us they seem to exhibit a want of taste and intelligence; but this is perhaps to be accounted for by the fact that they were intended to be worshipped only, and not admired. That the practice of art was very highly developed in Egypt is proved not merely by the great extent to which the division of labour was carried, but by the fact that the artists understood the process of copying figures by dividing them into squares and calculating their proportions so as to be able to reduce or enlarge them at pleasure. As all authorities, however, concur in pronouncing the Egyptian artists perfect in point of technical skill, it would be superfluous to say more on this branch of the subject.

Besides the painting of the Egyptian plastic works, another peculiarity is the incision of the reliefs, which recede from the surface instead of being raised above it. These 'ceulanoglyphs', or 'reliefs en creux', which somewhat resemble pieces of embroidery, produce nearly the same effect as paintings. Their object is the same, and the style of composition, design, and artistic execution are nearly
identical. No attention whatever was paid to tastefulness in grouping or uniformity of arrangement, the separate scenes being merely placed beside or over each other; but, individually, these are remarkable for distinctness and excellence of execution, and they afford us a far more vivid picture of the life of the ancient Egyptians, their customs, their wars, and their religious rites, than any written chronicle could have afforded. In artistic finish, on the other hand, these scenes are defective, and the colouring has no independent value, being merely used to make the figures stand out more distinctly, and imitating nature in the crudest possible manner.

In the province of artistic conception we find Egyptian imagination fettered by traditional bonds which it made no effort to break; but in the practice of the handicrafts Egypt was perfect. The goldsmiths and workers in metal in particular had attained the most complete mastery of their craft; they thoroughly understood all its ancillary arts, such as enamelling and Damascene work, and they were thus able to produce works of a degree of finish such as a highly civilised nation alone could execute and appreciate.

The traveller should note the signification of some of the Symbols and Signs most commonly used in the ornamentation of the columns and other parts of the Egyptian temples. Thus, is the crook or shepherd's staff, the emblem of the leader or monarch; a scourge, the symbol of kingly power. When both are in the hand of the same figure they perhaps impart the power of restraining and of urging onwards. Then a seal, the symbol of life; Nilometer, the symbol of steadfastness; the red crown of Lower Egypt; the white crown of Upper Egypt; the united crown of Upper and Lower Egypt; and the Uræus serpent. On diadems and suns was placed the emblem . The Uræus serpent, possessing the power of life and death, was the emblem of kingly power. The sceptre, , denoted authority of various kinds, power, wealth, and victorious strength. The sceptre , which is read 'us, 'am, or ouab, indicates the name of the Theban nomos; a basket, signifies a master; a decorated basket, a festival, or solemn assembly, at which offerings were made in such receptacles; māa, an ostrich-feather, truth and justice; ran, the frame surrounding the names of kings,
signifies the name; \( kheper \), the scarabæus or beetle, the principle of genesis and regeneration. The precise meaning of the symbol \( \uparrow \) is unknown, but it is read \textit{sam}, and signifies union. It is frequently observed at the foot of statues, entwined with aquatic plants, where it is symbolical of the union of Upper and Lower Egypt, and perhaps of the union of this world with the next. The lock \( \& \) on the temple of a figure marks it as a child, generally the offspring of the gods or of the kings.

IX. Buildings of the Mohammedans.

Mosques. Dwelling Houses.

By Franz-Bey, Architect at Cairo.

The Mohammedan style of architecture in the valley of the Nile was not, as might perhaps be expected, the immediate successor of the Egyptian, but was separated from it by that of the early Christian epoch, a period of six or seven centuries. This new style was not of native growth, but was imported from abroad, being of Arabian origin, considerably modified by the forms of art which the victorious Arabs found in vogue among the Byzantines, and by those of Persian art of the era of the Sassanides. Different as the Arabian buildings at Baghdad and Cairo may appear from those at Tunis and in Spain, they all possess certain features in common. The fundamental idea of all Mohammedan architecture originated in the nomadic life of the Arabs. The tent was the prototype, alike of the house and of the temple. The walls in particular, with their carpet-like decoration, and their extensive, unrelieved surfaces, remind one of this origin. This style of architecture is that of the fickle children of the desert, whose edifices, even after they had become a settled and stationary nation, continue to convey an idea of unsubstantiality, and who never attained to a clear perception of the proportion to be observed between the support and the burden to be borne. This defect is less apparent in cases where the Arabian builders were brought under the influence of more civilised nations, where they employed columns, entablatures, and other fragments of ruined edifices which they found available, or where, as sometimes happened, they were aided by Byzantine or other foreign architects, than in purely Arabian edifices like the Alhambra in Spain; but in every case the national characteristic is more or less distinctly traceable.

The buildings most immediately connected with the national traditions are the Religious Edifices, the leading feature of which consists of the Court, such as that seen at Mecca, which dates from a period even earlier than that of Mohammed himself. The walls
of the court, indeed, lost their primitive simplicity after their
designers had been brought into contact with the colonnaded courts
of Egypt and the Syrian regions, and the Columnar Court was thus
developed; but the Arabian builders avoided using or imitating
Egyptian columns. They preferred the columns or remains of col-
umns of the Alexandrian and Roman period, as the massive pro-
portions of those of the Egyptian style were less appropriate to a
light and open structure than the columns of the richly decorated
Corinthian order.

They borrowed their cornicings, which they employed but spar-
ingly, and their mosaic ornamentation, such as arabesques, from the
Byzantine models which they found in Syria and in the oldest
Byzantine-Christian edifices of Egypt, and their pointed arches and
domes chiefly from the region of the Euphrates. At the same time
they contrived to impart to their works a certain individuality of
character, partly by the elegance of their forms and the preference
given to superficial over architectural decoration, and still more so
by the peculiar character of their ornamentation, resembling the
patterns of textile fabrics, and obviously imitated from wall-
tapestry. Similar patterns appear also in their latticed windows,
their carved doors, and their diaped balloons.

The Exterior of these buildings is generally plain, consisting of
a lofty, rectangular enclosing wall of quadrangular plan, but not
tirely without relief in the form of projections and indentations.
In the mosques there are usually minarets and domes projecting
beyond this general outline, and this is still more commonly the
case with the public fountains (sebil) and the mosque schools
(nedreseh) above them. The portal, on the other hand, and certain
perpendicular sections of the building of various widths, generally
recede a little, the latter a few inches only, being again brought
forward immediately below the cornicing to the level of the façade
by means of a 'stalactite' corbelling. In these last also the windows
are often inserted with little regard to symmetry. In the corners of
the projections thus formed, as well as in the other angles of the
building, we frequently find columns of marble inserted, or columns
hewn out of the material of the building, and detached to the extent
of three-fourths of their thickness. The whole plan of the stone
façades, which is not devoid of a certain degree of grandeur,
reminds us of those of the ancient Egyptian temples, although the
Muslims were generally scrupulously careful to avoid every resem-
bance to the pagan buildings. The portal is generally the richest
part of the edifice. The windows are simpler, and less importance
is given to the principal cornice than the height and other dimen-
sions of the building would seem to demand.

The Portals consist of rectangular niches, of such depth as to
allow room on the left and right outside the door for the maṣṭabas,
or stone-benches used by the doorkeeper (bawwāb). This door-
niches in the mosques rises nearly to the full height of the façade, and terminates at the top either in a sphere, or in a polygonal half-dome, partly ribbed, and partly embossed with pendentives or ‘stalactites’. The two perpendicular mural pillars of the niche approach each other towards the top, either in curved or straight lines converging at an acute angle. In neither case, however, do they actually meet, the niche terminating above in a hemispherical dome, which springs from the converging lines. The form of the entrance varies considerably. In some cases it terminates above in an architrave, in others in a round or pointed arch, while fantastically waved or broken-arch forms are also not uncommon. The commonest style in the mosques is the architrave form with segmental relieving arches. A favourite practice was to pave the threshold with an ancient block of red or black granite, even if covered with hieroglyphics, and in many cases these venerable inscriptions are still traceable. In the mosques, on the resting-place in front of the door, is a low railing which marks the boundary to which the visitor may penetrate without removing his shoes or sandals.

The Windows are more commonly rectangular than arched, and are sometimes grouped in twos and threes, in which case they are often tastefully adorned with round, oval, or star-shaped rosettes in plaster, perforated, and filled with coloured glass. This arrangement has many points of resemblance to the Byzantine and Romanesque styles. The window in the façades are frequently surrounded with scrolls in low relief, and with flat bands or roll-mouldings. On the inside they are usually adorned with friezes in plaster with arabesques.

Special importance was attached to the principal doors of monumental buildings, which as a rule were massively mounted with iron or bronze, or were constructed of pieces of wood of different colours, ingeniously fitted together. The portals of some of the mosques are embossed with bronze decorations, beautifully embossed and chased. The doors in the interior of the buildings are often richly inlaid with ebony and ivory.

The Dome, a very salient feature in Mohammedan buildings, especially in the mosques and mausolea, varies much in form; the base of the structure projects beyond the square ground-plan of the edifice, and the summit rises above the enclosing wall. The dome, which tapers upwards in an elliptical form and is adorned with knobs and crescents, is blended with the quadrangular interior of the mausoleum by means of pendentives; while, externally, the union of the cube with the sphere is somewhat masked by the polygonal base of the dome. In some cases the transition is effected by means of gradations resembling steps, each of which is

† In the more frequented mosques the custodians provide slippers for the use of Frank visitors. Fee 1 silver piastre.
crowned with a half-pyramidal excrescence of the height of the step. These excrescences might be regarded as external prolongations of the pendentives of the interior, but do not correspond with them in position. The architects, however, doubtless intended to suggest some such connection between the internal and external ornamentation. The domes are constructed partly of stone and partly of brick, the pendants being of stone, or of plaster and lath-work, and they are sometimes of considerable length. The finest are probably those of the Khalifs' Tombs. The greatly elongated domes of the Mameluke tombs have a second dome structure in their interior. The latter, lying much lower, supports walls placed in a radiating form, which bear the upper dome. One of these dilapidated tombs (p. 392) affords a good opportunity of examining this mode of construction. Near it there is also a dome with a lantern, a form quite foreign to the customary style of Arabian dome building.

It is a mistake to suppose that the joints are not cut in a straight direction, but were formed in curved or broken lines which required each stone to be an exact counterpart of its neighbour. This arrangement is occasionally seen in the case of straight or flat segment-shaped plinths, but even there this kind of construction is often merely simulated by means of inlaid marble of different colours.

The Minarets (from the Arabic menäreh, 'a signal' or 'signal-post') are generally square at the base, tapering upwards, story by story, until the form at length changes to that of an octagon or cylinder. On these towers the architects have expended their utmost skill, and the spectator will not fail to be struck by their graceful proportions. The highest story is sometimes formed of pilasters, or columns, which bear a roof, either consisting of one or more dome-shaped protuberances with the symbol of El-Islâm, or of a simple conical point. They are generally built of substantial masonry, and contain Winding Staircases of stone leading to the galleries of the different stories and to the balconies between them. From these last the mueddins summon the faithful to prayer (p. 145). The galleries are borne by projecting cornices, and the balconies by brackets of similar construction. The wooden rods and hooks at the top of the minarets are used for hanging up the lamps during the fasting month of Ramadân. The mosques were also formerly provided with external platforms (called mabkharas), on which incense used to be burned on high festivals, so as to diffuse sweet perfumes throughout the whole neighbourhood. The mosque of El-Ḫâkim is now the only one which still possesses platforms of this kind.

The Public Fountains (sebîls), with the Mosque Schools (medresehs) on the first floor, are frequently included within the rectangular precincts of the mosques, but they sometimes project from them in a circular form. The exterior of these buildings, and also of the open
colonnades used for scholastic purposes, is frequently adorned with detached columns, which is not the case with the religious edifices.

The Interiors of the mosques, on the other hand, are freely embellished with columns, the court being usually bordered by a colonnade, which is doubled or trebled on the side next the prayer-niche (kibla).

Cairo presents no example of a distinct Arabian order of column, and hardly a single Arabian capital, those actually executed by Arabs (such as those adjoining the prayer-recess of the mosques) being imperfectly developed, and copied from Byzantine and Ptolemaean models. The form of capital which seems peculiar to Cairo is very simple and is also used as a base. Proceeding from the four corners of the abacus in curved lines are four surfaces which unite below with the ligature of the round or octagonal column. The numerous columns which adorn the mosques and private houses originally belonged, almost without exception, to Roman or Ptolemaean structures, and sometimes to Christian churches. The Mohammedans did not, however, employ columns belonging to the ancient Egyptian temples unless they had already been remodelled and used in Greek or Roman structures. Thus the Roman pedestals with remains of hieroglyphics occasionally seen in the mosques must originally have belonged to Egyptian temples. The architects of the mosques collected the columns they required for their purpose with little regard to their dimensions. If they were too short, a pedestal, or a reversed capital was placed beneath them, regardless of the order to which it belonged. Ionic and Corinthian columns are mingled promiscuously, and a certain degree of uniformity in the architecture is only observed when the abacus is reached. On this last lies a second abacus of sycamore wood secured by a wooden bar, from which lamps are frequently suspended.

The arches of the Arcades are almost invariably pointed, being at first round, while their sides go off at a tangent near the top; or they gradually assume the keel-shape, being slightly curved inwards below in the shape of a horseshoe. There are also other forms which approach still more nearly to the Gothic pointed arch; and there seems little doubt that this form, so early and so generally employed at Cairo, was exported thence to Sicily, and became the type which afterwards extended to Northern Europe. Beyond this resemblance in the form of the arch, however, and in some of the details of the windows, the pointed style possesses nothing in common with the Arabian. The Gothic gateway of marble between the mosques of Kala’un and Barku’kyeh (p. 276) in the Derb el-Nahhasin must, therefore, be regarded as a work executed under European influence. The popular account of it is that it was brought from some island.

The arcades of the mosques and other spacious halls are covered with a flat Ceiling of open-work, of almost uniform height. The
junction of the walls and ceiling is generally masked by a pendent cornice, or a cornice with a frieze for inscriptions. The beams used in the construction of the ceilings are generally square at both ends to a length of 3-5 ft., beyond which they are rounded below, and frequently carved. The interstices between the beams are sometimes divided into 'coffers'; and proper coffered ceilings also occur, as in the mosque Salâheddin Yûsuf in the citadel (p. 262).

In the corners of the apartments, as well as under the principal architraves, pendants are generally placed to conceal the angles. The earliest ceilings appear to have consisted of palm-trunks, and then covered with boards of sycamore wood, which were often richly carved. The space immediately in front of the kibla (prayer niche) usually terminated in a dome borne by columns. Spherical and groined vaulting was used for smaller chambers only; but the arcades of the Barâkûk mosque (p. 280), with their depressed spherical brick vaulting, form an exception to this rule. In secular buildings the use of vaulting is much more frequent, as in the case of the city-gate Bâb en-Naṣr (p. 278) and other arched passages. The entire ground-floors of palaces are also sometimes vaulted, and bridges and aqueducts were usually executed in barrel vaulting, or with pointed arches.

The Decorations generally consist of panelling or flat paintings, destitute of structural meaning, while pilasters, cornices, and other architectural embellishments are rare. This species of ornamentation was doubtless originally suggested by the carpets, fringes, and mats, used by the Arabs for covering their walls. The stalactite corbelling, on the other hand, which mask the union of the vertical with the horizontal parts of the building, and take the place of the vaulting used in western architecture, are of a more structural character; but even these perform no real architectural function, and form a mere fantastic decoration of the angles of the domes.

The panel and frieze decorations are either foliage, geometrical figures, or written characters. The Foliage is usually shaped in rectangular relief, with a few incisions to divide the broader surfaces. The moulding is generally more or less in conformity with the spirit of the classical style, but in the conventional arabesques the leaves and other parts of plants of a southern climate are recognisable. The Geometrical Figures consist either of a kaleidoscopic arrangement of constantly recurring fantastic forms, or of a series of intertwined and broken lines. Lastly, the Arabic Written Characters with which the friezes are often decorated, and more particularly the Cufic and Sullus characters, are peculiarly well adapted for ornamental purposes, as they resemble decorative foliage, although destitute of its strictly symmetrical and continuous character. When the writing is employed for lengthy inscriptions in low relief, the ground on which it is placed is generally covered with slightly raised arabesques.
Panels or friezes bearing inscriptions of this character produce a very rich and pleasing appearance. When viewed from a moderate distance, especially if enhanced by colouring, the broad characters stand out with great effect. The ground then resembles a network of lace, the delicate lines of the arabesques being indistinguishable except on close inspection. Sultan Hasan's mosque (p. 260) contains a remarkably handsome frieze of this description. The large and bold characters on the mosques or private houses which strike the eye of the traveller are almost invariably texts from the Korân, while historical notices in a small running character are often inscribed on marble slabs over the entrances and the latticework of the sepils, where they are sometimes carved in wood. Similar inscriptions also occasionally occur in the halls of the interior.

The observer can scarcely fail to be struck with the apparently capricious way in which this ornamentation is distributed, the artist having sometimes lavished the whole richness of his arabesques upon certain spots to the neglect of others. When this peculiarity is more closely examined, it will be found that the parts thus favoured are — (1) the Portals, which are embellished with a framework of rich friezes, with rosettes to mark certain points, with artistic sculpturing on the architrave, and with pendants in the ceiling of the niche; (2) the Minarets, which it was customary to place over or adjacent to the portals, but seldom from structural motives; (3) the external surfaces of the Dome, which are sometimes covered with arabesques, and sometimes with roll-mouldings or wreaths; (4) the Kibla, with its handsome border, its capitals and columns, which are often rich and beautiful, its fine mosaics, its miniature pseudo-arcades; (5) the Pendants in the interior of mausoleums; (6) the Ceilings; (7) the Mimbar (pulpit), which is partly in stone and partly in wood. The latticework, windows, doors, couches or sofas (dikkeh), lanterns, and lamps are also much ornamented. These last are sometimes made of very curious enamelled glass, but few of them are now to be found in the mosques. Colour does not perhaps play quite so conspicuously a part in the Egypto-Arabian monuments as in the Spanish; but the Egyptian artists, like those of the Alhambra, were also much addicted to the use of bright colours, especially red, blue, yellow, gold, and white. The ground of the decorative inscriptions is frequently deep blue, while the letters are usually gilded. On the whole, however, painting was never so highly developed here as in Spain, where the artists showed a certain appreciation of perspective by painting the lower parts of their walls with dark colours and gradually shading them upwards with lighter and more brilliant tints. In their colouring, as well as in their ornamental reliefs, it is obvious that the Egyptian artists aimed at producing effect by contrasts. Of roof-beams are serrated.
BUILDINGS OF THE MOHAMMEDANS.

The pavement consists of the richest marble mosaic, for the most part in dark colours, the walls are generally painted, and the cornice and ceiling richly coloured and gilded. In the more important private houses we sometimes find the walls covered with majolica. The traveller will also be struck with the beautiful effects of colour produced by the Inlaid Work in the kiblas of certain mosques (the tombs of Kalaûn, Tulûn, and Kait Bey), where marble, porphyry, mother-of-pearl, and Venetian enamel have been combined. In the case of Cabinet Work the colours used for inlaying are dark brown, black (ebony), white (ivory), and bronze. Externally the dark yellowish stone of which the buildings were constructed produced a naturally pleasing effect, which the architects occasionally endeavoured to enhance by colouring every alternate course red or black; while important parts were adorned with marble mosaic, majolicas, panelling, and gilding. Owing to the mildness of the climate of Egypt much of the original colouring has been preserved, but it must not be confounded with the rude and staring painting of stone façades and marble ornaments executed on the occasion of the opening of the Suez Canal in 1869.

The secular edifices, like the sacred, and particularly the Dwelling Houses, have also their characteristic peculiarities. The ordinary town-houses are constructed of stone on the ground-floor, and generally have an overhanging upper story. The projecting parts sometimes rest on pillars, but more commonly on beautifully carved brackets of peculiar form, and are provided with a kind of bow-window, which serves the double purpose of ventilating the house and of affording a view of the street to the women concealed behind the lattice-work. The small perforated and generally octagonal balconies, with round holes at the bottom, are used for cooling the drinking-water in porous vessels (külêhs), whence they derive their name of Mushrebiyeh (from sharâb, a draught). These balconies are rectangular in shape, but their sides are sometimes arched, and the lattice-work round them, composed of turned pieces of wood, often forms an ingenious and elaborate pattern. The roofs of these mushrebiyehs usually project in a tent-like form, and instead of cornices they have pendent friezes cut out of boards. The union of these projections with the surface of the wall below is generally masked by means of richly carved and elegantly waved mouldings with tasteful rosettes. Above the mushrebiyehs, which rarely extend to the height of the apartment within, there are usually introduced upper windows, with stucco frames, filled with stained glass. — The Cornices of the houses project but slightly, curving a little outwards when pendentives are not employed; and they are almost always crowned with pinnacles, which are often most elaborately executed. We may also mention the curious form of cornice seen in the Mameluke Tombs, where the projecting ends of the roof-beams are serrated.
While bestowing their full meed of praise on the wonderfully rich ornamentation and other details of Arabian architecture, one cannot help feeling that the style fails to give entire aesthetic satisfaction. Want of symmetry in plan, poverty of articulation, insufficiency of plastic decoration, and an incongruous mingling of stone and wood, are the imperfections which strike most northern critics. The architects, in fact, bestowed the whole of their attention on the decoration of surfaces; and down to the present day the Arabian artists have always displayed far greater ability in tracing elegant outlines, and designing the most complicated ornaments and geometrical figures on plane surfaces, than in the treatment and proportioning of masses. Although we occasionally see difficulties of construction well overcome, as in the case of the interior of the Bâb en-Nâṣr, these instances seem rather to be successful experiments than the result of scientific workmanship. The real excellence of the Arabian architects lay in their skill in masking abrupt angles by the use of ‘stalactites’ or brackets.

If we enquire into the causes of these defects in the development of art we shall find that the climate is one of the principal. Its remarkable mildness and the rareness of rain have enabled architects to dispense with much that appears essential to the inhabitant of more northern latitudes; and hence the imperfect development and frequent absence of cornices. The extraordinary durability of wood in Egypt, again, has led to its being used in the construction of walls, and in connection with stone, in a manner which would never occur to northern architects. Another circumstance unfavourable to the development of native art has doubtless been the ease with which the architects obtained abundance of pillars and capitals in ancient buildings ready to their hand. There were also political obstacles to the progress of art, such as frequent intestine struggles and dissensions, and the sway of despotic rulers and their servile officers; and, lastly, the characteristic Egyptian tenacity and veneration for tradition and religious precept have not been without their influence. The original design of the mosque, for example, was borrowed from Mecca, and no deviation could be made from its plan; and this accounts for the invariable recurrence of the same forms in the mosques of Egypt. In a few instances architects ventured to introduce innovations, but they never failed to revert sooner or later to the established style. The external architecture of private houses, however, being unfettered by religious considerations, might have progressed more favourably but for the powerful influence of superstition and fear. An external display of wealth, according to the popular notion, drew upon its possessor the ‘evil eye’ of the covetous, the consequence of which was misfortune or death, while, on the other hand, it afforded the government a pretext for extorting heavy taxes from the occupant. It therefore became customary
with the Egyptians to restrict any appearance of luxury to the
interior of their harems, where it is exhibited in the sumptuous
furniture and hangings, and in the jewellery of the women. These
indications of wealth are never seen except by the proprietor's
nearest relations and the female friends of his wives, and are
effectually concealed from the view of the government and of the
general public.

With regard to Sculpture and Painting it will strike the tra-
veller that the modern Egyptian chisel and brush have been reserv-
ed exclusively for the decoration of wall surfaces. Representations
of animals occur rarely, while those of the human figure were
prohibited by the Korân (comp. p. 215). The latter, however, are
occasionally met with. One of the Tulunides, for example, caused
a festal hall to be adorned with painted wooden statues of himself,
his wives, and his favourite dancers; and at Cairo there was
even a famous manufactory of figures of men and animals at that
period. In the 11th cent., as we are informed, there were two cel-
ibrated painters at Cairo who vied with each other in the execu-
tion of relief pictures. One of them painted a dancer, who seemed
to be disappearing into the wall, while his rival painted another
who seemed to be coming out from it. El-Kitami's picture of
Joseph in the pit was also a far-famed work. On the whole, how-
ever, these branches of art were but little developed, the Egyp-
tians resembling the Israelites in this respect. The Arabs were
more successful, however, in the prosecution of artistic handicrafts,
and excelled in the embellishment of all kinds of implements in
metal-work, enamel, inlaying, engraving, etc. Their decorative
ingenuity, developed by these arts quite as much as by the wall
decorations, and applied to textile fabrics also, has attained so
wide a celebrity, that the word 'Arabesque' is now nearly syno-
nymous with 'ornament'. The word 'Grotesque' was once similarly
applied to the western style of decoration borrowed by Raphael
and Giovanni da Udine from the 'Grottoes' of the Baths of Titus at
Rome, and employed by them with singular success in the loggie
of the Vatican, but this word has long since lost its original
meaning.

The Mosques are divided, in accordance with their religious
importance, into two kinds: (1) those in which the sermon
(khuṭbeh) is preached on Fridays, called Gām'a; (2) those in which
prayer only is offered daily except on Fridays, named Mesgid‡,
or Zāwiya. The name mesgid, which has been imported from

‡ It is from this word mes gid (which means a place for prostration),
that we derive the word mosque, through the Spanish mezquita and the
French mosquée.
Constantinople, is less frequently used than Zâwiya, which denotes a small mosque, consisting of one chamber only.

The Muslims also repeat their prayers at the grated windows of the mausolea of their saints (shêkh, or welî; see p. 150), behind which is visible a catafalque, covered with bright coloured carpets, but by no means invariably containing the remains of the holy man. These well's, or tombs of shêkhs, occur in every part of the country, being frequently built into the houses, and are easily recognised by their cubic form and their domes. They are rarely more than 4-6 yds. square, and are generally whitewashed. The interior is often empty and infested with scorpions and vermin.

Every Gâm'a has a court of considerable size, generally uncovered, called the Fasha, or Şâhn el-Gâm'a, in the centre of which is the Haneflyêh, or fountain for religious ablution. On the E. side the court is adjoined by the Liwân, covered with carpets or mats (Haşîreh), where the sacred vessels are kept. Between the Liwân and the court there often runs a mushrebiyêh railing which separates the holy place of the Gâm'a from the court.

In the Liwân we observe: (1) the Kibla or Mihrâb, the prayer-niche turned towards Mecca; (2) the Mimbar, or pulpit, to the right of the Kibla, from which the Khaṭîb or Imâm addresses the faithful; (3) the Kursî (pl. Kerâşi), or reading-desk, on which the Korân (which is kept at other times in a cabinet of its own) lies open during divine service; (4) the Dikkeh, a podium borne by columns, and surrounded by a low railing, from which the Mobâliğh (assistants of the Khaṭîb) repeat the words of the Korân, which is read at the Kibla, for the benefit of the people at a distance; (5) the various lamps and lanterns (Kindîl and Fânûs). By the side of the Şâhn el-Gâm'a is another small court with a basin of water and other conveniences, which the faithful almost invariably visit before entering the sacred precincts. Adjoining the Liwân is usually placed the mausoleum of the founder of the mosque, called Maḵṣûra, and farther distant, by the principal entrance, is the Sebil (fountain) with the Medreseh (school). Under the Sebil is a cistern, which is filled during the inundation of the Nile. These fountains are often richly adorned with marble and bronze railings. They are protected by a very projecting roof, and above them is the more or less handsome school hall. The railings whence the water is distributed are usually approached by several steps. The interior of the Sebil consists of a single large chamber, the pavement of which is about 3 ft. below the level of the surrounding soil, and in it the water drawn from the cistern is placed in vessels for distribution at the railings. Adjacent to the Sebils are sometimes placed troughs for watering animals. The water stored in these cisterns is generally in great request in June, when the Nile water becomes unwholesome, assuming a green colour caused by the presence of myriads of microscopically small plants. The Medreseh usually consists of a single hall, with a store-room for its simple furniture.
BUILDINGS OF THE MOHAMMEDANS. 183

Considered with respect to their ground-plans, the mosques are classed in two leading groups: (1) those of rectangular plan, with hypaethral columns or pilasters round the open court (see plan of the mosques of ‘Amr, p. 309, and Barkúk, p. 281); and (2) those which have a rectangular or cruciform court surrounded by closed rooms, like the mosque of Sultan Hasan and most of the tomb mosques, or those where the tomb is of large size compared with the Şahn el-Gām’a.

The Tombs of the Muslims (comp. also p. 153) are generally situated on high ground, uninfluenced by the moisture of the river, and sometimes in the desert. The chambers are destitute of decoration. Within is a catafalque of stone resting on a more or less decorated pedestal, and bearing two upright columns (Shâhid) of marble or other stone, one of which, placed immediately over the head of the deceased, bears his name and age, with texts from the Korân. At the top of the shâhid is represented the turban of the deceased, the form of which indicates his rank. Over the catafalques of persons of distinction are erected dome-shaped canopies, resting on four columns or pilasters, or their tombs have the closed form of those of the šekhs already mentioned. On festivals the catafalques and hollow parts of the pedestals are covered with palm-branches, flowers, and basilicum. On these occasions the friends, and especially the female relatives, of the deceased often spend whole days by the tomb, engaged in prayer and almsgiving. For these mourners it was necessary to provide accommodation, and the result is that a complete mausoleum, with its rooms for the family, sebil, school, stables, custodian’s residence, etc., is often nearly as extensive as the mosques themselves, while some of them are so large as almost to present the appearance of a small deserted town. To buildings of this kind the name of Hôsh is applied. One of the most imposing of these is the tomb-mosque of Sultan el-Ashraf, the last of the so-called Tombs of the Khalifs towards the N.E.

The Dwelling-Houses, which rarely have more than two stories, are built in very various styles, but the following rules are generally observed in their construction: — (1) The principal rooms, particularly those of the Harem (p. 183), look into the court or garden, if there be one. (2) The windows looking to the street are small, placed very high, and strongly barred, while those of the upper floors are closed with mushrebiyeh (p. 179), which, however, are gradually being superseded by glass-windows with shutters. (3) The entrance-door (Pl. I, 1), behind which is the seat (Maṣṭaba, Pl. I, 2) of the doorkeeper, is generally low and narrow, and the passage (Pl. I, 3) leading from the street to the court is built in the form of an angle, to prevent people from seeing into the court. (4) The court (Hôsh, Pl. I, 4) is planted with trees and unpaved, and contains a well of water that has filtered through from the Nile. This water, however, is generally more or less brackish,
and is used only for washing purposes and for the cattle. (5) By the entrance to the court, and on the same level, is the Mandara (Pl. I, 7), or reception-room of the proprietor, with at least one Khazneh, or cabinet (Pl. I, 15), and other conveniences. The Mandara of the best class is of symmetrical construction, and the door is in the middle of one of the sides. The central part of this hall, called the Durkā'a, which is paved with marble mosaic and contains a fountain (Fasktyeh), is one step lower than the sides on the right and left. The ground-plan is generally the same as that of the Kā'a (Pl. I, 14). Opposite the entrance of the Durkā'a there is generally a Suffeh, or kind of stand in stone or marble, on which are placed the household utensils for washing, drinking, etc. The more elevated sides of the Mandara, called the Liwān, are covered with carpets and mats, thus forming a kind of couch, and are never stepped upon except with shoeless feet. Visitors leave their shoes in the Durkā'a. Along the walls are often placed cupboards, richly decorated with inlaid work and majolica. The ceilings are generally tastefully ornamented. Adjoining the court there

Plan I.
Ground Floor.

is usually another hall, situated a little above its level, adorned with a column, and open towards the north. This is called the Takhta Bôsh, and is used in temperate weather for the same purposes as the Mandara. Lastly the Muk'âd (Pl. I, 5), where the proprietor receives visits in summer, is usually raised, like the Takhta Bôsh, half the height of the ground-floor above the level of the court, and is adorned with several columns, while below it are small chambers used as store-rooms and for various other purposes, and frequently the well with its drawing apparatus.

The principal part of the Harem (women's apartments), which in smaller houses is accessible from the court only by the Bâb el-Harim (Pl. I, 12; II, 3), is the Kû'â (Pl. I. 14). The ceiling of the Durkâ'a is higher than that of the Liwân, and has a dome in the centre with mushrebiyeh openings. The walls of the Liwân are frequently lined with rows of shelves, with valuable porcelain, crystal, or plate. In the larger houses a separate staircase for the women-servants ascends from the ground-floor to the upper stories. On its way it passes the intervening floor forming their dwelling, which is built over the less important rooms of the ground-floor.
Another door usually leads direct from the apartments of the proprietor into the harem (Pl. 1, 3). At the back of the building are kitchens and stables, and frequently a mill also. — In the country, and even at Cairo, the entrance-door is sometimes painted with very rude figures of camels, lions, steamboats, etc., which are intended to indicate that the owner has performed the pilgrimage to Mecca (p. 146).

X. The Arabic Language.

The golden era of Arabic literature was coeval with the great national development of the race, which was favoured by the introduction of El-Islām. The poems of that period and those of somewhat earlier date, together with the Korān, constitute the classical literature of the Arabs. Besides the language of literature, which is the dialect of Kūreish (the family of Moḥammed), different dialects were in use among the various Arabian tribes, just as different dialects of English prevail in various parts of Great Britain; though in the case of Arabic, notwithstanding the vast tract of country throughout which it is spoken — from Yemen to Mesopotamia, from Baghdad to Morocco — the dialectical variations are comparatively slight. To this day classical Arabic is still written with remarkable purity by well-educated Arabs, though frequently modified by colloquial expressions.

Arabic belongs to the Semitic group of languages, and no relationship has yet been traced between it and the languages of Europe. It has, however, particularly in the colloquial dialect, many points of resemblance to Hebrew. The Arabic characters have been developed from the Syriac, which in their turn were derived from the Hebrew-Phoenician. In old MSS. the letters are generally better formed than in modern writing, and the present running hand is small, indistinct, and unpleasing. The types used in the printing-offices of Cairo are chiefly of small size; those employed at Beirūt are larger and more distinct. The vowel signs are now very rarely added, so that it is difficult to understand printed Arabic without an accurate acquaintance with the grammatical rules.

The pronunciation of Arabic vowels more nearly resembles that of Italian or German than that of English. The language of the peasantry and the inhabitants of the desert is purer and more akin to the classical language than that of the dwellers in towns. The Muslims generally speak more correctly than the Christians, being accustomed to a refined diction and pronunciation from their daily repetition of passages of the Korān. The chief difference between the language of the Korān and the modern colloquial dialect is that a number of terminal inflexions are dropped in the latter.

The Egyptian Dialect differs from the Syrian in the somewhat different pronunciation of some of the letters, particularly the letter
(see p. 188), in some of the vowel sounds (as kām in Egyptian, kem in Syrian), in the spelling of many of the words in common use (as heneh or hineh, Egyptian for 'hero', which is hōn in Syrian), and in the meaning of some of its words (thus khōkh in Egyptian means 'peach', and in Syrian 'plum'). There is also a slight and much less appreciable distinction between the dialects of Lower and Upper Egypt, the most noticeable difference being in the pronunciation of the (see p. 188). A Syrian, however, or an Upper Egyptian, will always be sufficiently well understood at Cairo. Above all things the learner should endeavour at once to master the pronunciation of the more difficult Arabic consonants, such as ِ, ّ, and ُِ, so as, for example, to be able to make a distinct difference between bêt (house) and bēd (eggs). Very few Europeans learn to pronounce accurately, even after a residence of many years in the country. Owing to the increasing intercourse between the natives and Europe, they have of late adopted many words from other languages, chiefly from Italian and French. Many Arabic words have moreover, long since been replaced by Turkish equivalents. The Egyptian dialect also contains many Coptic or ancient Egyptian words.

Alphabet. We give the corresponding sounds, so far as it is possible to represent or describe them to the English reader. It should also be observed that in the following pages we use the vowel sounds of a, e, i, o, u as they are used in Italian (ah, eh, ee, o, oo). The e used in the Handbook is a contracted form of ei, and is used in preference to it, as it exactly represents the ordinary pronunciation (viz. that of a in fate). The original diphthong sound of ei is only used in the reading of the Korân and in a few isolated districts. Where a sound resembling the French u occurs it is represented by ü (as in tüüü). This system of transliteration will be found most convenient, as the words will then generally resemble the forms used in German, French, and Italian, instead of being distorted to suit the English pronunciation. Thus: emār, which is pronounced 'aymeer'; shēkh (or sheikh), pronounced 'shake' (with a guttural k); tulūl, pronounced 'toolool'; Abūsir, pronounced 'Abooseer'; etc.

Vowels. The short vowel symbols, Fathath, Kesrah, and Dum-meh (ā, ẹ, ū), which are generally omitted, become long when connected with Alef, Wau, and Ye (ā, ẹ, Ḱ, ū, au).

The numerous gutturals of Arabic render the language unpleasing to the ear. The consonants Nos. 15, 16, and 21, which are sometimes called 'emphatic', are very peculiar, and modify the vowels connected with them: thus after them a and u approach the sound of o, and i that of e. The sounds of the French u and eu (German ü and ö) are rare in colloquial Arabic.

Accompanies an initial vowel, and is not pronounced as a consonant.

### Consonants continued.

- \(b\) as in English.
- \(t\) as \(th\) in 'thing', but generally pronounced \(t\), and by the Turks \(s\).
- \(g\) like the English \(j\) in Syria and Arabia, but pronounced \(g\) (hard) in Egypt.
- \(j\) as in English.
- \(h\) a peculiar guttural \(h\), pronounced with emphasis at the back of the palate.
- \(kh\) like \(ch\) in the Scotch word 'loch', or the harsh Swiss German \(ch\).
- \(d\) as in English.
- \(dh\) as \(th\) in 'the', but generally pronounced \(d\).
- \(r\) like the French or German \(r\).
- \(z\) as in English.
- \(s\) emphasised \(s\).
- \(d\) both emphasised by pressing the tongue firmly against the palate.
- \(t\) an emphatic \(z\), but generally pronounced in Egypt and Syria like No. 15.
- \(c\) a strong and very peculiar guttural.
- \(gh\) a guttural resembling a strong French or German \(r\).
- \(f\) as in English.
- \(k, q\) emphasised guttural \(k\), replaced by the natives of Lower Egypt, and particularly by the Cairenes, by a kind of hiatus or repression of the voice.
- \(m\) as in English.

**Accentuation.** If a word terminates with a long syllable ending in a consonant (indicated by a circumflex accent over the
vowel), or with a syllable ending in a double consonant, the accent
is placed on the last syllable (as in maghnâtis, bâdingân, al'mâz,
kélébât, taghtâmm, each of which has the stress on the last syllable).
If the last syllable has any other form, i.e. if it terminates in a vowel
only, or in a consonant preceded by a short vowel, the accent in the
case of a disyllable is on the first syllable (as in gëzëmeh, bûrnus,
sûrsha, rédiî), and in the case of a trisyllable or polysyllable on the
third syllable from the end (as mûrmlâla, mûhbarâ, mûdânëh), ex-
cept when the penultimate is a long syllable (as in sibânîkh), in
which case the accent is on that syllable.

ADDRESS. The inhabitants of towns use the 2nd person plural in-
addressing a person, or a periphrasis, such as genâbak (your honour), ha-
dretak (your presence), or to a patriarch ghubtâkum, to a pasha sa'dâdetak.
Yâ sidi (O sir) is also frequently used, and to Europeans, ya khabâgeh.

POSSESIVES. These are expressed by means of affixes. Thus, binti,
my daughter; bintak (îk when the person addressed is feminine), thy
daughter; bintu, his daughter; bintâha, or bintahâ, her daughter; bintnâ
or bintina, our daughter; bintkum or bintukum, your (pl. 1) daughter; bint-
tukum, their daughter. The idea of possession is colloquially expressed
by the use of the word belâd (‘property’), as el-'abd belâdî, my slave (‘the
slave my property’).

ARTICLE. The definite article el is assimilated before dentals, sib-
lants, and the letters n and r: thus, esk-shems, the sun, etc.

DEMONSTRATIVES. In Egypt the word ‘this’ is rendered by de, fem.
dî; as er-rajîl de, this man; el-bint di, this girl. The Beduins use the
old Arabic and Syrian hâda. ‘These’, dût. ‘That’, dikha or dák; plural
dikhum or dukhuma.

RELATIVE: ellî, omitted after substantives used in a general sense.

DECLENSION. The substantive is not declinable. The genitive of a
substantive is formed by simply placing it immediately after the
substantive to be qualified, the latter being deprived of its article: thus,
sbn el-bâsha, the son of the pasha. The feminine terminations a, e, i are
in such cases changed into at, et, it: thus mara, wife; marat el-kâdît, the
wife of the judge.

DUAL. The dual termination is en, fem. etên: thus senen, year;
seem tên, two years; rigl, foot; riglên, two feet.

PLURAL. In the masculine the termination is in (as fellâhin, peas-
ants): in the feminine ât (as hâra, town, quarter, etc., pl. hârât). The
plural is, however, usually formed by a radical change of the vowel
sounds of the singular, the change being effected in thirty or forty dif-
ferent ways, so that it becomes necessary for the learner to note carefully
the plural form of every substantive: thus, ‘ain, spring, pl. ‘ugân; lâgîr,
merchant, pl. tuggar; gebel, mountain, pl. gibât; kâbitä, tribe of Beduins,
pl. kâbitîl.

VERBS. Many of the verbs consist of slightly differing cognate roots,
connected somewhat in the same manner as the English verbs lay and
lie. Each verb consists of a perfect and present imperfect tense, an
imperative, a participle, and an infinitive.

The above remarks are made merely in order to afford a slight
idea of the structure of the language. the difficulties of which are
such that few persons will venture to encounter them, unless they
make a prolonged stay in the country. We should, however, re-
commend the traveller to commit to memory the following words
and phrases of everyday occurrence, a knowledge of which will often
prove useful.

The substantives following numerals above ten are used in the singular; thus: 4 piastres, ʾarba' ḥrâsh; 100 piastres, mît ḥirsîh.

I, āna; thou, enteh, fem. enți; he, huweh; she, ḥîyeḥ; we, eḥna; ye or you, entu, or enṭum; they, ḥum, or huma.

Yes, ʾaywa; to be sure, ʾaṣam; no, ʾā; no, I will not, lâ, mush ʾāuz, or ʾāiz; it is not necessary, mush lâzîm; not, mā; there is nothing, mā fish; I will, āna beddî; wilt thou, beddak; we will,
beddina; will you, beddukum (or teridu, a form less common in Egypt).

I go, âna râh; I shall go, âna arâh; we shall go, nerâh; go, râh; will you not go, mâ terâh; go ye, râhu.

See, shuf; I have seen, shuft.

I speak, etkallem, or etkallem; I do not speak Arabic, âna mâ betkallem-shi bil-arabi; what is your name, ismak ê, or êsh ismak.

I drink, bashrab, or ashrob; I have drunk, âna shirib; drink, ishrab.

I eat, âna bâkul, or âna âkul; I have eaten, âna akalt; eat, kal; we will eat, beddina nâkul.

He sleeps, yinâm; he is now asleep, huweh nâim; get up, kâmu; I am resting, besterih.

I have ridden, rikib; I mount, arkab, or barkab; I start, âna besâfir, or musâfir.

I am coming, âna gâi; come, taâleh, taâla, or taâl.

To-day, en-nahâr-deh, el-yâm, or el-yôm; to-morrow, bukra; the day after to-morrow, ba'deheh bukra; yesterday, embâreh; the day before yesterday, awdel embâreh.

Much or very, keïr; a little, shwoyyeh (shwuuyeh, shweyyeh); good, tayyib; not good, mush tayyib; very good, tayyib keïr; slow, slower: shwooyeh shwooyeh, 'âla mahlak; go on, yallah, yallah.

How much, kâm; for how much, bikâm; enough, bess; how many hours, kam sâ'a.

For what purpose, min-shân-êh; no matter, mâ 'alêsh. This last is a favourite expression with the Arabs, who use it to express their resignation on almost every occasion except when money is in question.

Everything, kull; together, sawa, sawa; every, kull wahed; one after the other, wahed, wahed.

Here, hineh, or henek (Syrian hên); come here, taâlehenec; come from here, taâle min henek; there, henâk (Syrian hönîk); above, fôk; below, taht; over, 'ala; deep, ghamîk, ghâzîr; far, ba'id; near, karîb; inside, guwwa; outside, barra; where, fên (pronounced by the Beduins wên); yet, lissa; not yet, mâ lissa (with a verb); when, emta, meta; after, ba'd; later, afterwards, ba'den; never, abadan; always, dâiman; perhaps, belki, yumkin, or yîmkin.

Old, kehir, 'attûk: deceitful, khâin; intoxicated, sakrân; blind, a'ma; stupid, awkward, ghâshîm; lazy, keslân; strange, gharib; healthy, salâm, sågh salâm, tayyib, bis-sahhâ, or mabsût (also 'contented'); hungry, ga'dân; small, sughayyir, or seghrî; short, kusaye-yir or kusêr; long, tawîl; untruthful, kaddûb; tired, ta'bân; satisfied, shabân; weak, da'tîf; dead, meyyit; mad, magnân (Syrian mejnân); trustworthy, amîn.

Bitter, murr; sour, hâmêd; sweet, kelu.

Broad, arîd; narrow, dayyik; large, azîm, kehir; hot (weather), harr, (of food, etc.) sukha; high, 'âli; empty, khâli, fi'dî; new, gedîd; low, wâti; bad, ba'dîl; dirty, wusekh; dear, ghâli.
White, abyad; black, dark, iswud, aswad; red, ahmar; yellow, asfar; blue, azrak; green, akhdar.

Hour, sā'a; what o'clock is it, es-sā'a kām; it is 3 o'clock, es-sā'a telāteh; it is half past 4, es-sā'a arba' unuss; it is a quarter to 5, es-sā'a khameh illa rub'a.

Forenoon, dahā; noon, duhr; afternoon (2 1/2 hours before sunset), 'asr; night, lēl; midnight, nuss-el-lēl.

Sunday, yóm el-had, nehur el-had; Monday, yóm el-ënên; Tuesday, yóm el-telāteh; Wednesday, yóm el-arba'; Thursday, yóm el-khamis; Friday, yóm el-gum'a; Saturday, or Sabbath, yóm es-sebt. Yóm or yüm (day) is generally omitted. Week, gum'a; month, shahr, pl. ushhur.

Instead of the Arabic names of the months used in Syria, the Egyptians employ the Coptic (ancient Egyptian) names of the solar months, which, however, are always about nine days behind the European months. Each Coptic month has thirty days, and in order to complete the year five or six intercalary days are added at the end (in the beginning of September). The European names, however, are gradually coming into general use.

The intercalary days (which come after Misra) are called ayyūm en-nesī.

The Muslim months form a lunar year only (comp. p. 147). Their names are: Moharrem, Safar, Rabi' el-Awwel, Rabi' et-Tānī, Gemūd el-Awwel, Gemad et-Tānī, Regeb, Sha'bān, Ramadān (month of fasting), Shawwāl, Dhul-Ka'ūdheh, Dhul-Higgeh (month of the pilgrimage).

Winter, shīṭa; summer, ʿēf, kēd; spring, rabi'; autumn, kharīf; rain, mutar; snow, telg; air, hawa.

Heaven, sema; moon, kamar; new moon, hilāl; full moon, ḥedr; sun, shems; sunrise, fulū' esh-shems; sunset, maghreb; star, negm, pl. nuyūm; constellation, kaukab.
VOCABULARY.

East, sherk; west, gharb; south, kibla; southern, kibli, kubli; north, shemât.

Father, abu; mother, umm; son, ibn, or weled, pl. aulâd; daughter, bint, pl. benât; grandmother, gedda, or sitt; brother, akhu, pl. ikhwân; sister, ukht, pl. akhwat; parents, abu u umm, or wâlidên; woman, mara, kûmil; women, harîm, niswân; boy, weled; youth, fellow, ged', pl. ged'ân; man, râgel, pl. rigât; person, insân, pl. na's, or ibn âdam (son of Adam), pl. beni âdam; friend, habîb, sâheb, pl. ashâb; neighbour, gâr, pl. gîrân; bride, arâs; bridegroom, 'aris; wedding, 'urs.

Cord for fastening the keffiyeh, 'okât; cloak, 'abâyeh; fez, tarbûsh; felt cap, libdeh; girdle, hizzâm; leathern girdle, kamur; trousers (wide), shirwâl; trousers (of women), shîntyân; European trousers, bantalan; jacket, waistcoat, salta, 'anteri; dressing-gown, kuftân; coat (European), sutra; skull-cap, takîyeh, 'arakiyeh; silk, harir; boot, gezma; slipper, babûg; shoe, markûb, surma; wooden shoe, kabkab; stocking, gûrâb, shurâb; turban, 'emma.

Eye, 'ën, dual 'ênân; beard, da'ân, lehyeh; foot, rigl, dual riglân; hair, sha'r; hand, yed, id, dual idên; my hands, ideyyeh; right hand, yâmin; left hand, shemât; palm of the hand, kef; fist, kabdu; head, râs; mouth, fumm; moustache, shench; shawârib.

Diarrhoea, ishât; fever, sukûhâna, homma; China, kîna; quinine, melh el-kîna; opium, așyün; pain, wâja.

Abraham, lîbâkâm; Gabriel, Gabrân, Gebraîl; George, Gerîgas; Jesus, Seyyidîna 'Isa (the Mohammedan name), Yesû' el-Mosîh (used by the Christians); John, Hanna; Joseph, Yûsûf, Yûsîf; Mary, Maryam; Moses, Mûsa; Solomon, Sulêmân, Islêmân.

American, amerikâni; Arabian, 'arâbi; Arabs (nomads), 'Arab; Austria, Bilad Nemsa; Austrian, nemsâwi; Beduin, Bedawi, pl. Bedwânân, 'Arab, 'Orbân; Cairo, Ma'sr, Medinet Ma'sr; Constantinople, Istambûl; Egypt, Bilad Ma'sr; Egyptians (non-nomadic Arabs), Aulâd 'Arab; England, Bilad el-Inkîlzî; English, inkîlizî; France, Fransa; Frank (i.e. European), Franji, Afrankî, pl. Afrankî; French, fransâwi; Germany, Alemanîa; German, alemâni; Greece, Rûm; Greek, rûmi; Italy, Bilad Itâliâ; Russia, Bilad Moskôf; Russian, moskovi, moskôfî; Switzerland, Switzera; Syria, Esh-Shâm; Turkish, têrki.

Saint (Mohammedan), wâli, weli; St. George (Christian), Gerîgas el-kâdîs, mûr Gerîgas; prophet, nebi, or (applied to Mohammed) râsûl.

Army, 'askar; baker, khbabz, farrân; barber, hallâk, mozeyyîn; Beduin chief, shék el-'Arab; bookseller, kutubi; butcher, gessâr; caller to prayer, mueddîn (p. 145); consul, kûnsul; consul's servant (gendsarme), kawwâs; cook, tabbâkh; custom-house officer, gum-ruktshi; doctor, hakim, plur. hûkama; dragoman, teryümân (p. 13); gatekeeper, waswâb; goldsmith, saîgh; judge, kâdi; money-changer, surràf; pilgrim (to Mecca), hagg (Syrian hàjji), plur. hegây; police,
VOCABULARY.

The words merg and ghaba (meadow) are almost unknown in Egypt, where neither meadows nor woods exist.
palace, kasr, serayeh; plain, sahl, (low ground) wata; road, tarik, darb, sikkeh, (main road, high road) tarik sultani, (by-road) hara, darb, sikkeh; ruin, kharaba, birbeh; school, (reading) kuttab, (more advanced) medreseh, plur. madaris; street, (main) shar'a, (lane) zukh; town (large), medineh, plur. medain; valley, wadi; wood, ghaba; village, beled, karyeh, kafr.

Ass, homar, plur. hamir; bee, nahta; bird, ter, plur. tiyar, (small) 'asfuir, plur. 'asahir; boar (wild), khanzir berri, halluf; bug, bakka; camel, gemel, plur. naka; camel for riding, hegin; chicken, katikut, bedari, farkha, plur. farak (used in Upper Egypt for 'young pigeons'); cock, dik; dog, kelb, plur. kilab; dove, hamam; duck, batt; eagle, nisr; fish, segah, plur. semen; fleas, beraghit; fly, dubbana; foal, muhr; gazelle, ghazal; hedgehog, kunfud; hen, farraga (Syrian jejeh); horse, hosin, plur. khel; leech, 'alaka, plur. 'alak; lizard, sehliyeh; house, 'amal; mare, faras; pig, khanzir; pony, kedisch; scorpion, 'akrab, plur. akrib; sheep, karuf, fem. naiga; snake, tu'ban, hayeh; stallion, fahl, hosin; tortoise, salhafa; turtle, tirs; vulture, rakhim.

---

ON ARRIVAL. For how much will you take me ashore? (to the ship?) Tetallun fil-barr bikam? Tenezilni fil-Nerkeb bikam?
For five francs, Bikhamas frankat; bikhamseh frank.
Too much; I will give you one. Ketir, alik wahed, bess.
You shall take me alone; or I will give you nothing. Takhudni (or tevaddini) wahdi, willa ma batikshi hageh.
There are three of us. Ehna telateh.
Four piastres each. Kull wahed bi arba' krush.
Put this box (these boxes) into the boat. Nessil es-sanduk-deh (es-sandik-dol) fil karib.

---

AT THE CUSTOM-HOUSE (Gumruk). Open this box. Iftah es-sanduk.
I have nothing in it. Ma fishe hageh, ma fihush hageh. (Fees, bakshish).
Give me your passport. Hat et-teskereh (bassabour!).
I have no passport. Ma 'andish keskereh.
I am under the protection of the English (American) consul. Ana fi hemayet (or ana taht) konzul el-Ingizi (el-Amerikani).

---

AT A CAFE (p. 17). Boy, bring me a cup of coffee. Hat figan kahva, ya weled (kahwa bisukkar, with sugar; mingher sukkar, or murra, without sugar, or bitter).
Bring me a water-pipe. Hat nargileh (or nefes).
Bring me a live coal. Hat wata (basat nair, Bassa).
Change the pipe (i.e. bring a newly filled bowl).  

\[ \textit{Gheyyir en-nefes.} \]

\[ \text{At the Bath (p. 21). \textit{Fil Ťammām.} Bring the wooden shoes.} \]

\[ \text{Washing. Take the clothes to be washed. Waddī el-hudūm lil-ghasīl. (The articles should be counted in the presence of the washerman.) — How much does the washing cost? Kām (kładī ʔ) temen el-ghasīl?} \]

\[ \text{On the Journey. When will you start? Entā (meta) tesāferu? — We will start to-morrow at sunrise. Beddīnā nesāfer (netwākkil) būkra, ma'āsh shems; an hour before sunrise, sī’ā kabl esh-shems; two hours after sunrise, sā’ētēn ba’d esh-shems. — Do not come too late. Mā tēl’awwawaksh. — Is everything ready? Kull shē hāder? — Pack; load (the camel). Sheyyīlū; sheddu. — Hold the stirrup. Imsīk er-rikāb. — Wait a little. Istanna (istenna) shwoyyeh.} \]
\[ \text{What is the name of this village, mountain, valley, tree, spring? E (or ʔesh) ism el-beled de; or el-beled-de ismā ʔ (el-gebel, wādī, shegara, ‘ēn)?} \]
\[ \text{We will rest, breakfast. Beddīnā nestereyyāh (nisterīlī), nīfūr. — Is there good water there (on the way)? Fī māyēh tayyīb (fīddarb)? — Where is the spring? Fēn el-‘ēn? — Keep at a little distance. Khālīk ba’d ‘annī. — Bring the dinner. Hāt el-akl, etṭabīkk, el-ghada. — Take away the dinner. Shīl el-akl.} \]
\[ \text{Stop. ʿUkaf, ‘andak. — Go on. Yalla. — Where are you going to? Entā rāih fēn? — Where do you come from? Gāi min ʿēn?} \]
\[ \text{Shall we go straight on? Nerāh dughrī? — Straight on. Dughrī, dughrī. — Turn to the left. Hawwūd ‘ala shmālak.} \]
\[ \text{Do not be afraid of me. Mā tkhaʃsh minni. — What am I to do? Mālī āna? — I will have nothing to do with it; it does not concern me. Ana mālī. — What are we to do? Esh el-‘amal; na’mel ʔ?} \]
O sir, a gift. Bakhshish, y'â khawâgeh! — There is nothing for you; be off. Mîfsîsh; rûh!

Open the door. Istâh el-bâb. — Shut the door. Ikfil el-bâb. — Sweep out the room, and sprinkle it. Iknus (iknis) el-ôdeh u rushshâha.

We will eat. Beddina nâkul. — Cook me a fowl. Itbukhli farrâga. — Clean this glass well. Naddef tayyib el-kubâyeh-di. — Give me some water to drink. Iskîni, iddîni sharba.

Salutations and Phrases. Health (peace) be with you. Es-salâm 'aleikum. Answer: And with you be peace and God's mercy and blessing. U 'aleikum es-salâm waraḥmet Allâh wa barakahû. These greetings are used by Muslims to each other. A Muslim greets a Christian with — Thy day be happy. Nehîrak sa'id. Answer: Thy day be happy, blessed. Nehîrak sa'idâa mubârek (umbârak).

Good morning. Sabâhkum bil-khêr, or el-khêr. Answer: God grant you a good morning. Allâh isâbbehkum bil-khêr.

Good evening. Messâkum bil-khêr; or messikum bil-khêr; or msalkhêr. Answer: God vouchsafe you a good evening. Allâh yimesâkum bil-khêr; or messâkum Allâh bil-khêr. — May thy night be happy. Lëletak sa'idêh. Answer: Lëletak mubâraka.

On visiting or meeting a person, the first question after the usual salutations is: How is your health? E zeyyak, or kêf hâlak (kêf kêfak)? Thanks are first expressed for the enquiry: God bless thee; God preserve thee. Allâh yibârek fîlk; Allâh yihfa'dâk. Then follows the answer: Well, thank God. El-handu tillah, tayyib. — The Beduins and peasants sometimes ask the same question a dozen times.

After a person has drunk, it is usual for his friends to raise their hands to their heads and say: May it agree with you, sir. Hâniyân, yâ sidi. Answer: God grant it may agree with thee. Allâh yehannâk.

On handing anything to a person: Take it. Khud (Syrian dânâk). Answer: God increase your goods. Kattar Allâh khêrak, or kettar khêrak. Reply: And thy goods also. Ukhêrak. (This form of expressing thanks, however, will not often be heard by the
ordinary traveller, as the natives are too apt to regard gifts presented to them by Europeans as their right.)

On leaving: Good bye. 'Al Allâh. Or: To God's protection. Fi amân Illâh. Or: Thy good will. Khâfrak. — Generally speaking, the person leaving says nothing, unless when about to start on a long journey, in which case he says: Peace be with you. Ma'âs-salâma.

I beg you (to enter, to eat, to take something). Tafaddal (tisfâddal, itsfâddal); plur. tafaddalu (itsfâddalu, tefâddalu). — Will you not join us (in eating)? Bismillâh (literally 'in God's name').

Take care; beware. Au'â, or 6'a, dir bâlak; or simply, bâlak.

I am under your protection; save me. Fâr'dak (fi'ardak); fi hasabak (Syrian âna dakhilak). — My house is thy house. Bêtî bêtak (p. 24) — Be so good. Emel ma'rûf, or el-ma'rûf.

XI. Works on Egypt.

The traveller who desires more than a mere superficial acquaintance with the land of the Pharaohs, the history of which is the most ancient and in some respects the most interesting in the world, should of course before leaving home read some of the standard works on the subject, and also select a number of others for reference or entertainment during the journey. This is all the more necessary if the traveller is entirely ignorant of the ancient and modern languages of the country, in which case he will find it difficult, if not impossible, to institute independent enquiries as to its manners, literature, and art. From the appended list, which might easily be extended, the traveller may make a selection in accordance with his individual taste. Those indicated by asterisks are among the most indispensable.

Before enumerating the works which most English travellers will read, we may mention a few of the leading foreign authorities on Egypt. Foremost among these are Lepsius's 'Denkmäler aus Ægypten und Æthiopien', Champollion's 'Monuments de l'Egypte et de la Nubie', Rosellini's 'Monumenti dell'Egitto e della Nubia', and the 'Description de l'Egypte' published by the members of the French expedition. Schnaase, Kugler, Lübke, Erbhak, and Reber have written valuable works on the history of Egyptian art; Forskal, Schenk, Unger, Schweinfurth, Ascherson, and Boissier, on botany;
and Brehm, Hartmann, Fraas, Pruner, and Klunzinger on natural history and medicine.

With regard to the Greek and Roman writers on Egypt, see p. 330. The Arabian historians are mere chroniclers, who narrate a series of facts and traditions, and are entirely deficient in method and the faculty of criticism. The following are the most important writers on the general history of Egypt: — El-Mas'ūdi (d. 956), of Fostêt; Ibn el-Athīr (d. 1232), of Mossul in Syria; Ibn Khaldūn (d. 1406), one of the most learned of Arabian authors, a philosophical historian, and chiefly famous for the preface to his history, which was printed at Būlāk, in four volumes, in 1868; Abūlīdā (d. 1334), prince of Hama in Syria. The following are authors of important works on limited epochs of Egyptian history and of valuable descriptive works: — El-Maqrīzī (d. 1442, at Cairo), the author of a geographical, physical, historical, and political description of Egypt, and of Cairo in particular, printed at Būlāk in 1854; Abūl-Maḥāsīn (d. 1469), the author of a detailed history of Egypt from the Arabian conquest nearly down to the time of his death; Es-Siyūṭī (d. 1506), of Siūṭ in Upper Egypt; El-Manūfī (d. 1624); Abū Shāma (d. 1224), who wrote the history of Nūreddīn and Shāhāeddīn; Bahāeddīn (d. 1234), who for many years was a follower of Salādīn; 'Abdellatīf (d. 1232), a physician at Baghdād, the author of a very important and interesting description of Egypt.

1. Alexandria.

Arrival. The perfectly flat N.E. coast of Egypt, and even Alexandria itself, are not visible to the steamboat passenger until very shortly before the vessel enters the harbour. We first observe the lighthouse rising conspicuously above the flat and colourless line of the coast, and then a row of windmills, light-coloured buildings, and the smoke of the steamboats in the harbour. On a hill to the left rises the château of the Khedive at Ramleh (p. 220), and on the coast, to the right, at the beginning of the entrance to the harbour, we perceive the so-called Bâb el-'Arab (Beduin Gate), the extremity of a line of fortifications extending between the sea and Lake Mareotis (p. 222). It was this western harbour only, the Eunostos, or harbour of those 'returning home in safety' of the Greeks, that European vessels were formerly permitted to enter, while they were rigorously excluded from the 'Great Harbour' on the E. side, which was described by Strabo (p. 206), and is now erroneously called the 'New Harbour'. The latter, which Môhamed 'Ali attempted again to utilise, but found too much choked up with sand, is now chiefly used by fishing-boats, but larger vessels sometimes enter it when compelled by stress of weather.

Before passing Bâb el-'Arab the steamer takes a pilot on board and is steered by him through a narrow, shallow, and rocky channel (Bôghaz) into the harbour. As the passage can only be effected by daylight, vessels arriving in the evening must ride at anchor outside until next morning. On the coast, to the right, we observe the grotesque half-ruined Château of Meks (p. 220), with its numerous domes and slender towers. It was erected by the viceroy Sa'id Pasha (p. 107), who used to

reside here, surrounded by his army, for a considerable part of the year. The older palace, to the left, on the prominent Ṣādīs el-Tin (cape of figs, p. 219), and the Arsenal are comparatively uninteresting, especially as the busy harbour itself now engrosses the whole attention. The steamer is soon surrounded by numerous small boats, the occupants of which proffer their services with animated gesticulations. As soon as the brief sanitary inspection is over, the boatmen swarm wildly on deck like a piratical crew, eager to secure a fare, and reminding the traveller of a scene from Meyerbeer's "Africaine." In the midst of this bustle and confusion the following Arabic words may be found useful: — *tu'dal,* come; *šaf,* look here; *muš 'danazak,* I don't want you; *muš támin,* it is not necessary; *imāši* or *rub,* begone. A supply of half-franc pieces and sous should be kept in readiness for the occasion.

Having sufficiently surveyed the novel and picturesque scene, the traveller engages a boatman to convey him and his luggage ashore, or, especially if ladies are of the party (see below), he gets one of the hotel agents to manage everything for him. Before leaving the vessel he should keep a watchful eye on his luggage, and see that the whole of it is placed in the boat which he himself is going to use. As soon as the boat is clear of the steamer the Arab hoists his sail, for he never rows unless absolutely obliged, and steers for the custom-house. Any importunity as to the fare may be simply answered with — "*tayyib,* yalla, yalla" (all right, make haste).

On reaching the landing-stage of the *Custom-House* (Pl. 24), the traveller is first conducted to the passport-office (to the left, in the passage), and gives up his passport, which is afterwards restored to him at the consulate at Alexandria, or he may have it sent after him to Cairo.

Meanwhile the luggage has been landed, and the traveller, if alone, and with ordinary luggage, pays the boatman 2½ fr., or for 2 persons 4½ fr., and for each additional person 1 fr. more. The porter who carries the luggage into the custom-house and afterwards to a cab expects 25c. for each package. All these rates of payment are amply remunerative, but "*bakhshish*" (p. 16) is invariably asked for, and the word will resound in the traveller's ears throughout the whole of his journeyings in the East, and even long afterwards.

The custom-house examination is generally pretty rigorous, the articles chiefly sought for being tobacco, weapons, and diamonds. No fee need be given to the officials.

As already observed, it is preferable, especially when ladies are of the party, to secure the services of one of the hotel agents, who relieves the traveller of all trouble, pays boatmen and porters, and assists in clearing luggage at the custom-house. In addition to his outlay, he receives a fee of 2½ fr. from a single traveller, or more in proportion for a party. The principal hotels now send their own boats to meet the steamers. The traveller who wishes to ensure a comfortable disembarkation may write beforehand to the hotel at which he means to put up, and desire a commissaire, a boat, and a carriage to meet him. The usual charge in this case for a party of three persons is: — boat from the steamer to the custom-house 5 fr., luggage-boat 2 fr., porter and fee to custom-house officers 2 fr. 75c., carriage to the hotel 4½ fr., carriage of luggage 2 fr., or 16 fr. 25c. in all.

At the *gress* of the custom-house a noisy and importunate crowd of carriage-drivers and donkey-boys lies in wait for new-comers. Neither walking nor riding is recommended to the traveller on his first arrival, and he had better drive straight to his hotel. Carriage to the hotels (3½ M.) 2½ fr., or for 3-4 persons 3-4 fr.; donkey ½ fr.; porter for each large package ½ fr.

*Hotels.* (It may again be remarked here that all the hotels in the East charge a fixed sum per day for board and lodging, exclusive of liquors, whether the traveller takes his meals in the house or not.) *Hôtel de l'Europe* (Pl. a), in the large Place Méméeti-Ali (p. 215), with good rooms and baths, 20 fr. per day; *Hôtel Abbât* (Pl. b), in the Place de l'Eglise, good cuisine, 16 fr. per day; both well situated. — Second
class: Hôtel des Messageries (Pl. c), in the Okella Sursock ("okella" being the name for a single large block of houses; p. 249), on the New Harbour, on the E. side of the town; charge 12½ fr., including wine; recommended to persons of moderate requirements. Sea-baths in the neighbourhood.

Cafés (comp. p. 17), in the European style, generally kept by Greeks (the Turkish, which the traveller will have many opportunities of seeing, are not worthy of mention): De France and Egyptien, near the Place Méhéméty-Ali, E. side; Pyramide, Rue de la Bourse, on the coast; Paradiso (café-chantant), Rue de la Poste Française, also on the coast. Café noir in the European style, or "café fort" in the Arabian, 2 piastres current (26 c.) per cap. — Restaurants: de Paris, Rue d'Anastasi; de la Bourse, Rue de l'Eglise Anglaise; Hôtel de Tristre, near the Place de l'Eglise; Zopick, near the German Club. — Beer, generally from Graz, at all these establishments.

Clubs. The Deutsche Verein (Pl. 23), Rue de la Mosquée d’Atarine, has a good reading-room, to which admission is obtainable through a member. The Club Mohammed’Ali resembles the Club Khédivial at Cairo (p. 292).

Cars (in the European style). There is a tariff, but the Arab drivers invariably ignore it. The fare for a short drive in the town, without luggage, is on ordinary days 1 shilling; to the steamboats, see above; to the railway station, see p. 221. Per hour, during the day, 2s. 2½d., but more on holidays when the demand is greater. After the first hour each additional half-hour only should be charged for. Drives beyond the fortifications according to bargain. The usual charge for a whole day, in which case also a bargain should be made, is 20-25 fr.

Donkeys (comp. p. 11). Per ride of ½ hr. 50 c.; per hour 1½ fr.; longer excursions according to bargain; whole day 5-6 fr.

Commissionnaires (p. 13), who are useful when time is limited, abound. They charge 5-7 fr. per day, but the fee should be fixed beforehand. Most of them offer to escort the traveller to Cairo and even up the Nile; but such proposals should be disregarded, as the best dragomans are always to be found at Cairo in winter. For the mere journey to Cairo, and for the ascent of the Nile by steamer, no dragoman is necessary. On arriving at the Cairo station (p. 229) travellers are met by the commissionnaires of the principal hotels, so that the services of any other attendant are unnecessary.

Post Office (comp. p. 27; Pl. 41), Place de l'Eglise, open from 7 a.m. to 7.30 p.m., except for an hour after noon. Letter-boxes at the hotels and in several of the streets. England, France, Italy, and Austria have post-offices of their own, but these will soon be closed, as Egypt has now joined the Postal Union.

Telegraph Office (Pl. 45), Rue Chérif-Pacha. The rate for telegrams within Egypt is 5 piastres tariff per ten words. English Telegraph (Pl. 46), Rue de l'Obélisque, near the English Consulate (by which telegrams may also be sent to Cairo at the same charge). Telegrams to other parts of Europe, see p. 23.

secretary. **Spanish, Señ. de la Chica.** **Swedish** (Pl. 22), Boulevard de Ramlé: M. Boedker. **Danish** (Pl. 14), Okella Dumnreicher: M. de Dumnreicher.

**Steamboat Offices.** (fares, etc., see p. 10). **Peninsular & Oriental Co.** (Pl. 9); **Messageries Maritimes** (Pl. 7); **Austrian Lloyd** (Pl. 8); **Rubattino & Co.**, Italian (Pl. 10); **Ferriessinet & Co.**, French (Pl. 6); **Russian Steamers** (Pl. 11); **Egyptian Postal Steamers** (Pl. 5); all in or near the Place Méhémét-Ali.

**Railway Stations.** The new station for Cairo (p. 221), Suez (p. 401), and Rosetta (p. 436) is outside the Porte Moharrem Bey, 1/2 M. from the Place Méhémét-Ali. (The old station on the harbour, beyond the Mahmúdiyyeh Canal, is now used for the goods traffic only.) The station for Ramlé (Pl. 3) is not far from Cleopatra's Needle (p. 217).

**Bookstores.** The **Stationers & Bookstores Co.** (formerly Robertson), St. Mark's Buildings, Place Méhémét-Ali, chiefly for English books; **Pernasson**, on the N. side of the Place Méhémét-Ali, chiefly for French books. — Six NEWSPAPERS (in French, English, and Italian) are published at Alexandria, including the official Moniteur Égyptien, which is to be seen at all the hotels and cafés.

**Bankers.** Banque Impériale Ottomane (above the Exchange, Pl. f), which has branches throughout the whole of the Turkish dominions; Bank of Egypt, Rue Méhémét-Tewfik; Anglo-Egyptian Banking Co. and Austro-Egyptienne, both in the Place Méhémét-Ali; Oppenheim, Nèbeh, & Co. (Pl. g), Rue Mosqué d'Atarine: Franco-Egyptienne, Rue de l'Obélisque; Bank of Alexandria, Rue Chérif Pacha; Crédit Lyonnais, Rue Chérif Pacha.

**Physicians.** Dr. Mackie, Dr. Walter, and Finney Bey, English; Dr. Varenhorst, Dr. Külp, Dr. Fenger, and Dr. Love, German; Dr. Gaillardot, French; Dr. Nérussos-Bey, Greek. Ibrahim Soussa, a good native dentist. All the addresses may be obtained at the chemists' shops.

**Chemists.** Ludwig, Rue Rás-et-Tin 16, on the right, at the beginning of the street; Otto Huber, Rue Chérif Pacha.

**Shops** for all kinds of European articles are to be found in the Place Méhémét-Ali. Cordier, St. Mark's Buildings, near the English Church; Chalons, near Cordier; Meyer & Co., ready-made clothing. The Arabian bazaar presents no attraction. — A. Maury & Co., goods-agents (comp. pp. 25, 233).

**Churches.** English (Pl. 25), Place Méhémét-Ali, Rev. E. J. Davis, service on Sundays at 11 and 3 o'clock. Presbyterian Church (Pl. 34), a handsome new building in the Rue de l'Eglise Anglaise, German and French service on alternate Sundays at 10. Roman Catholic: St. Catherine (Pl. 30) and Lazarist Church (Pl. 31). Greek Orthodox (Pl. 29). Greek Catholic (Pl. 28). Armenian (Pl. 26). Maronite (Pl. 32). Coptic (Pl. 27). Several Synagogues, the largest of which is near the Ramlé Station, and the handsomest in the Rue de l'Okelle Neve, 45.

At Alexandria there are eight different Freemasons' Lodges, which, however, possess two buildings only, called the Loge des Pyramides and the Scotch Lodge. An Italian Lodge has recently been established in the German Club building (p. 203).

**Theatres.** The large Ziasinia Theatre (Pl. 48), in the Rue de la Porte Rosette, opposite the German Consulate, is frequently closed, even in winter. Italian plays are performed in the small Afféri Theatre (Pl. 47), Rue d'Anastasi. The Casino, Place Méhémét-Ali, is an inferior café-chantant.

**Disposition of Time.** Unless the traveller desires to visit all the points of historical interest at Alexandria, he may easily, by taking a carriage, inspect the town with its few relics of antiquity in half-a-day; or a whole day will be required if the drive be extended to the new quays at Meks (p. 220) and along the Mahmúdiyyeh Canal. Those who have never seen an Oriental town will be interested in observing the street scenes and the picturesque faces and costumes; but to travellers returning home Alexandria presents an almost European appearance, and is unattractive. Starting from the Place Méhémét-Ali (p. 215), we may ride or drive to Pompey's Column (p. 216), proceed beyond the walls to the
History. Alexandria was founded in B.C. 332 by Alexander the Great, forming a magnificent and lasting memorial of his Egyptian campaign. With the foundation of the city are associated a number of legends to the effect that the coast, opposite the island of Pharos, was specially pointed out by divine omens to the Macedonian monarch as a suitable site for the foundation of a new seaport.\(^{+}\) In the time of Alexander there were several harbours on the N. coast of Egypt. The most important were those of Nauaratis, at the W. (Canopic) mouth of the Nile, chiefly used by Greek vessels after the 26th Dynasty (p. 92), and Tanis and Pelusium on the N.E. side of the Delta, at the two embouchures bearing the same names, to which Egyptian and Phoenician vessels only seem to have been admitted. Alexander, who had overthrown the barriers which had hitherto separated the nations dwelling on the E. shores of the Mediterranean, conceived the plan of founding a new and splendid seaport town in Egypt, both to facilitate the flow of Egypt’s wealth towards Greece and the Archipelago, and to connect the venerable kingdom of the Pharaohs with that widely extended Greek empire which it was his great ambition to found. The site chosen by the king was not, however, an entirely new one. On the coast opposite the island of Pharos (p. 206), as we learn from the monuments, had long stood the Egyptian village of Rhakotis, where, as Strabo records, a guard was posted to ensure the safety of the frontier. It seems strange at first sight that the new seaport should have been founded at the W. extremity of the coast of the Delta instead of on the old harbour of Pelusium at the E. end, which lay close to the Red Sea and to the caravan route between Egypt and Syria, and might easily have been extended so as to suit Alexander’s requirements. The fact is, however, that the far-seeing founder really made a most judicious choice; for it has been recently ascertained that a current

\(^{+}\) A venerable old man is said to have appeared to the king in a dream and to have repeated to him the following lines from Homer (Od. iv. 54, 55):

‘One of the islands lies in the far-foaming waves of the sea,

Opposite Egypt’s river, and its name is Pharos.’

The following incident was also regarded as a favourable omen. As Dinocrates, the king’s architect, was marking out the plan of the town and the sites of the principal buildings, the white earth used for the purpose ran short, and he supplied its place with the flour belonging to his workmen. The flour soon attracted numerous birds, by which it was speedily devoured, whereupon Aristander pronounced this incident to be a prognostication of the future wealth and commercial prosperity of the city.
in the Mediterranean, beginning at the Strait of Gibraltar, washes the whole of the N. African coast, and, when it meets the waters of the Nile, it carries the vast deposits of the river towards the E., and has thus filled the old harbour of Pelusium with mud. The action of this current also endangers the new harbour (Port Sa'id, p. 424), and on its way towards the N. it has already choked up the famous ancient ports of Ascalon, Sidon, and Tyre. Even Herodotus remarked that the Nile mud rendered the water shallow off the coast of the Delta; and it was doubtless a knowledge of these circumstances which led to the selection of a site for the city of Alexander on the W. side of the mouths of the Nile.

Topography of Ancient Alexandria. The site selected for the new city, which the able architect Dinocrates laid out in the form of a Macedonian cloak (chlamys), was in every respect a favourable one. On the N. side it was washed by the Mediterranean, and on the S. side by Lake Mareotis, which was abundantly fed by numerous canals connected with the Nile. The products of Egypt could be brought down by the river to the city, and thence at once shipped to any part of the Mediterranean. The island of Pharos lay opposite to the mainland. 'Now Pharos', says Strabo (B.C. 66-24; Bk. xvii. c. 1, § 6), who describes Alexandria in the 17th Book of his Geography, 'is a long-shaped island, almost connected with the mainland, where it forms a harbour with two entrances. For the two promontories thrown out by the shore form a bay, and between these lies the island by which the bay is closed. ... The E. end of the island of Pharos is nearest to the mainland and to the promontory called Lochias, and makes the entrance to the harbour narrow. This strait is further narrowed by rocks, partly covered by the water, and partly above the water, which cause the waves of the sea to break into surf as they enter. The extremity of the island itself is also a rock washed by the sea, bearing a tower beautifully constructed of white stone with many stories, and named after the island. This tower was erected by Sostratus of Cnidus'. — The tower mentioned by Strabo was the famous lighthouse built in the reign of Ptolemy Philadelphus, which was regarded by the ancients as one of the wonders of the world, and gave its name of 'Pharos' to all lighthouses afterwards erected. It bore the inscription: 'Sostratus, the Cnidian, son of Dexiphanes, to the gods who protect mariners'. It is said by an Arabian historian to have stood at the E. end of the peninsula now called Burg ez-Zefer; and he describes its ruins as consisting of a square substructure 110 ells in height, an octagonal second story of 60 ells, and a round superstructure of 63 ells, or 233 ells in all, while its original height is said to have been 400 ells (590 ft.).

The W. entrance to the harbour', continues Strabo (ib., § 6), 'is also somewhat difficult of access, but does not demand so great caution as the other. It forms a second harbour, called Eunostus† (or 'harbour of the happy return'), which lies outside of the artificial and enclosed harbour. The other, which has its entrance by the already mentioned tower of Pharos, is the Great Harbour (comp. p. 201). The others are separated from it by an embankment called the Heptastadium, and lie contiguous to each other in the recess of the bay. The embankment forms a bridge which extends from the mainland to the western part of the island, and has two passages, bridged over, and leading into the harbour of Eunostus. This structure, besides forming a bridge to the island, served also as an aqueduct when the island was inhabited. But, as it took the side of the kings in the war against Alexandria, the island was laid waste by the divine Cesar.'

The Heptastadium, a vast embankment of seven stadia in length

† This is the 'Old Port' which is almost exclusively used at the present day, and where the Khedive is erecting a number of handsome new buildings (comp. p. 220).
Ancient Alexandria. ALEXANDRIA. 1. Route. 207

(1400 yds.), as its name imports, was constructed by Ptolemy Soter, or his son Philadelphus; and having since that period been artificially enlarged by debris from the ancient city, thrown into the sea, as well as by natural deposits, it has now attained a width of more than 1600 yds. The embankment now forms the site of a great part of the modern city, and on its W. side is situated the Custom-House where the traveller first sets foot on Egyptian soil.

To the right of the entrance to the Great Harbour, Strabo then goes on to say (ib., § 9), 'lies the island with the tower of Pharos, and on the side are the rocks and the promontory of Lochias†, on which stands a royal castle. To the left of persons entering are the inner royal buildings connected with Lochias, which comprise painted saloons and groves. Below these lies an artificial harbour, appropriated to the kings, and closed, and opposite to it is the small island of Antirrhodus, with a royal castle and another small harbour. The island was so named from being, as it were, a rival of Rhodes. Above it lies the theatre. Beyond this is the Poscidium, a curved promontory which runs out from the Emporium (or market-place), and to which Antony added an embankment projecting still more towards the middle of the harbour. At the end of this embankment he erected a royal residence which he called Timonium. This was his last work, when after his defeat at Actium, deserted by his friends, he crossed to Alexandria and determined for a time to lead the life of a Timon (or misanthrope). ... Next follows the Cesarium (or Temple of Cesar), with the market-place and warehouses. Such are the surroundings of the Great Harbour. (§ 10) Immediately beyond the Heptastadium is the harbour of Eunostus, and above it the artificial harbour, sometimes called Cibotus (literally, the box), which also has docks. From this harbour runs a navigable canal to Lake Mareotis'.

Among the principal quarters of the ancient city we may first mention the Necropolis, or city of the dead, at the extreme W. end, 'where there are many gardens, tombs, and establishments for embalming bodies' (Strabo, xvii. 10), and Rhakotis, 'the quarter of Alexandria situated above the ships' magazines' (Strabo, xvii. 6), the most ancient part of the city, and chiefly inhabited by Egyptians. The Bruchium quarter, which was walled in, and contained the palaces and public buildings, lay on the mainland between Lochias and the Heptastadium, while the Jews' quarter was situated to the E. of Lochias, between the sea and the main street, the E. end of which was closed by the Canopic gate. Outside the gate lay the hippodrome, and farther to the E. was the suburb of Nicopolis, 30 stadia from Alexandria, which possessed an amphitheatre and a race-course, and where the quinquennial games were celebrated (Strabo, xvii. c. 1, § 10).

With regard to the streets of ancient Alexandria, Strabo (ib. § 8) has the following passage: 'The whole town, indeed, is intersected with streets practicable for wagons and riders, but the two broadest of them are more than a hundred feet in width and cross each other at a right angle.' — This statement has been confirmed and supplemented by the excavations of Mahmud-Bey, who has discovered traces of a rectangular network of streets, seven of them running lengthwise, from W. S. W. to E. N. E., and twelve breadthwise, from N. N. W. to S. S. E. He has also identified the two main streets mentioned by Strabo, the more important of which probably coincided with the modern Rue de la Porte Rosette, beginning at the Gate of Rosetta, the ancient Canopic gate, intersecting the town, and at its W. end deviating from the straight line. This street is still the most important in the town, and it is probably indebted for its long existence to the conduit constructed under it at an early period, which still supplies the cisterns with Nile water. Of the buildings which once flanked this street a few relics only now exist, but the excavations have brought to light distinct traces of the old pavement, which consisted of blocks of granite, and have established the fact that the street was

† Now much reduced in extent, owing to the dilapidation of the breakwaters and the damage done by earthquakes.
about 45 ft. in width, or double that of the other streets. On each side of the causeway ran foot-pavements with arcades, of which, however, the traces are but scanty. — The important cross-street mentioned by Strabo has been discovered by Mahmûd-Bey on the E. side of the town. Here, between two causeways, each 20 ft. in width, he found a deep band of soil, on which probably grew a row of trees; and this street was also provided with a water-conduit. The side-streets, which were 23 ft. in width only, were generally about 300 yds. apart.

Of the Principal Buildings of ancient Alexandria the relics are now so scanty that it is impossible to determine the character of the edifices to which they belonged. (With regard to the so-called Cleopatra's Needle and Pompey's Pillar, see pp. 216, 217.) The locality least free from doubt is the site of the Panæum, which according to Strabo (ib., § 10), was 'an artificial circular mound, resembling a rocky hill, to which a winding way ascends. From its summit one can survey the whole of the surrounding town in every direction'. This spot is doubtless identical with the modern Kom ed-Dik, the highest ground in the town, 112 ft. in height, where the reservoir of the waterworks (p. 214) is now situated.

The Gymnæum, according to Prof. Kiepert, who has minutely examined the plans of Mahmûd-Bey, and not the Sema and Museum, occupied the site of the old German consulate and its garden. 'The most beautiful building, however,' says Strabo (ib., § 8), 'is the Gymnæum, with its colonnades, which are more than a stadium in length. In the middle lie the courts of justice and groves'.

The theatre, the Sema or Soma, and the Museum were situated in the quarter of the Royal Palaces (p. 207), which belonged to the Bruchium (p. 207), and occupied 'a fourth or even a third part of the whole extent of the city' (ib., § 8). This quarter must have lain to the N. of the great street leading to the Canopic Gate, and to the S. of Lochias, and must have adjoined the harbour and 'all that lay beyond it'. The Alexandrian Theatre lay opposite the island of Antirrhodus (p. 207), in accordance with the custom that obtained at Greek seaports of placing theatres where they could command a view of the sea. Speaking of the Sema, Strabo (ib., § 8) describes it as 'another part of the royal buildings, an enclosed space, within which are the tombs of the kings and that of Alexander. For Ptolemy Lagus had taken away the body of the latter from Perdiccas, who had brought it from Babylon. . . . Now Ptolemy brought the body of Alexander to Alexandria and buried it where it now lies, though not in the same coffin. The present coffin is of hyalus (glass or alabaster), but the former was of gold, which was carried off by Ptolemy surnamed Cœcus and Parisactus' (or bastard). — A sarcophagus carried off by the French, and afterwards captured by the English and deposited in the British Museum, was once supposed to be that of Alexander, but, when the hieroglyphics upon it were deciphered, they were found to have no reference to the great Macedonian monarch.

The Museum, like the Sema, belonged to the quarter of the royal palaces, and probably stood on the spot where some huge ruins, since described by Brugsch, were discovered in 1853 when a Greek school was being built. These ruins lay on the S. side of the Place Mêchéméet-Ali and to the W. of Cleopatra's Needle, a site which would correspond with the quarter of the palaces. The library undoubtedly was connected with the Museum, and it is noteworthy that among these ruins a hollowed stone was found bearing the inscription, 'Dioskorides, 3 vols.', though it can hardly have been used as a receptacle for scrolls. From these walls, now buried beneath the earth, once flowed a copious stream of knowledge, the benefits of which continue to be traceable even at the present day. According to Strabo (ib., § 8), the Museum contained 'a hall for walking, another for sitting, and a large building with the dining-room of the scholars residing at the Museum. The society also possesses revenues in common, and the Museum is presided over by a priest, formerly appointed by the kings, but now by the emperor'. This 'hall for walking' was an extensive court shaded with trees and provided with fountains and benches, while the hall for sitting was used for purposes of business and study.
The latter was a covered colonnade, closed on one side, where the scholars assembled, and where their pupils, thirsting for knowledge, listened to the precepts of their masters. Like all the Egyptian dining-halls, that of the Museum probably had a flat roof, a polished pavement, and a balustrade of short columns around it. The members of the Museum were arranged at their repasts according to the schools to which they belonged (Aristotelians, Platonists, Stoics). Each department elected a president, and the body of presidents formed a council, whose deliberations were presided over by the 'neutral' priest appointed by government. With the vast and artistically embellished buildings of the Museum various other important establishments were connected, chief among which was doubtless the library, with copying and binding rooms, where the manuscripts were reproduced, adapted for use, and fitted with rollers and cases. Besides the revenues enjoyed by the Museum in its corporate capacity, a yearly salary was paid to each member from the time of Philadelphus downwards. Parthey estimates the members in the time of the first Ptolemies at one hundred at least, but it was probably much smaller at a later period. The Alexandrian School was chiefly celebrated for its distinguished professors of the exact sciences, including geography, astronomy, mathematics, mechanics, natural history, medicine, and anatomy. Among its most celebrated scholars were Eratosthenes and Strabo, the geographers; Hipparchus and Ptolemaeus, the astronomers; Archimedes, the mechanician; Euclid, the founder of geometry; and Herophilus and Erasistratus, the anatomists. The branch of learning most successfully cultivated by the members of the Museum, however, was grammar, or philology, as it would now be called. 'The task of transmitting to posterity in a pure form the whole of the knowledge and intellectual creations of an earlier period may perhaps be regarded as the noblest aim of philology, and this task was most ably performed by the philologists of Alexandria. It is to their critical labours that we owe the preservation of the Greek literature, which has exercised so great an influence on the culture of the West and on modern history generally.' In these words Parthey sums up the result of the labours of the Alexandrian scholars, whose individual merits we cannot here discuss.

The chief Library at Alexandria, the nucleus of which consisted of the library left by Aristotle, belonged to the Museum, having been founded by Ptolemy Lagi with the assistance of Demetrius Phalereus. It was arranged in the reign of Philadelphus, and rendered accessible by being placed in the Museum. Zenodotus, Callimachus, and Eratosthenes were the first librarians. Callimachus provided the scrolls with titles. As to the number of volumes in the library our chief source of information is a scholium on Plautus, with Ritschl's commentary. In the time of Ptolemy Philadelphus the number was about 400,000, which, by deducting duplicates, was reduced to 90,000. In Caesar's time, when the library was burned, the number had probably risen to about 900,000. The Pergamenean collection of books, which Antony presented to Cleopatra, contained 200,000 scrolls. These treasures, collected in one place and easily accessible, enabled the members of the Museum to pursue the studies most congenial to them. A second library was placed in the apartments of the Serapeum.

The site of the Serapeum, or great temple of Serapis, which Strabo mentions very briefly, may be approximately determined by the fact that it must have stood near Pompey's Pillar. The god to whom it was dedicated was introduced by the Ptolemies, in order that both Greeks and Egyptians might have a deity recognised by both, who might be worshipped in common. Ptolemy Soter is said to have caused the image of the god to be sent from Sinope on the Pontus, the inhabitants of which were most unwilling to part with it. At length, after three years, the colossus is said himself to have entered the vessel and by a miracle to have arrived at Alexandria in three days. To the Greeks he was introduced as Pluto, while the Egyptian priests called him Osiris-Apis. They both regarded him as the god of the infernal regions, and as the Greeks associated him with Pluto, the Egyptians connected him with Ptah. The introduction of the new god was the more easily accomplished as it was favoured by the priesthood of both nations, their well intentioned object.

Baedeker's Egypt I.
being to attract worshippers of different races to the same shrine, and, at one spot at least, to blend the religious sentiments of the Greeks and Africans. After his arrival in Egypt Serapis was of course transformed into an entirely new divinity, and his rites were remodelled so as to suit the Greek, and more particularly the Egyptian, forms of worship. The place where the Apis bull was chiefly worshipped down to a very late period is ascertained to have been Memphis (p. 359). The Temple of Serapis, when completed, is said to have been surpassed in grandeur by no other building in the world except the Roman Capitol. It lay to the W. of Alexandria, in the suburb of Rhakotis, and not far from the Necropolis, on an eminence ascended on one side by a carriage-road and on the other by a flight of steps, widening towards the top and leading to a platform with a vaulted roof borne by four columns. Beyond this were colonnades containing chambers set apart for the worship of the god, and a number of lofty saloons which at the time of Philadelphus contained a library of 42,000 vols. This collection was afterwards much enlarged, and is said to have comprised 300,000 vols. at a later period. There were also numerous subterranean chambers, used for various purposes, and a number of dependencies, as at the Serapeum of Memphis (p. 369). The interior of the colonnades was enriched with extraordinary magnificence. The walls were richly painted, and the ceilings and capitals of the columns gilded. Within the sanctuary stood the statue of the god, which probably consisted of a wooden figure overlaid with various precious metals. An opening ingeniously introduced in the sanctuary admitted rays of light falling on the mouth of the idol, "as if kissing him." Most of the images of Serapis now preserved are of dark stone. That of Alexandria, which is sometimes said to have consisted of emerald, was probably coloured dark blue. On its head was the calathos, and at its feet lay Cerberus, with the heads of a wolf, a lion, and a dog, around which was entwined a serpent.

After Alexander's death, when his empire was divided among his generals, Ptolemy, the son of Lagus (p. 96), came into possession of Egypt, and Alexandria became his capital. The population of the city increased greatly, and it attracted a large number of Jewish settlers, to whom Ptolemy assigned a suburb on the coast, towards the E. During his wise and upright reign Alexandria became a great resort of artists and scholars, including Demetrius Phalereus, the orator (p. 209), Apelles and Autolycus, the painters, Euclid, the mathematician, and Erasistratus and Herophilus, the physicians, in whose society the king spent much of his time. A history of Alexander the Great written by Ptolemy himself has unfortunately been lost. Under his successor, Ptolemy II., Philadelphus (p. 96), the Museum (p. 208) attained its highest prosperity. Among its distinguished members were Sosibius and Zoilus, the grammarians; Strato, the natural philosopher; Timocrates and Aristarchus, the astronomers; Apollodorus, the physician; Hegesias, the philosopher; Zenodotus, Theocritus, Callimachus, and Philetas, the poets; and the versatile Timon. It was about this period that the Old Testament was translated from Hebrew into Greek, the new version being called the Septuagint from the tradition that seventy translators were engaged in the work. Under Ptolemy III., Euergetes (p. 96), Aristophanes of Byzantium, the grammarian and critic, became the director of the Museum, while the mathematical school was superintended by Eratosthenes of Cyrene, the founder of the science of mathematical geography. At this period Alexandria was also the
residence of the orator Lycon of Troas, of the poets Apollonius, the Rhodian, and Lycothron, and of the great astronomer Conon. Notwithstanding the continual dissensions among the Ptolemies with regard to the succession to the throne (p. 96), which seriously disturbed the peace of the city, the fame of Alexandria, as the greatest centre of commerce in the world and the chief seat of Greek learning, steadily increased, and in B.C. 48, when the Romans interfered in the quarrels of Cleopatra VII. and her husband and brother Ptolemy XIV., had reached its zenith. After the murder of Pompey at Pelusium, Cæsar entered Alexandria in triumph (p. 98), but was attacked by the citizens and the army of Ptolemy XIV., and had considerable difficulty in maintaining himself in the Bruchium (p. 207). During the siege of the city occurred the irreparable calamity of the burning of the Great Library of the Museum, but it was afterwards to some extent replaced by the Pergamenean collection, presented to Cleopatra by Antony. Cæsar was afterwards conquered by the charms of the Egyptian queen, but Antony fell more fatally into her toils, and spent years of revelry with her at Alexandria (comp. p. 98). Augustus treated Alexandria with clemency, and enlarged it by the addition of the suburb of Nicopolis on the E. side of the city.

Under the successors of Augustus, Alexandria was almost uninterruptedly the scene of sanguinary civil dissensions, caused chiefly by the Jews, who in the reign of Tiberius constituted one-third of the whole population. In A.D. 69 Vespasian was proclaimed emperor by the Alexandrians, his election having been to a great extent due to the influence of the philosophers Dion, Euphrates, Apollonius of Tyana, and others then resident at the Museum. Under the following emperors also the sciences continued to flourish at Alexandria. In the reign of Hadrian, Valerius Pollio and his son Diodorus, and Apollonius Dyseolus, the grammarians, Ptolemy Chennus, the mythographer, Appian, the historian, and Claudius Ptolemy, the astronomer, lived at Alexandria; and the emperor himself, who visited the city twice, held public disputations with the professors at the Museum. In A.D. 176 Marcus Aurelius came to Alexandria for the purpose of quelling an insurrection, but treated the citizens with great leniency, and attended the lectures of the grammarians Athenæus, Harpocratus, Hephæstion, Julius Pollux, and others. Lucian also lived at Alexandria at this period, in the capacity of secretary to the prefect of Egypt. In the reign of Marcus Aurelius the Temple of Serapis was burned down, but the library escaped without injury, and the temple was soon rebuilt. In 199 Severus visited Alexandria, and established a senate and a new municipal constitution. The visit of Caracalla, whom the citizens had previously derided, was fraught with disaster. Having attracted the whole of the male population capable of bearing arms to one spot, he caused them to be massacred in cold blood. He closed the
theatres and the public schools, and to prevent future rebellions he caused a wall fortified with towers to be erected between the Bruchium and the rest of the city.

The first great persecution of the Christians, which took place in the reign of Decius (250), was a terrible blow to the Alexandrians. The city had for a considerable time been the seat of a bishop, and had since 190 possessed a theological school, presided over by Pantanenus and at the beginning of the 3rd cent. by Clement of Alexandria, who endeavoured to combine Christianity with the Neo-Platonism which sprang up about this period at Alexandria and was taught by Ammonius Saccas, Herennius, Plotinus, Porphyrius, Jamblichus, and others. A second persecution took place in 257, during the reign of Valerian; and shortly afterwards, in the reign of Gallienus, the plague carried off a large portion of the population. The incessant revolts which broke out in Alexandria and other parts of Egypt led repeatedly to the elevation of usurpers and rival emperors to the throne. Thus, Firmus was proclaimed emperor at Alexandria as a rival of Aurelian, and Probus owed the purple mainly to the Egyptian legions. The Alexandrians afterwards revolted against Diocletian and declared themselves in favour of Achilleus; but Diocletian besieged the city, took it by storm, and chastised the inhabitants with great severity.

Christianity, however, still continued to gain ground, and Alexandria was even regarded as the chief seat of Christian erudition and of the orthodox faith. The dogmatic dissensions between Arius, who filled the office of presbyter, and Athanasius, who afterwards became a bishop, at length broke out, and were fraught with disastrous consequences. Alexandria was also soon obliged to yield to Constantinople its proud position as the centre of Greek thought and science. The sanguinary quarrels between the Athanian party and the Arians under their unworthy bishop Georgius further contributed to the rapid decline of the city. On the accession of Julian to the purple the pagans of Alexandria again instituted a persecution of the Christians, and Georgius became one of their victims. In the reign of Theodosius, however, paganism received its deathblow, and Theophilus, the patriarch of Alexandria, displayed the utmost zeal in destroying the heathen temples and monuments. The famous statue of Serapis was broken in pieces and burned in the amphitheatre amidst shouts of derision from a Christian crowd. The material prosperity of the city also fell off so greatly, that the municipality was no longer able to defray the cost of cleansing the Nile and keeping the canals open. After the death of Theophilus (in 413) the revenues of Alexandria were still farther diminished by the proceedings of the new patriarch Cyril, who led the armed mob against the synagogues and expelled the Jews from the city; and in 415 the learned and beautiful heathen Hypatia, daughter of the mathematician Theon, was cruelly murdered by an infuriated crowd.
The reigns of Marcian, Leo I., and Justinian were also signalised by new revolts, chiefly occasioned by religious dissensions. Under Justinian all the still existing heathen schools were finally closed, and the few scholars of any eminence who had remained till then were obliged to leave the place. A new insurrection which broke out in the reign of Phocas was attended with greater success than previous revolts, for Heraclius, whom the Alexandrians now proclaimed emperor, contrived in 610 to maintain his possession of the purple. The sway of the Eastern emperors in Egypt, however, soon came to an end. In 619 Alexandria was captured by Chosroes, King of Persia, but the Christians were left unmolested. Ten years later Heraclius succeeded in recovering possession of Egypt, but the troops of the Khalif 'Omar soon afterwards invaded the country and took Alexandria after a prolonged siege. In December, 641, 'Amr Ibn el- 'Aṣī, 'Omar's general, entered the city; but by order of his master, he treated the inhabitants with moderation. The decline of Alexandria now became still more marked, and about this period 'Amr founded Fostāţ (p. 239), as a new capital and seat of government, free from Christian influences. The new town, which gradually developed itself into the modern Cairo, soon became an important and prosperous place at the expense of the famous ancient Greek city. During the middle ages Alexandria sank into insignificance. Its commerce received a deathblow by the discovery of the sea-route to India round the Cape of Good Hope, and the discovery of America entailed new losses. After the conquest of Egypt by the Turks (in 1517) the city languished under the infamous régime of the Mamelukes, the harbours became choked with sand, the population, which had once numbered half a million souls, dwindled down to 5000, and the environs were converted into a sterile and marshy wilderness. With regard to the history of the French invasion, see p. 106.

The decay of the once powerful seaport was at length effectually arrested by the vigorous hand of Mohammed 'Ali, who improved the harbours and constructed several canals. The chief benefit he conferred on Alexandria was the construction of the Maḥmūdiyyeh Canal, which was so named after the reigning Sultan Maḥmūd. By means of this channel fresh water was conducted to the town from the Rosetta branch of the Nile, the adjoining fields were irrigated anew, and Alexandria was again connected with the Nile and the rest of Egypt, the products of which had long found their only outlets through the Rosetta and Damietta mouths of the river. The enterprising pasha began the work in 1819, employing no fewer than 250,000 labourers, and completed it at a cost of 7½ million francs. He also improved the whole canal-system of the Delta, the works being chiefly superintended by the aged and eminent Linant de Belleville-Pasha, general director of public works, and other French engineers. The subsequent viceroys, and particularly the
present Khedive Isma'il have also made great efforts to improve the prospects of the town; and the Egyptian cotton-trade, which received a strong impulse from the American war, and found its chief outlet through Alexandria, has proved a source of great profit to the citizens. Several regular steamboat services and two telegraphic cables now connect Alexandria with Europe, while it communicates with the rest of Egypt by river, railway, and telegraph.

GAS AND WATER. The city was provided with gas in 1865, and is also now well supplied with water. The old cisterns, the number of which is said still to exceed a thousand, and the situation of which enables us to determine the direction of the ancient streets, have been superseded by the modern waterworks, begun in 1868, and completed in 1869, which are supplied by the Moharrem-Bey Canal, a branch of the Mahmoudiyeh Canal. The reservoir, into which the water is pumped by steam, after having been filtered, is situated on the top of the Kom ed-Dik hill, the site of the Panæum of antiquity (p. 208), and is capable of containing 10,000 cubic metres of water (about 360,000 cubic feet). The water-rate per cubic metre (36 cubic feet) is now 1 fr. only, while for the same quantity the old water-carriers used to receive 2fr. 25c.

HOSPITALS AND CHARITIES. 1. The German Deaconesses’ Institution, Avenue de Moharrem Bey, an excellent establishment, and worthy of support. 2. The large European Hospital, Boulevard Isma'il Pasha. 3. The large Egyptian Hospital and Foundling Asylum, not far from the Ramleh Station. 4. The Greek Hospital.

HARBOURS (comp. pp. 201, 208). The maritime traffic of Alexandria is of considerable importance, although it is said to have decreased since the opening of the Suez Canal. The port is entered annually by about 2800 vessels, consisting of 70 men-of-war, 370 mail-packets, 2060 sailing merchantmen, and 330 steam traders. The annual exports average 1300 million piastres in value, the most important commodities being usually cotton and cotton-seed. Next in order are wheat, leguminous seeds, sugar, Mocha coffee, wool, and flax; and lastly we may mention the not unimportant items of elephants’ tusks valued at 6,233,500 francs, ostrich-feathers valued at 4,806,100 francs, and mother-of-pearl valued at 3,903,840 francs.

Alexandria now contains a population of upwards of 200,000 souls, including at least 50,000 Europeans. In its palm days it is said to have numbered more than half-a-million inhabitants, consisting of Egyptians, Greeks, Jews, Phœnicians, and Italians, all of whom were animated in common with the spirit of enterprise which attracted them to the recently founded city. The Greek element predominated at that period, next in importance to which was the Egyptian, while a numerous, but exclusive, Jewish community was settled here as early as the 4th cent. B.C. According to tradition the Gospel was first preached to the Alexandrians by St. Mark, and it is a historical fact that the Christian community was already numerous in the time of Hadrian (2nd cent.). In a letter to Servianus the emperor himself gives a very unfavourable, but hardly accurate account of the Christians.

‘Egypt, my dear Servianus’, writes Hadrian, ‘which you extolled to me, I have found to be inhabited by a very frivolous and vacillating people, who are easily swayed by every passing humour. Those who worship Serapis are the Christians, and men who call themselves bishops of Christ are nevertheless devoted to Serapis. There is not a single president of a Jewish synagogue, not a single Samaritan, not a single Christian presbyter that is not at the same time an astrologer, an interpreter of signs, and a quack. The patriarch himself, whenever he comes
Place Méhémet Ali. ALEXANDRIA.

1. Route. 215
to Egypt, is compelled by one party to worship Serapis, and by another to worship Christ. They are a refractory, good-for-nothing, and slanderous set of people. — The city (Alexandria) possesses treasures and resources in abundance. No one’s hands here are idle. At one place glass is manufactured, at another paper, and at another linen. All these busy people seem to carry on some kind of handicraft. Men with gouty feet, blind persons, and even those with gouty hands, all find some occupation. They all really recognise one god only (probably Mammon), the same who is worshipped by Christians, Jews, and all nations. It is a pity that the people are of so bad a disposition, as the importance of the city, even in point of size, makes it well worthy of being the capital of the whole of Egypt. I made every possible concession to the city, restored its ancient privileges, and added so many new ones that the citizens came and thanked me in person; and yet as soon as I had left the place they calumniated my son Verus.

As at that period, so at the present day, the population of Alexandria consists of members of every nation dwelling on the banks of the Mediterranean. The language most generally understood is Italian, which the Arabs, as well as other nations, learn readily.

Sights. Unless the traveller proposes to make archaeological researches and to study the ancient topography of Alexandria, he will easily become acquainted with its principal points of interest in a single day (comp. p. 204). Cairo affords a far better insight into Oriental life than its half-European seaport, while its delightful winter climate, notwithstanding the proximity of the two cities, is far superior to that of Alexandria. In summer the reverse is the case, as the heat at Alexandria is then tempered with cool sea-breezes, but even as early as April, especially when the S. or S.E. wind prevails, the atmosphere there also is often hot and dusty.

The new-comer will nevertheless find it interesting to walk through the town, and particularly to observe the busy streets with their Oriental and European thoroughfares; and he will encounter, chiefly beyond the precincts of the Frank quarter, a number of isolated relics of antiquity, in the shape of stumps of columns, blocks of stone, and heaps of broken pottery. The great centre of European life is the Place Méhémet Ali (formerly Place des Consuls), which is embellished with plantations of trees and two fountains. In the centre rises the Equestrian Statue of Mohammed Ali (Pl. 35), the founder of the reigning dynasty of Egypt, designed by Jaquemard, and cast in Paris. The statue is 16 ft. in height, and stands on a pedestal of Tuscan marble 20 ft. in height. As the Mohammedan religion forbids the pictorial or plastic representation of the human form, the erection of this monument was long opposed by the Ulama, or chief professors of ‘divine and legal learning’. On the N.E. side stands the English Church (Pl. 25). From the S.E. corner of the square we reach the triangular Place de l’Eglise, or Square Ibrahim, the former name being derived from the Rom. Cath. church of St. Catharine (Pl. 30) situated here. One of the narrow passages leading to it is called after Bismarck, and another after Cavour.

It is not an easy matter to give the traveller distinct directions as to his route through the city, as only the principal streets have
well recognised names. Most of the new names given them by
government are unfamiliar to Europeans and Arabs alike, and have
practically superseded the older names in a few cases only. Some of
the streets again are differently named by Europeans of different
nationalities. If the traveller loses his way he will soon meet with
a donkey-boy who will take him back to his hotel (comp. p. 203).
On the W. side of the city, and on the neck of land between the
two harbours, the ancient Heptastadium, to the N. of the Place
Méhémet-Ali, the inhabitants are chiefly of Arabian extraction
(p. 204), while the quarter which was once the island of Pharos,
farther to the N., is occupied by the Turks. The streets here are
sometimes broader than in the other quarters, and the houses are
sometimes handsomely built and provided with gardens.

Starting from the S. side of the Place de l'Eglise (see above), we
proceed towards the S. by the Rue de la Colonne Pompée to the
Porte de la Colonne Pompée, or Porte du Nil. Outside this gate we
pass a large Arabian cemetery, lying on the right, and soon reach
an eminence covered with rubbish and fragments of ruins, on which
rises "Pompey's Column" (Pl. 37). The monument is composed of red
granite from Assûan, which has withstood centuries of exposure to
the elements; and it is now, besides Cleopatra's Needle, the only
well-preserved relic of antiquity in the city. The pedestal,
composed of several blocks which once belonged to other buildings,
was formerly covered by the earth and is much damaged. The
height of the column, together with the disintegrated, or perhaps
never quite completed, Corinthian capital, and the pedestal, is
104 ft.; the shaft is 67 ft. high, and is about 9 ft. in diameter below,
and not quite 8 ft. at the top. The proportions produce an exceed-
ingly harmonious effect.

This handsome monument does not derive its name from Pompey
the Great, who was murdered on the Egyptian coast (p. 97) after the
Battle of Pharsalia, but from the Roman prefect Pompeius, who, according
to the inscription, erected it in honour of the unconquered Diocletian,
the 'defender of the city of Alexandria'. There is no ground for sup-
posing that this column once bore the brazen horse which the citizens
are said to have erected as a token of gratitude to Diocletian. After
that emperor had besieged Alexandria for eight months, and had
destroyed the waterworks, he at length took the city, and slew the
usurper Achilles. According to the popular story, he then commanded
his soldiery to massacre the seditious populace until their blood should
reach his horse's knees. His horse soon afterwards stumbled over a
dead body and wetted its knee in human blood, whereupon the emperor
was pleased to regard this as a sign that the unhappy citizens had been
sufficiently chastised. Out of gratitude, particularly to the horse, they
are said to have erected the brazen horse which was known as that of
Diocletian. That the horse did not, however, occupy the summit of the
column is proved by an ancient illustrated plan of Alexandria, in which
Pompey's Pillar is represented with the figure of a man on the top. The
inscription, moreover, indicates that the column was erected by Pome-
peius II., whose prefecture did not begin till A.D. 302, whereas the defeat

† Τὸν (όσιόφυτον αὐτοκράτορα, τὸν πολιούχον Ἀλεξανδρείας Διοκλητιανὸν
τῶν ανίκητων Πομπήου ἐπαρχὼς Αἰγύπτου (τὸν εὐεργέτην).
and death of Achilles took place about 296. The column has, therefore, no connection with the story of the brazen horse, but was probably erected chiefly in commemoration of a gift of corn presented by Diocletian to the citizens during a period of scarcity.

Near the extensive cemetery at the foot of the column are several fragments of columns which probably belonged to the Serapeum (p. 209). If we are to believe the accounts of Maṣrīzī and 'Abdell-āṭīf, this temple was encircled by a colonnade of 400 columns, and once contained the library which was burned by 'Omar.

Following the road a little farther, and diverging to the right near a manufactory, we skirt the S. slope of a low plateau and soon reach the Catacombs (Pl. D, 7), about 1/2 M. from Alexandria.

From this point to the vicinity of the Serapeum (see above) the sloping, rocky ground was honeycombed by a great number of subterranean passages and tomb-chambers, but as there is now a quarry here, all traces of the ancient constructions will soon be obliterated. Several ornamented sarcophagi are still seen lying about. The workmen offer coins, chiefly of the time of Constantine, for sale, and it is from that period that the construction of the catacombs probably dates. One only of the tomb-chambers, which was discovered in 1858, is tolerably preserved, and it is now exposed to view owing to the fall of the stories above it. We enter by a wooden gate, generally open, and descend by an ancient flight of steps on the W. side to a group of three chambers. On the left (N. side) we observe an apse with traces of paintings and Greek inscriptions (Christ between Peter and Andrew in the middle; on each side a love-feast). The vault opposite the entrance, with remains of tasteful decoration in stucco, contains three recesses, the paintings in which represent (W. side) the Mariēs at the Sepulchre; (N. side) Christ, like the Egyptian god Horus, treading on serpents, with a quotation from Ps. xci. 13; and (E. side) the Ascension. On each side of the central recess is a large Greek cross with the inscription at the four corners IC XC NIKA (Jesus Christ conquers). These very rude frescoes probably date from about the 6th cent., being doubtless a second restoration of the original, as we still find three layers of plaster, one above the other, and each bearing traces of painting. The third vault, a long chamber on the E. side, contains sixteen recesses, which were once closed by means of upright slabs of stone. A flight of steps descending hence to the S., the outlet of which is now built up, led to a lower series of tombs.

We now return to the Porte de la Colonne Pompée (Pl. 38), proceed to the right, within the walls, to the Porte de Moharrem Bey (Pl. 39), past the Cairo railway station, and follow the Rue Cafarelli to the N. to the Boulevard de Ramlé. A little on this side of the Ramlē Station, on the left, rises *Cleopatra's Needle (Pl. 36), an obelisk of the time of the Pharaohs, and quite unconnected with the queen whose name it bears. Like most of the Egyptian obelisks, it consists of a single block of the hard, reddish granite of Assuān (Syene), and is in the form of a very slightly tapered pyramid, truncated at the top, and terminating in an obtuse pyramid (or pyramidion). It was probably executed in the reign of Thothmes III., about the year B.C. 1590, and is 67 ft. 2 in. in height. Its companion, 68 ft. 5½ in. in height, which for many years lay on the ground to the left, was presented to the English by Muḥammed 'Ali, and was at length removed in the autumn of 1877. After narrowly escaping shipwreck, it finally reached London on 21st Jan. 1878. Both monuments, as the inscriptions indicate,
were brought from Heliopolis (p. 320), which, as we learn from the Flaminian obelisk at Rome, was full of obelisks; and the London obelisk also mentions the 'house of the Phœnix'.

The central row of inscriptions on the four sides of the Alexandrian Cleopatra's Needle indicates that it was executed in the reign of Thothmes III. (p. 89) of the Eighteenth Dynasty. The best preserved of the original inscriptions is to this effect: "Ra-men-kheper, the victorious and contented Horus, who defeats the princes of the nations, hundreds of thousands are his when he raises his battle-axe; and power is given to Ra over all countries. All power is united in his hands, in order to extend the joy of Thothmes, child of the sun, who is endowed with power, and life, and stability'. The rows of hieroglyphics on the left and right were added by Ramses II. (p. 90); and another Pharaoh, probably Seti II, Ne-ceptah, of the Nineteenth Dynasty, has also caused his name to be engraved on the obelisk. These two monarchs thus followed an objectionable practice which the Pharaohs had of perpetuating their names on the monuments of their predecessors. The obelisks were used as emblems of stability and permanence, and were also revered as symbols of the rays of the sun. We learn from hieroglyphic inscriptions that the characters graven in the granite were once filled with gold, 'electrum' (gold alloyed with silver), or gilded bronze, and the obelisks are, therefore, spoken of as 'illumining the world with their rays'. Most of the obelisks were accordingly dedicated to the sun-god Ra at Thebes, and to Ammon-Ra at Heliopolis, and we are told that festivals were celebrated in honour of these monoliths, and offerings presented to them. The needle now in London informs us that its inscriptions were inland with electrum. The Romans and Byzantines afterwards removed many of the obelisks from the Egyptian gateways, sometimes in pairs, and used them for decorative purposes or as sun-indicators. Two of them were thus placed in front of the mausoleum of Augustus, and another in the Campus Martius. The 'Cleopatra's Needle' of Alexandria is not an obelisk of the largest size. The highest obelisk still standing at Thebes (Karnak) measures 105 ft., and mention is even made in an existing papyrus of one which was 110 cubits in height. Cleopatra's Needle and its former companion were brought to Alexandria in the reign of Tiberius and erected in front of the Cesarœum (Temple of Cesar) or Sebasteum, one of the most famous and magnificent buildings in the city, embellished with colonnades and a profusion of pictures and statues, and provided with a library and a sacred grove. The building may possibly have been begun by Cleopatra after the birth of Cesarion, but it was certainly completed by the Alexandrians in honour of Tiberius. In 336, on the occasion of an insurrection of the pagans, the edifice was burned down, but was afterwards re-erected. The date of its final destruction is unknown. The word 'obelisk' (little spear) is Greek, and, as Herodotus speaks of ὁβελοὺς ὀλίγνους (stone spears), it doubtless originated at Alexandria. The diminutive form of the word 'obelus' was probably originally applied in jest by the citizens to these stupendous monuments of early Egyptian art.

A few paces to the E. of this point, and close to the sea, rises the so-called Roman Tower (Pl. 44), which, however, seems to be of Arabian origin.

Descending the Boulevard de Ramlé, and taking one of the streets to the left, we soon regain the Place Méhéméet Ali (p. 215), from the N.W. corner of which diverges the Rue Râs et-Tin, the longest street in Alexandria. This street describes a wide curve through the Arabian quarter situated on the ancient Heptastadium (p. 206), traverses the Turkish quarter on what was formerly the island of Pharos (p. 206), some of the houses in which present a very handsome appearance, and leads to the Viceroyal Palace on the
Rās et-Tīn (Pl. 43), or 'promontory of figs.' This walk affords a
good view of the street-traffic of the city, but the palace itself,
which was built by Mohammed 'Ali and restored by Isma'il Pasha,
is uninteresting, especially as the Diwān, or Council Chambers, were
destroyed by a fire in 1870. The balcony, however, commands a
fine view of the extensive harbour. (Admission by ticket procured
at the Consulate; but the hotel commissionnaires sometimes
obtain access by payment of a bakhshish.) The Harem, a separate
building, facing the sea, is built on the model of the seraglio at
Constantinople. The neighbouring Lighthouse is no longer shown
to visitors, and the Arsenal (Pl. 1) is not worth visiting.

A drive (3 M.; road very dusty; carriage in the afternoon
10 fr., or after 5 p.m. 5-7 fr., fee 1 fr.) should also be taken to
the Ginénet en-Nūshā, or public garden (usually called the Jardin
Pastré). Turning to the right outside the Porte de Rosette (Pl. 40),
leaving the European cemeteries to the left, and avoiding the
road which leads in a straight direction to Ramleh, we pass the
waterworks on the left, cross a small mound of ancient rubbish,
and reach the Maḥmūdiyyah Canal (p. 213). We then turn to the
left, drive for a short time along the canal, and soon reach the
entrance to the gardens, where a band plays, and where the fash-
ionable world of Alexandria drives and rides on Fridays and Sun-
days from 4 to 6 p.m. Europeans will be interested by the pro-
fusion of exotic plants which thrive here in the open air.

Retracing our steps, and following the bank of the canal, which
lies on the left, we observe on the right a long succession of villas
and gardens, including the viceregal château Nimreḥ Telāteḥ
('Number Three'), with its handsome entrance, and the château
and garden of Mōharrem-Bey. We may now re-enter the city by
the Porte Mōharrem-Bey, or by the Porte de la Colonne Pompée.

Adjoining the W. side of the city is the site of the original
Macedonian Necropolis, a reminiscence of which is preserved in the
Arabic name Gabāri (see below). No traces of the cemetery now
remain, the ground being occupied by a dirty suburb intersected
by very bad roads. About 4½ M. farther W. are the Quarries of
Mecṣ (see below), which are hardly worthy of a visit (carriage
there and back in 2-3 hrs., 10-12 fr.).

Starting from the Place Mēhēmet-Ali, we follow the new Rue
Ibrāhīm (Pl. E, F, 4, 5), which has been constructed straight
through an old Arabian quarter, and at the end of it cross the
Maḥmūdiyyah Canal. We then turn to the left (crossing the rails
which lead to the extensive new quay now in course of construc-
tion), and immediately afterwards proceed to the right by the
Route du Mecṣ (Pl. A, B, 6), which skirts the coast. A little to
the left of the road is the new Hippodrome, the race-course of
Alexandria, sometimes known as the Gabāri (see above). To the
W. of it is an old palace with a mosque, recently converted into a
Quarantine (Pl. 42) or lazzaretto. In the friable limestone of the coast-hills are a number of tomb-chambers, the ceilings of which are borne by pillars of the rock left for the purpose; but most of them have been destroyed by the inroads of the sea, and are now covered up. These chambers, which contain nothing interesting, have been styled the *Baths of Cleopatra*. Further on, to the left of the road, is the château of Saʿīd Pasha (p. 201), and to the right, close to the sea, is the *Bāb el-ʿArab* (p. 201).

At Meks are established the works of Messrs Greenfield & Co., an English firm which has contracted for the construction of the imposing new Harbour Works of Alexandria. These consist, in the first place, of an outer breakwater, beginning near the W. end of the island of Pharos (Rās et-Tin, p. 219), and extending to the S.W. towards Meks, forming an obtuse angle, and nearly 2 M. in length. This huge barrier, begun in May, 1871, and completed in Dec. 1873, is formed of a foundation of 26,000 solid masses of masonry, each 20 tons in weight, faced on the side next the sea with natural blocks, each 15-25 cwt. in weight. The horizontal surface is 19 ft. in width, and, at low tide, 10 ft. above the level of the water. The admirably sheltered harbour thus formed is nearly 1800 acres in area, and 20-60 ft. in depth. A second pier, or Molo, nearly 1000 yds. in length, and connected by lines of rails with the old railway-station, protects the inner harbour, which is about 475 acres in area and on an average 27 ft. deep. From the beginning of this pier (near Gabari, at the S.W. extremity of the town) a series of new quays extends along the whole E. side of the old harbour to the Arsenal, whereby about 75 acres of very valuable land have been reclaimed. The whole length of the berthing thus obtained for large vessels, including the inside of the Molo, extends to nearly 2 M. Down to the present day, no fewer than 33,000 artificial blocks, weighing 20 tons each, and 2 million tons of natural blocks of stone, manufactured and quarried respectively at Meks, had been used in the construction of the harbour-works.

To the E. of Meks, and to the S. of the road, lies the extensive Lake Mareotis (p. 222).

Ramleh (a place of little interest) is connected with Alexandria by two railways; the direct line (station near Cleopatra's Needle) on which a train runs hourly to Ramleh in \( \frac{1}{2} \) hr. (fares 5\( \frac{1}{2} \), 4\( \frac{1}{4} \), 3\( \frac{1}{4} \)d. p. tariff); and the Rosetta railway (station outside the Porte Moharrem-Bey), which runs nine trains daily to Ramleh in 22 min. (fares 4 piast. 20, 3 piast. 20, 2 piast. 20 paras). There is also a new carriage-road (carriage about 10 fr.), which will be preferred by those who wish to inspect the fragments of statues and half-excavated ruins of buildings lying scattered about the fields.

The direct local railway traverses the rubbish heaps of the ancient *Nicopolis* (see below). Projecting into the sea, to the left,
is the small Fort Silseleh. We here obtain a retrospective glimpse of the sickle-shaped S.E. side of the town.

Nicopolis, situated beyond the Hippodrome (of which no trace is now left), about 30 stadia to the E. of the city, is said to have been ‘no smaller than a town’, and received its name, ‘town of victory’, from Octavian (Augustus) in memory of the victory he gained here over Antony and his adherents. A small Temple, recently discovered close to the sea, and to the N.W. of the ruins of the Kasr el-Kayázereh (castle of Cæsar), the ruined walls of which have been pulled down to afford material for the new palace of the Khedive (see below), was perhaps also erected by Octavian on the same occasion.

To the right, skirting the Maḥmüdiyeh Canal, runs the Rosetta railway (p. 436). Near the station of Sidi Gaber, on a slight eminence to the left, and not far from the site of the old Roman castle above mentioned, is a new viceroyal palace, called Mustafa Pasha. The Catacombs situated to the N.E. of this point are almost entirely destroyed. Farther on, to the right, is another viceroyal château, with towers. The train now passes a series of villas and gardens full of luxuriant vegetation, the most attractive of which lie beyond the fourth of the five stations.

Ramleh (i.e. ‘sand’) is a modern place, consisting chiefly of numerous country-houses (Pension Beauséjour, apparently good), some of which are occupied by Alexandrian families throughout the whole year. It possesses waterworks of its own, which greatly facilitate horticulture. On the way to the sea the traveller will observe a few relics of the Greek and Roman periods.

From Alexandria to Ramleh by the Rosetta Railway, and thence via Abūkīr to Rosetta, see p. 436.

2. From Alexandria to Cairo.

131 M. RAILWAY. Express train in 1½ hrs., fares 35 fr. 90 (138 piastres), 30 fr. 20 (68 piastres); ordinary trains in 6 hrs., fares 30 fr. 20, 19 fr. 65, 12 fr. 25 c. Each first-class passenger has 35 kilogrammes of luggage free, second 26, third 17 (or about 77, 67, and 37 lbs. respectively). The first and second class carriages resemble those in France and Italy; the third are often excessively dirty. Three trains daily each way: from Alexandria express at 8 a.m., ordinary at 9.45 a.m. and 2.10 p.m.; from Cairo express at 8 a.m., ordinary at 9.30 a.m. and 2 p.m.—From stat. Benha via Zakāzik direct to Suez at 12 noon, reaching Zakāzik at 1.33 (half of 1/4 hr.; good refreshment-room), and Suez at 7 p.m. (fares from Alexandria to Suez 199 and 130 piastres tariff). At Kāfr ez-Zaiyāt (p. 223) there is a European restaurant. The only refreshments obtainable at the other stations are boiled eggs (bēd), Arabian bread (ʾēsh), water (mōyeh), and oranges (bortukan) and sugar-cane (kaşāb) in their seasons (1/2-2 copper piastres).

The new railway-station near the Porte de Maharram Bey is not far from the hotels, but the traveller had better drive to it, starting from his hotel at least half-an-hour before the advertised time of departure. New-comers and travellers burdened with much luggage should engage the comissionnaire of the hotel or a valet-de-place (2s.) to assist in booking their luggage, an operation carried on by the employés with those alternations of apathetic indolence and violent hurry which are so characteristic of Orientals. The Alexandria and Cairo line, the first railway constructed in the East, was made under Saʿīd Pasha in 1855,
and was to have been continued by another line from Cairo across the desert to Suez, but the latter project has been abandoned. The names of the stations are not called out. The Arabian villages (comp. p. 39) seen from the line present a very curious appearance, and the interior of their half-open mud-hovels is frequently visible. The dust is very annoying in hot weather, forcing its way into the carriages even when the windows are closed.

The train first traverses gardens towards the E.N.E.; and then, about halfway to Ramleh (p. 220), the château of which is visible in the distance, and not far from the ruin of the Kafr el-Kayâsereh (p. 221) situated on the coast, it diverges to the right from the new Rosetta line (p. 436). It now crosses the Maḩmûdiyeh Canal (p. 437), and skirts its S. bank nearly as far as stat. Damanhûr (see below). To the left lies the Lake of Abûkîr (Beheret Ma'adîyeh); to the right is Lake Mareotis (Beheret Maryûf), the water of which washes the railway embankment at places during the period of the inundation, while in summer it is a considerable distance from it.

The Lake Mareotis, or Mareia, as it was also called in ancient times, bounds Alexandria on the S. side. In Strabo's time it was filled from the Nile by means of numerous canals, both from the S. and E., which brought great traffic to this inland harbour, while the sea-harbour was more important for the export trade. The lake, which lies 8 ft. below the sea-level, was once surrounded by a luxuriantly fertile tract of country, irrigated from the Nile as early as the time of Herodotus. The banks once yielded excellent white wine, which has been extolled by Horace and Virgil, and is mentioned by Athenaeus as having been particularly wholesome. Egypt now produces very little wine, but reminiscences of its culture in the region of Lake Mareotis (p. 222) are still preserved in the name Karm (i.e. 'vineyard', pl. kurūm), which the Arabs apply to some ancient ruins here, and in numerous wine-presses hewn in the rocks which still exist. Maḩmûd-Bey and Professor Kiepert divide this coast region into four parallel zones: (1) The chain of sand-hills on the coast, where many old ruins are still observable; (2) The depression of the Wâdî Maryûf, a western prolongation of the lake, the water of which covers the eastern and lower half of that valley, while the western half consists of marshy ground with several islands, bearing ruins of ancient buildings; (3) The chain of hills to the S. of the lake, about 5 M. in width, and consisting of fertile land, with the ruins of about forty ancient villages; (4) The Mareotic plain, stretching to the margin of the desert, and also containing many ruins.

During the Arabian and Turkish régime the waters of the lake gradually subsided, but in 1801, during the siege of Alexandria, the English cut through the neck of land between the lake and the sea near the so-called Maison Carrée, a little to the W. of Abûkîr, thus laying an extensive and fertile region under water and destroying about 150 villages. The present Es-Sett marks the spot where the fatal cutting was made and afterwards closed. Mohammed 'Ali did all in his power to repair the damage and to improve the environs of Alexandria, but about 100,000 acres of cultivable land are said still to be covered by the seawater. The water is now evaporated for the sake of its salt, the right to manufacture which is farmed out by government for 4000 purses (nearly 20,000 l.) per annum.

We observe at intervals the sails of the barges on the Maḩmûdiyeh Canal, and long strings of laden camels traversing the embankments. Near (17 1/2 M.) Kafr ed-Dawâr, which resembles a large farm, we perceive the first cotton-fields on the right. 29 M. Abu Homş, a group of mud-hovels.
39 M. Damanhûr (first station at which the express stops, reached in 1 1/4 hr.), the capital of the district (or Mudûrîyeh, p. 34) of Behêreh, with 25,000 inhab., was the ancient Egyptian Tema-en-Hûr (city of Horus), and the Roman Hermopolis Parva. The town lies on an eminence, and contains some tolerably substantial buildings. Among them are several manufactories for the separation of the cotton from the seeds, and above them tower several minarets. The Arabian cemetery lies close to the railway. In July, 1798, Bonaparte, on his expedition to Cairo, selected the route via Damanhûr, which at the time was so excessively parched and burned up that his officers and men suffered terribly, while he himself narrowly escaped being taken prisoner. On 21st July, however, he succeeded in defeating the troops of the Mamelukes at the ‘Battle of the Pyramids’, and on the 25th he entered Cairo. A large market is held at Damanhûr on Sundays, and a smaller one on Fridays. (From Damanhûr to Fûm el-Bahr and Rosetta, see p. 437.)

54 M. Tell el-Bârûd, a village with a large mound of ruins.

From Tell el-Bârûd to Bûlûk ed-Dakrûr (p. 231) a direct railway connecting our line with the Upper Egyptian Railway, was opened in 1875. The traveller bound for Cairo, however, will not care to take this route except in case of necessity. The train leaves Alexandria at 9 p.m., reaches (54 M.) Tell el-Bârûd at 12.47 a.m. (halt of 40 min.), and arrives at (128 1/2 M.) Bûlûk ed-Dakrûr at 5.58 a.m.; it starts again at 8 a.m. and arrives at (357 M.) Siût at 7.22 p.m. — In the reverse direction the train leaves Siût at 7.50 a.m. and arrives at Bûlûk at 6.52 p.m.; it starts again at 8.30 p.m., reaches Tell el-Bârûd at 2 a.m., and Alexandria at 5.3 a.m. — Fares: to Bûlûk 120 piast. 20 par., 80 piast.; to Siût 20 piast. 20 par., 175 piastres.

As far as Bûlûk the train follows the W. bank of the Rosetta branch of the Nile, skirting the boundary between the Libyan desert and the cultivated Delta of the Nile. The stations between Tell el-Bârûd and Bûlûk are Kôm Hamûdeh, El-Tayyib, Kâfr Dâwût, El-Wardân, and El-Menâshî. The station at Bûlûk is nearly 1 1/2 M. from the Muski. Carriages not always to be had.

The cultivated land becomes richer, and we pass villages, groups of trees, and even tamarisks. The train reaches the broad Rosetta arm of the Nile, crosses it by a long iron bridge (fine view to the left), and enters the station of (65 1/2 M.) Kãfr ez-Zaïyât (second station at which the express stops, 2 hrs. after leaving Alexandria; halt of 1/4 hr.; restaurant). The town, which carries on a busy trade in grain, cotton, and the other products of the Delta (p. 73), lies on the right bank of the river. Excursion to the ruined site of Saïs, the modern Sû el-Hâger, see R. 8, d.

The Delta in Winter. ‘The fields are still wet at places, and straight canals are seen in every direction. All the cereals grown in ancient times still flourish here, and the slender palm still rears its fruit-laden crown beside the less frequent sycamore, with its slender umbrageous foliage. The cotton-plants are successfully cultivated where the soil is well irrigated, and form extensive plantations of underwood, bearing a profusion of yellow, red, and white blossoms, which somewhat resemble wild roses. Vineyards are rare, but they sometimes occur in the northern part of the Delta, the plants being trained on the trelliswork which we often see represented in the paintings of the ancient Egyptian tombs. The
water-wheels (sâkiyeh) are turned by buffaloes and donkeys, and sometimes by camels or by steam; and the water-pail (shâdûf), though less common than in Upper Egypt, is occasionally plied by slightly clad men and boys. The canals are flanked with embankments to protect the fields from inundation, and the paths on these banks are lined with strings of camels, donkeys with their riders, and men, women, and children on foot. From a distance the villages look like round, grey hillocks, full of openings, and around them rise dovecots and palm-trees. On closer examination we distinguish the 'mud-huts', huddled together on rising ground where they are safe from the inundation. Many of these hamlets are adorned with very handsome groups of palms, while the minarets which overtop the larger villages and towns seem to point as devoutly to heaven as our Gothic church-spires. (Ebers, 'Goshen', etc.)

76½ M. Tanta.

Opposite the station is an Inn kept by a Greek, which looks not uninviting. Another inn, kept by Sign. Quaranta, an Italian, to the right of the station, though insignificant, is, however, considered better, and is patronised by European merchants from Cairo and Alexandria during the fair of Tanta.

Consular Agents. British, Mr. Joyce; German, Hr. Dahan; French, M. Athanasi. — Chemist, Hr. Friedrich.

Tanta, the handsome capital of the province of Gharbîyeh, which lies between the Rosetta and Damietta arms of the Nile, with a population estimated at 60,000 souls, possesses large public buildings and an extensive palace of the Khedive. The bazaars present a very busy scene at the time of the fairs (see below).

The Mosque of the Seyyid el-Bedawi, having been recently restored, presents a handsome appearance. The large court contains the basin for ablutions (pp. 145, 182).

Seyyid Ahmed el-Bedawi is probably the most popular saint in Egypt, and the most frequently invoked. He is said to have been born in the 12th cent. at Fez, or according to others at Tunis, and to have settled at Tanta after a pilgrimage to Mecca. He is credited with the possession of great personal strength, and is therefore invoked in times of danger or exertion, and by women also who desire the blessing of children.

Travellers may generally visit the mosque without an attendant, but must not omit to deposit their shoes at the door. During the fair, however, which attracts among other visitors a number of fanatical Mohammedans from countries rarely visited by Europeans, it is advisable to procure the escort of the sheikh of the mosque, to whom an introduction may be obtained through the consular agent (see 1-2 fr.).

The catafalque of the saint is covered with red velvet richly adorned with embroidery, and is enclosed by a handsome bronze railing. The dome is still unfinished. One large and two small schools are connected with the mosque. The sebil, or tank, with the small medreseh (school) above it, situated in the space adjoining the mosque, is an interesting old building.

The most important of the three annual Fairs of Tanta is that of the 'mûlîd' (nativity) of the saint in August. The two other fairs are in January and April. Each fair lasts from one Friday to the following, presenting an interesting and picturesque scene, but too often marred by the licentiousness so prevalent among Orientals. In August upwards of half-a-million persons congregate here from all the Eastern countries bordering on the Mediterranean, and from the Mohammedan part of Africa. The Egyptian peasantry, who purchase cattle, implements, clothing, and trinkets at the fair, are always largely represented, and a number of European merchants are also to be met with. The
number of visitors to the April fair is said to average 200,000, and to the January fair 50,000. Upwards of a million head of cattle are sold annually at these fairs. Beggars and pilgrims farther contribute to swell these vast crowds, and the merchants themselves usually combine a pious visit to the shrine of the saint with their commercial business; for the Prophet permits even the Mecca pilgrims to engage in trade, although he has imposed on them many unpleasant restrictions. In August and April we also encounter here the greater number of the Ghamazī and Awālim (comp. p. 20), of the singing and dancing and unveiled women, and of the jugglers and showmen of every kind who dwell on the banks of the Nile. The fair of Tanta may indeed almost be regarded as a modern reflex of the pilgrimage to Bubastis (p. 397) described by Herodotus. Women uttering the peculiar crowing sound which they use to express great emotion still approach the sacred shrine in boats as in the time of Herodotus, and license is everywhere prevalent. — Long processions of camels laden with chests and bales are seen converging towards the town, accompanied by crowds of men and large herds of cattle. The banks of the canal are thronged with persons washing themselves and drawing water. The streets teem with the most animated traffic, and are filled with long rows of boats, in many of which the occupants are seen plying their handicrafts. Dervishes with dishevelled hair and ragged clothes, cripples, and idiots, who are treated with great respect, are clamorous for bakshish; and pilgrims returning from Mecca are saluted with flags and symbols at the gate of the mosque. On the first Friday of each fair the vast concourse of visitors, headed by the chief authorities of the town, move in procession towards the mosque of the sainted Seyyid. In the large space set apart for shows, adjoining the horse-market, the jesters usually attract a numerous audience. When they pronounce the name of Allāh the whole of the assemblage seated around bow their heads with one accord. The gestures of terror and astonishment made by the children and negroes at the performances of the jugglers are very amusing. Among the most popular exhibitions are those of the obscene Karagyūz, and the dances performed by men in female dress (comp. p. 20).

From Tanta to Mahallet Rab, Mansūra, and Damietta, see pp. 434, 427.

A short branch-line runs from Tanta to the S. to Shibin el-Kum, a small town on this side of the Rosetta branch of the Nile, in the Menfiyyeh, one of the most fertile regions in the Delta.

Beyond Tanta the train traverses a fertile tract, and beyond (88 M.) Birket es-Sab‘a crosses a small arm of the Nile. A number of cotton-cleaning mills afford an indication of the wealth of the country. A little farther on, near Benha, on the Damietta arm of the Nile, is a large viceroyal palace, where ‘Abbās Pasha (p. 107), Sa‘īd Pasha’s predecessor, was murdered in 1854. The train crosses the Damietta branch of the Nile by an iron bridge, and, immediately beyond it, reaches —

101½ M. Benha (reached from Alexandria in 3½ hrs., from Cairo in 3½ hr.; halt of 10 min.; railway to Zakāzik, Ismā‘īliya, and Suez, see p. 394), or Benha l‘Asal, i.e. ‘Benha of the honey’, so called from a jar of honey which Magaukas, the Copt (p. 360), is said to have sent from this place to the Prophet. The red oranges and the ‘Yūsuf Eftendi’ mandarins of Benha are much esteemed at Cairo.

To the N.E. of Benha, not far from the town, and intersected by the railway, are the ruins of the ancient Athribis, the ‘heart-city’ of antiquity, situated in the 10th Nomos of Lower Egypt, and named Kom el-Atrib by the natives of the village of Atrib or Atrib. The site of the ancient town is still traceable, but the remains hardly repay a visit, and no

BAEDERKE'S Egypt I.
inscriptions are now left. The heaps of rubbish begin near the Rosetta branch of the river and end by a small canal. A lion bearing the name of Ramses II., found here and carried to Europe, and the fact that the town and the deities belonging to it are mentioned in a few hieroglyphic inscriptions, indicate that it was founded in the time of the Pharaohs. A Roman-Egyptian necropolis was at a later period founded at the end of the long street on the remains of ancient buildings. Brugsch, who visited the place in 1854, describes it thus: — 'The dead lay in their coffins in tomb-chambers which were situated immediately below the surface of the mound of rubbish, and were constructed of black Nile-bricks dried in the sun. The chambers were vaulted and lay adjacent to each other. I sought in vain for inscriptions and paintings, but one of the chambers was coloured red. The coffins consist of square boxes of cedar-wood, the sides being about an inch in thickness. The mummies were admirably preserved and elaborately encased in their cerements. Neither they nor the coffins bore any trace of hieroglyphics, but on the lid of one of the latter I found the word ΗΑΤΠΑΣ and a date. Many statues and busts of the Græco-Roman period have also been found here, which indicate that the town of Athribis was a place of considerable importance at this late epoch of Egyptian history'.

Near (109 1/2 M.) Tūkh the mountains enclosing the Nile higher up become visible in the distance, those on the E. (Arabian) side appearing lower than those on the W. (Libyan) side. About 5 min. later the outlines of the pyramids begin to loom in the distance towards the S.W., and near (121 M.) Kalyūb these stupendous structures become distinctly visible. About 3 M. to the W. of this point is the Barrage du Nil (p. 392), to which a disused branch-line diverges. Railway to Zakāzik, Isma‘iliya, and Suez, see K. 5. The Libyan chain becomes more distinctly visible, and we also observe the Mo‘kattam range with the citadel, and the mosque of Mohammed ‘Ali with its slender minarets. The scenery now becomes more pleasing. The fields are enlivened with numerous trees, and gardens and villas come in sight. To the left lie the site of the ruins of Heliopolis (the obelisk of which is not seen from the railway), and the garden of Matariyeh with its sycamores, and the large château of ‘Abbāsiyeh, while on the right we perceive the beautiful avenue leading to Shubra (p. 316). The environs of the city become more and more prominent, and about 50 min. after leaving Benha the train enters the station of (131 M.) Cairo.

---
3. Cairo.

Arrival. The hotel commissionaires with their omnibuses or carriages await the arrival of each train and take charge of luggage. As it not unfrequently happens that all the hotels are full, it is a wise precaution to telegraph for rooms from Alexandria. Carriage with two horses from the station to one of the hotels 2½-3 fr., donkey ½ fr., luggage-donkey ½ fr. (but an attempt to extort more is always made; comp. p. 12).

Hotels (see remark on p. 202). New Hotel (Pl. a), in the Ezbekeiyeh, a large building with handsome rooms (landlord, Sign. Pantelliti); *Shepherd's Hotel* (Pl. b), also in the Ezbekeiyeh (proprietor Hr. Zech, manager Hr. Gross), patronised by English and American travellers, and until recently the only hotel at Cairo. Each of these hotels has a terrace and garden, and the charge at each is 20-25 fr. per day. *Hôtel du Nil* (Pl. c), in a narrow street off the Muskı (p. 251), the main artery of traffic; a good house, though uninviting externally, with a pleasant garden (proprietor Hr. Friedmann, manager Hr. Scharfnagel), 16-20 fr. per day. These three hotels have baths and reading-rooms. Hr. Friedmann supplies wine for the Nile voyage. — *Hôtel Auric* (Pl. d), Rue du Tribunal, small, with a good restaurant on the ground-floor, pension 20 fr.; *Hôtel Royal* (Pl. e), in the Ezbekeiyeh, also small; *Hôtel d'Orient* (Pl. f), in the Ezbekeiyeh (close to several noisy cafés-chantants); *Hôtel Abbat* (Pl. g), the nearest to the station. These four hotels, kept by Frenchmen, are very tolerable, though of moderate pretensions.

Private Apartments for the winter may also now be procured without much difficulty. A slight knowledge of the language, however, is indispensable, as the servants seldom speak foreign languages. The cost of living in this way is lower than at a hotel, but only when a prolonged stay is made. A sunny aspect should be chosen, and a detailed written contract drawn up. A bargain as to food may be made with some neighbouring restaurant. Wine, see p. 233. Information as to rooms may be obtained at the cigar-shop of *Livadas* in the Ezbekeiyeh.

Restaurants (rarely visited by travellers). *De la Bourse* and *de Paris*, in the Ezbekeiyeh; *Santi*, in the garden of the Ezbekeiyeh, breakfast 3, dinner 3½ fr.; *Hôtel Auric*, see above; *Hôtel des Colonies*; *Panaiotti*, in the narrow street leading to the *Hôtel du Nil*. There are also many others, chiefly kept by Greeks, and still less inviting than the above.

Confectioner: *Berci* (an Italian) in the Ezbekeiyeh and the Muskı.

Cafés in the European style abound (beer ½ fr. per glass). Most of them have a separate room in which roulette is played, and the traveller need hardly be cautioned against joining in the game. *De la Bourse* (see above) and *Cercle Oriental*, both in the Ezbekeiyeh; also in the Ezbekeiyeh Garden, by the music tents (p. 256). Beer is sold by *Mayer*, near the post-office; *Müller*, near Shepherd's Hotel; *Kovats*, near the Café Egyptian (see below); *Sphinx*, to the left of the entrance to the Muskı, a good point for observing the busy street traffic (p. 242). — The following are *Cafés Chantants*, where Bohemian musicians and singers perform in the evening: *Hôtel d'Orient* (see above); *Café Egyptian*, opposite Shepherd's Hotel; *Eldorado*, in the narrow street at the back of the *Hôtel d'Orient* (but about to be removed to the Ezbekeiyeh).

The Arabian Cafés (p. 17), of which there are upwards of a thousand at Cairo, each consisting of a single booth with a few cane-bottomed seats, are hardly worth visiting. Small cup of coffee with sugar 30; without sugar 20, *'Stambuli'* coffee 40 paras copper. — Outside the European cafés are usually congregated a number of *Shoeblacks* ("boyeh" i.e. "colour" in Turkish), a lively, but sometimes too importunate fraternity, who jabber a few words in several of the European languages. Shoe-cleaning ½-1 piastre in copper. The negroes always seem specially anxious to have their boots well polished.

Money Changers, Arabic *Sarrāf* (comp. p. 4), who endeavour to attract customers by rattling their money, are to be found in every street. Although it is very desirable always to be well provided with small
change, the traveller is cautioned against dealing with these people until he is thoroughly conversant with all the coins. He should also be on his guard against spurious silver roubles. The usual exchange for a Napoleon is 150 piastres current, and for a franc 7 piastres and 10 paras.

**Bankers** (comp. p. 3). Oppenheim, Nephew, & Co., Place de l'Opéra, at the corner of the Hawala Street; Tod, Müller, & Co., in the Rosetti Garden; X. Mayer, Rue du Tribunal, agent of the Imperial Ottoman and the Austro-Egyptian banks; Bank of Egypt, Rondpoint du Mouski; Credit Lyonnais, in the Egyptian post-office building. The chief Alexandrian firms (p. 204) also have branch-offices at Cairo. English circular notes and French banknotes always realise the best exchange.

**Post Office** (comp. p. 27), on the E. side of the Ezbekiyeh (Pl. 88), open daily from 7 a.m. to 6 p.m., and also for a short time after the arrival of the last mail train, or for a longer time when the British, Indian, and other important mails come in. Letter-boxes at most of the hotels, at Berti's (the confectioner), at the railway-stations, and in various other places.

**Telegraph Offices.** Egyptian (Pl. 88), at the new post-office (see above); British (Pl. 97), at the old Egyptian post-office. Comp. p. 28. Telegrams for Upper Egypt must be in Arabic.

**Carriages,** generally good, and with two horses, abound at Cairo. The principal stand is to the right of the entrance to the Muski, and there are others in the Ezbekiyeh, near the Hôtel d'Orient, and in the Place 'Abidin, near the offices of the minister of finance. The new tariff of 1876 is never strictly obeyed. For a short drive the usual fare is 1½-2 fr.; for 1½-2 hr. 2-3 fr.; for a whole day 20 fr., or for the better carriages 25 fr. — The following are the fares for the principal drives and excursions in a carriage and pair:

</table>
When, however, a drive of any length is contemplated, the traveller had better enquire of the landlord or manager of his hotel as to the proper fare. On Sundays and holidays the fares rise considerably, and it is then often difficult to get a good vehicle. The sâis, or boy who runs before the carriage to clear the way in the crowded streets, is a very useful attendant (p. 245). His services are included in the carriage-fare, but he expects a small additional fee.

**Railway Stations** (comp. p. 11). The station for Alexandria (R. 2), Zakázik, Isma'âliyeh, and Suez (R. 5), and for the whole of the Delta, lies beyond the Isma'âliyeh Canal (Pl. A. 5), ½ M. from the end of the Muski. The station for Bedrashîn (Sakkâra), the Fayûm, and the Nile railway as far as Siût (p. 337), and also for the branch-line of the Alexandria and Cairo railway (p. 223), diverging at Tell el-Barûd (opened in 1875), is at Bûlâk ed-Dakrûr, 1½ M. from the Muski. Another station is to be erected at the S. end of the town for the line now being constructed to Turra and Helînân (p. 330).

**Donkeys** (comp. p. 11) afford the best and most rapid mode of locomotion in the narrow and crowded streets of Cairo, and they are to be met with, day and night, in every part of the town. The attendants often thrust them unceremoniously on the traveller's notice by placing them directly in his path. These animals are to be found in great numbers at all the most frequented points, and if one is wanted in the middle of the night the word 'hammâr' (p. 11) shouted out immediately attracts a large assortment of them. The donkey-boys of Cairo have all the savoir faire of denizens of a large city, and they often possess a considerable fund of humour, which they show most readily when well paid. They delight in excursions into the country (to Sakkâra, for instance), which afford them a 'fantasiya', or special treat; and the European will be astonished at the smallness of their requirements and those of their beasts. The donkeys are particularly serviceable in the narrow streets of the Arabian quarter, which afford shade and coolness, but are not accessible to carriages. For a short ride in the town the usual charge is 1-2 piastres tariff (25-50 c.); for 1 hr., 1 fr.; for a forenoon in the town, 2½ fr.; for excursions 4-6 fr. per day (ladies' saddle 1 fr. extra), and a bakhshish of ½-3 fr. to the boy, unless he has been uncivil. When a donkey is hired to carry baggage, its attendant should be required to follow the same route as the travellers themselves, and always to remain in sight. Persons making a prolonged stay, as soon as they have found a good donkey with proper gear and a satisfactory attendant, had better secure its future services by the payment of an extra bakhshish. Care should be taken to choose a donkey with sound fore-legs.

**Commissionnaires** (comp. p. 13). The traveller who is pressed for time, and wishes to see as much as possible, cannot well dispense with a cicerone. The best guides (5-8 fr. per day) are to be had at the hotels. They often try to induce their employers to engage them for distant tours, such as that to Mt. Sinai, or the voyage up the Nile, but for such expeditions they are totally unfitted. As a rule, purchases should never be made in their presence. If, however, the traveller knows a few words of Arabic, and is not in a hurry, he will soon find his way through every part of the city and the environs with the aid of his donkey-boy alone.

**Dragomans** (comp. pp. 13, 203). Information as to trustworthy dragomans may be obtained at the traveller's consulate, at the hotels, at Kauffmann's, the bookseller, or at Zigada's, in the Muski. In the second volume of the Handbook the Editor will also mention the names of several who are recommended.

**Theatres.** _Italian Opera_ (Pl. 75), where a good company generally performs. Aïda, an opera composed for the Khâdiv by Verdi, is frequently given here in good style. Pit 10 fr. The boxes occupied by the harem of the Khâdiv are furnished with gratings to exclude the gaze of the curious. — _French Comedy_ (Pl. 98), near the Opera; pit 5 fr. — Both these theatres are supported by subsidies granted by the Khâdiv. — The Circus and Hippodrome (Pl. 14) have been closed for some years. — _Summer Theatre_ in the Ezbekîyeh Gardens, see p. 256.
Physicians. Dr. Reit, an experienced medical adviser in cases of pulmonary affections; Dr. Sachs, a good operator; Dr. Hess, a Swiss; Dr. Grant, English; Dr. Rothmann, for female complaints; Dr. Misse; Dr. Bull, a Dane; Dr. Ducorogna, a Greek, who has studied in Paris. — Oculists: Dr. Tachau, a German; Dr. Dutrieux, a Belgian. — Dentists: Mr. Broadway and Mr. Waller, both English. — The addresses may be obtained at the hotels.

Chemists. Sommer (a German), in the Ezbeekiyeh and the Muski (English and homoeopathic prescriptions made up); Ducrot (a Frenchman), in the Muski; Nardi (an Italian), also in the Muski; Perrot, in the Ezbeekiyeh.

Churches. English Church (Pl. 21), in the Isma'iliya quarter. — American Service in a house in the Coptic quarter. — Protestant Church (Pl. 20), in the Isma'iliya quarter; German service in the morning, French in the afternoon. — Roman Catholic Church (Pl. 27), in a street off the Muski, opposite the street in which the Hôtel du Nil is situated. — Orthodox Greek Church (Pl. 28), in the Hamzawi (p. 251). — Coptic Catholic Church (Pl. 24), at the back of the Roman Catholic Church; Coptic Jacobite Church (Pl. 29), in a side street between the Boulevard Clot Bey and the Ezbeekiyeh. These two sects have, in all, 32 churches at Cairo. — The Jews here are of two sects, the Talmudists and the Karaites, the former being by far the more numerous. They possess 13 synagogues, most of which are situated in the Jewish quarter (Derb el-Yahudî; Pl. 2, 3). The religious affairs of both sects are presided over by a chief rabbi.

Schools. The new School of the American Mission (Pl. 32), conducted by Messrs Lansing and Watson, whose sphere of operations is chiefly among the Copts, adjoins the English Consulate in the Ezbeekiyeh. — The Anglican Mission School is presided over by Miss Whateley. — The German School, managed by the Rev. Dr. Troutteller, is largely patronised by all nationalities and sects. — Besides these, there is a European Girls' School (Miss. Castel and Fréd. Petersen), an Ecole Gratuite, an Ecole des Sœurs du Sacré Cœur, and an Ecole de Frères. — Permission to visit the Egyptian schools may be obtained at the office of the general inspector, in the Derb el-Gamâmîz (p. 267).

Hospitals. The large Kaşr el-'Ain (Pl. 16), a hospital with a school of medicine, lies on the Nile, on the route to Old Cairo (p. 309). The N. wing contains the European Hospital (physician, Dr. Martini), admirably fitted up, and under the supervision of the consuls. The patients are attended by nine sisters of mercy. The charges are 12 fr., 6 fr., or 3 fr. per day, according to the accommodation. A small botanic garden is attached to the hospital. Visitors are admitted on Sundays, Tuesdays, and Thursdays.

Teachers of Arabic. James Samoud, well known as a writer of Arabic comedies; Glovard, Derb el-Genineh; Sheikh Husayn el-Marsayî; Kordî Efendi. — Dr. Spitta, the director of the Viceroyal Library in the Derb el-Gamâmîz (p. 267), also kindly affords information to travellers.

Clubs. The Geographical Society (Pl. 13), founded by Dr. Schréinmacher, the celebrated African traveller, possesses an extensive library and a reading-room, which are open to visitors at certain hours. — The Club Khadîrî (Pl. 7), in the Duke of Sutherland’s house in the Ezbeekiyeh, is fitted up in the English style, and is patronised by some of the higher government officials among other members. Strangers are not admitted without difficulty.

Baths (comp. p. 21). European Baths at the hotels, and in the Rosetti Garten (kept by a native of Trieste). The best of the numerous Arabian Baths are that of Tombaly, near the Bab esh-Sha'riyeh (Pl. B, 3), and one at Bulâk.

Booksellers. Kaufmann, in the Muski, an old-established firm. Monferrato (formerly Robertson), adjoining Shepheard's Hotel (Pl. 6), with a large assortment of English Oriental literature. Ebener, with a collection of pictures and a reading-room, opposite the Hôtel d'Orient. Photographs (see below) are also sold at these three shops. — Writing and drawing materials, visiting-cards, etc., are sold by Zellikofer and Granier, both in the Muski.
Hairdressers.

Photographs. Schoefft, 'Abbâsiyeh Street (Place Faghalla), with a good background for groups; also a fine collection of groups of natives, and a few desert scenes, some of which are very striking (various prices; a collection of 25, of small size, is sold for 25 fr.). Helius, Rue du Tribunal, with a handsome studio; Cauvetria, Rosettii Garden; Béchart, in the Ezbekeiyeh Garden, and others. Among the numerous photographs of Egyptian landscapes and temples the best are those by Sébah of Constantinople, which may be purchased at his dépôt, adjoining the French consulate in the Ezbekeiyeh, or at Kauffmann's. Hr. E. Brugsch, the keeper of the Bâlâk Museum (p. 293), has caused a number of the objects in the museum to be photographed. This collection, which costs 25 fr., may be purchased at the museum, or at Kauffmann's, but is not sold by the photographers.

European Wares. All the ordinary wants of the traveller may now be supplied at Cairo, but he is particularly cautioned against ordering anything to be made, as the execution of the order is almost sure to be unsatisfactory. Clothing and many other articles, chiefly for the use of travellers, are sold at the large shop of Paschal & Co., in the Ezbekeiyeh, by Costa and Robert, both in the Muski, and at the Bazar Universel, opposite the Egyptian post-office (p. 239). Ladies' requirements are sold by Cécile, Camille, and others in the Ezbekeiyeh.

Goods Agents. Those who make purchases in Egypt to any considerable extent are recommended to send them home through the medium of a goods-agent (such as C. Hasselbach, representative of C. Maury & Co. of Alexandria), in order to avoid custom-house examinations, porterage, and various other items of expense and annoyance.

Hairdressers abound in and around the Ezbekeiyeh. Their charges are usually exorbitant, 1/4 to 2 1/2 fr. being charged for hair-cutting, and 1 fr. for shaving. Most of the Arabian Barbers have their shops open to the street. Their principal occupation consists in shaving the heads of their customers in Oriental fashion, an art in which they are very expert. When the operation is over, they hold a looking-glass before the customer, saying — wa'timân, (may it be pleasant to you), to which the usual reply is — 'Allâh yîwîm 'aîk' (God make it pleasant to thee).

Wine, Preserves, etc. are sold by Bourdon, near the Hôtel Auric (Pl. d.), and by Niccolo Zigada, at the corner of the Muski.

Tobacco (comp. p. 27). Syrian tobacco (Korâni and Gebel) is sold at a shop in the Gâma el-Benât street (p. 269), near the Muski, but had better be purchased in small quantities only. Turkish tobacco (Stambûli) is sold by Caravopoilo, in the Muski, on the left side, not far from the entrance to the street, who also keeps a stock of other tobaccos and of cigars, and at many other shops. Cigars, generally of Dutch, Bremen, or Hamburg manufacture, are also sold at the hotels and at the dépôt 'A la Ville de Hambourg, belonging to Hr. Kauffmann, the bookseller, near the E. entrance to the Ezbekeiyeh Garden.
Arabian Bazaars, see pp. 23, 249. Near the end of the Muski is a shop kept by a Nubian, who sells various Egyptian and Nubian Articles, suitable for presents. Thus an ostrich-egg costs 3 fr. and upwards, a specimen of the faţţa, or ball-fish (p. 84) 3-5 fr., a Nubian lance 1 fr., bow with six arrows 12-15 fr., small saddle 12 fr., square saddle 20 fr., leopard skin 15-30 fr. (the skins, however, are insufficiently tanned, and almost entirely stripped of their hair). Unless the proprietor of this shop happens to be in want of money, it is difficult to obtain anything from him at a reasonable price, and he sometimes closes his shop entirely. — Sticks and whips of Hippopotamus Skin are sold by a Pole (who speaks a little Italian) in the street leading to the Hôta-1 du Nil (p. 229).

Arabian Woodwork is sold by "Parvis," an Italian, on the left side of a court near the entrance to the Muski. Visitors may inspect his workshop without making any purchase.

The dates of the Religious Festivals of the Mohammedans, of which Cairo is the principal scene, cannot easily be given according to the European computation of time, owing to the variable character of the Arabian lunar year. The calendar given on p. 154 will, however, afford some assistance.

The first month of the Arabian year is the Moharram, the first ten days of which (câshır), and particularly the 10th (yôm 'ashūra), are considered holy. On these days alms are distributed, and amulets purchased. Mothers, even of the upper classes, carry their children on their shoulders, or cause them to be carried, through the streets, and sew into the children's caps the copper-coins presented to them by passers-by. On the 10th Moharram, the highly revered 'Ashūra day, on which Adam and Eve are said first to have met after their expulsion from Paradise, on which Noah is said to have left the ark, and on which Husân, the grandson of the prophet, fell as a martyr to his religion at the battle of Kerbeia, the Gâma' Hasanân (p. 290) is visited by a vast concourse of religious devotees, whose riotous proceedings ladies had better not attempt to witness. Towards evening a great zîkr of whirling dervishes takes place here (p. 237).

At the end of Safar, the second month, or at the beginning of Rabî' el-awwel, the third, the Mecca Caravan (p. 147) returns home, its approach being announced by outriders. Some of the faithful who go to meet the procession proceed as far as three days' journey, but most of them await its arrival at the Bîrket el-Haggi (p. 321), or pilgrims' lake. Detached groups of pilgrims occasionally return before the rest of the cavalcade, and their arrival is always signalised by the blowing of trumpets and beating of drums. A pyramidal wooden erection, called the Mahmal, hung with beautifully embroidered stuffs, and carried by a camel, accompanies the procession as a symbol of royalty. The interior of the Mahmal is empty, and to the outside of it are attached two copies of the Korân. The procession usually enters the city by the Bab en-Nasr (p. 278). In 1½ hrs. it reaches the Rumâleib (p. 260), the large open space in front of the citadel, from which last twelve cannon-shots are fired as a salute. The cortège then sweeps round the Rumâleib, and finally enters the citadel by the Bab el-Wezîr (Pl. E. 2). The departure of the pilgrims (p. 236) is attended with similar ceremonies.

The great festival of the Mûlid en-Nerî, the birthday of the prophet, is celebrated at the beginning of Rabî' el-awwel, the third month. The preparations for it begin on the second day of the month, and the most important ceremonies take place on the evening of the eleventh. The city, and particularly the scene of the festival, is then illuminated by means of lamps hung on wooden stands made for the purpose. Processions of dervishes (p. 148) parade the streets with flags by day, and with lamps hoisted on poles by night. On this evening the sellers of sweetmeats frequently exclaim — 'A grain of salt for the eye of him who will not bless the prophet!' The Dîşeh, or ceremony of riding over the dervishes, also takes place on the eleventh of this month. Some fifty dervishes or more lie close together on the ground, and allow the sheikh of the Sa'adiyeh dervishes on horseback to ride over them. Accidents rarely happen, although the horse treads on every one of the pro-
Religious Festivals.

CAIRO.

3. Route. 235

stripe figures. During this ceremony the spectators shout incessantly — 'Allah-lá-lá-lá-lá-lá-lá-há!' At night a great zíkír is performed by the dervishes (p. 237). On this festival, as on all the other 'mólíds', the jugglers, buffoons, and other ministers of amusement, ply their calling with great success (comp p. 148).

In the fourth month, that of Rabí' el-Ahír (el-láhí), occurs the peculiarly solemn festival of the birthday or Mólíd of Husén, the prophet's grandson, the principal scene of which is the mosque of Hasanén, where the head of Husén is said to be interred. This festival lasts fifteen days and fourteen nights, the most important day being always a Tuesday (yóm el-télát). On this occasion the 'Iláwíníyeh dervishes (p. 148) sometimes go through their hideous performance of chewing and swallowing burning charcoal and broken glass, and their wild dances. On the chief days of this festival, and on their eyes, great crowds congregate in and around the mosque, and especially by the tomb of Súllám es-Sáleéh in the bazaar of the Nahábásín (p. 254). On these occasions the Korán is read aloud to the people, the streets adjoining the mosque are illuminated, the shops are kept open, and story-tellers, jugglers, and others of the same class attract numerous patrons.

In the middle of Regeb, the seventh month, is the Mólíd of Sitteh Zénáb ('Our Lady Zénáb'), the grand-daughter of the prophet. The festival, which lasts fourteen days, the most important being a Tuesday, is celebrated at the mosque of the Sitteh Zénáb (p. 266), where she is said to be buried.

On the 27th of this month is the Lélet el-Mírág, or night of the ascension of the prophet, the celebration of which takes place outside the Báb el-'Adawi, in the N. suburb of Cairo.

On the first, or sometimes on the second, Wednesday of Sha'bán, the eighth month, the Mólíd of Imám Sháféí is commemorated, the centre of attraction being the burial-place of El-Karáfeh (p. 313). This festival is numerously attended, as most of the Cairenes belong to the sect of Imám Sháféí (p. 147). The ceremonies, including that of the 'Dósh', are the same as those at the other mólíds.

The month of Ramađán (p. 146), the ninth, is the month of fasting, which begins as soon as a Muslim declares that he has seen the new moon. The fast is strictly observed during the day, but the faithful indemnify themselves by eating, drinking, and smoking throughout the greater part of the night. At dusk the streets begin to be thronged, the story-tellers at the cafés attract large audiences, and many devotees assemble at the mosques. The eve of the 27th of the month is considered peculiarly holy. It is called the Lélet el-Kadr, or 'night of value', owing to the tradition that the Korán was sent down to Mohammed on this night. During this sacred night the angels descend to mortals with blessings, and the portals of heaven stand open, afford certain admission to the prayers of the devout. On this night the traveller should visit the Hasanén mosque, or, especially if accompanied by ladies, that of Mohammed 'Ali (p. 260) in the citadel, in order to see the great zíkír of the whirling and howling dervishes, of whom some thirty or forty take part in the performances. The scene is of an exciting, but somewhat painful character, particularly if any of the performers become 'melbás', a condition resembling that of epileptic convulsion (p. 150).

The month Ramađán is succeeded by that of Shawwáll, on the first three days of which the festival of rejoicing is celebrated, called by the Arabs El-'Id es-Sughayyir (the lesser feast), but better known by its Turkish name of Betrám. The object of the festival is to give expression to the general rejoicing at the termination of the fast; and, as at our Christmas, parents give presents to their children, and masters to their servants at this festive season. Friends embrace each other on meeting, and visits of ceremony are exchanged. During this festival the Khedive also receives his principal officials, ambassadors, and other dignitaries.

At this season the traveller may also pay a visit to the cemetery by the Báb en-NAyér, or to one of the others, where numerous Cairenes assemble.
to place palm branches or basilicum (rihdn) on the graves of their deceased relatives, and to distribute dates, bread, and other gifts among the poor.

A few days after the Beirâm, the pieces of the Kisceh, or covering manufactured at Constantinople, at the cost of the Sultan, for the Ka'ba (the most sacred sanctuary in the interior of the temple at Mecca), whether it is annually carried by the pilgrims, are conveyed in procession to the citadel, where they are sewn together and lined. The ceremonies which take place on this occasion are repeated on a grander scale towards the end of the month of Shawwal (generally the 23rd), when there is a gay procession of the escort which accompanies the pilgrimage caravan to Mecca, and which takes charge of the Mahmal (p. 234). On this occasion every true believer in the prophet, if he possibly can, spends the whole day in the streets. The women don their smartest attire. Many of the harem windows are opened, and the veiled inmates gaze into the streets. The chief scene of the ceremonies is the Itumeleh (Pl. F, 2), at the foot of the citadel, where a sumptuous tent of red velvet and gold is pitched for the reception of the dignitaries. The procession is headed with soldiers, who are followed by camels adorned with gaily coloured trappings, and bearing on their humps bunches of palm-branches with oranges attached. Each section of the cavalcade is preceded by an Arab band of music, the largest section being that which accompanies the Takht Rawiyya, or litter of the Emir el-Hagg, and the next in order that of the Delil el-Hagg, or leader of the pilgrims, with his attendants. Next follow various detachments of pilgrims and dervishes with banners, and lastly the Mahmal (see above). A picturesque appearance is presented by the camp of the assembled pilgrims (Haggii) at the Birket el-Hagg (p. 321), whence the caravan finally starts for Mecca.

On the 10th of Dhiel-higah, the twelfth month, begins the great festival of El-'Id es-Kebir, which resembles the lesser feast (el-'id es-sugh-hayyir) already mentioned. On this day, if on no other throughout the year, every faithful Muslim eats a piece of meat in memory of the sacrifice of Abraham, and the poor are presented with meat for this purpose by the rich.

The Muslims also celebrate the Christian Easter Week, although in a different manner, and of course for different reasons from the Christians. On Palm Sunday (bad el-khus) the women bind palm twigs round their heads and fingers. On the following day (Monday) it is customary to eat fokéis (cucumbers) with cummin. On the Tuesday the diet of the faithful consists of a kind of cheese-broth with onions, and the day is therefore called yim el-mish 'al-basa'il ('cheese-soup-and-onion-day'). Wednesday is called arbal Eyb, or 'Job's Wednesday'. On this day the ghubara herb is said to have addressed to Job the words — 'Wash thyself with my juice, and thou shalt recover'. He did so, and recovered, and to this day the whole of the Egyptian Muslims wash themselves with ghargura Eyb in memory of the miracle. Maundy Thursday is the Pea-Thursday of the Muslims (khmis el-bisilta). Good Friday is called yum'a el-mafrikào, or 'day of the butter-cakes'. Saturday is the sebt en-mor or 'sabbath of light' (so named from the sacred fire which on this day bursts forth from the Holy Sepulchre at Jerusalem). On this day it is customary for the Muslims to use a kind of eye-powder for the purpose of strengthening their eyes, to get themselves bled, and to eat coloured Easter eggs. On Easter Sunday (id en-nusara) the Mohammedans usually visit their Christian friends, and these visits are returned during the feast of Beirâm.

With the Rising of the Nile there are also connected several interesting festivals, closely resembling those of the ancient period of the Pharaohs, which even the Christian epoch was unable entirely to obliterate. As, however, they take place in summer, few travellers will have an opportunity of witnessing them. As these festivals have reference to a regularly recurring phenomenon of nature, their dates are necessarily fixed in accordance with the Coptic solar reckoning of time, instead of the variable Arabian lunar year. — The night of the 11th of the Coptic month Ba'īna (17th June) is called Lēlet en-Na'īta, i.e. the 'night
of the drop', as it is believed that a drop from heaven (or a tear of Isis, according to the ancient Egyptian myth) falls into the Nile on this night and causes its rise. The astrologers profess to calculate precisely the hour of the fall of the sacred drop. The Cairenes spend this night on the banks of the Nile, either in the open air, or in the houses of friends near the river, and practise all kinds of superstitious customs. One of these consists in the placing of a piece of dough by each member of a family on the roof of the house; if the dough rises, happiness is in store for the person who placed it there, while its failure to rise is regarded as a bad omen. On 21st June the river begins slowly to rise (comp. p. 57). On the 2th of the Coptic month Ba'ûna (3rd July) the Munâdi en-Nil, or Nile-crier, is frequently heard in the morning, announcing to the citizens the number of inches that the river has risen. The munâdi is accompanied by a boy, with whom he enters on a long religious dialogue by way of preface to his statements, which, however, are generally inaccurate. The next important event is the Cutting of the Dam (yûm gebr el-bahr, or yûm wefa el-bahr), which takes place between the 1st and the 14th of the Coptic month of Misra (i.e. between 6th and 19th August), when the principal ceremonies are performed on and near the island of Râqa (p. 304). The Nile-crier, attended by boys carrying flags, announces the Wefa en-Nil (the plenitude, or superfluity of the Nile), or period when the water has reached its normal height of sixteen ells (p. 58). The cutting through of the dam takes place amid general rejoicings and noisy festivities. It appears from inscriptions on columns found on the Nile near the Gebel Selseleh, that similar festivals connected with the rise of the river were celebrated as early as the 14th cent. before Christ.

Dervishes (comp. p. 148). The 'Dancing Dervishes' perform their 'zikr' in the Gâm'a el-Akbar (p. 263) every Friday from 2 to 3 p.m.; visitors walk in and take their seats outside the space enclosed by boards, no permission being necessary (bakhshish of 1-2 piastres on leaving). A visit may be paid in the same way to the performances of the 'Howling Dervishes', whose zikr takes place in the Gâm'a Kaşr el'Ain (p. 303), also on Fridays from 2 to 3 p.m. Both these curious scenes may be witnessed on the same day if the traveller goes early to one of them, leaves after 20-25 min., and then visits the other, thus seeing quite enough of each.

Sights and Disposition of Time.

The duration of the traveller's stay at Cairo depends of course on his own inclination and the objects he has in view. He may wish to devote his attention chiefly to the mosques, or to the street-scenes; he may endeavour to find his way through the intricacies of the city alone, or with the assistance of a donkey-boy, or he may prefer to hire a carriage and a commissionnaire. By carefully preparing a plan beforehand, and starting early every morning, the traveller may succeed in visiting all the chief objects of interest in six days, but it need hardly be said that a satisfactory insight into Oriental life can only be obtained by prolonging one's stay to several weeks.

Principal attractions when time is limited: — (a) In the Town. Street-scenes (p. 242); Ezbekiyeh Garden (p. 256); Citadel (p. 260), either about sunset, or before 11 a.m.; Tombs of the Khalifs (p. 279) and Mamelukes (p. 313); the mosques of Sultan Hasan (p. 258), 'Amr (p. 309) at Old Cairo, Ibn Tulún (p. 263), Kalaûn (p. 273), Barûkûiyeh (p. 276), and El-Azhar (p. 285), the last being shown only by permission obtained through the traveller's
consulate; Bāb en-Naṣr (p. 278); Museum at Būlāk (p. 293). —
(b) In the Environs (by carriage). Pyramids of Gizeh (p. 327);
tombs of Apis and the Maṣṭaba of Saḵkāra (p. 357); Heliopolis
(p. 318); Shubra Avenue (p. 316).

The above outline will serve as a guide to those who are pressed
for time; a more leisurely visit may be arranged as follows: —

First Day. Forenoon (by carriage, or on donkey-back): *Citadel
(p. 260), with *View of Cairo, and visit to the Gām’a Moḥammed
‘Ali; Gām’a Sultān Hasan (p. 258); Gām’a ibn Tulūn (p. 263);
Bāb ez-Zuwēleh (p. 270); Gām’a el-Muaiyad (p. 270); street and
road to Kubbah, Maṭāriyeh, the Virgin’s Tree, and Heliopolis (p. 318).

Second Day. Forenoon (on donkey-back): Bazaars (to which a
whole day may also be devoted on foot); Muristān Kalaūn (p. 273);
tomb-mosque of the sultan Moḥammed en-Naṣīr ibn Kalaūn
(p. 275); Gām’a Barkūkiyeh (p. 276); Gām’a el-Hākim (p. 277);
Bāb en-Naṣr (p. 278); Tombs of the Khalifs (p. 279). — After-
noon (by carriage): Nile Bridge (p. 314; closed from 1 to 2.30 p. m.);
garden and palace of Gezīreh (p. 315; admission by tickets
procured at the traveller’s consulate).

Third Day. Forenoon: Museum of Būlāk (p. 293). — After-
noon (on donkey-back, starting early in winter): Moses’ Spring
and the smaller Petrified Forest (p. 324), returning by the Mo-
kaṭṭam (view of Cairo by sunset), and past the Citadel (p. 226).

Fourth Day. Forenoon: Mosques of El-Azhar (p. 285) and
Hasanēn (p. 290), most conveniently visited in succession, as both
are shown by special permission only, and with the escort of a
kawwās. The same remark applies to the Gām’a Sitteh Zénab
(p. 266), a visit to which, however, had perhaps better be omitted,
as its situation is somewhat remote. The mosque of El-Azhar
should not be visited on a Friday, as there is no teaching on that
day, and the traveller would thus miss one of the chief attractions.
— Afternoon (by carriage): Old Cairo (p. 303) and the island of
Rūja (p. 304); Babylon with the early Christian churches (p. 306);
the Gām’a ‘Amr (p. 309); also, if time permit, the Imām Shāfe‘i,
Hōsh el-Bāsha (p. 313), and the Tombs of the Mamelukes, after
which we return by the quarter of the Tulunides (p. 263).

Fifth Day (by carriage): Pyramids of Gizeh (p. 237; which
may be seen in the course of a forenoon, if necessary); visit Shubra,
if time remains, in the afternoon (gardens and kiosque shown by
permission from the traveller’s consulate).

Sixth Day (by railway and on donkey-back): Memphis and
Saḵkāra (p. 257).

Seventh Day (by railway): Baths of Heluān (p. 390), and
(on donkey-back) quarries of Ťurra and Maṣāra (p. 391).

Eighth Day (by railway): Barrage du Nil (p. 392).

The above itinerary will on the whole be found the most con-
venient, although some riders will perhaps consider several of the days somewhat too fatiguing.

The following places deserve repeated visits: — the Museum at Bûlâk; the Citadel, or the windmill-hill at the E. end of the Rue Neuve (prolongation of the Muski), particularly in the afternoon towards sunset, for the sake of the view of the Tombs of the Khalifs and the hills of Mokaṭṭam; the Tombs of the Khalifs; the Ezbekiyeh Garden; the Shubra Avenue, on a Friday; the Bazaars (and street-traffic), on a Thursday.

Special permission is necessary for the following places:

(a) From the police (Zabtiyeh, p. 242), through the consulate, for (1) the Gâmâ el-Azhar (p. 285), for (2) the Gâmâ Hasanîn (p. 290), for (3) the Gâmâ Sitteh Zenâb (p. 266), and for (4) the Gâmâ Shekh Şâleh (Pl. 62; modern, built by the Khedive, and not worth visiting). Fridays and festivals are unsuitable days for a visit to these mosques. The kâwâs of the consulate who escorts the visitors usually receives a fee of 5 fr.

(b) From the minister of war, through the consulate, for (1) the Gâmâ Şalaheddîn Yûsuf (p. 262), for (2) the Gâmâ Sulêmân Pasha (p. 262), and for (3) the fortifications at the Barrage du Sélemân (p. 303).

(c) From the master of the ceremonies, through the consulate, for the gardens and château of Gezirî (p. 314).

(d) From the consulate direct for the gardens of Shubra (p. 317).

(e) An introduction from the consulate is also requisite in order to procure admission to the house of the Shekh es-Saadî and that of the Shekh Muftî (to which last, however, a bakhshish sometimes forms a sufficient passport).

History of Cairo. When Egypt was conquered by Cambyses (B.C. 525), the Babylonians are said to have founded New Babylon on the site now occupied by Old Cairo, and during the Roman period that city became the headquarters of one of the three legions stationed in Egypt. Remains of the Roman castrum are still preserved here. In A.D. 638 New Babylon was captured by 'Amr ibn el-'Aṣî, the general of Khalif 'Omar; and when he started on his victorious progress towards Alexandria, he commanded the tent (fostâf) he had occupied during the siege to be taken down. As it was discovered, however, that a pigeon had built her nest upon it, 'Amr ordered the tent to be let standing until the young birds should take wing. After the capture of Alexandria, 'Amr requested the Khalif to allow him to take up his residence there, but 'Omar refused to accord permission, as Alexandria appeared to him to be rife with elements of discord, and, moreover, too far distant from the centre of the conquered country to be suitable for its capital. 'Amr accordingly returned to his tent, around which his adherents encamped. A new city thus gradually sprang up, and the name of Fostâf continued to be applied to it in memory of its origin. 'Amr afterwards erected a mosque (p. 309), and he is also said to have begun the construction of the canal (Khalîq), which, leaving the Nile opposite the island of Rûdî, intersects the town, and is supposed to have been intended to connect the Nile with the Red Sea. The city was considerably extended in the reign of the splendour-loving Ahmed ibn Tulîn, the founder of the dynasty of the Tulunides, who erected the new quarter of El-
KHATIYA, to the S.W. of the present citadel. Among the buildings ascribed to him is the mosque (p. 263) which still bears his name. The town of Fostat was favoured by his successors also, and particularly by his son Khumarîyâch, who erected a palace here; and at length, under the Fâtimites Khalifs (p. 102), the modern city of Cairo was built adjacent to the old. The new city was founded by Jâhâr, the general of the Fâtimites Khalif Mu'izz, to the N. of El-Khatiya, as a residence for the khalif, and as barracks for the soldiers commanded by him. At the hour when the foundations of the walls was laid, the planet Mars, which the Arabs call Kâhir, or ‘the victorious’, crossed the meridian of the new city; and Mu'izz accordingly named the place Maṣr el-Kâhirâ, or Kâhirâ. Maṣr, the name of Egypt or of its capital, seems also already to have been applied to Fostat, which, to distinguish it from Maṣr el-Kâhirâ, was now called Maṣr el-Atika (the present Old Cairo). The new town extended rapidly. Bricks were easily made of the Nile mud, the Mokattâm hills afforded excellent stone, while the gigantic ruins of the ancient Memphis on the opposite bank of the river were also used as a quarry, as the foundations of the houses still show. In 973 the new city of Cairo was constituted the capital of Egypt, and for many centuries after that period the destinies of the country were determined here. In 1106 the citadel which still commands the city was erected by Šâlaheddin (Saladin) on the slope of the Mokattâm hills; and the same sultan caused the whole town, together with the citadel itself, to be enclosed by a wall, 29,000 ells in length. Under his luxurious and extravagant successors Cairo was greatly extended and magnificently embellished. According to the Arabian historians, the most enterprising of these sultans was Mohammed en-Nâṣir (d. 1311), who constructed numerous handsome edifices both within and without the citadel, as well as canals and roads, thus converting the ruins and sand-hills in the environs into beautiful suburbs, with palaces and pleasure-grounds. At that period, however, Cairo was fearfully devastated by the plague, as it had been on two former occasions (in 1067 and 1295), and was also several times subsequently; and, according to Makrizi, no fewer than 900,000 (?) persons died in Old and New Cairo between November, 1348, and January, 1349. The town suffered severely in other ways also, and indeed its whole history, so far as recorded, like that of the sultans and the Mamelukes themselves, seems to have presented an almost continuous succession of revolutions, rapine, and bloodshed. As most of the Mameluke sultans who resided in the citadel died a violent death, so the reign of almost every new potentate began with bitter and sanguinary contests among the emirs for the office of vizier, while but few reigns were undisturbed by insurrections in the capital. During the third regime of Mohammed en-Nâṣir, who had been twice deposed, and as often recovered his throne, a persecution of the Christians took place at Cairo. The Christians, of whom great numbers resided in Cairo and throughout the whole of Egypt, were accused by the people of incendiaryism. Their churches were accordingly closed or demolished, while they themselves were so ill-treated and oppressed, especially in the reign of Sultan Âli (1354-58), that many of them are said to have embraced Islamism. In 1366 and 1367, in the reign of Sultan Sha'bân, sanguinary conflicts took place in the streets of Cairo between hostile parties of Mamelukes, and in 1377 Sha'bân himself was tortured and strangled in the citadel. Even greater disorders attended the dethronement of Sultan Barkûk (1380), when the wildest anarchy prevailed at Cairo, the convicts escaped from their prisons, and in concert with the populace plundered the houses of the emirs and the public magazines. The following year a rebellion again broke out among the Mamelukes, who stormed the citadel, in consequence of which Barkûk regained possession of the throne, and celebrated his triumphal entry into Cairo. Scarcely, however, had he closed his eyes and been succeeded by Parag, when the Mamelukes again revolted, and renowned conflicts took place for possession of the citadel, during which the city was partly plundered. Similar scenes were repeated on almost every change of government. The turbulence of the Mamelukes, who were always treated with too much consideration by
the sultans, now became more and more unbearable; they robbed the people in the markets, assaulted citizens in the public streets, and grossly insulted respectable women. Hitherto the outrages committed by these troops had been chiefly connected with some political object, but from the middle of the 15th century downwards they were generally perpetrated with a view to plunder. Thus in 1458, when fires repeatedly broke out at Cairo and Bulāk, it was generally believed that the Mamelukes had caused them in order to obtain opportunities for robbery. In the course of the following year they forcibly entered the mosque of ‘Amr at Old Cairo on a Friday, and robbed the numerous women who were then attending divine service. In the sultanate of Khoshkādem (1461-67) the Mamelukes plundered the bazaars of Old Cairo, and in the reign of Mohammed (1496-98), son of Kāit-Bey, they roved through the streets at night, maltreated the police, and plundered various quarters of the city. In 1496, when rival emirs were almost daily fighting in the streets of Cairo, the Mamelukes of course availed themselves of the opportunity for plunder.

On 26th Jan., 1517, the Osman Sultan Selim I., after having gained a victory in the neighbourhood of Cairo, entered the city. Tümān Bey, the last Mameluke sultan, again gained possession of the ill-guarded town on 28th Jan., but was obliged to evacuate it on the following day, and was taken prisoner and executed (p. 270). Before Selim returned to Constantinople, he caused the finest marble columns which adorned the palace in the citadel to be removed to his own capital. Thenceforward Cairo became a mere provincial capital, and its history is almost an entire blank down to the period of the French expedition. On 22nd July, 1798, after the Battle of the Pyramids, Cairo was occupied by Bonaparte, who established his headquarters here for several months, and who quelled with sanguinary severity an insurrection which broke out among the populace on 23rd-25th September. At the beginning of the year 1799 Bonaparte started from Cairo on his Syrian expedition, and on his return to France, Kleber was left as commander-in-chief of the French troops at Cairo, where he was assassinated on 14th June, 1800. In 1801 the French garrison under Belliard, being hard pressed by the grand vizier, was compelled to capitulate. On 3rd August, 1805, Mohammed ‘Alī, as the recognised pasha of Egypt, took possession of the citadel, which for the last time witnessed a bloody scene on 1st March, 1811, when the Mameluke Beys were massacred by Mohammed’s order. Since that period nothing has occurred to interrupt the peaceful development of the city.

Cairo, Kahira, or Masr el-Kahira ('Masr the victorious', Masr being the ancient Semitic name for Egypt; p. 30), or simply Masr or Misr, is situated in 30° 6' N. latitude, and 31° 26' E. longitude, on the right bank of the Nile, about 9 M. to the S. of the so-called 'cow's belly', the point where the stream divides into the Rosetta and Damietta arms, and has not inaptly been styled 'the most beautiful diamond on the handle of the green fan of the Delta'. On the E. side of the city, which covers an area of about 11 square miles, rise the barren, reddish cliffs of the Moňatam Hills (p. 321), about 650 ft. in height, which form the commencement of the eastern desert. The city has extended so much towards the west of late years that it now reaches the bank of the river and has entirely absorbed Bulāk (p. 291), which was formerly its harbour.

Cairo is the largest city in Africa, as well as in the Arabian regions, and is the second city in the Turkish empire. It is the residence of the Khedive, and of the ministers and principal au-

BAEDERKES EGYPT I. 16
thorities, and is presided over by a governor of its own. Owing to the secluded habits of the Mohammedan families, and in consequence of the fact that a large section of the lower classes of the community have no fixed abode, it is a very difficult matter to ascertain the number of the inhabitants with even approximate precision. Judging from the average annual number of births in Egypt and at Cairo, the population of the city may be estimated at 400,000 souls, although, according to the Guide Annuaire d'Egypte for 1872-73 the number is 349,883 only (including about 20,000 Europeans, of whom 7000 are Italians, 4200 Greeks, 4000 French, 1600 English, 1600 Austrians, and 1200 Germans). Natives of all the principal Oriental states are also to be found at Cairo.

The mass of the population consists of Egypto-Arabian townspeople (p. 48), Fellâh settlers (p. 38), Copts (p. 42), Turks (p. 52), and Jews (p. 53), the last of whom number 7000 souls. Besides the natives and the European residents, the traveller will frequently encounter negroes of various races, Northern Africans, Beduins, Syrians, Persians, Indians, and other Oriental settlers.

The Hospital mentioned at p. 332 is fitted up in the European style, and so likewise is the Military School (Ecoles Militaires; Pl. 30), with its four departments (staff, artillery, cavalry, and infantry), connected with which there is a Veterinary School conducted by Dr. Hamont. Cairo also possesses a Girls' School, maintained by government (founded through the exertions of Dr. Dor, a Swiss), and a Chemical-Pharmaceutical Laboratory, presided over by M. Gastinel, a French chemist, and possessing an excellent pharmaceutical collection. The medicines required for all the hospitals in the country are prepared in large quantities at the laboratory, and the yield of the twelve saltpetre manufactories of Egypt (about a thousand tons per annum) is tested here.

The Police Force (Zabîlyeh, Pl. 87), an admirably organised institution, consists of about 300 officials, including a number of Europeans (chiefly Italians), who are very obliging to strangers, and who preside so effectually over the safety of the public that the traveller may explore the remotest and dirtiest purlieus of the city without the least apprehension of danger. If, however, he should have any cause for complaint, he should lay the matter before his consul (p. 6).

The **Street Scenes** presented by the city of the Khalifs afford an inexhaustible fund of amusement and delight, admirably illustrating the whole world of Oriental fiction, and producing an indelible impression on the uninitiated denizen of the West. What makes Cairo so romantic and novel is the contrasts of barbarous and civilised scenes and incidents it presents, which forcibly strike and interest even the most utterly blase European, and which recur in every department and phase of life in this Arabian capital of the desert, and indeed throughout all Egypt. Cairo may
be compared to a mosaic of the most fantastic and bizarre description, in which all nations, customs, and epochs are represented, — a living museum of all imaginable and unimaginable phases of existence, of refinement and degeneracy, of civilisation and barbarism, of knowledge and ignorance, of paganism, Christianity, and Mohammedanism. In the Boulevards of Paris and on London Bridge I saw but the shadow, and at Alexandria the prelude only, of the Babel of Cairo, to which the Roman or the Venetian carnival is tame and commonplace. These marvellous scenes cannot fail to strike every one, and particularly the uninitiated new-comer, most forcibly. In order to enjoy them thoroughly, one cannot help wishing for eyes behind, as well as before, and for the steady power of forcing one's way possessed by the camel of burden. (B. Golts.)

There is, however, no great difficulty in forcing one's way through the crowd in the Muski, although the chaotic, carnival-like scene which it presents can hardly be depicted in too bright colours.

Most of the streets in the old part of the town are still unpaved and inaccessible to carriages, and they are too often excessively dirty. The Khedive, however, is annually increasing the number of carriage-ways by the demolition of old streets and the erection of buildings in the modern style. The lanes separating the rows of houses in the Arabian quarter are so narrow that there is hardly room for two riders to pass, and the projecting balconies of the harems with their gratings often nearly meet. The new quarter on the W. side of the city possesses broad, shadeless streets, handsome avenues, and the beautiful Ezbekiyeh Garden (p. 256); but Oriental life seems to find this atmosphere uncongenial, and it must therefore be sought for in the old quarters, and particularly in the Muski, the chief business thoroughfare. The busy traffic in this street often presents an 'interminable, ravelled, and twisted string of men, women, and animals, of walkers, riders, and carriages of every description. Add to this the cracking of the drivers' whips, the jingling of money at the table of the changers established at every corner of the street, the rattling of the brazen vessels of the water-carriers, the moaning of the camels, braying of donkeys, and barking of dogs, and you have a perfect pandemonium'. Europeans, and even ladies, may ride with perfect safety through the midst of all this confusion, and they will often have opportunities of observing most picturesque and amusing scenes.

The denseness of the crowd sometimes seems to preclude the possibility of farther progress, but the hammâr, or donkey-boy, is pretty sure to elbow a passage without much difficulty.

'Having carefully learned the expressions ana 'aâiz humâr (I want a donkey) and bikam kirsh deb (how many piastres), I yielded to the temptation of plunging recklessly into the thick of Arabian life, its conversation, and its equestrianism. I therefore pronounced the mystic words with the satisfaction of a child which utters articulate expressions for the first time; and when I was instantly so perfectly understood by a score of donkey-boys that they all offered me their donkeys at once (though perhaps
they would have done so had I not spoken at all. I felt like a magician
who has succeeded in discovering an effectual formula of conjuration.
After this display of my abilities, I vaulted into the saddle with as much
ease and assurance as if Cairo had been my home. The donkey-boy next
probably asked me — 'where to?' Whereupon, feeling that my stock of
Arabic phrases and cabalistic formulae was nearly exhausted, I replied
in a very abbreviated style — *kullo, kullo*, that is, 'everything' (meaning
that I wanted to see everything). The donkey-boy then nodded his *ya'ayb
ana arcf* ('all right, I understand'), and I now felt perfect confidence in
my powers of speech... My donkey now set off at a gallop and plunged
into the midst of a labyrinth of lanes full of riders and walkers, but
where I was going to, or how far, or why, I was unable to tell. That,
however, was precisely the joke of the thing'.

Lovers of the picturesque will find such rides very enjoyable.
When they have sufficiently explored the narrower streets, they
may direct their attendant to return to the Muski ('*lil Muski, yâ
hammâr*'), whence the hotels are easily reached.

It is not, however, until the traveller has learned to distinguish
the various individuals who throng the streets, and knows their
different pursuits, that he can thoroughly appreciate his walks or
rides. We may therefore give a brief description of some of the
leading characteristics of the different members of the community.
The traveller will probably first be struck with the differences of
colour in the *Turban*. From a very early period it has been cus-
tomary for the Arabs to distinguish their different sects, families,
and dynasties by the colour of their turbans. Green turbans form
the badge of the 'Sherifs', or descendants of the prophet, and they
are also frequently worn by the Mecca pilgrims, green being also
the colour of the banner of the prophet. The 'Ulama, or clergy
and scholars, usually wear a very wide and broad, evenly folded
turban of light colour. The orthodox length of a believer's turban
is seven times that of his head, being equivalent to the whole
length of his body, in order that the turban may afterwards be
used as the wearer's winding sheet, and that this circumstance
may familiarise him with the thought of death. The dress and
turbans of the Copts, Jews, and other non-Muslim citizens, are
generally of a dark colour, those of the Copts being blue, and
those of the Jews yellow, in accordance with a decree issued in
the 14th century (p. 240). Blue is also the colour indicative of
The *Women* of the poorer and rustic classes wear no mourning.
thing but a blue gown and a veil. Their ornaments consist of silver
or copper bracelets, earrings, and ankle-rings, while their chins,
arms, and chests are often tattooed with blue marks. In Upper
Egypt nose-rings are also frequently seen. The women of the
upper classes are never so handsomely dressed in the streets as
at home. Their figures, in early life, are generally upright and
graceful. They colour their eyelashes and eyelids dark, and their
finger and toe-nails with henna, which gives them a brownish
yellow tint. When equipped for riding or walking, most ladies
wear a light-coloured silk cloak, with very wide sleeves (*töb* or
Street Scenes. CAIRO. 3. Route. 245

sebleh), over their home attire. They also don the burko', or veil, which consists of a long strip of muslin, covering the whole of the face except the eyes, and reaching nearly to the feet. Lastly they put on the habara, a kind of mantle, which in the case of married women consists of two breadths of glossy black silk. Thus disguised, they look unnaturally broad and unwieldy, and not unlike bats. The wealthier ladies, who drive in their carriages attended by eunuchs, usually veil their faces up to their eyes with thin gauze in accordance with the fashion of Constantinople. With regard to circumcision, weddings, and funerals, the ceremonies attending which are similar in all the Egyptian towns, see p. 151. Among other customs we may also mention the peculiar mode in which a woman carries her child, either astride her shoulder, or resting on her hip.

Amid this busy throng of men and animals resound the various cries of street-vendors and other persons who transact their business in the open air, and the warning shouts of outrunners (sâis), coachmen, donkey-attendants, and camel-drivers. The words most commonly heard are — 'riglak', 'shemâlak', 'yeminak', 'guarda', 'ââ', 'ââ'. As a rule, however, the Cairenes pay no attention to these warnings unless addressed to them individually. Thus, 'riglak yâ khâwâgeh' ('your foot, sir', i.e. 'take care of your foot'); khâwâgeh is the usual title given to Europeans by the Arabs, and is said to have originally meant 'merchant' only); 'shemâlak yâ shêkh' ('your left side, O chief'); 'yeminak yâ bint' ('your right side, girl'); 'dahrak yâ sitt' ('your back, lady'); 'yâ arûs' (bride); 'yâ sherif' (descendant of the prophet); 'yâ efendi' (Turkish official). — Beggars are very numerous at Cairo, most of them being blind. They endeavour to excite compassion by invoking the aid of Allah: 'yâ Mohannin, yâ Rabb' ('O awakener of pity, O Master'); 'âna tâlib min and Rabbi raghêf 'êsh' ('I seek from my Lord a cake of bread'); 'ânu dêf Allâh wa'n-nebi' ('I am the guest of God and of the Prophet'). The usual answer of the passer-by is, 'Allâh yerzuk' ('God will succour'), or 'Allâh ya’tik' ('God give thee'; comp. p. 16).
One of the most popular characters to be met with in the streets of Cairo is the SÅ¾ka, or Water-Carrier, with his goatskin of water, carried either by himself or by a donkey, who still plies his trade, although the new waterworks (p. 379) could easily supply every house in the city, as well as the public seibs (p. 175), with water, and though on many of the houses there are brass tubes through which passers-by may take a draught from the main pipes. His usual cry is — 'yâ 'auwaÄd AllÅh' ('may God recompense me'). The labour he undergoes during eight months in the year, when he brings his heavy load all the way from the Nile, is very severe and miserably underpaid; but during the four months when the river is rising he obtains his supply from the canal by which Cairo is intersected. The springs, being generally brackish, are not suitable for drinking. Many of the sÅ¾kas sell water to the people in the streets. These are known as 'sÅ¾ka sharbeh', and they carry their supply of water either in a skin or in a large earthen-ware vessel on their backs. They offer a draught to passers-by in a brazen saucer or in a kulch (porous bottle), for which they receive a small copper coin, and sometimes no payment at all. On the occasion of festivals, and particularly on the mÅ¶îds (birthdays) of saints, persons who desire to do a pious work frequently hire one of the sÅ¾kas to dispense water gratuitously. The sÅ¾ka then shouts in a singing tone, 'sibh Allâh yâ 'atshân yâ møyeh', thus inviting all thirsty persons to drink gratuitously; while he occasionally turns to his employer, who generally stands near him, with the words, 'God forgive thy sins, O dispenser of the drink-offering', or 'God have mercy on thy parents', to which the persons who have partaken of the water reply, 'amin' (amen), or 'God have mercy on them and on us'. After numerous blessings of a similar kind have been interchanged, the sÅ¾ka hands the last cup of water to his employer, with the words, 'The remainder for the liberal man, and Paradise for the confessor of the Unity! God bless thee, thou dispenser of the drink-offering!'

The Hemali, who belong to one of the orders of dervishes (p. 149), are also engaged in selling water, which they flavour with orange-blossom (zahr), while others add a little brandy ('erk-sus) or grape-juice (zebib). There are also numerous itÂ­
crant vendors of different kinds of sweetmeats, which to Europeans look very uninviting. Thus, sahalab is a thin jelly made of wheat-starch and sugar, the sellers of which shout, "halâweh, yâ sukkar bimismâr yâ halâweh!" (confection, O sugar, for a nail, O confection!). These vendors, who resemble the rag and bone collectors of European towns, often barter their wares for nails or pieces of old iron, as their call indicates. Lastly, there are itinerant cooks, with portable kitchens, who sell small meat puddings, fish, and other comestibles, and whose customers eat their dinners sitting cross-legged by the side of the street. This custom is noticed by the old German geographer Sebastian Münster (d. 1552), who says that 'the city of Cairo is said to be five times as large as Paris. There are few people, who, as with us, buy food to prepare at home; but when they are hungry they buy from the cooks, of whom the city contains nearly thirty thousand'.

The way in which fruit and vegetables are cried is particularly curious. The commonest expressions are perhaps the following: 'Allâh yehawwinheh yâ le-mân' ('God will make them light, O lemons'; i.e., he will make light, or empty the baskets containing the lemons); "asal yâ burtukân, 'asal' ('honey, O oranges, honey'; i.e., sweet as honey); 'meded yâ Embâbeh meded! tîrnâm Embâbeh yaghibb el-lôz!' 'yâ mahlâ bunei el-bahr' ('help! O Embâbeh, help! the lupins of Embâbeh are better than almonds; Oh, how sweet is the little son of the river'). The best lupins are grown at Embâbeh, and they are called 'children of the river' from the fact that they require to be soaked in Nile water for a considerable time before they are boiled. Other cries are 'yâ muselliîl-ghalbân yâ 'libb' ('O comforter of those in distress, kernels', i.e., of the melon); or, more commonly, 'el-mo-hînmas' ('roasted kernels'); yâ fustuk
gedid' (new pistachios); 'el-ward kân shôk min 'arâk en-nebi fetlah' ('the rose was a thorn; it blossomed from the sweat of the prophet'). This legend resembles that of the thorns at Subiaco among the Sabine Hills, which were converted into rose bushes by the blood of St. Francis. 'Rawdâyeh el-genneh yâ temer ḥennâ' ('odours of Paradise, O flowers of henna'). With regard to the henna plant, see p. 75.

When the work of the day is over, the solemn and sonorous cry of the mueddin, summoning the faithful to prayer (see p. 145), reverberates from the tops of the minarets; but much of the busy street-traffic goes on till nearly midnight, and during the month of Râmaḍân it even continues throughout the whole night, while the barking of hungry dogs and the braying of donkeys frequently form an additional interruption to repose. At a very early hour in the morning the same scenes recommence, and on leaving his hotel the traveller is tempted to believe that Cairo is celebrating a never-ending Carnival.

While perambulating the streets of the city the traveller will frequently have occasion to observe the Schools (kuttâb), which are open on the side next the street, and one of which is attached to almost every public fountain. He will find it very amusing to watch the efforts of the fîkîh, or schoolmaster, in teaching his pupils with the aid of admonitions and blows, while the boys themselves recite verses of the Korân with a swaying motion of their bodies, bending over their metal writing-tablets, and yet finding time for the same tricks as European schoolboys. If, however, the fîkîh is too closely watched, he is apt to be disconcerted, and to call down 'dirt on the head' of the too curious spectator.

These schools all have a purely religious character, and are exclusively creations of El-Islâm. The mere reading and recitation of verses from the Korân being in itself considered a meritorious act, the great object of these schools is to teach the pupils to recite the Korân by heart. Each boy is provided with a copy of the sacred book, if he can afford to buy one, an ink and pen case (dawdâyeh), and a tablet of metal or of wood painted white. After learning the alphabet, the pronunciation and the values of numbers, he is then taught the ninety-nine 'beautiful names of Allah' contained in the Korân, a knowledge of which is necessary to enable him to repeat the ninety-nine prayers of the Mohammedan rosary (sebha). The boy is then made to write out the Fâtha, or first chapter (sûrah) of the Korân, which he reads often enough to impress it perfectly on his memory, swaying his body to and fro the while, whereby, as he imagines, his memory is rendered more pliant. After learning the first chapter, he next proceeds to learn the last, the last but one, and the others in the same inverted order, until he reaches the second, the reason being that the chapters gradually diminish in length from the second to the last. Although the language is often difficult and obscure, no explanations are given, so that the boy who knows the whole book by heart usually understands but little of it. As soon as the boy has learned the whole of the Korân in this way, the completion of his studies is commemorated by the celebration of the Khatmeh, a family festival, to which the schoolmaster is invited.

These schools are maintained by the private enterprise of the schoolmasters themselves, who exact payment of 1-2 piastres per week from
each pupil. In 1877 there were 220 schools of this kind at Cairo, presi-
ded over by 239 teachers, and attended by 7175 pupils; at Old Cairo
there were 24 schools with 29 masters and 908 boys; and at Bûlûk 31
schools with 31 masters and 1010 boys.

In walking through the bazaars (see below) and other streets, the
traveller will be interested in observing how industriously and
skilfully most of the artizans work with their very primitive tools. The
Carpenters (naggûr), for example, seem to ply their craft with
very tolerable success, without bench, vice, rule, or drill. In
order to steady the piece of wood on which they are working they
make use of the weight of their bodies, and sometimes of their
teeth and their toes. For a rule they substitute a piece of string
or a palm-twig, and for boring holes they use an iron spike
imbedded in a circular piece of wood, which they turn by means
of an instrument resembling a fiddle-bow (p. 255). Their principal
tool consists of a small axe, which serves many different purposes.
A number of other primitive tools are described at pp. 254, 255.
— After the closing of the shops in the evening it is customary
for the porters or watchmen to place their beds (serîr) of palm-
twigs outside the entrances, where they spend the night, thus
presenting a very curious and characteristic phase of Egyptian
out-of-door life.

The Bazaars of Cairo (comp. p. 23), though inferior to those
of Damascus and Constantinople, present to the European traveller
so many novel features, and so many interesting traits of Oriental
character, that he should endeavour to pay them repeated visits,
in order to become acquainted with their peculiarities at his leisure.

Most of the bazaars consist of narrow, and often dirty, lanes,
generally covered over with an awning to shade them from the sun,
and flanked with rooms of various sizes, open towards the street,
and about 3 ft. above the level of the ground (comp. p. 24).
These lanes usually enclose a massive building of considerable size
(khân), consisting of two stories, and containing an inner court,
around which are grouped a number of magazines for goods. Some
of the older of these buildings, particularly those in the Cameliyeh
(p. 255) and the Khân el-Khalîlí (p. 253), are architecturally inter-
esting, and possess handsome mushrebiyehs. A considerable
number of these khâns form separate quarters of the city (hâra),
which were formerly closed by massive, iron-mounted gates, still
in some cases preserved; and they were carefully guarded at night
by watchmen appointed for the purpose. No one was permitted to
pass through the gates without undergoing an examination by the
custodian, and this custom still prevails at Damascus and in the

† Bazâr is properly speaking a Persian word, the Arabic equivalent
for which is sîk. The magazines of the wholesale merchants, with their
large courts, are called wakkâleh, which the Franks have corrupted to
Ocraleh, Occal, or Okella (pp. 202, 255, 277).
towns of Upper Egypt, such as Siūt. In former times, during the prevalence of the Mameluke conflicts, which were always attended with the pillaging and assassination of many peaceful citizens, the gates of the khāns frequently remained closed for several days together, for the purpose of affording protection against the outrages of these lawless mercenaries.

The principal market-days are Monday and Thursday, when the traffic in the narrow streets is so great that it becomes difficult or impossible to traverse them; but it is on these occasions that the most characteristic scenes of Oriental life are witnessed. Peddlers are seen forcing their way through the crowd, shouting at the top of their voices, sometimes carrying a small table with them, and frequently selling their wares by auction. So, too, we observe coffee-sellers, water-bearers, nargileh-hawkers, and others, elbowing their way, lauding their commodities, and escaping accidents almost by a miracle. One of the noisiest frequenters of the bazaars is the dallāl, or auctioneer, who carries on his head or shoulders the goods he is instructed to sell, and runs up and down the lanes shouting ḥarāq, ḥarāq, and adding the amount of the last bid he has received. However great the confusion may be, his practised ear instantly detects each new bid issuing from one of the dukkāns, and he immediately announces the new offer—'bīshrin kirsh', 'bīshrin u nus', and so on. The seller of the goods always accompanies the dallāl to give his consent to the conclusion of the transaction.

It is hardly possible to give the traveller any idea of the prices of the various commodities, as they depend on the demand, which is greater in winter than in summer, and also on the character of the seller and the demeanour of the purchaser. We may also mention that many so-called Oriental articles, particularly silks and woollen stuffs, are now manufactured of inferior materials by European firms, and exported to Egypt. Some articles again, such as rugs and hangings, please the eye amid their native surroundings, but are rarely suitable for European rooms; while others are more advantageously purchased in most European capitals, than from the Oriental merchants themselves, with whom bargaining is difficult and troublesome. So-called antiquities are largely sold at the hotels at exorbitant prices, far exceeding their true value, and many of them are even specially manufactured for the purpose.

Caution in making a purchase is far more requisite in the East than in Europe, as Orientals regard skill in chea'ing simply as a desirable accomplishment. Those who purpose making large purchases had better defer doing so until they have gained a little experience of the national peculiarities, and they should in no case rely on the recommendations or advice of commissionaires and persons of a similar class (comp. p. 231). Natives of the country may often be consulted with advantage as to prices, but the traveller must
be prepared to pay more than persons familiar with the language and customs.

The following description of the city is so arranged that even a newcomer will have little difficulty in finding his way without any other guide. If, however, time be limited, the traveller is recommended to get a commissioner or local dragoman (p. 231), to show him the bazaars in the following order.

The Muski, the chief thoroughfare of Cairo, nearly 1 M. in length, runs in a nearly straight direction from W. to E., from the Ezbeikiyeh place to the tombs of the Khalifs. This street, the beginning of which has frequently been sketched by European artists, has now to a great extent lost its Oriental characteristics, but it still presents many picturesque and attractive features (comp. p. 242). Among the shops, many of which present quite a European exterior, are numerous tobacco and cigar stores, emporiums of clothing, and stalls of fez-makers, with the peculiarly shaped iron they use in their trade. (The price of a fez or ṭarbūsh varies from 2 fr. to 15 fr. according to the material with which it is lined.)

On entering the Muski we observe on the right, above us, an Arabian school (p. 248). We ascend the street to a small place called the Rond-Point (Pl. C, 3). Immediately before this place is reached, we diverge to the right, and follow the first lane to the left (running parallel with the Muski), passing a red and yellow mosque on the right, and disregarding the attraction of the European glass wares sold here. Pursuing a straight direction (i.e., as straight as the crooked lanes admit of), we pass the end of a narrow lane on the right, through which we perceive the entrance to an uninteresting Greek church, and the covered entrance to a bazaar lately burned down, on the left. Turning to the right, we next enter the Sūk el-Hamzawi (Pl. C, 2, 3), or bazaar of the Christian merchants (Syrians and Copts), who vied with their Mohammedan fellow-tradesmen in the exorbitance of their demands, and whose chief wares are European calico, porcelain, and drugs (which last are sold at all the bazaars). Near the end of this street, a little before its junction with the broader street El-Ghāriyeh (see below), we observe on the right the Sūk el-'Attārin, or spice-market, which is easily distinguished by its aromatic odours. The perfumes of Arabia, genuine and adulterated, wax-candles, and drugs are the chief commodities here. Attar of roses is sold by weight at high prices. The small bottles into which it is put have very narrow necks, through which one drop at a time only can pass. Customers should of course see that the bottles are accurately weighed beforehand.

Beyond the 'Attārin Bazaar (still keeping the El-Ghūriyeh carriage way on our left) we next enter its continuation, the Sūk el-Fāḥhāmi (literally, coal-market; Pl. D, 2), the bazaar for wares from Tunis and Algiers. We first observe drug-stalls, and then
magazines of light-coloured woollen and other stuffs, which, however, are imported from Nîmes and other places in Southern France, being now seldom or never manufactured at Tunis.

Pursuing the same direction, parallel with the El-Ghûriyeh street, and passing a number of shoemakers’ stalls (bawâbishi), we come to a broader covered passage (exactly opposite which is a modern okella, presenting no attraction), which we follow to the right for a few paces, and then take the first lane to the left. At the end of this lane lies a more open spot where undressed wool is exposed for sale. Lower down, a little to the left, we reach the Sukkariyeh, or bazaar for sugar, dried fruits (nuḳl), and similar wares. Adjoining it is the Gám’a el-Munīyad (p. 270), now undergoing restoration, while facing us, at the end of the street, rises the handsome Bûb ez-Zuwêleh (see p. 270), or Mutawelli. Opposite the outside of the gate is a house with a large grated window, and in the corner is a column built into the wall, at which executions by strangulation formerly took place. In a straight direction we next enter the Shoemakers' Bazaar, formerly a school, an interesting building, the first story of which overhangs the lower and is borne by large brackets. The large gateway (on the right) is still preserved; part of the interior is undergoing alteration, while the rest of it is in a dilapidated condition. — The same street then passes the stalls of the tent and flag-makers, and leads to the Boulevard Mohammed 'Ali (p. 258), at the W. end of which are the mosques of Sultan Hasan (p. 258) and Rifâ’iyeh (p. 258), the latter being still unfinished. On the left, before this last is reached, is the entrance to the once celebrated Sûk es-Sellâha (Pl. F, 2), or bazaar of the armourers, now reduced to three or four miserable stalls, where European weapons are sold. Keeping to the left, we traverse several crooked lanes and reach the Sebîl Mohammed 'Ali (see below) in the Ghûriyeh street. This last digression, however, is uninteresting.

We return from the Shoemakers' Bazaar to the Bûb ez-Zuwêleh, before reaching which we pass the unattractive Saddlers' Bazaar (Sûk es-Surûqîyeh), and a police-office at the corner to the right. We now follow a broader street, the first part of which is called the Sukkariyeh (see above). Beyond the Sebîl Mohammed 'Ali this street is named El-Ghûriyeh from the mosque erected by Sultan El-Ghûri (p. 272), the small minaret of which, with its domes, rises nearly in the middle of the street.

We follow this street in a straight direction nearly as far as the post of the (lower) sentry on the left, a little before reaching whom we turn to the right into the Sûk es-Sûdân, or bazaar for wares from the Sudan, consisting of chests, gum, dûm-palm nuts, ill-tanned tiger skins, etc. (see p. 234). Farther on, in a straight direction, are the stalls of the Booksellers and Bookbinders.

Most of the booksellers are also scholars, but they are not so fanatical as their brethren of Damascus, who sometimes decline to sell their books.
to Christians. Seated on their maṣṭabas are frequently to be found various other members of the learned, or would-be learned, world, who spend whole days here in interminable colloquies. Some of the booksellers sell those works only which they have themselves published, while others keep an assortment of books from the printing-officers of Bālāk and others (p. 292). As the prices vary greatly in accordance with the demand and other circumstances, and there is no such thing as a fixed publishing price, purchasers should always endeavour to ascertain beforehand the true value of any work they wish to buy. (The Cairoine edition of the Thousand-and-one Nights, being now nearly out of print, is very expensive.) As in the case of many other wares, the line between new and second-hand books is not so strictly drawn in the East as in Europe. The booksellers generally keep catalogues, several feet in length, to refresh their memories regarding the state of their stock. The Korān, which is shown very reluctantly to non-Muslims, is generally kept under lock and key, or at least separate from the other books. The books are not arranged side by side as in European shops, but piled up in a very inconvenient fashion. Many of them are sold in loose sheets, in which case the purchaser should see that the work is complete, as gaps are of frequent occurrence. The bindings usually consist of leather and pasteboard. Valuable books are often kept in cases of red sheepskin, out of which they are drawn by means of a loop. — The workmanship of the bookbinders, who like other Oriental artizans work in the open street, is generally cheap and durable. Red is their favourite colour.

At the point where the street expands a little, before reaching the handsome W. entrance of the El-Azhar mosque (p. 285), we observe several houses with picturesque mushrebiyehs (p. 179). The next lane to the left leads us across the Rue Neuve, the prolongation of the Muski (passing a large new school at the corner to the right), towards the large new minaret of the Ḥasanēn Mosque (p. 290). Opposite to it, on the left, is a gateway through which we enter the Khan el-Khalili, which once formed the centre of the commercial traffic of Cairo. This building, which is said to have been founded so early as the end of the 13th cent. on the site of ruined tombs of the Khalifs by El-Ashraf Salāḥeddin Khalil (1290-93), one of the Bahrite Mameluke sultans, forms a distinct quarter of the city, and is intersected by a main street and numerous cross-lanes, formed by long rows of stalls of tradesmen and artizans, all covered over. This is the headquarters of the silk and carpet merchants and the vendors of trinkets and other wares.

The usual price of a light keffiyeh (shawl for the head) is 12-14 fr., and of one of heavier quality, with red and yellow stripes and interwoven with gold thread, 20-25 fr. The fringes are generally loosened and adjusted after the completion of the purchase. Many of the so-called Damascene silks, and particularly the lighter keffiyehs in pleasing colours, are manufactured at Lyons and Crefeld. The table-covers of red, blue, or black cloth, embroidered with coloured silk (35-100 fr.), are well worthy of notice. The letters with which they are adorned rarely have any meaning.

The Khan Khalili contains two large Carpet Bazaars, one (the smaller) immediately to the right of the entrance (see above), and the other at the W. end, to the left, a little before we reach the broader and better lighted Suk en-NAHḤĀSIN (p. 254). The latter of these two bazaars, established in the court of a building
in the early Arabian style, is a favourite subject with European artists.

The prices of the carpets, like those of other Oriental goods, are liable to great fluctuation. Those of Baghādād and Brussa (in Asia Minor) are the most sought after, but imitations, manufactured at Brussels, are said to be not uncommon. They are chiefly remarkable for the harmonious arrangement of their colours. As soon as a purchaser appears, the dealers spread their wares over the whole court for his inspection. If the traveller is pressed for time he had better not attempt to make a purchase, as several hours must not unfrequently be spent in negotiation before a satisfactory bargain is concluded.

Leaving this court, we cross the Sūk es-Naḥḥāsīn (see below) in a somewhat oblique direction, and pass through a very insignificant gate into the Sūk es-Sāigh (pl. Šiyāgh), or bazaar of the gold and silversmiths, which consists of several crooked lanes, barely a yard in width, through which the traveller will sometimes find it difficult to thread his way. The occupants of these crowded alleys keep their wares in glass cases or under glass shades. Their stalls present a very poor appearance, and their filagree-work is inferior to the Italian. Spurious gold and silver wares are not unfrequently sold as genuine. The bellows of the silversmith are generally of amusingly primitive construction, consisting of a conical bag of goatskin, open at one end, where it is provided with wooden handles, and terminating at the other end in a tube, usually an old gun-barrel, which runs under a small mound of clay to the fire.

The finest ninety-carat silver, which is never sold except in its native condition, is frequently purchased with a view to the manufacture of plate and trinkets in the house of the purchaser himself and under his immediate supervision, in order that all possibility of fraud may be obviated. The finest quality manufactured at the shops is the eighty-carat silver, the workmanship bestowed on which is usually worth a quarter to a half the value of the raw material; the next quality is the seventy-five carat; and, lastly, there are inferior qualities containing fifty per cent or less of pure silver. The silver manufactured at the shops ought to bear a government stamp, indicating the number of carats it contains. As soon as a standard of price is agreed on, the article is paid for in accordance with its weight in dirhem (drachms), and with its assay as stated by the seller. The quality of the metal is then attested by a government official, who is always in attendance, and the article is taken to the customs-office, where a duty is exacted from the purchaser. The whole transaction is therefore of a somewhat complicated character, and the formal attestation by the official affords no guarantee whatever of the true quality of the metal. The only satisfactory plan is to purchase the raw material, and, like the natives of the country, get it manufactured under one's personal supervision.

In the Jewish quarter, to the W. of the Sūk es-Sāigh, are the booths of the Jewellers (Gōhargiyeh), where, however, there is nothing to see, as they show their wares to intending purchasers only.

From this labyrinth of lanes we return to the Sūk en-Naḥḥāsīn, or market of the copper-smiths, immediately to the left of which are the imposing façades of several contiguous mosques, the first two of which contain the tombs of Sulṭān Kālaūn and his son Mohammed en-Nāṣir (p. 275). This bazaar presents little attraction, but one of the Arabian copper ink-bottles (dawayeh; 4-10 fr., according to the style of the engraving with which they are
adorned) may be purchased as a souvenir. Several pipe-makers (shibulšši) are also established here. Their chief occupation is the boring of pipe-stems. Their primitive apparatus consists of an instrument resembling a bow with which they turn a wooden cylinder terminating in an iron spike. The string of the bow is pressed against the wood, and the bow is moved to and fro, somewhat like that of a violin, so as to turn the borer. Notwithstanding the simplicity of this tool, and although they merely steady the stem with their hands, they execute their work with surprising rapidity and accuracy.

The same kind of implement is used by the turners. The wood on which they are working is secured on two nails in two parallel upright pieces of wood and turned with the bow with the right hand, while the work is done with a chisel held in the left.

Leaving the bazaars for a short time, we may now turn to the right, and follow the broad, newly constructed street to the Bêt el-Kâdi (Pl. 2), or ‘House of the Judge’. The appointment of kâdi is made by the government at Constantinople, and is usually bestowed on favourites, as it is said to be a very lucrative post. In the large court on the right is an open verandah, resting on columns with early Arabian capitals (takhta bôsh; p. 184). Part of the building still dates from the time of Saladin (1193). Within the building, the entrance to which consists of an open verandah, the kâdi holds his court on Thursdays. This court was formerly the supreme tribunal of the country, but its jurisdiction is now limited to cases in which the law laid down by the Korân is to be administered, and particularly to actions between married persons. The large extent to which the court is patronised shows that polygamy is not particularly conducive to domestic harmony.

Crossing the court, and passing through the gate opposite, we next follow the windings of the narrow lane to the left as far as a sentry posted by the Gâm'a Yûsuf Ġamulî.

[To the right of this mosque begins the street called Gameliyeh, leading to the Bâb en-Nasr (p. 278). It consists of a number of large warehouses (okellas; p. 249), and is the headquarters of the Red Sea trade.

The staple commodities here consist of gums, coffee, mother-of-pearl, tortoise-shell, skins, ostrich-feathers, wax, incense, attar of roses, and various essences, the ports from which they are brought being Jeddah (p. 410), Hodêda, ‘Aden, Zêla’, Berbera, Masau’a (p. 410), Sauâkin (p. 410), and Koščîr (p. 409).

As we shall have to traverse the Gameliyeh on our way to the Tombs of the Khalîfs, we need not now visit it.]

Where the street divides, beyond the above-mentioned sentry, we keep to the left until we regain the Siq en-Nâjrîsîn, near a fountain (Sebil ‘Abder-Râhman Kîkîyâ; p. 277). We then follow the bazaar-street to the right to the Bâb el-Futûh (p. 278), and proceed thence to the left to the Rue Neuve (Muski, p. 251).
The above-named bazaars are the most important at Cairo, the others being unattractive. We may, however, add the names of some of the other trades, as given by Mr. Lane: — Tūgir, cloth and stuff merchants; khurdagi, dealers in iron goods and small wares; khādiyāt, tailors; sabbāgh, dyers; reffā, stocking-makers; habbāk, embroiderers and silk-lace makers; 'akkād, manufacturers of silk braid; 'aṭṭār, druggists and perfumers; dakhākhni, tobacconists; fākhdhīni, fruiterers; seiyāt, oil мерchants, who also sell butter, cheese, honey, etc.; khudari, vegetable dealers; gezzār, butchers; farrān, bakers; kahwēgi, coffee-dealers; shammān, wax and candle-dealers; simsār. brokers; samkari, tinsmiths; ḥaddād, smiths; sā'āti, watchmakers; faṭātri, cake-sellers; sammāk, fish-dealers; kharrāt, turners.

The Ezbekiyeh and the New Isma'īliya Quarter.

The central point of the Isma'īliya Quarter (p. 257), which is intersected by broad and shadeless streets bearing French names, is the —

Place Ezbekiyeh (Pl. C, 4, 5), or simply the Ezbekiyeh, which is named after the heroic Emir Ezbeki, the general of Sulṭān Kait Bey (p. 266), who brought the general and son-in-law of Bajesid I. as a captive to Cairo. A mosque was erected here in honour of his victory; and, though the building no longer exists, its name still attaches to the site. This was once the focus of the Oriental traffic of Cairo, but the native industries have gradually to a great extent been absorbed by Europeans. The principals hotels, several of the consulates, numerous cafés, palatial dwelling-houses, handsome shops, and the theatres are situated in this magnificent place, in the centre of which are Pleasure Grounds, with the luxuriant vegetation peculiar to the marvellous climate of Egypt. The gardens afford a delightful promenade, especially in the afteroon, and also present a very attractive appearance by gaslight. They were laid out in 1870 by M. Barillet (d. 1874), formerly chief gardener to the city of Paris. They are octagonal in shape, and cover an area of 20½ acres; the walks are altogether 1⅔ M. in length. The gardens contain a variety of rare and beautiful trees and shrubs, and the open spaces are planted with the Lippia nodiflora, to supply the place of grass, which does not thrive in this dry climate. The grounds are open to the public in the forenoon, but in the afternoon a charge of 1 piastre tariff (40 paras copper; no change given) is made for admission. An Egyptian band, which generally performs European music, plays here daily from 5 to about 8 p.m. Among the other attractions of the place are several cafés, a café-chantant in the Chinese style, where Italian and sometimes Arabic comedies are performed in summer (p. 231), a French restaurant, where a good supper is procurable, a shooting-gallery, and a photographer's studio. An artificial hill with a bel-
vedere commands a fine view, and below it is a pretty grotto. On Sunday and Friday evenings the park is illuminated, on which occasions the great basin, lighted with 2500 jets, presents a very imposing appearance, although decorated in the European 'Tivoli' taste. The grounds should be visited once at least during the illumination, although the hour is generally the same as that of dinner at the hotels. They were at first visited almost exclusively by Europeans, but it is gradually becoming the fashion for Arabs to send their veiled wives and their children to promenade here. The trees, shrubs, and flowers thrive admirably, the greatest show of blossom being in May and June. Invalids who spend the winter in Cairo for the sake of their health will find these beautiful grounds a very pleasant resort.

Similar gardens, but of smaller extent, have been laid out by M. Barillet at Gezirah (p. 314), in the island of Rôda (p. 304), at Shubra (p. 317), at Kubbeh (p. 315), and at Gizeh (p. 327). The present superintendent of gardens is M. Delchevallierie. — Private gardens of M. Ciccolani, see p. 317.

The New Town of Isma'iliya was begun about the year 1865, when the Khedive presented sites here gratuitously to any one who would undertake to erect on each a house worth at least 30,000 fr. within eighteen months. Most of the houses are architecturally uninteresting, but there is a fair sprinkling of handsome buildings.

At the end of the Muski, on the left, is the small place named Atab el-Kadra (Pl. C, 3), adorned with an Equestrian Statue of Mohammed 'Ali similar to that in Alexandria (p. 215). On the W. side of the place are ministerial offices, beyond which is the Théâtre Français (Pl. 98). On the S. side of the Ezbekiyeh is the Opera House (Pl. 75), with the place named after it, on the S. side of which is the house of Hr. Oppenheim, the banker, and to the right of it (W.) the ponderous New Hotel (Pl. a). Opposite, on the W. side of the Ezbekiyeh, is a large house belonging to Sign. Matatia, the banker, built in the Louis XV. style, and let out in quartiers. To the W. of the New Hotel are the German Church (Pl. 20) and the uncompleted English Church (Pl. 21). Still farther to the W. is the residence of M. Delort, the banker, in the early Arabian style, the interior of which, partly fitted up with relics from old Arabian houses, is worthy of a visit. The ministerial offices and several palaces of the Khedive are also situated in this new quarter of the city. Among these last, which are never shown to the public, and are generally entirely enclosed by lofty walls, is the Palais Abidin (Pl. 76), built in the form of a horse-shoe, and situated in a still unfinished place. Some of the other palaces will be briefly mentioned when we have occasion to pass them (pp. 303, 327).

It need hardly be added that the traveller in search of Oriental scenes will not care to devote much time to this modern and almost entirely European quarter, but will hasten to make acquaintance with the Arabian parts of the city.

Baedeker's Egypt I.

Starting from the Place Atab el-Kadra, between the Muski and the Ezbekiyeh (see above), the new Boulevard Mohammed 'Ali, 1860 yds. in length, leads straight to the foot of the citadel. At the end of this long street rise two large mosques. That on the left is the Gâm'a Rifâ'iyeh (Pl. 59), named after an order of dervishes (p. 148), and erected entirely at the expense of the mother of the Khedive, but still unfinished. On the right rises the—

**Gâm'a Sultan Hasan** (Pl. 44), the 'superb mosque', and the finest existing monument of Arabian architecture. It was begun in the year 757 of the Hegira (A.D. 1356), and completed in three years by Melik en-Nâsir Abu'l-Ma'âli Hasan ibn Kalaûn, but is now in a neglected and dilapidated condition.

Sultan Hasan, the sixth son of Sultan Nasir (p. 275), was still a minor when he ascended the throne in A.D. 1346. At the end of the vigorous reign of Nâsir (d. 1341), which lasted 43 years, the Mamelukes and emirs revolted, and the state of anarchy which now ensued was farther aggravated by the prevalence of the plague or 'black death' (1348-49), which exterminated whole families, whose property was immediately seized by the government. Maqrizi (p. 240), with the usual exaggeration of Orientals, records that no fewer than 15-20,000 persons died at Cairo in a single day. After having been dethroned in 1351, Hasan regained possession of his sceptre three years later, but in 1361 he was again dethroned and assassinated.

This mosque is immediately adjacent to the Place Rumûleh (p. 260). The lofty walls with their shallow niches, pierced with six or seven windows one above the other, the huge gateway (see below), and the S. minaret which is still preserved, present a majestic appearance, especially now that the incongruous additions of later date have been removed. The building is in the form of an irregular pentagon, on the E. side of which the minarets and the mausoleum (see below) form symmetrical projections. The windows in the side are disposed somewhat irregularly, and the wall terminates in a broad cornice. The angles of the edifice are embellished with columns built into the wall, with a wreath of pendentives or 'stalactites' at the top, forming to some extent a new order of capital.

According to the legend, Sultan Hasan, after the completion of the work, ordered the architect's hands to be cut off, in order that he might not erect a second building of equal splendour. (Similar myths in various parts of Europe record that architects have been blinded from the same motive.) The mosque of Hasan has always been the chief rallying point of the ringleaders of insurrections and all kinds of public demonstrations.
One of the Minarets, as Makrizi informs us, was overthrown by an earthquake, killing three hundred persons. The southernmost is the highest minaret in existence, measuring 280 ft. (that of El-Ghûrî 213 ft., Kalaûn 193 ft., Muaiyad 167 ft., El-Ashâr 167 ft., Kait Bey and Barkûk 164 ft., Tulûn 132 ft., 'Amr 105 ft.).

The **Gateway on the N. side, in the Boulevard Mohammedi 'Ali, situated about 10 ft. above the street, is unrivalled in its imposing dimensions. It forms a niche, 66 ft. in height, with regular arabesques in sculptured stone, and the principal cornice is in the 'stalactite' form. An insignificant flight of steps ascends to the entrance.

From the Entrance (Pl. 1) we first turn to the left, then to the right, and afterwards to the left again, and thus reach the Inner Court (Pl. 3; before entering which we must put on straw-shoes; fee 1 piastre on leaving), 38 yds. in length, and 35 yds. in width, presenting a very interesting and picturesque appearance. In the centre is the Médâ'eh, or fountain where Egyptian worshippers per-
Arabian architecture. Over the entrance to the principal dome is inscribed the date 764 of the Hegira (A.D. 1363).

The interior of the mosque is cruciform, and the four arms of the cross are roofed with lofty, pointed vaulting. In the S.E. arm is the Liwān el-Gām‘o (Pl. 10), or Sanctuary, with a stone Mimbar (Pl. 11), from which the sultan sometimes addressed the people. Numerous lamps hang from the ceiling. To the right of the Mimbar is the Entrance (Pl. 13) to the Makṣūra (Pl. 14), a dilapidated, but interesting and majestic structure, covered with a dome, 180 ft. in height, and containing the Tomb of Sulṭān Ḥasan. The pendentives in the corners, which are still partially preserved, betray the influence of the classical style. Around the walls runs a frieze with texts from the Korān in large letters intertwined.

On leaving this mosque, we proceed to the E. (right) to the circular Place Rumēleh, from which the Mecca pilgrimage starts (p. 236), and to the Place Mēhēmet Ali (Menshiyeh Gedileh, or New Place), formerly called the Karamēdan, on the S. side of the Rumēleh. From the E. side of the Rumēleh a broad carriage-road, passing two mosques (on the left: the Gām‘a Mahmūdī, Pl. 52, and beyond it the Gām‘a Gamberrahmān, Pl. 41, with a decaying miuaret), and affording a view of the Tombs of the Khalifs to the left, ascends in windings to the Citadel. A shorter and steeper route, which may be ascended on donkey-back, diverges to the right near the beginning of the carriage-road, passing through the Bāb el-Asāb, flanked with its huge towers. It was in this narrow and crooked lane, enclosed by lofty walls, and formerly the chief approach to the citadel, that the massacre of the Mamelukes took place on 1st March, 1811, by order of Muḥammad ‘ʿAlī (p. 106). Amin Bey, the only one who survived, effected his escape by making his horse leap into the moat, through a gap in the wall.

The Citadel (El-Kal‘a; Pl. F, G, 1, 2), which should be visited repeatedly for the sake of the view, was erected in 1166 by Saḥāreddīn (p. 240), with stones taken from the small pyramids at Gīzeh, the site having been selected, according to Arabian historians, owing to the fact that meat could be kept fresh here twice as long as in any other part of Cairo. Although the fortress commands the city, its site is unfavourable in respect that it is itself completely commanded by the heights of the Moḵaṭṭam, rising above it immediately to the S.; and in 1805 Muḥammad ‘ʿAlī was accordingly enabled, by means of a battery planted on the Gebel Gīyūshī (p. 322), to compel Khurshid Pasha to surrender the Citadel.

We enter the inner court of the Citadel by the Bāb el-Gedid (‘New Gate’), and traversing a walled passage, we observe on a terrace before us the —

*Gām‘a Muḥammad ‘ʿAlī (Pl. 53), the ‘Alabaster Mosque’, whose
lofty and graceful minarets are so conspicuous from a distance as to form one of the landmarks of Cairo. The building was begun by Mohammed 'Ali, the founder of the present Egyptian dynasty, on the site of a palace which was blown up in 1824; and in 1857 it was partially completed in its present form by Sa'i'd Pasha (p. 107). In plan it resembles the Turkish mosques built on the model of the Hagia Sofia at Constantinople. The execution of the design displays but little artistic taste, and the treatment of the material is somewhat unsatisfactory. The alabaster used for the incrustation of the masonry consists partly of blocks, and partly of slabs, and was obtained from the quarries near Beni Suef, which were known in ancient times, but had long been disused and forgotten. The beautiful yellow tint of the stone soon fades when exposed to the sun. The S. façade, where the colour is not yet entirely faded, shows the manner in which the alabaster has been used (p. 62).

The Entrance (Pl. 1; where we put on straw-shoes; fee 1 p.t.) is on the N. side. The interior, consisting of a single large quadrangle, the domes of which rest on four huge pillars, presents an imposing appearance; and the ceiling is effectively painted. The Kursi, Mimbar, and Kibla (see Plan) possess no particular attraction. At the S.E. angle is the Tomb of Mohammed 'Ali (d. 1849), enclosed by a handsome railing (Pl. 6), opposite to which is a space set apart for the Sultan, also enclosed by a railing (Pl. 5).
To the S. of the last is the Sahn el-Gâm'a (Pl. 10), or Anterior Court, enclosed by vaulted galleries, in the upper parts of which plain limestone has been used instead of alabaster. In the centre is the Hanefiyeh (p. 182), designed in the debased Turkish style. On the W. side is the approach to a tower, terminating in pavilions in the Chinese style, and containing a clock which was presented to Mohammed 'Ali by Louis Philippe of France.

A magnificent view is obtained from the parapet at the S.W. end of the mosque, which is reached by walking round the building. (The palace of the Khedive, fitted up in the European style, is uninteresting.) From this point we survey the yellowish grey city, with its countless minarets, domes, and gardens. At our feet stands the mosque of Sulţân Hasan. To the N. and W. are situated the windmill-hills and the green plain traversed by the Nile. To the W. in the distance are the Pyramids, towering above the desert. On the flat roofs of the houses we observe innumerable air-pipes, called malkâf, known also by the Persian name of bâdghir, by means of which the cool north-wind is introduced into the houses.

The other mosques in the citadel cannot be visited without special permission (p. 289). Many of the chambers have been diverted from their original uses, so that they are not easily inspected, and are moreover in a very ruinous condition.

The Gâm'a Sâlaheddîn Yusuf (Pl. 60), situated to the S.E. of the Mosque of Mohammed 'Ali, was erected in A.D. 1171-98, in a style betraying the influence of Western architecture, and in many points resembling that of a basilica. Here, too, the pointed arch predominates. The openings under the arcades are of the elongated Moorish form. The dome was once supported by nine magnificent columns of granite, but it has now fallen in. The only remains of it being the deeply sculptured pendentives. As in the case of most of the other mosques, the columns have been taken from ancient monuments. The Kibla is handsomely embalished with miniature arcades, in the interior of which are rich arabesques. The coffered ceiling of carved wood is painted white and gilded, with a blue ground. The windows are still partially filled with tracery in plaster. The whole edifice up to the roof is of solid masonry. The minarets, each consisting of a cube with a cylinder above it, are covered at the top with slabs of green porcelain, and are encircled with a band of 'Sulhus' characters in white on a brown ground.

Immediately to the S.E. of the Mosque of Saladin is the so-called Well of Joseph (Pl. 15), a square shaft, sunk in the limestone rock to a depth of 280 ft., containing somewhat brackish water, which is brought to the surface by means of two sâkiyehs, one above the other, worked by oxen halfway down the opening. Since the introduction of the steam-pumps (p. 279), however, the well has lost its former importance. When the citadel was constructed here in the 12th cent., the builders discovered an ancient shaft filled with sand, which Sâlaheddîn Yusuf caused to be re-opened and named after himself Yusuf's, or Joseph's, Well. This circumstance gave rise to the tradition, which was chiefly current among the Jews, that this was the well into which the Joseph of scripture was put by his brethren, and the story is still faithfully repeated by the dragomans.

The Gâm'a Sulânîm Pasha (Pl. 67) was erected in the year 391 of the

† Windmills were first erected in Egypt by the French, before which period all the grain in the country was ground in the houses in hand-mills (râha), of the kind still in use in the villages.
Regira by Sulémân, the Mameluke, afterwards Sullán Selim. The architecture is a mixture of Arabian and Turkish, but the plan is rather Byzantine in character. The mosque is small, but carefully executed. It contains Cufic inscriptions, marble mosaics, and a mimbar in marble.

Route from the Citadel to the Moḳattam and to the Petrified Forest, see p. 321.

To the W. of the Place Méhémet Ali (p. 260), towards the Nile, runs a street called the Šalîbeh, traversing the oldest, and now partially ruined, quarter of Cairo, which was erected by the Tulunides (p. 102), and is almost exclusively inhabited by the lower classes. About 440 yds. from the Place this street is intersected by another, running from N. to S., the N. (right) part of which is called the Siûfiyeh, and the S. (left) part the Rûgbîyeh. At the beginning of the Siûfiyeh, on the right, is a new Arabian Girls' School, and beyond it, on the same side, is the Gâm'a el-Akbar (Pl. 36), where the dervishes perform their dances (p. 237), with a dome adorned with carefully sculptured arabesques. (This street terminates in the Boulevard Moḥammed 'Ali.) At the corner opposite the mosque is the recently completed Sebit of the Mother of 'Abbâs Pasha (Pl. 94), in marble, rich and effective in general appearance, but lacking finish in its details. The large school above it is hardly worth visiting.

We now retrace our steps to the Šalîbeh and enter the Rûgbîyeh street, follow it for about 300 yds., and turn down a street to the right, in which, after about 130 yds. more, we observe on the right the

*Gâm'a ibn Tulûn (Pl. 68). This mosque, the oldest in Cairo, was erected by Abûl-'Abbâs Ahmed ibn Tulûn, the independent governor of Egypt under the suzerainty of Khalîf Mu'tamid (A.D. 870-92), in the year 265 of the Hegira (A.D. 879), on the once fortified hill of Ka'ât el-Kebsh (see below).

Ahmed ibn Tulûn, the founder of the dynasty of the Tulunides (p. 102), was so successful in war that he extended the boundaries of Egypt beyond Syria and as far as Mesopotamia, but was proclaimed a rebel from the mimbar of every mosque by the 'Abbâsid Khalîf El-Mu'tamid of Baghdad (see above), and fell a victim to disease in Syria in A.D. 884.

According to one legend the mosque occupies the spot where Abraham sacrificed the goat (kêsib) instead of his son, whence the appellation Ka'ât el-Kebsh (i.e., 'castle of the goat'). Another legend points to this as the spot where Noah's ark ran aground on the 10th Moharrem (p. 234), although the Muslims generally believe that this event took place on Mt. Jûdi near Mosul in Syria (see p. 141). According to a third tradition the name is derived from the winding staircase which ascends the still existing minaret (see below) in the form of a twisted ram's horn.

The construction of the edifice, which, as Makrizi informs us (p. 199), was designed by a Christian in imitation of the Ka'ba at Mecca, occupied two years. Contrary to the practice followed in the case of earlier mosques, the whole of the building was constructed of entirely new materials. The walls consist of brick, coated with stucco.
The Entrance (Pl. a) to the mosque is on the E. side, and we reach the interior by traversing the S. part of the Liwân. The mosque originally had two entrances from each of the three outer courts (see Plan). The Şâhn el-Gâm'a, which we first enter, is a

\[

\text{Street leading to the Citadel} \\
\end{array}
\]

spacious quadrangle, 99 yds. square. The dome-covered structure (Pl. 6) in the centre was originally destined to be the tomb of the founder; but, as he died in Syria (see above), it was fitted up as a Hanefiyeh, or basin for ablution before prayer, and still serves that purpose.

On the N., W., and S. sides of the court of the mosque run arcades, now converted into cells for the reception of paupers and cripples (who pester the visitor for alms), whereby the character of the building, which must once have presented a very imposing and harmonious appearance, has been seriously injured. The Arabian historians relate that Ahmed was so charmed with the edifice when completed that he presented the architect with 10,000 dinars, and he is said to have defrayed the whole of the cost of its construction out of one of the treasures found by him (p. 102).

The pointed arches of the arcades are slightly depressed, and have a tendency towards the horse-shoe form, a shape which is completely developed in the lower stories of the minaret (see below). Between the openings of the arcades are introduced pointed arches or niches, partly for purposes of support, and partly by way of ornament. The central pillars, which fell in 1814, once bore marble tablets with Cufic inscriptions, recording the date of the building of the mosque, but these have since been destroyed.

The Liwan, or Sanctuary, on the E. side, through which we have entered the building, contains five series of arcades, and in each of the other sides of the court there are two series. With a view to exclude all sound of the outside world, the external wall of this chamber of prayer was separated from the street by means of a row of shops, and the three other sides were isolated by the introduction of outer courts beyond them, enclosed by lofty walls (see Plan).

All the angles in the interior are filled with columns built into the walls, extending two-thirds of the way up, without bases, and with imperfectly defined capitals in plaster. At certain places in the pillars and the masonry longitudinal beams of wood have been introduced for the purpose of strengthening the building, but they are visible only where the external incrustation has fallen off. The perforated attics, the gratings of stucco, the ornamentation, and the Cufic inscriptions in stucco are all executed in strict conformity with the Byzantine-Arabian style. In the Kibla (Pl. 1), however, we observe two marble columns with capitals of more pronounced Byzantine form. The upper part of the niche is adorned with gilded mosaic, and the lower part with inlaid marble. The *Mimbar (Pl. 2), a masterpiece of wood-carving, was probably restored when the mosque was repaired by El-Melik el-Manṣur in the year 696 of the Hegira.

The roof, with its open timber-work and octagonal recesses, constructed of the trunks of date-palms and overlaid with sycamore
wood, formerly rested on 158 rectangular pillars of brick, coated with stucco. The friezes, bearing Cufic inscriptions, are also of sycamore wood.

The outer court on the W. side contains a Sâkiyeh (P. 9) and the singular Minaret (Pl. 8), with its external winding staircase, the design of which is said to have been suggested to Tulun by a strip of paper wound round his finger, and which is the only one of the kind except that of the Mabkhara of the Gâm’â Hâkim (p. 277). The minaret commands a good survey of the oldest buildings of Cairo, but, owing to its ruinous condition, the ascent is now prohibited. (Fee to the attendant who shows the Liwân 1-2 piastres. A supply of small copper coins had better be taken to satisfy the importunity of the beggars.)

Outside the entrance to the mosque we turn to the right, and then to the right again. Passing the S. side of the mosque, where we observe several handsome mushrebiyehs on the left side of the street, and turning a little to the left, we traverse several lanes and alleys, built on what was formerly the hill of Kal’at el-Kebs (p. 263), and reach the small, but once handsome —

Gâm’â Kait-Bey (Pl. 48), which, like most of the buildings of its period, is now in a neglected condition, and will soon be a complete ruin. This mosque was erected in the 15th cent., and in plan resembles the Tomb of Kait Bey (p. 284).

Kaid or Kait Bey (1468-96) was one of the last independent Mameluke sultans of Egypt. Both as a general and a diplomatist he successfully maintained his position against the Porte (Sultans Mohammed and Bajesid), and even inflicted serious losses on the Turks; but the refractory Mamelukes obstructed his undertakings, and in 1496 compelled him to abdicate in favour of his son Mohammed, a boy of fourteen.

The door, with its bronze covering, is about 45 ft. in height. The mosque is about 26 yds. in length and 22 yds. in width. The attics have almost entirely fallen in, but a graceful minaret still exists. Opposite the Kibla is a gallery, serving as a dikkeh, which is accessible from the staircase to the minaret. The principal arches, which approach the horse-shoe shape, though distinctly pointed, are tastefully decorated. The mimbar is richly embellished with wood-carving. The mosaics on the pavement and the walls are also worthy of note. Bakhshish, 1/2 piastre for each person.

In a small place on the Khalîg, or canal traversing the city, about 550 yds. to the N.W. of the mosque of Kait Bey, is situated the Gâm’a Sîtêh Zênab (Pl. 72), which was begun at the close of last century, but not completed until after the French invasion, and which has been recently enlarged. The mosque, richly embellished with ancient columns, contains the tomb of Zênab, daughter of Imâm ‘Ali, and granddaughter of the Prophet (her mûlîd, see p. 235), consisting of a sarcophagus, enclosed by a bronze railing, with a lofty dome above it (shown by special permission only). — Outside the mosque, to the right of the entrance, is the sarcophagus of another Mohammedan saint.
A long series of tortuous streets, called Derb el-Gamâmîz (‘sycamore street’), running not far from the canal, leads hence towards the N. to the Boulevard Mehîmet Ali. After fully half-a-mile we come to a small open space by the canal, shaded by some fine sycamores. The gate on the right leads to the viceregal *Library (Kutubkhâneh, Pl. 3), founded by the Khedive Ismâ‘îl on 24th March, 1870, in the left wing of the office of the minister of public worship. The collection consists of a number of books formerly preserved in various other institutions, and of others purchased or presented by the Khedive, and is dedicated to the use of the public. One of the finest presentations to the collection is the valuable library of Muṣṭafa Pasha, which occupies a separate room. The whole library consists of about 23,000 vols., chiefly Arabic and Turkish works, and there is a small European department, principally containing scientific works in French, which is to be gradually extended. The library is open to the public from 3 to 6 and from 7 to 10 o’clock by Arabian time, i.e. about three hours in the forenoon and three hours in the afternoon, and the officials are instructed to afford visitors all the information in their power. Books must be consulted in the reading-room, the use of which is accorded to persons provided with a certificate from their consul, bearing their names, and available for a year. The library is closed on Fridays; and during the month of Ramadân it is open in the afternoon only. The director is Dr. Spitta, a German.

The liberality with which the treasures of Muslim literature are thus thrown open to the European public is deserving of all praise. A special feature of the library, possessed by no other Oriental collection available to Franks, consists of the Maṣâḥif, or copies of the Korân, collected from various mosques of Cairo, and now preserved from destruction. They are remarkable for their large size, superb execution, and great age, and constitute the finest existing specimens of Arabian art.

The oldest specimen of the Korân is one in the Cufic, or early Arabian, character, 12 inches in length, and 8\(\frac{3}{4}\) inches in width. It contains one-half of the Korân only, and is in a very damaged condition, having, moreover, once been injured by fire. The titles of the sûras are bordered with gold, and the carefully written text illuminated with coloured letters. According to the testimony of a shâkh who saw the ‘noble book’ in its perfect condition, this Korân was written by Ga‘far es-Sâdîk, son of Mûḥammed el-Bâkîr, son of ‘Ali Zân el-‘Abîdîn, son of Husêin, son of ‘Ali, son of Abu Tâlib and son-in-law of the Prophet. This Ga‘far was a great chemist and scholar, whose pupil Taṭûsî, according to Ibn Khallikân (1,147, ed. of Bûlâk), once stated that he had written about 500 different pamphlets. He lived in the years 80-148 of the Hegira, and this Korân would thus be about 1150 years old. There is considerable doubt as to the accuracy of this story, but the MS. is certainly of very early date.

The other fine, large copies of the Korân, about twenty in all, are of later origin, most of them having been executed by order of the sultans of the Bahrîte Mamelukes (1260-1382) and of the Circassian Mamelukes (1382-1516), while a few of them date from the still later period of the Osman sultans. One of the most interesting of these is the copy of ‘Abd er-Razzâk, written by ‘Abd er-Rahmân ibn Abîfath in the year 590 of the Hegira, and dedicated to the mosque of Husêin, 11\(\frac{3}{4}\) by 8\(\frac{3}{4}\) inches. This Korân is more remarkable for age than beauty. To the superscription of each sûrah are added both the number of verses and that of the words and letters it contains, besides traditional utterances of the Prophet connected with the chapter in
question,—a most laborious piece of work, resembling what has been done by Jewish scholars in preparing copies of the Old Testament. Another copy, dating from 635 of the Hegira, 123/4 by 10½ inches, which once belonged to the mosque of Husên, has its titles in gold, but it is in a damaged condition.

Next in interest is a Korân of Sultan Mohammed en-Násir ibn Séreddin Kalaûtân (1293-1341). 21 by 14 inches, written by Ahmed Yâhûf, a Turk, in 730 of the Hegira. It is written entirely in gilded characters, and there is also a second copy of a similar description. Several other Korâns date from the reign of Sultan Sha'bân (1363-71), grandson of the last named, to whose mosque they were dedicated. The first of these, dating from 769, 27½ by 19½ inches, has not its titles written in the usual Cufic character, and the headings 'in the name of God the all-merciful' are in gold. Of the same date and similar size is the Korân of Khondaborâka, mother of Sultan Sha'bân. The first two pages are written in gilded and coloured characters, blue being the prevailing colour, and are illuminated with stars and arabesques; the next two are in gold, embossed with faint arabesques; and the whole work is written in a bold and excellent style. Another copy of Sultan Sha'bân, dating from 770, of the same width, but a little longer, contains some beautiful workmanship on the early pages. The text is wider than that of the last, and the book is bound in two volumes. Another and still larger copy, dating from the same year, measures 39½ by 21 inches. All these last were destined for the school in the Khâtât et-Tabbânêh (street of the straw-sellers), founded by Khondaborâka, the sultan's mother. Lastly we may mention another copy written in 778, by order of the same prince, by 'Ali ibn Mohammed el-Mokâtib, and gilded by Ibrahim el-Amâdî, from which we gather that these Korâns were sometimes the work of several different hands. This copy measures 28 by 20¾ inches, and above each sâreb is recorded the number of words and letters it contains. All these máshâhif are written on thick and strong paper, and vie with each other in magnificence. The designs exhibit no great variety; but they are executed with the most elaborate care and neatness. The text of these Korâns is provided with red letters written above certain passages to indicate where the tone of the reader's voice is to be raised, lowered, or prolonged.

The collection contains three Korâns of the reign of Sultan Barkûk (1382-99), the oldest of which, executed in 769, measures 41 by 32 inches. It was written by order of Mohammed ibn Muhammed, surnamed ibn el-Butût, by 'Abderrahmân es-Sâigh, with one pen in sixty days, and revised by Muhammed ibn Ahmed ibn 'Ali, surnamed Elkûfî. A second copy, of the same sultan's reign, and of similar size, has its first and last pages restored in the same style as those of other copies, but the modern workmanship is inferior to the ancient. A smaller Korân, of the year 501, measuring 23 by 19½ inches, is written entirely in gilded characters.

To Sultan Farag (1399-1412), the son of Barkûk, once belonged a copy of the Korân dating from 811, and brought to the library from the mosque of Musaiyad. It measures 37 by 29¾ inches, and was also written by 'Abderrahmân es-Sâigh, the same skilful penman who had been previously employed by Barkûk, and the author of a pamphlet, entitled 'Sandât el-Katibeh' ('the art of writing'), and now preserved in this library. From the year 810 dates a fine copy, 63½ by 27 inches, written by Mâsa ibn Isma'il el-Kinânt, surnamed Gagînî, for Sultan Shekh el-Mahmûdî Musaiyad (1412-21).

A copy which once belonged to Kait-Bey (1468-96), dating from the year 908, or a century later than the last, and unfortunately in a very injured condition, is the largest Korân in the collection, measuring 44¾ by 35 inches. To the period of the Osman sultans belongs the small máshâhif of Safîya, mother of Sultan Mohammed Khân, who caused fifty-two copies to be written by Muhammed ibn Ahmed el-Khâtîf el-Tebrîzî. It dates from 988, and measures 14 by 9½ inches. In it, as in one of the other copies, a black line alternates with a gilded one, and the first few pages are very beautifully executed. A copy of Husên-Bey Khemashârgî, 21½ by 16¾ inches, is written in a smaller character.
The library also boasts of many other valuable Korâns, chiefly written in the Persian character. One of these, 17½ by 12 inches, presented by an Indian hokmdâr to the Khedive, has a Persian commentary written in red between the lines of the text, and is beautifully illuminated at the beginning and at the end. Another copy, presented by a prince of Bukhâra, contains four commentaries, two in Arabic by Bêdâwi and Gelaâen, and two Persian. Another gift of the same donor was the prayer-book Dâdâl el-Khâirâl, written on a golden ground, and furnished with a Persian translation. There is also a Korân about 9 inches only in length, illuminated with gilded flowers, and dating from the year 1109 of the Hegira. It was written by Mouhammed Râb Allâh, and contains the thirty different parts of the Korân on thirty pages. Each line begins with an alif, the first letter of the Arabic alphabet — a most laborious performance. Another Korân, once the property of the Sultan Elga El-驭sî, measuring 20½ by 16 inches, is written in two different handwritings, the larger being named Thuluthi, and the smaller Neshi. The highest efforts of Arabian calligraphy and illumination are also displayed in several Mogrebin MSS., and in a number of single leaves bearing texts from the Korân or sayings of the prophet.

The ancient Muslims bestowed the utmost care on these precious copies of the Korân, and their descendants still entertain profound veneration for the sacred volume sent from heaven. The library possesses many other ancient and valuable MSS., but they are all entirely eclipsed by these Masâhib. There are also numerous commentaries on the Korân and books containing traditions of the prophet, as well as works on the law of the four Muslim sects, particularly the Hanfeites and Shâfeites. The library likewise contains a number of historical, grammatical, and astronomical works, some of which are very ancient, not a few being in the handwriting of their authors. Among the poetical MSS. the most important is that of Mutanebbî, dating from 553 of the Hegira, with a commentary by Ibn Ginnî, who also wrote a commentary on the Hamâsa. A MS., entitled 'Poems of the Arabs', dates from the same year, and among the MSS. of the Hamâsa is a Mogrebin or Algerian work, written 'from the recitation of the best-informed persons', and dating from 597. There is also an old MS. of the commentary of Merzûkî upon the collection of poems made by him. The fine MS. of Firdusi, embellished with many coloured illustrations, was presented by the Shah of Persia. The above enumeration will convey some idea of the valuable contents of the library, a catalogue of which is now in course of preparation. The printed books are less numerous than the MSS., and they are chiefly from the Bulâk press. Some of the surplus copies derived from that source have been sold by the library.

After visiting the library the traveller may inspect the neighbouring Dervish Monastery in the Habbanîyeh (Pl. 11; permission must be procured from the minister of public worship). The monastery was erected in 1174 of the Hegira by Moustaфа Agha, vizier of Sulîtan Selim. The round scîbî is the most interesting object in the establishment. The building possesses a large court, raised considerably above the street, and containing a few trees. Around the court are the cells of the dervishes, and adjoining it is a small mosque. With regard to the dervishes, see p. 148.

Continuing to follow the same street, we cross the unfinished Boulevard Shêkh Rîhân, and beyond it the Boulevard Mouhammed 'Ali (see p. 258). Beyond the latter we pass an open space, on the right side of which is the Palace of Mansûr Pusha (Pl. 85; unattractive), and enter the street named after the Gâmî'a el-Benât
(Pl. 40; 'mosque of the girls'), which rises on the right. On the left, a little beyond the mosque, and on the farther bank of the canal, is the entrance to the house of Şēkh Mu'ṭi, or Şēkh ul-İslām (Pl. 95), the interesting interior of which is shown by special permission only (p. 239). The street then runs on towards the N., in a straight direction, and terminates in the Muski, near the Hôtel du Nil (p. 229).

If we leave the Palace of Manşūr Pasha (see above) on the left, and follow a lane leading to the S.E. (right) corner of the place called after the old gate Bāb el-Khālkh, we reach after about 500 paces more the (left) old town-gate Bāb ez-Zuwēleh, built of solid blocks of stone, and resembling the Bāb el-Futūh (p. 278) in plan. The S. side consists of two huge towers; by that to the right are a number of stone and wooden balls, probably dating from the Mameluke period. Tūmān Bey, the last of the Circassian sultans of Egypt, was hanged outside this gate by Sulṭān Selim II., on 19th Rabī' el-Awwel, 923 of the Hegira (15th April, 1517; p. 241). This gate is also called Bāb el-Mutawelli, from the old tradition that the most highly revered saint Kutb † el-Mutawelli has his abode behind the western gate, where he sometimes makes his presence known by a gleam of light. A beggar who spends the day here endeavours, by loudly invoking the saint, to excite the compassion of passers-by. From the inner (E.) gate hang bunches of hair, teeth, shreds of clothing, and other votive offerings placed here by sick persons who hope thereby to be cured of their diseases.

Passing through the gate, we enter the street called Sukkorīyeh (p. 252), where on the left we observe the handsome portal of the Gām'a el-Muaiyad (Pl. 57), a mosque which is connected with the gate of the city. The interior is undergoing restoration, and is, therefore, not easily accessible. This mosque was erected by Sulṭān Şēkh el-Mahmūdī Muaiyad (1412-21), of the dynasty of the Circassian Mamelukes, who had once been the leader of the rebellion against Sulṭān Farag (p. 282), and who had been defeated by the sultan and imprisoned for a time at this spot. The edifice is also known as the Gām'a el-Ăhmar, or the red mosque, from the colour of its exterior.

Sulṭān Şēkh el-Mahmūdī Muaiyad, after having defeated and executed Sulṭān Farag, his predecessor, who was the son of Barḫū, the founder of the

† Kutb properly means pole or axis. This greatest of the Mohammedan saints is so named because the other well’s, who are divided into three classes (nakib, pl. nuğaba; negib, pl. nuğaba; bedil, pl. abdul), are considered, as it were, to revolve round him. According to the generally received belief of the Muslims the favourite abode of this saint is on the roof of the Ka’ba, but the Egyptians regard the Bāb ez-Zuwēleh as at least his next most favoured dwelling-place, and therefore sometimes call it the gate of El-Mutawelli, i.e. 'of the reigning kutb'. The tomb of Seyyid Ahmed el-Badawi (p. 224) is another resort of the kutb, who of course can instantaneously transport himself from Mecca to Cairo or elsewhere at pleasure.
Circassian Mameluke dynasty of the Burgites (from the Arabic burg, or castle, and so called from their service in fortresses), ascended the throne in Nov. 1412. His reign was chiefly occupied with victorious campaigns against his unruly Syrian vassals, in which he was greatly aided by the military talents of his son Ibrāhīm. He was a man of weak constitution, and the early death of Ibrāhīm is said to have accelerated his end; while some authors state, on the other hand, that he caused Ibrāhīm to be poisoned from jealousy on account of his greater popularity. Muaiyad died on 13th Jan. 1421. Although, according to Egyptian historians, he died very wealthy, his coffers did not contain money enough after his death to defray the expenses of his funeral, all his property having been carried off by his emirs, while no one cared for the dead body. Though successful in his foreign policy, he had neglected to secure the good will of his people. His emirs were never sure of their lives, many of them having been imprisoned or executed on mere suspicion. As most of the public offices were sold to the highest bidder, his subjects were oppressed and maltreated by his judges and officials, who sought to indemnify themselves by practising all kinds of extortion. Notwithstanding all the misfortunes he brought upon Egypt by his maladministration and cupidity, Muaiyad had no lack of panegyrists, who remembered only that he was a pious Muslim, that he associated much with scholars, that he was distinguished as a theologian, an orator, and a poet, and that he had founded a mosque, a hospital, and a medreseh, or theological school. On several occasions, after having perjured himself with a view to compass the destruction of his opponents, he spent several days in a dervish monastery, attended the zikrs, and loaded the monastery with presents. Like the dervishes, he usually wore nothing but a woollen robe, and to prove his humility he commanded the preachers to descend one of the steps of their pulpits when they had occasion to mention his name. Towards religionists of other creeds he was intolerant in the highest degree. He exacted heavy contributions from Christians and Jews, and he re-enacted and rigorously enforced the sumptuary laws of 'Omar (A.D. 634-44), Mutawakkil (849-50), the Fatimite Khalif Hākim (996-1020); see p. 277), and Sultan Mohammed en-Nāsir (1293-1341; p. 275). Not only were the colours to be worn by the Christians and Jews prescribed (the costume of the former being dark blue, with black turbans, and a wooden cross weighing 5lbs. hung round their necks; that of the latter, yellow, with black turbans, and a black ball hung from their necks); but the fashion of their dress and length of their turbans, and even the costume of their women, were so regulated as entirely to distinguish them from the followers of the prophet.

The handsome bronze gate at the entrance originally belonged to the mosque of Sultan Hasan (p. 258). The plan of the mosque resembles that of the mosque of 'Amr (p. 309); but this edifice is richer in its details, although without any strongly defined characteristics. Here, too, columns of many different kinds have been employed. On the right, by the Makṣūra, is the mausoleum of the sultan, and on the left that of his family. The sanctuary is separated by a railing from the inner court (Ṣāhn el-Gāma'), which is shaded with acacias and sycamores. The ruins on the S. side are those of a public bath which was formerly connected with the mosque, but its plan is scarcely now traceable. The mosque has three minarets, two of which rise above the outbuildings of the Bāb ez-Zuwāleh (see above) the city-gate connected with the sacred edifice.

Outside the gate, towards the S.E., to the left of the sentry, is the Derb el-Ahmor or 'red way', recently called Rue de la Citadelle, leading to the Citadel (p. 260). About 450 yds. from the
Bāb Mutawelli, by a bend of the road towards the right, rises the Gām'a el-Werdāni (or Mardāni; Pl. 69), with its graceful minaret. The court, now closed, and used as a magazine, is adorned with slender columns and pointed arches.]

Following the Sukkariyeh street to the left (N.) for about 100 yds. more, we observe on the right the modern Sebil of Mohammed 'Ali, in marble (Pl. 92), a fountain of pleasing appearance, though imperfect in its details. To the left, about 270 yds. farther on, where the street now takes the name of El-Ghūriyeh (p. 252), we observe, slightly projecting into the road, the Gām'a el-Ghūri (Pl. 42), and opposite to it the Sebil and Medreseh erected by the same founder. The two façades, dating from the second half of the 10th cent. of the Hegira, and presenting a very harmonious effect, are most interesting. The walls of the interior are adorned with inlaid figures. A shirt of the Prophet brought by Sulṭān el-Ghūri from Mecca, was formerly shown at this mosque, but it is now said to be preserved in the Citadel, where it is shown once annually to the higher government officials only, who have the privilege of kissing the precious relic.

Kansuweh el-Ghūri (1501-16), once a slave of Sulṭān Kait Bey, was chosen sultan on 20th April, 1501, after the downfall of Tūmān Bey, who had reigned for one hundred days only. Although upwards of sixty years of age when he ascended the throne, he still possessed considerable vigour and energy. He kept the unruly emirs in check, and neutralised the influence of the older Mamelukes by the purchase of new slaves. Although himself of servile origin, he was as great a lover of splendour as if he had belonged to a princely family. His stables contained the finest horses in Egypt, his rings the most precious jewels; his dinner-service was of the purest gold, and his palace and citadel were the resort of poets, minstrels, and musicians. He improved the roads and canals of Egypt, founded schools and mosques, and constructed fortifications; but, in order to accomplish all this, he imposed burdensome taxes on his people. On one occasion he levied a subsidy on all landed property in Egypt and Syria amounting to the value of ten months' produce, and he taxed the estates of religious institutions still more heavily than those of private individuals. A similar tax was imposed on mills, ships, beasts of burden, and irrigation machinery, and all government pensions were withheld for ten months, while large sums were arbitrarily extorted from the merchants. At the same time he levied heavy dues on imports and exports, debased the coinage, and taxed the inspectors of markets, who indemnified themselves by exactions from the dealers. Already seriously injured by the discovery of the Cape route to India by the Portuguese, the trade of Egypt was terribly depressed by these tyrannical proceedings. Having at length been made aware by the Venetians of the dangers which threatened his country, Kansuweh el-Ghūri endeavoured to protect its commerce by equipping a fleet for service against the Portuguese in India, and with it in 1508 he gained a naval victory over Lorenzo, son of the viceroy Francisco d'Almeida, near Shawl in Beluchistan; but the following year his fleet was compelled to retreat to Arabia in a shattered condition. Meanwhile Husēn had conquered Hijāz and Yemen, and added them to the Egyptian dominions, on which occasion El-Ghūri caused the whole of the S. side of the Ḥarām at Mecca to be rebuilt (in 906 of the Hegira), as recorded there by an inscription under the Bāb Ibrāhim; but these districts soon threw off his yoke and placed themselves under the suzerainty of the Osmans, and before his newly equipped fleet reached India, the sultan himself died. On 24th Aug. 1516, while fighting against the army
of the Osman sultan Selim I. in the plain of Dabik (to the N. of Aleppo),
he is said to have fallen down in a fit of apoplexy, and to have been slain
by his own followers, either from motives of cupidty, or to prevent him from being captured by the enemy.
His head was afterwards cut off and carried as a trophy to the victor.

Farther on, we leave the Gām'a el-Ashraf (Pl. 37; uninteresting) to the left, and, about 220 yds. from the Gām'a el-Ghūrī, reach the Rue Neuve (Muski, p. 251).

Starting from the Ezbekiyyeh and ascending the Muski as far as the El-Ghūrīyyeh street, on the right (p. 252), and the Bazaar of the Coppersmiths (en-Nahhāsîn; Pl. C, 2; p. 254), on the left, we follow the latter, passing the entrance to the Khān el-Khalīfī on the right (p. 253), and after a few hundred paces observe on the left three mosques, adjoining each other, with staring red and white striped façades (p. 179). The first of these is the —

Muristan Kalaūn (Pl. 73), once a vast hospital (‘muristan’, from the Persian word bimaristān), the greater part of which is now in a ruinous condition, and now used as a workshop by coppersmiths and tinkers. The tomb of the founder, however, which also serves the purpose of a mosque, is tolerably preserved. The foundation-stone was laid by Sultan el-Manṣūr Kalaūn (1279-90) in the year 683 of the Hegira, and the whole edifice is said to have been completed within thirteen months.

Passing over a son of Būbars, who was a minor, Kalaūn ascended the throne of Egypt in Nov. 1279. He gained a victory over a rebellious governor of Damascus; he defeated the Mongolians, who were threatening Syria, at Homā; he chastised the princes of Armenia and Georgia for allying themselves with the Mongolians, who had invited Pope Nicholas IV., Edward I. of England, and Philip le Bel of France to attack Syria, offering them the necessary horses, beasts of burden, and provisions; he entered into treaties with Emperor Rudolph, the Genoese, Alphonsus III. of Castile, Jacopo of Sicily, the prince of Yemen, and the prince of Ceylon; he took the town of Lādiskāye (Laodiçe) from the prince of Tripoli, and then Tripoli itself, which after the death of Bohemund had fallen into the hands of Bertrām of Gibelet; and he made preparations to wrest from the Christians their fortress of 'Akka (Acre), the only one still held by them in Syria.
Before, however, he could proceed to carry out this last enterprise, he died on 10th Nov. 1290. Kalaūn is immoderately praised by the Egyptian historians. He was, indeed, less bloodthirsty than Būbars, and less tyrannical towards his subjects; but in the prosecution of his schemes of aggrandisement he committed flagrant breaches of justice and honour, deeming no treaty sacred, if its violation promised him any advantage.

The Muristan, the finest monument of Kalaūn's reign, was so extensive, that it contained a separate ward for every known disease (see Plan), besides rooms for women; and connected with it were abundant stores of provisions and medicines. It also contained a large lecture-room, in which the chief physician delivered medical lectures. Not only the poor, but even persons of means, were received gratuitously as patients, and the consumption of food was so large that the hospital employed several officials for the sole purpose of buying provisions and keeping accounts. Besides

BaeDEKEN'S Egypt I.
these officials there were a number of others, whose duty it was to collect the various revenues set apart for the support of the institution. In the tomb-mosque the Korān and the religious traditions connected with it were publicly taught, the teachers and the pupils both being supported by government. A large adjacent apartment contained the library, which was well stocked with exegetical treatises on the Korān, books of traditions, grammars, and medical, theological, legal, and literary works, and was kept in good order by a librarian and five assistants. The school-

building contained four lecture-rooms for the teachers of the four schools of Mohammedanism (p. 147); and there was also a school for children, where sixty orphans were maintained and educated gratuitously.

In the tomb-chamber are still preserved articles of dress which once belonged to Kalaün, and are popularly supposed to possess miraculous virtues. Thus, the shawl (‘immels) of his turban is supposed to cure headaches, and one of his heavy kaftans, wrapped round the body of the patient for twenty-four hours, is said to be an infallible remedy for ague. This superstitious belief in the healing powers of the sultan’s clothing is probably due to the fact that he devoted much attention to medicine.

The Portal (Pl. 1; Nos. 1-8 are the only parts of the building now preserved; the other numbers on the plan show the former arrangements), the most interesting part of the whole edifice, is constructed of black and white marble, and is of imposing height. The doors still show traces of their former covering of bronze. The ceiling of the entrance, with its open beams, is also very effective.

The corridors, most of which are vaulted in the Gothic style, appear to some extent to have lost their original regularity in consequence of their restoration by Seyyid el-Mabrûki and Ahmmed Pasha Tâher during the present century.

The second door (Pl. 4) on the right leads to the Vestibule (Pl. 5) of the Tomb of Kalaün, now used as an office by the administrators of the estates of the mosque. The tomb itself contains a fine granite column, and the lower parts of the walls are covered with mosaics in marble. The kibla (prayer-recess), with its mosaics, its beautiful dwarf-arcades, and its shell-shaped ornamentation, is also worthy of notice. The disposition of the pairs of windows resembles that which occurs in Christian churches of the Romanesque period. The stucco tracery with which the windows are filled should also be inspected.

Adjacent to the Muristan is the *Tomb of Sultan Mohammed en-Nāṣir ibn Kalaün (1293-1341; Pl. 56), dating from 698 of the Hegira.

In 1293 Mohammed en-Nāṣir ibn Kalaün, son of the Kalaün above mentioned, when only nine years of age, succeeded his elder brother Khalil, who is better known as El-Ashraf (p. 253). At the beginning of his reign sanguinary feuds broke out between Ketboga, his vicegerent, and Shujâ‘i, his vizier. In Dec. 1294, Ketboga, having got rid of his antagonist, usurped the sceptre, but two years later was dethroned by the discontented emirs, and was succeeded by Lajîn, son-in-law of Bêbars, and once a slave of Kalaün, who is said to have been a German by birth, and to have been brought to Egypt when ten years old. Lajîn having been assassinated in Jan. 1299, Nāṣir, who had meanwhile resided at Kerak, a Syrian fortress to the E. of the Dead Sea, was recalled. Although he had gained several victories over the Mongolians, who were threatening Syria and even Egypt itself, he was still treated by his emirs as a youth under age, and the real rulers of the country were Sallar, his chancellor, and Bêbars II. Jashengir, the prefect of his palace, who had originally been a Circassian slave. In 1300 Nāṣir returned to Kerak, for the avowed purpose of undertaking a pilgrimage to Mecca, but on his arrival there he announced his intention to throw off the trammels of tutelage, and for a time to establish his residence at Kerak. The consequence was that he was declared at Cairo to have forfeited his throne, and Bêbars II. was proclaimed sultan in his stead (April, 1309).
The Syrian emirs, however, remained faithful to Nāṣir, and with their aid he succeeded in re-establishing his authority in Egypt, although the nominal Abbaside Khalif residing at Cairo had pronounced him an outlaw and declared war against him. The three chief traits in Nāṣir’s character, distrust, vindictiveness, and cupidity, now became very prominent, and there was no promise or oath which he deemed inviolable. He treated his emirs with the utmost capriciousness, presenting them with rich gifts, or ordering them to be executed, as the humour seized him; and this feature of his character has been aptly described by an Arabian historian, who declares ‘that he fattened his emirs, and killed them when thoroughly fattened, in order that all they had swallowed might return to him.’ Isma‘īl Abul Fidā (p. 199), however, one of his emirs, retained his master’s favour till the time of his death, and even had the title of sultan conferred upon him. Towards the mass of the population, on the other hand, Nāṣir was always liberal and condescending; he abolished oppressive taxes, punished hoarders of grain, and distributed corn in times of famine. He was tolerant towards the Christians also, and was anxious to abrogate the regulations about dress (p. 271) which certain fanatics had induced him to make in his earlier years, but was unable to carry out his wish. He even appointed Christian officials, particularly in the custom-house and finance departments. His chief object was to surround himself with officers who could procure him money, to defray the enormous expenses of his court, to gratify his taste for horses (of which no fewer than 3000 are said to have been reared in his stables annually), and his love of building. He connected Alexandria anew with the Nile by means of a navigable canal, and constructed other canals also, such as that from Khānkāh to Siryāḵūs, and embankments. In spite of his tyranny, he therefore enjoyed a considerable share of popularity, to which his stringent enforcement of the religious laws and his indulgence towards the clergy, so long as they did not interfere in politics, farther contributed. On 6th Jan. 1341 Nāṣir died the death of a pious and penitent Muslim. As soon as the emirs perceived that his end was near, they seized upon the whole of his property, so that after his death not even a suitable pall to cover the corpse could be found. His miserable funeral took place by night, attended by a few emirs only, and lighted by a single lantern. Thus, according to his Arabian biographers, terminated the reign of the powerful sultan whose dominions had extended from the frontier of Abyssinia to Asia Minor, and from the Euphrates to Tunis, but who, though wealthy and the father of twelve sons, died like a stranger and a childless man, and was buried like a pauper.

The late Romanesque portal, in marble, with its round arch, has an architrave adorned with Arabian sculpturing, and is strikingly different from all other Arabian portals of the kind. It was originally erected at Acre in Syria, after the destruction of which it was transferred to Cairo in A.D. 1291 by the Egyptian Mameluke Sultan El-Ashraf (p. 253) as a trophy of victory. The only object of interest in the interior is the well-defined and beautifully moulded Arabian stucco-work, remains of which are preserved.

The third large building is the Barkūkiyeh Mosque (Pl. 39), erected as a monument to the daughter of Barkūk at the close of the 14th century. It possesses a marble portal and a bronze door, but the interior is uninteresting.

Barkūk (1382-99), a Circassian slave, succeeded in raising himself to the throne by setting aside Hāggi, a boy of six years, and great-grandson of Mohammed en-Nāṣir. He was proclaimed sultan in Nov. 1382, being the first of the Circassian Mameluke sovereigns (p. 105). His accession to
the throne, which had been the result of treachery and intrigues of every kind, so exasperated the emirs that they conspired against him and dethroned him in June, 1889. In Jan. 1390, however, after having defeated his enemies, Barkūk celebrated his triumphal entry into Cairo. During his reign the Mongolians under Timur and the Osmans under Bajesid encroached on the frontiers of his empire, but Barkūk was not sufficiently energetic to resist their advances. He died in 1399.

These three mosques, with their three lofty minarets, present an imposing, though not quite regular, façade. Opposite to them is a modern sebil. Continuing to follow the Nahḥāsin Bazaar (p. 254), which is generally enlivened by busy traffic, towards the left, we come to another fountain with a School (Pl. 91), erected by a certain 'Abder-Rahmân Kikhya, the founder of several religious edifices (p. 289). An arm of the Nile is said once to have flowed between the Tomb of Kalaūn and this fountain.

Passing to the right of the fountain, we reach the beginning of the Gumelīyeh street, the seat of the wholesale trade of Cairo (p. 255), the warehouses of which occupy the okellas (p. 255), or inner courts, of this part of the town. The finest of these courts, which present no great attraction, is the Okella Sulṭān Pasha (Pl. 74), opposite the corner where our street bends to the N. The entrance, with a kind of star-vaulting, and the court, with its colonnades and mushrebiyehs, should be noticed. To the left, at the corner of the lane by which we have come, is the Medreseh Gumelīyeh (Pl. 31), with a late Romanesque gateway, the original form of which is scarcely now traceable owing to the restoration and bedaubing it has undergone. At the back of this school is a tomb-mosque. Following the lane towards the N. for about 500 paces more, we reach a transverse lane on the left, which leads to the entrance of the —

Gám'a el-Ḥākim (Pl. 43), erected at the beginning of the 5th cent. of the Hegira, on the plan of the Gám'a ibn Tulūn, by Khalīf El-Ḥākim, of the Fāṭimite dynasty (p. 102), the founder of the sect of the Druses. A Cufic inscription over the E. gate gives the date 393 of the Hegira (A.D. 1003).

El-Ḥākim (986-1020), the third Fāṭimite Khalīf, succeeded his father 'Azīz when scarcely eleven years old. His bigoted attachment to the Shi'ite views (p. 151), and his intolerance towards the Sunnites, Christians, and Jews, rendered him unpopular with most of his subjects of the upper ranks. With the lower classes, on the other hand, consisting partly of Shi'ites and partly of Sunnites, he ingratiated himself by his liberality, his religious and unassuming mode of life, his zeal for the discipline of his soldiers, his rigorous administration of justice, and his persecution of the Jews and Christians. But while he wore the plainest kind of clothing and prayed daily among the people, he frequently caused his viziers and officials to be executed from mere caprice. Down to the year 1017 he was a benefactor to the poor, but a sanguinary tyrant towards the rich, the great, and those who differed from him in creed. Till then he had been a devout Shi'ite and exacted obedience from his subjects as their lawful Imām, but had repudiated any homage approaching to deification. He now, however, devoted himself entirely to the Ultra-Shi'ites, who elevated him to the rank of a god. He was persuaded of his divinity by Mohammed ibn Isma'il ed-Darazi, a cunning Persian sectary, who called on his people to recognise
him as a deity. Thenceforward El-Hākim discontinued his attendance at the mosques, ceased to organise pilgrimages, and exacted from his subjects the veneration due to a god. Islam became a matter of indifference to him, and he permitted the Christians and Jews who had embraced the religion of the prophet to return to their former faith, although by Mohammedan law such conduct was punishable with death. All the suppressed churches and synagogues were re-established, and their property restored to them, and the sumptuary laws were repealed. At length, on the night of 12th Feb. 1021, El-Hākim disappeared, having probably been assassinated while taking one of his nightly walks on the Mokāṭātam hills. The Druses (the sect founded by Ed-Darazi, above mentioned), however, believe, that El-Hākim voluntarily withdrew from the world in consequence of its sinfulness, and that he will one day re-appear and be worshipped by all nations as the last incarnation of the Deity.

The greater part of the old mosque is now in ruins, so that it is no easy matter to trace its architectural plan. A few brick pillars, incrusted with stucco, with bowtels, or projecting cylindrical moulding's at the angles, and several columns without bases or capitals, are the only remain. The arcades consist of pointed arches, widening into the horse-shoe form; and proper horse-shoe arches, some of them of elliptical shape, also occur. The ceiling and the wooden bolts are of palm-wood. The inscriptions are in the Cufic character. The minaret, with its massive base in the style of the Egyptian pylons (p. 166), was fortified by the French in 1799 (see below). To the left of the entrance is a small glass-house, erected by Syrians, and worthy of a glance owing to its primitive character.

Returning to the lane by which we have come, we follow it to the N., passing on the left an okella with an interesting gateway enriched with stalactite decoration, and a façade adorned with Arabian wood-carving. We now reach the —

Bāb en-Naṣr, or ‘Gate of Victory’, the plan of which was probably derived from the Roman castle of Babylon (p. 306). The ancient city-wall to the W. connects this gate with the similar Bāb el-Futūḥ. These two gates, together with the fortified mosque of Sultan Hākim situated between them (see above), formed a strong position for the troops of Napoleon, whose cannons have only recently been removed from the terraces of the gates. The casemates and towers still bear French names cut in the bastion walls. On payment of a small bakhshish, the visitor may ascend the Bāb en-Naṣr and the city-wall, and walk along the top of the latter to the Bāb el-Futūḥ. These gates, the most important of the sixty which once existed in the walls of Cairo, were erected by the vizier Berd Gamali in the 11th century. The Bāb en-Naṣr in particular is built of well-hewn stone, and has vaulted winding stair-cases in the interior, groined vaulting in the gateway, girders with a kind of hatched moulding, and cornices with a corbeled frieze. Over the entrance are a slab with a Cufic inscription, and decorative shields. The principal entrance of the Bāb el-Futūḥ is flanked with semicircular towers, and that of the Bāb en-Naṣr with square towers. The spaces between the inner and outer gates are vaulted.
We leave the Bāb en-Naṣr and turn to the right, crossing a Mohammedan burial-ground, on the left side of which, on a small

![Bāb en-Naṣr](image)

(From the side next the town.)

eminence not far from the road, is interred J. L. Burckhardt (d. 1817), the distinguished Oriental traveller, whose works are still of high authority.

Before leaving the city-wall to the right, we observe on the left two towers with iron basins, being the reservoirs of the Waterworks supplying the palace of the Khedive in the 'Abbāsiyeh and the Citadel. In front of these, but less visible, are the five large filters for purifying the town supply.

The water is pumped into these filters by engines of 150-horse power, situated in the Isma'iliya quarter, on the canal of that name. A smaller pump adjoining the filters is used for providing the Citadel with water. The first temporary pumping machinery, erected in 1865-66, at Kasr el-'Ain, was employed in filling the basins in the desert, and also in supplying a small part of the city. The distribution of water is now effected by a double system of pipes, through one set of which the filtered water is forced to a height of about 80 ft., while the other brings unfiltered water from the neighbourhood of Būlāk for the purpose of watering the streets and the gardens, conducting it to a height of about 30 ft. only. The engines in the Isma'iliya quarter are capable of supplying the town with 30,000 cubic metres, or about 111,000 cubic feet, of water per day. The government pays 46 centimes for each cubic metre of filtered water consumed, and 25 centimes for the same quantity of unfiltered water. The lowest rate payable by small families for filtered water is 8 fr. per month. The whole length of the pipes for filtered water, the largest of which are 2 ft. in diameter, amounts to 19 miles, and that of the pipes for unfiltered water to about 6 miles. The cost of the works amounted to 5 million francs.

The very dusty road next leads to the unimportant tomb of Shēkh Galal, a little beyond which we reach the so-called —

**Tombs of the Khalifs,**

which extend along the E. side of the city, and which, beyond the Citadel, are known as Tombs of the Mamelukes ☞.

☞ The name 'Tombs of the Khalifs' is historically a misnomer. Both the Bahrite (1258-1332) and the Circassian Mameluke sultans
All these tombs, most of which are of vast extent, were once richly endowed, each being provided with a numerous staff of šēkhs and attendants, who with their families resided within their precincts. At the beginning of the present century the revenues of these establishments were confiscated, so that the tombs are now falling to ruin. The descendants of the mosque attendants and other Arabs have since taken up their quarters among the ruins, and the old necropolis has thus been converted into a kind of suburb of Cairo, the inhabitants of which often pester strangers with their importunities.

A visit to the tombs is exceedingly interesting, particularly towards sunset, owing to the very curious and novel picture they present. They may be reached by carriage, but the traveller will be more independent on donkey-back.

**Points of View.** (1) From the road, approaching from the Bāb en-Nāṣr, a little beyond the tomb of the šēkh; (2) From the S.W. corner (see Plan), at the foot of the Citadel; (3) From the Windmill Hill opposite the end of the Rue Neuve, the E. prolongation of the Muski. This last point is specially recommended as it also affords an admirable survey of the town, the Nile, and the Pyramids, and is very easily reached. Half-an-hour of leisure before sunset can hardly be better spent than on this hill (p. 284), but the beggars are often troublesome.

The N.E. group of these mausoleums (on the left when approached from Bāb en-Nāṣr) consists of the Tomb of Sultān Abu Su‘īd Kansuwh el-Ghūrī (p. 272), a cube surmounted by an elongated dome, and two tomb-mosques, one of Sultān el-Ashraf, with a handsome minaret, the other of Emīr Yūsūf, son of Bursbey (see below). These two mosques, which present no attraction, are now used for military purposes, and are not shown without special permission from the minister of war. As visitors are prevented by the sentry from approaching within half-a-mile of them, we leave them to the left, and proceed in a straight direction to the —

*Tomb-Mosque of Sultān Barkūk* (p. 276), with its two superb domes and its two minarets. Under the N. dome are the tombs of the male, and under the S. dome those of the female members of the family. The present Entrance (Pl. 1) at the S.W. corner is in a ruinous condition. The old Principal Entrance (Pl. 18) at the N.W. angle, now closed, has an architrave of alabaster; the threshold is of granite, and the ceiling consists of a dome with pendentives.

The Vestibule (Pl. 2) of the S. façade, through which we reach the interior, has a fine star-shaped dome. We pass thence into the Hōsh, or Sahn el-Gām‘a (Pl. a, b, c, d), the large Quadrangle, in the centre of which is the Hanefiyeh (Pl. 4), or fountain for ablution. Beneath the larger (N.E.) dome is the Tomb of Sultān Barkūk (Pl. 12), who reigned from 19th Ramaḍān, 784, to 15th Shawāl, 801 (comp. p. 276). Adjoining the tomb is a column, said to represent the height of the deceased, and inscribed with several biographical data. A black stone here (ironstone), when rubbed on granite under water, is believed by the Muslims to possess

(1382-1517) were nominally dependent on Khalīfs of the house of the ‘Abbasides resident in Egypt (p. 101), but treated them as mere puppets; and it was these real monarchs of Egypt, and not the Khalīfs, who built these large and superb mausoleums.
The accompanying plan of Barţuk's Tomb-Mosque will convey an idea of its original extent and arrangements; but a considerable part of it is now in ruins.

sanatory virtues, in which those who drink the discoloured water participate.

The adjacent tomb is that of Sultan Farag, Barkuk's son and successor.

Farag (1399-114) had scarcely ascended the throne (20th June, 1399), as a boy of thirteen years of age, before the Osmans began to threaten the Syrian dominions of the Egyptian empire; and Timur (Tamerlane), in his war against the Osmans, shortly afterwards defeated the Syrian emirs, who had opposed him, near Aleppo. Farag himself thereupon headed a campaign against Timur, and proceeded victorious as far as Damascus; but owing to dissensions among his emirs he was obliged to return to Cairo and leave Syria to its fate. After the defeat of the Turks under Bajesid by the Mongols under Timur at the battle of Angora, Farag was compelled to enter into negotiations with Timur, and he is even said to have sent him Egyptian coins bearing the Mongolian conqueror's name in token of his submission. The death of Timur, however (18th Dec. 1403), saved Egypt from the risk of being conquered by the Mongols. The latter years of Farag's reign were constantly disturbed by the rebellions of his emirs, particularly Shakh el-Mahmudi Muniyad (see p. 270). He was at length compelled by the insurgents to capitulate at Damascus, whither he had proceeded with his army, and was executed (May, 1412).

The third tomb contains the remains of a brother of Farag, who reigned seventy days only. The S. Mausoleum (Pl. 13) contains the tombs of the female members of the family. The *Mimbar (Pl. 6), in hard limestone, one of the most beautiful existing specimens of Arabian sculpture, was presented by Kait Bey (p. 206). The *Minarets, with their three galleries (besides the balconies below them), are borne by pendent cornices.

The symmetrical plan of the edifice, its massive masonry, and the symmetrical disposition of the rows of pilasters with domes, constitute this mosque one of the most perfect examples of Arabian architecture in existence; and, notwithstanding its ruinous condition, it still presents a most imposing appearance.

To the W. (right) of this tomb-mosque is the Tomb of Sultan Sulaiman, containing interesting sculpture in the dome and inscriptions in fayence, now partially destroyed. To the E. of this tomb (and to the S. of Barkuk's mosque) is another handsome dome-covered tomb, the founder of which is unknown; and there are other interesting dome-structures of various forms, carefully executed, but of uncertain origin. Adjoining the mausoleum of Sulaiman is the tomb of the *Sehib Benat (seven maidens). The dome, with its pendentives, is of a very elongated form, and differs considerably from those of the neighbouring mausolea, being more similar to those of the so-called Mameluke tombs (p. 313).

Opposite the last-named tomb, to the E. (left), is the Tomb-Mosque of Bursbey (Berisboi), completed in 1431.

Bursbey (1422-38), who had for a time been the viceroy of a young son of Tatar, ascended the throne on 1st April, 1422. After having defeated some of his rebellious vassals, he determined to attack Cyprus, one of the chief hotbeds of piracy. In the course of the third of his expeditions he succeeded in capturing Janus, King of Cyprus, whom he carried in triumph to Cairo. On paying a ransom of 200,000 denarii, and promising to pay the sultan an annual tribute, he was sent back to Cyprus.
Tomb of the Khalihs.

South East side. Seen from a distance of 200 Yds. in approaching the tombs from the Citadel.
as a vassal of Egypt. Bursbey was, however, less successful in his battles with the Turcoman Kara Yelek, who had allied himself with Timur, the prince of the Mongols. A contemplated expedition against Egypt, which was to have been commanded by Shah Rokh, a son of Timur, had to be abandoned in consequence of the breaking out of a pestilence throughout the East. In order to prevent Kara Yelek from joining Shah Rokh, Bursbey attacked him in N. Syria in 1436, but was compelled by his refractory emirs to conclude a dishonourable peace, notwithstanding which he shortly afterwards entered Cairo with all the pomp of a conqueror. Shah Rokh then demanded the cession to himself of the privilege of sending to Mecca the materials for the covering of the Kabā, a right which had belonged to the sultans of Egypt since the decline of the kalifate of Baghdâd, but Bursbey was successful in resisting this claim. He also defeated the Sherif of Mecca, and thus became the protector of the holy city, while the possession of Jedda, the seaport of Mecca (p. 410), afforded him great commercial advantages. This was owing to the fact that Jedda had recently become a favourite resort of the Indian spice-merchants who had previously traded with 'Aden, but had there been subjected to gross extortion by the princes of Yemen. Bursbey availed himself so thoroughly of these advantages that he incurred the hostility of Venice, Catalonia, and Arragon; but he succeeded in monopolising the trade in some of the most important articles, so that the interests of private dealers were seriously prejudiced. He died a natural death in 1438.

Various data regarding the building of the mosque and the legacies bequeathed for its preservation were engraved on a long marble frieze on the okella which adjoins the edifice on the right, and a considerable part of it is still to be seen in the place. The Liwān contains good mosaics. Some of the handsome perforated stucco windows are still preserved, but the bronze gratings have been removed, and the openings built up. Several severe conflicts between the French troops and the Mamelukes are said to have taken place around this mosque.

The admirably executed gateway with its pendentives, and the wall enclosing the three monuments, were erected by Moḥammad, an intendant of the Ḥôsh, about the year 1142 of the Hegira.

Adjoining the mosque is the Muḥbed cr-ʾRifāʾi, a mausoleum with a remarkably depressed dome, next to which is the Tomb of the Mother of Bursbey, a poorly executed work. The form of the openings in the latter is worthy of notice, as the arches with straight sides, placed below an acute angle, though not uncommon, seldom occur quite alone. The oldest arches of the kind are to be found in the 'Amr and Azhar mosques.

In the same street, a few paces farther to the S., we observe on the right the long Okella Kait Bey, with its carefully executed gateway and characteristic ornamentation. The façade is built of massive stone, and is tolerably regular, but the mushrebîyehs are of inferior workmanship and probably of later date. The gate is mounted with large iron nails. The ground-floor is vaulted, while the upper floor has an open ceiling. The edifice was completed in the year 877 of the Hegira.

A little farther to the S., projecting in an angle, is a public fountain, now in ruins, also erected by Kait Bey. The shallow
niches, the upper parts of which are shell-shaped, are in the form of fantastic arches.

Beyond this sebil we reach an open space, on the right side of which is the *Tomb-Mosque of Kait Bey* (p. 266), the finest edifice among the Tombs of the Khalifs, with a lofty dome and beautiful minarets.

The Sahn el-Gâm’a was once closed by a mushrebiyeh lantern, which fell in 1872. The rest of the edifice has an open ceiling, as in the case of the mandaras (p. 184). The Dikkeh, in the form of a balcony, resembles that in the mosque of Kait Bey adjacent to the mosque of Tulûn. The details are very elaborately executed. Within the mausoleum are shown two stones, one of red, and the other of black granite, which are said to have been brought from Mecca by Kait Bey, and to bear impressions of the feet of the prophet. One of them is covered with a wooden canopy, and the other with a bronze dome. The mosque also contains a finely carved kursi for the Korân. The whole edifice is erected of solid and regular masonry. The Minaret is remarkable for the elegance of its form. The Dome, richly adorned with bands of sculpturing, is constructed of limestone.

After visiting this mosque the traveller may proceed to inspect the great necropolis. Those who are not fatigued may now walk towards the Citadel (p. 260), examining the different hûshes, domes, and smaller monuments on the right and left, and may then visit the Tombs of the Mamelukes (p. 313) beyond the Citadel. The embankment of the new railway which runs between the Tombs of the Khalifs and the quarries of the Mokattâm, affords a good survey of the scene. The traveller who quits the Tombs about sunset should not omit to ascend the Windmill Hill from the side next the town (comp. Plan, p. 280), for the sake of the view.
A fine effect, especially by evening light, is produced by the domes and the peculiar colouring of the valley and the opposite heights of the Mokṣatam. This mound of rubbish should indeed be frequently visited (comp. p. 280). To the W. are the city, the plain of the Nile, and the Pyramids. The red building to the N.E. is the 'Abbāsiyeh (p. 318), to the left of which is a mosque (Gām'a el-'Adil). In front of the latter is the N.E. group of the Tombs of the Khalifs (p. 280), a little to the right of which are the two minarets of Sulṭān Barkūk (p. 280). Beyond these rises the Gebel el-Aḥmar (p. 323), adjoining which are the Mokṣatam hills, with the other Tombs of the Khalifs at their base.

Mosques of El-Azhar and Hasanên.

Permission to visit these mosques, which are on opposite sides of the Rue Neuve, nearly in the middle of the street, must be obtained from the police (p. 239), and the traveller must be accompanied by a ḥawwās from the consulate. Fee to the ḥawwās 3-5 fr., according to the number of the party, and to the attendant in the mosque somewhat less.

The Gām'a el-Azhar (Pl. 38) presents few features of architectural interest, and is so shut in by houses that very little of the exterior is visible. The plan of the principal part was originally the same as that of the 'Amr Mosque (p. 309), but the numerous additions made at various periods have somewhat modified its form, and in consequence of the conversion of the mosque into a university the aisles have been separated from the court by walls and railings. The first great alterations took place in the year 1004 of the Hegira, in the reign of Moḥammed ibn Murād, the next were made by Shēkh Ismā'il Bey in 1131 of the Hegira, and the last by Sa'īd Pasha about 1848, all exhibiting the decline of Arabian architecture.

The Minarets (Pl. 12), some of which are brightly painted, were erected at different periods, one of them having been built by 'Abder Raḥmān Kikhya (p. 289).

The mosque has six gates: the Bāb el-Muzeyinīn (Pl. a), or Gate of the Barbers (see below), on the W. side, forming the principal entrance, and possessing an interesting portal; the Bāb Ghariyeh (Pl. b), on the N. side; the Bāb esh-Shurba (Pl. c), or Soup Gate, on the E.; the Bāb es-Sû'ūdiyeh, or Gate of the Upper Egyptians; the Bāb esh-Shawwām (Pl. e), or Syrian Gate; and the Bāb el-Maghārbeh (Pl. f), or Gate of the W. Africans, the three last being on the S. side.

The mosque was converted into a University (now the most important in Mohammedan territory) by Khalīf 'Aziz Billāh (A.D. 975-96), at the suggestion of his vizier Abu'l Farag Ya'kūb, in the year 378 of the Hegira, and the establishment is attended by students from almost all the countries professing El-Islām.
On the side of the court looking towards Mecca is a spacious colonnade (see below), which forms the principal hall for prayer and tuition. On the three other sides are smaller colonnades, divided by wooden partitions or railings into a number of riwâks, or separate chambers (literally, colonnades). Each of these is set apart for the use of the natives of a particular country, or of a particular province of Egypt. The most important of these riwâks are as follows:

**Riwdk el-Turk** (the word Turk being applied to all Mohammedans from the N. provinces of the Turkish empire), attended by 60 students

- **Riwdk el-Maghârbîkh (W. Africans)**: 118 students
- **Riwdk el-Shawwâm (Syrians)**: 250 students
- **Riwdk al-Baghdâdîkh (natives of Baghdâd)**: 3 students
- **Riwdk el-Hind (Indians)**: 4 students
- **Riwdk el-Akrîd (Kurds)**: 15 students
- **Riwdk ed-Dakarna, or Dárîrîyeh (natives of Dârfûr)**: 11 students
- **Riwdk es-Sunnârîyeh (natives of Sennâr)**: 23 students
- **Riwdk el-Barâbra (Nubian Berbers)**: 42 students
- **Riwdk el-Gabart (E. Africans from the Somali coast, from Zêla, Barbera, and Tajurra)**: 260 students
- **Riwdk el-Haramûn (natives of the holy cities of Mecca and Medina)**: 2 students
- **Riwdk el-Yemen (natives of Yemen)**: 90 students
- **Riwdk esh-Sharâkweh (natives of the Egyptian province of Sherkiyeh)**: 420 students
- **Riwdk esh-Fashnîyeh (natives of Fashnîh in Upper Egypt)**: 480 students
- **Riwdk el-Fayûmî (natives of the Fayûm)**: 200 students
- **Riwdk el-Baharîvch (natives of Lower Egypt)**: 475 students
- **Riwdk es-Sâdîyeh (natives of Upper Egypt)**: 1160 students

The university is attended by about 10,780 students in all, who are taught by 321 shekhs or professors.

The different sects are distributed as follows:

- Shâfe'îtes: 5651, with 147 shekhs.
- Mulekîtes: 3826, with 99 shekhs.
- Hanîfîtes: 1278, with 72 shekhs.
- Hambalîtes: 23, with 3 shekhs.

The students (Magâuirâhîn) usually remain three, and sometimes from four to six years in the mosque. They pay no fees, but each riwâk is supported by an annual subsidy from the endowments of the mosque, although these were much diminished by Mohammed 'Ali, who appropriated the revenues of most of the religious foundations in Egypt to government purposes. The shekhs, or professors, receive no salary, either from the mosque or from government, but support themselves by teaching in private houses, by copying books, or by filling some religious office to which a salary is attached, and they occasionally receive donations from the wealthier students. When teaching, the sheikh sits cross-legged on a straw-mat and reads from a book placed on a desk (rahleh) before him, explaining each sentence as he proceeds; or he directs one of the more advanced students to read aloud, adding his own explanations from time to time. The students sit in a circle around the teacher, listening, or attentively taking notes. As soon as a student knows by heart the whole of the book which is being studied by the class, the sheikh makes an entry in his copy of the work, called the Igdzeh, whereby authority to lecture on the book is conferred on the student himself. The president of the university, who is usually the most distinguished of the shekhs, is called Shekh el-Azhar, and receives a salary of about 20 purses, i. e. 10,000 piastres.

Most of the students, particularly those whose native tongue is not Arabic, begin their university education by learning the Arabic grammar (ilm en-nahû). The next branch of study is religious science (ilm el-
Mosque el-Azhar. CAIRO. 3. Route. 287

kelâm), the introduction to which consists of a series of preparatory lectures on the attributes of God and the prophet ('ilm el-tauhid, i.e. the doctrine of the unity of God). The chief attributes of God are said to be the following twelve: existence, source of all being, eternity, independence, unity, omnipotence, will (in accordance with which he rules the universe, man being powerless to save himself from sin or to be pious without the assistance and grace of God), omniscience (or knowledge of everything that happens between the lowest foundations of the earth and the loftiest heights of the firmament), life, vision (which enables him to see everything everywhere, without the aid of light, and without eyes), hearing (without ears, in the same way as he knows without a brain, and overthrows without hands), and speech (in a language that has had no beginning, a language without letters or sounds, which is inherent in his nature, and does not resemble the speech of human beings).

After having completed his course of religious instruction, the student proceeds to study law ('ilm el-fikh).

'Jurisprudence', says Ibn Khaldûn, one of the greatest of Arabian thinkers, 'is a knowledge of the precepts of God in relation to the actions of men, some of which is our duty to perform, while others are forbidden, or recommended, or permitted; and this knowledge is derived from the book of God, i.e. the Korân, from the Sunna (i.e. tradition), and from the inferences drawn by the lawgiver (Mohammed) from sufficient materials afforded by the Korân'. The study of law is therefore based upon the exegesis of the Korân (tafsîr) and of tradition (hadîth).

The science of law is divided into two branches: —

(1) The doctrine of the Chief Religious Commandments of El-Islâm, viz. (a) Et-Tauhid, or the recognition of God's unity and of Mohammed as his prophet; (b) The Şalât and Tahâra, or the duty of repeating the canonical prayers in connection with the ablutions; (c) The Sadaqa and Zakât, or giving of alms and payment of a religious tax; (d) The Şiyām, or fasting during the month of Ramadân; (e) The Ḥagg, or duty of performing a pilgrimage to Mecca.

(2) The doctrine of Secular Law, civil and criminal, either as expressly laid down by the Korân, or as deducible from it. The legal literature again is divided into two classes, one embracing systematic expositions of the law of the Korân, and the other consisting of the decisions (fatwa) and opinions of celebrated jurists in special and difficult cases.

Besides these leading branches of instruction, logic ('ilm el-ma'tîk) rhetoric ('ilm el-ma'dâni wal bayân), the art of poetry ('ilm el-'arûdî), the proper mode of reciting the Korân ('ilm el-kîrâ'â), and the correct pronunciation of the letters ('ilm el-tejââ'id) are also taught.

The above list of the subjects taught at the most important of Mohammedan schools will serve to convey an idea of the intellectual condition of Orientals at the present day. The most conspicuous defect of their culture consists in the entire absence of independent thought, in consequence of which they are the mere recipients of the knowledge of the past. Their minds are thus exclusively occupied with the lowest grade of intellectual work, their principal task consisting in the systematic arrangement or encyclopedic compilation of the knowledge handed down to them. Some of the shîkhs of the Azhar are men of marvellous erudition, but they are destitute of creative power, or of the ability to utilise their old materials for the construction of any new edifice, and they adhere faith-fuilly to the notion of their forefathers that the greatest triumph of mental labour is to learn by heart any work of acknowledged literary value. Doubt and criticism, which, though of a destructive tendency, serve also to open up fresh sources of knowledge, are unknown to them; with natural history they are entirely unacquainted; and even geometry, algebra, and astronomy, which were cultivated so assiduously by the ancient Arabs, have now fallen into oblivion. So well satisfied are they, moreover, with their own wisdom, that they utterly despise the scientific pursuits of the Western world.
We enter the mosque by the Gate of the Barbers (Pl. a), from the Street of the Booksellers (p. 252). On each side of the Entrance Court (barbers')...
(Pl. 1), which was restored by Edhem Pasha at the beginning of the present century, we frequently observe barbers engaged in shaving the heads of the students with admirable skill, but we of course avoid stopping to watch the process for fear of giving offence. This being one of the fountain-heads of Mohammedan fanaticism, the traveller should, of course, throughout his visit, be careful not to indulge openly in any gestures of amusement or contempt. Beyond the entrance, which forms a kind of fore-court, we reach the Hôsh el-Gâm'a (Pl. 2), or Great Court, where the students are seen sitting on their mats in groups and conning their tasks. This court does not contain the usual fountain for ablution, but there are three small Cisterns (Pl. 3) for the purpose. The arcades enclosing the court have arches approaching the keel shape, but the sides are straighter than usual. The openings and niches over the arcades are less systematically arranged than in the case of the Tulûn Mosque (p. 263), from which they seem to have been copied.

On the E. side, in the direction of Mecca, is the Liwân el-Gâm'a (Pl. 4), or Sanctuary, now the principal hall of instruction, covering an area of about 3600 sq. yds., with a low ceiling resting on 380 columns of granite and marble, all of ancient origin, and arbitrarily arranged. The hall is entirely destitute of architectural enrichment, and presents a heavy and sombre appearance. Here again, as in the court, we observe various groups of students in the usual crouching attitude, and others devoutly praying in front of the kîblas (Pl. 5), of which there is one for each of the four recognised sects of the Shâfe'îtes, the Malekites, the Hànefîtes, and the Hâmbalîtes (comp. p. 147). The domes over these kîblas and their walls are adorned not unpleasingly in stucco. On the S. side is the Tomb of 'Abd er-Rahmân Kîkhya (Pl. 8), by whom the S.E. part of the mosque was restored (d. about 1750). To the W. (right) of this tomb is the Riwâk (see above) of the students from Dâr-Fûr (Pl. 34), and to the left of the latter, on the E. side, is that of the natives of Mecca and Medina (Pl. 23). The N. side is bounded by the Mesgîd Gôhâriye (Pl. 9), a smaller mosque, and the oldest part of the whole structure.

After having inspected the great hall, the visitor is conducted into a number of smaller apartments (riwâks), some of which are indicated in the plan of the edifice, but they contain nothing noteworthy. There is also a separate riwâk, called the Zâwiyet el-'Omyân, for blind students, for whose maintenance a portion of the funds is set apart. These blind youths, who have a shêkh of their own, were frequently guilty of riotous conduct in former years, and used to parade the streets armed with bludgeons, whenever they conceived their rights infringed, the disputes being generally concerning the quality of their food. To this day they are said to be the most fanatical of their sect, and to entertain the most bitter hatred and contempt for the kâfir, or unbelieving Christian.
On the right and left of the W. Entrance (Pl. a) are two old mosques. The Mesgid Şêkîh Tabarset (Pl. 10), on the S. side, contains a kibla richly adorned with mosaic. The mosque on the N. side (Pl. 11) is now in ruins, as indeed are several other parts of the mosque of El-Azhâr (‘the flourishing’).

Returning to the Rue Neuve, we observe to the N., opposite us, the handsome minaret of the —

*Gâma‘ el-Hasanên* (Pl. 46), the mosque of Hasân and Husèn, the sons of ‘Âli, the son-in-law of the prophet (p. 151; the termination en indicating the dual), which is now undergoing restoration. The interior is constructed with considerable symmetry and care. The wooden ceiling, from which hang a number of lamps, is painted. A marble column is said to contain the head of Husèn, who was slain at Kerbela by Shemir Ibn el-Gaushan by order of Yezid. The head is said to have been brought to Cairo in a green silk bag. This tomb-mosque is chiefly frequented by men on Thursdays, and by women on Saturdays.†

† The visitors to the tombs, burial-mosques, and welis, which are to be found near almost every village, generally have a twofold object in view, one being to do honour to the memory of the deceased and to invoke the blessing of heaven upon them, and the other to obtain through their mediation the fulfilment of some special wish. On arriving at the tomb, the visitor must turn towards the face of the deceased and pronounce the greeting of peace. He then walks round the *makûra*, or monument, from left to right, repeating the *fâtha* at the door, or at each of the four sides, in a very low voice. A *sûrah* of the Korân is sometimes also repeated, and even the khatmeh, or recitation of the whole volume, is not unfrequently performed. In conclusion the praises of God and the prophet are usually recited, coupled with a prayer that the merit of the whole performance may be placed to the credit of the soul. Before the concluding prayer, the worshipper sometimes introduces a prayer for his own temporal and spiritual welfare. When wealthy persons visit the tomb of a saint, they distribute bread among the poor, and pay one *sukka* or more to dispense water gratuitously. Some of the tombs are chiefly visited on certain days of the week; and there are certain days of the year (especially about the middle of the month of Şâ‘înân) on which festivals are celebrated in honour of the patron saints of the different towns and villages. The most important of these are that of Seyyid Ahmed el-Badawi at Tanja in Lower Egypt, and that of ‘Abd er-Rahim at Kench in Upper Egypt. A week or a fortnight before the day of the festival, booths for the sale of coffee and sweetmeats begin to spring up around the shrine, and crowds of devotees flock to the tomb from all directions, some of them to perform the *zikr*, and others to take part in various *fantasiyâs*. Dancing women, singers, musicians, jugglers, snake-charmers, buffoons, as well as swing and merry-go-rounds, present their various attractions to young and old. On the feast-day itself, when the crowd is greatest, a solemn procession takes place. The *maiha‘*, a kind of wooden frame which usually lies on the roof of the tomb, is covered with the gold and silver-embroidered winding-sheet of the saint and placed on the back of a camel, gorgeously decorated with ribbons, carpets, and bells. The procession is headed by outriders galloping to and fro on camels, by file-players and drummers, and by the arm-bearing population of the village, whose chief delight consists in firing off their guns. Immediately before the camel with the *maiha‘* walk a number of venerable old men reciting passages from the Korân, and on each side of it are flag-bearers. Behind it come a band of music, female
The battle of Kerbela, at which Husen fell, took place on 10th Moharrem of the year 61 of the Hegira (10th Oct. 680). Historians record that Husen's head was sent to Damascus, while his body was interred in the Meshhed Husen on the N.E. frontier of Persia, to which Persian pilgrims still resort in great numbers.

Neither Hasan nor Husen was remarkable for moral worth or political greatness. The veneration paid to these young 'saints' seems to have sprung solely from the persecutions to which the whole family of 'Ali was subjected, coupled with the fact that they were the grandsons of the prophet. Their misfortunes doubtless at first excited pity, a feeling which led to their being honoured with a kind of deification, particularly in Persia, where divine honours had at a still earlier period been paid to the sovereigns of the country as being descended from the gods. It is still the custom in Persia, during the month of Moharrem, to represent the events which led to Husen's death in nine successive theatrical performances, somewhat resembling the Passion plays of Europe.

Opposite the egress of the mosque is the entrance to the Khân Khalîli (p. 253). At the E. end of the Rue Neuve is the Windmill Hill mentioned at pp. 280 and 285, adjoining which is the road to the Tombs of the Khalîfs (pp. 279-284).

Bûlâk and the Museum of Egyptian Antiquities.

Owing to the expansion of Cairo towards the W., in the direction of the Nile, Bûlâk (or Boulaq), situated beyond the Isma'ilîyah Canal, and formerly an island, has become the river-harbour of the city of the khalîfs. Its narrow streets present a very busy scene, affording a more characteristic picture of Oriental life than the capital, as the inhabitants of distant provinces are proportionally more numerous here. Natives of Dâr-Fûr, Wadai, Donkola, Kerdofân, and Khartûm, and members of the various negro tribes are seen mingling in picturesque confusion; and popular festivals and amusements are very frequently provided for their entertainment in the evening. Goods are conveyed hither from Upper Egypt, from Nubia, from the interior of Africa, and from the fertile Delta; and the Nile barges are then laden with other cargoes for the return-journey. The principal quay is nearly opposite the palace of Gezirah, adjacent to a large timber-yard; and it is most frequented between October and December, when the rapids of the river are most easily navigated. The merchants of Cairo congregate here every morning to make purchases, frequently as early as 7 o'clock. When there is a scarcity of goods, they sometimes go out to the vessels in boats; but when there is no scarcity, the goods are sold by auction in Bûlâk. Caravans bringing merchandise also arrive here not frequently, the most important being from Tunis via Kufra and Siwa, and from Wadai and Dâr-Fûr. On one part of the route from Dâr-Fûr, it is said that the caravans obtain no fresh water for twelve days.

dancers, men on camels thumping on huge drums, and lastly a promiscuous crowd of holiday makers. The procession often marches about the town for an hour or more, and thence out into the desert. Towards evening the mahmal is brought back to its usual place, and the festival then terminates.
292 Route 3. CAIRO. Museum

The chief wares brought to Bulak are gum, ostrich-feathers, ivory, and senna-leaves. The best quality of gum, called 'samgh kordofani', comes from Kordofan, while the inferior 'talh' is from Sennar. The ostrich-feathers come from Kordofan, where the birds are reared, and also from Wadai and Dár-Für. The feathers are carefully tied up in bundles, and well peppered to protect them against moths. They are sold by weight, a roll (pound) of good and pure white feathers realising as much as 30£. The black and grey feathers are much less expensive. After reaching Europe they require to be washed before being used. Of late years it has become usual to pick out the finest feathers, and to offer them for sale to travellers at high prices, even as far up as Assuân.

At Bulak, and at the moorings of Embâbeh, farther to the N., the traveller will find the dahabiyehs, or boats fitted up for the voyage to Upper Egypt. At the N. end of the town is situated the Arsenal, founded in 1835, with a manufactory of weapons attached to it. Machinery for Egyptian manufactories arriving from Europe is put together at Bulak before being sent to its final destination, and all repairs of machinery are also executed here. Bulak also boasts of a large Iron Foundry, an Ecole des Arts et Métiers, a Paper Manufactory, a House of Correction for Women, a Lunatic Asylum, and the Government Printing Office, none of which establishments will interest ordinary travellers.

The Viceregal Printing Office (el-maṭba'a; the director is Hosein Bey, and the chief reader is the learned Shēkh ed-Dasāki, whose reputation extends to Europe, and who speaks a little French) was founded by Moḥammed 'Ali, chiefly for the purpose of printing and disseminating translations of European scientific works of all kinds, and particularly school-books. The introduction of printing had at first to contend against serious prejudices, as many of the Muslims feared that the name of God would be defiled by contact with impure substances used in the process. To this day, indeed, the Korân is preferred in a written form; but, thanks to the perseverance of the government, the prejudice against other printed books has now almost entirely disappeared, and there are few of the many modern institutions recently introduced into Egypt which have thriven so well as this printing-office. Within the last fifty years there have been printed here, according to the government statistics, 418,375 copies of 226 works (393 vols.) of various kinds, without reckoning works printed at the cost of private individuals.

The number of private printing-offices is also increasing from year to year, the most important being that of Muṣṭafa Wahabi, where works published by a scientific society (gem'iyet el-ma'ārif) are printed. Lithography is also beginning to come into use, but the execution is often defective.

Of the works printed in Egypt 1000-4000 copies are usually struck off, and the fact that the whole of them are generally sold within a few years affords a proof that the taste for literature in the East is again on the increase. Some works, such as Bokhari's collection of traditions, have an immense sale. Energetic attempts are still being made to render European works accessible to Orientals in the form of translations, chiefly from the French. Thus, among the legal works, may be mentioned a translation of the Code Napoléon, among the geographical the works of Malte Brun, and among the historical the Life of Charles XII. by Voltaire; and a few years ago the libretto of Offenbach's Belle Hélène was even thought worthy of being printed in Arabic at the government printing-office of Bulak. — At the same time the national literature has not been neglected, and a number of valuable early Arabic works have recently been brought into notice by the agency of the printing-press, such as the historical works of Ibn al-Asir (comp. p. 199), those of Ma'krizi (p. 199), those of El-Maḳkari, the writer of Spanish history (17th cent.), and the 'Book of the Songs' by Abulfarag el-Isbahānī (d. 966).
A peculiarity of many of the books recently printed at Būlāk is that smaller works illustrative of the text are printed on the margins of the pages. The paper used for the purpose is made in Egyptian manufactories, chiefly from maize-straw, which accounts for its yellowish tint.

The great attraction at Būlāk is the —

**Museum of Egyptian Antiquities** (the traveller bound for which has only to direct his donkey-boy ‘Il Antikāt’), a magnificent collection, and entirely unrivalled of its kind. Many of its treasures, owing to want of space, cannot be exhibited in the present museum building, and are stored in the magazines (to which, however, foreign savants may obtain admission by applying to M. Mariette). A new edifice destined for the reception of the museum is being erected in a handsome style in the district of Gīzeh, on the opposite bank of the Nile (p. 327). To the indefatigable energy of M. Mariette-Bey (p. 364) the museum is indebted for its foundation, and also for its admirable and very full French catalogue (5 fr.), which students are recommended to purchase.

For travellers whose time is limited, the following brief enumeration of some of the most interesting objects will probably suffice. A great advantage possessed by this collection over all the European museums, and one of which M. Mariette is justly proud, is that the places where all its monuments and relics have been found are known, while even the merest fragments have been admitted when possessing any definite value or interest. The
Museum is open daily, except on Fridays, from 8.30 to 5 o'clock (no fee).

We first enter the Garden. A little way back, on the right of the entrance to the Museum, is the Colossal Figure of a king in a sitting posture, in granite, found at Tanis, and belonging to the period of the 12th Dynasty, notwithstanding the cartouches of Ramses II. engraved upon it. In front of it are three admirable sphinxes. Then several more or less mutilated statues in black granite. To the left of the entrance is a Roman Statue in white marble, probably a portrait. Adjoining it, to the right, is a Pedestal of rose-coloured granite which formerly bore a colossal statue of Antinous, the favourite of the Emperor Hadrian, who was drowned in the Nile in A.D. 122. It was found at Antinoë, a town named after Antinous, and the statue was erected there to his memory by Fidus Aquila, governor of the district of Thebes. Beyond this is the Stone of Athribis, with a Greek inscription of twelve lines, to the effect that a tetrapylon (hall with four entrances) was erected in the reign of the emperors Valentinian, Valens, and Gratian. This stone originally belonged to an ancient Egyptian temple, as proved by the cartouches of Ptolemy I. and Sabaco.

Petit Vestibule. The Catalogue, Mariette's 'Aperçu de l'Histoire d'Egypte', his 'Itinéraire de la Haute-Egypte', his 'Plan du Grand Temple de Karnak', and photographs (p. 233) of objects in the museum are sold here. The monuments here are of no great interest. Several Roman busts; 15, on the W. side, a fine marble bust of the god of the Nile (?), hardly inferior to the Zeus of Otricoli; on the N. side, to the left of the inner door, a military register, published by E. de Rouge; 16, on the E. side, bust of the Roman Emperor Maximianus (A.D. 304-10); below it, 18, portrait-bust of the early Roman period.

Grand Vestibule. All the walls are covered with tombstones, the most important of which are enumerated here. S. Side, to the left of the entrance: 32. Kneeling figure in grey granite, holding before it a curiously shaped sacrificial table, adorned with a head of Hathor and a blossoming lotus. 38. Sarcophagus in green basalt, the hieroglyphics on which are executed with marvellous delicacy, notwithstanding the hardness of the material. 31. Torso of the statue of a dignitary from the temple at Karnak, characteristic of the style of art prevalent during the early empire. — W. Side: 38. Large monument of Hapi, dating from the period after the 6th Dynasty. 82, 83. (on each side of the door) Sarcophagus, with lid, of Un-nefer; above, under a sky represented by a starry band, is the goddess Khu, holding in each outstretched hand an ostrich-feather, as the symbol of justice and truth; lower down are the gods Ra, Tum, and Khepera; below these is the soul of the deceased, represented as a bird with a human head, with the Tat (or symbol of immortality) hanging from its neck; at the sides are several deities connected with funereal rites. 38. Monument of Katai, in the form of the façade of a house, dating from the 5th Dynasty. 84. (in the corner) Sarcophagus-lid of Menei, who is represented recumbent on his deathbed, while his soul approaches his body with outspread wings. Above rises the sun, supported by Isis and Nephthys, symbolising the admission to eternal life which the deceased has merited by his uprightness. — N. Side. 73. Monument of Mai, in the form of a façade in the style of the later empire. In the upprmost row of figures the deceased is represented praying to Osiris, in company with several members of his family, while in the row below he is receiving homage from his relatives. In front of this monument, 22. Portrait head with very gentle and regular features, in black granite, probably Menepthah I., the Pharaoh of the Exodus; the double crown unusually large and massive. 86, 85. (on each side of the entrance to the Salle du Centre) Sarcophagus, with cover, of Hor-em-heb, dating from the period of the Saite monarchs (p. 92), in green basalt, admirably executed and carefully polished, and covered both inside and outside with hieroglyphics and figures. 100. Naos, formerly closed.
like a reliquary, with two doors, the holes of the hinges of which are still visible, with a representation of a man and woman receiving the honours due to the dead. 99. (on the opposite side of the door-way) Similar representation of a dead man, kneeling, and with raised hands. 98. Statue (thickset figure). 80. Portrait-head of King Taharqa of the 25th Dynasty (Ethiopian), in grey granite: negro cast of features, nose mutilated. — E. Side: 98. Celebrated monument of the time of Thothmes III., in black granite, in the pure and noble style of the 17th Dynasty. An inscription in twenty-five lines celebrates the praises of this Pharaoh in very bombastic style. The monument derives much additional interest from the fact that it bears the names of the nations conquered by Thothmes, whose campaigns extended as far as Mesopotamia. On the other side of the doorway, 72. Hymn to the sun, by Anaua. — S. Side: 21. Head of a king, remarkable for the rudeness of its execution. 91. Sarcophagus of a mummy in limestone, beautifully executed; the soul is seen approaching to re-animate the body; below the bed are the four genii of death (fragment placed at the lower end of the sarcophagus). In the centre of the larger fragment is Tat, the symbol of unchangeableness, surrounded with fantastic animals. 33. Statue of Hornekhth (18th Dynasty), in a sitting posture, rudely executed. In the centre, No. 19. Statue, in rose-coloured granite, of King Sebek-em-sat, of the 18th Dynasty; a thickset figure, the face damaged. To the left of it, 96. Sacrificial stone in granite (found at Karnak), originally provided with sixteen hollows for the reception of perfumes, one of which is now wanting. Adjoining it, to the left, 92. Sacrificial stone in alabaster, dating from the 5th Dynasty, and found at Sakkarä, which, like all the works of that period, shows four hollows only in connection with the emblem of the sacrificial table (△). Above the last, 24. Statue of Ti (see p. 375), less notable for excellence of execution than for the marked individuality of the features of this very ancient dignitary. Adjacent to it, on the right, 26. Statue of Num-hotep, a dignitary of the 12th Dynasty, with colouring in perfect preservation. On the other side of No. 19 is 95. Sacrificial table (counterpart of No. 96), with twenty-five niches, and the name Ra-Sankh-hati Amen Teft Amenemhat, a hitherto unknown king of the 13th Dynasty. Beyond it, 23. Portrait of Ra-nefer, a priest. On each side of the last, 93. 94. Funereal sacrificial tables in alabaster, artistically designed, and resting on two lions.

Salle des Hyksos (adjoining the Grand Vestibule on the right). The whole period of the Hyksos (p. 88) is represented in Europe by a solitary head in the Villa Louvisi at Rome. W. Side (left), 1001. A kind of altar in granite bearing the name of Ra-ou-kenen Apapi, a Hyksos monarch, who caused the name of a king of a hostile dynasty, previously engraved on the stone, to be removed. Above it, 99. Hyksos Sphinx in black granite, the fore-part of which only is preserved, having the coarse and foreign-looking features of the race which oppressed Egypt for so long a period. An inscription on the right shoulder mentions Apapi (Aophis), one of the last Hyksos kings. Menepthah, the Pharaoh of the Exodus, who must have often resided at Tanis, the seat of the Hyksos, caused his name to be inscribed on this monument, and his example was followed by a king of the 20th Dynasty. — N. Side. Tombstones along the wall. In front of them, 1013, the so-called Monument of the Diadochi, in black granite, found among the foundations of a ruinous old house at Cairo. In the arch above the proper inscription is a representation of Ptolemy I. Lagi (p. 90), before his accession to the throne. He is still styled a 'satrap' here, but the empty cartouches adjoining his figure seem to indicate that he is free to ascend the throne. On the left he is consecrating to Horus, the avenger of his father, a piece of planted land (△), and on the right he is presenting gifts to Isis-Buto, the tutelary goddess of the cities of Peh and Tep. The inscription extols the satrap Ptolemy as a hero, who brought back from Asia to the Nile the treasures removed from the temples of Egypt, and who fixed his residence in the 'Fortress of Alexander' I., which was
formerly called Rhakotis' (i.e. Alexandria). His victories over Syria and the western regions of Egypt, and his beneficence to the gods of Egypt are also praised, and there follows a eulogy of his liberality in renewing a grant to the goddesses (i.e. to the priests) of the cities of Peh and Tep, the so-called quarters of Buto, whose worship had been abolished by the ‘Arch-enemy Xerxes’. — E. Side: 2. Torso of an interesting Hyksos statue in grey granite from Crocodilopolis. In the centre of the wall, 952. Monument of Pi-ra-unam-em, of the 19th Dynasty, carefully executed and well preserved. On the upper part of the tomb the deceased with his sister is represented as appearing before Osiris, Isis, and Nepthys, to which scene belongs the prayer to Osiris written beside it. Below are the same two deceased, who, having ‘become Osiris’, have taken possession of the divine throne and are receiving the customary honours from a worshipper clothed with a panther-skin. — S. Side: 9104 (under glass and framed) The famous Decree of Canopus (pp. 436, 444), found at Tanis (and usually called the Tablet of Tanis, to distinguish it from another copy in theLouvre). This tablet confirmed the correctness of the method of deciphering discovered by the celebrated Champollion, and employed by Egyptologists since the finding of the Rosetta Stone (p. 438). On the limestone pillar are inscribed three different versions of the same decree; above it appears in hieroglyphics, or the Ancient Egyptian written language, below in Greek, and on the margins in the popular dialect written in the Demotic character. The decree was pronounced by an assembly of the priests in the temple of Canopus on 7th March (17th Tybi), B.C. 238, in the reign of Ptolemy III. Euergetes I.; it praises the king for having brought back the images of the gods from Asia, gained many victories, preserved peace in the land, and saved it from imminent famine by his foresight in importing corn; and it concludes with a resolution that the assembly shall call itself ‘the priesthood of the Euergetes of the gods’, found a new sacerdotal caste to be named after Euergetes, institute new festivals in honour of the king and queen, and introduce an improvement in the popular calendar. It is also resolved to pay permanent honour in all the temples throughout the country to the Princess Berenice, who died young and unmarried, and to celebrate certain festivals yearly to her memory. In all temples of the first and second rank costly and beautiful statues were to be erected to the ‘princess of virgins’, to which various services were to be rendered and offerings presented. Her praises were to be sung by specially trained choirs, and chiefly by virgins, and the bread provided for the priestesses was to be stamped ‘bread of Berenice’. The inscriptions lastly declare that the decree is to be inscribed on slabs of bronze or of stone in the holy (hieroglyphic), the Egyptian (demotic), and the Greek languages, and to be exhibited conspicuously in every temple of the first and second rank. — W. Side: 904. Fine bas-reliefs in limestone from the tomb of Hor-min at Sakkarâ; on the left are represented the process of purification to which the deceased and Nêf, his wife, are subjected by Hathor, and below are the offerings presented to them by members of their family; on the right is the funeral of the deceased.

Above, 905. Bas-reliefs from the tomb of Hor-em-heb, an officer of high rank of the period of the 19th Dynasty. 902. Portion of a bas-relief representing a scene from the campaign of Queen Hatasu (18th Dynasty) against the Arabs; the commander of the enemy, accompanied by his wife, appears submissively before the general of the Egyptian troops. Above the last, 1004. Fragments of beams from the temple of Seti I. at Abydos, with the cartouche of the founder. In the centre, 341. Double Statue of grey granite, found at Tanis, and dating from the Hyksos period. Two foreign-looking figures are standing before the sacrificial tables, which are abundantly adorned with aquatic plants, fishes, and birds. The features of the figures resemble those of the sphinxes; their matted beards, their plaited hair, and the bracelets on their arms distinguish them strongly from the figures on other Egyptian monuments. Behind this, 795. An interesting Naos of the time of Thothmes III. On the W. side of the Grand Vestibule is the Salle de l’Ancien Empire. — E. Side. On opposite sides of the door: 997, 998. Large
sepulchral monuments of Sabu from Sakkāra. The first of these represents the deceased sitting at a table covered with slaughtered cattle, eggs, flowers, fruit, and other offerings, which are being brought in by servants; on the other monument we see Sabu seated in a kind of litter, while a number of men and women are bringing their gifts to the tomb. Below are represented the cutting up of slaughtered oxen, the deceased navigating the Nile, and his cattle being driven before him to be counted. All these scenes are intended to imply that in the next world the just continue the same life as they lived in this, but in a state of greater felicity. — At the right corner of the wall is an ancient fragment of carved wood (without a number), from Memphis. — S. Side: 622. Another fragment of carved wood. 792. Portrait-statue of king Chephren in green basalt, somewhat mutilated and imperfectly executed. This statue should be compared with the large statue of the same monarch (No. 578) in the Salle du Centre. — W. Side: 587. Group of Asa with his wife and son in limestone (mutilated). The colouring, by which the woman is distinguished from the two male figures, is still remarkably fresh. 994, and at the opposite end of the wall, 995. Two doorposts of limestone, representing a lady named Hathor-nefer-hotep, with a bandage under the eyes. In the centre, 993. A kind of imitation door, often used as a tombstone in the mastabas, representing Sokar-ka-ba-u, the husband of Hathor-nefer-hotep, of very ancient workmanship, as the style indicates. — At the corner of the wall is a small door leading to a balcony, which commands a fine view of the Nile. — The N. Side is entirely occupied by 999. Twelve very low reliefs in limestone from the mastaba of Sakkāra, beautifully executed, and dating from the best period of the ancient empire. Their chief theme is freedom and joyousness of life, and no figures of gods are introduced. Uppermost row: Offering of gifts to the dead, fish-spearers, and a gazelle and antelope being led by servants. Central row: Women filling vessels, offerings to the dead, cutting up of the slaughtered victims, cows wading through a river, and behind them a boat of wicker-work. Lower row: A man with two apes, one of which is trying to eat another man's vegetables. Below, the cooking of fish. Adjacent are various scenes connected with the administration of the estates of the deceased. — E. Side: 992. Piece of wooden panelling from Sakkāra. In the centre: 999, 990. Fragments belonging to the previous number. The marked individuality of the portrait-head, and the finish of the carving itself are worthy of notice. These fragments are believed to date from about the same period as the pyramids. Beyond these, 9790. A large and very perfectly executed sarcophagus in recoloured granite, of great antiquity, which once contained the remains of an Egyptian noble named Khufu-anankh (4th Dynasty). The sides recall the domestic rather than the sepulchral style of architecture, but in Egypt these styles were similar in many respects. The ancient Egyptians used to call their earthly dwellings 'inns' or 'lodgings', while they styled their tombs 'everlasting houses'. The ends of the beams, resembling triglyphs, should be noticed.

Salle du Centre. This saloon is divided into three parts by two rows of pillars, and is admirably lighted from above by twenty-four windows. The most important monuments are enclosed with brass railings. The cabinets are suitably and tastefully fitted up. — S. Side (to the left of the entrance): 570, 579. Statues of Osiris in grey granite. Cabinet B: Osiris and the deities belonging to his myth (see p. 128). In the centre, a fine statue of Osiris, surrounded by a number of representations of the Apis-bull, which was regarded as an incarnation of Osiris. Above these is a series of Apis tombstones from the Serapeum at Sakkāra (p. 569). 196, 197. Two fine Statues from Thebes. That on the left represents Osiris in the ceremonies of the dead; that on the other side represents him as a vigorous god, restored to life, under the name of Neferhotep ('good repose'). — W. Side. Cabinet C: Continuation of the Osiris series. 229-31. Osiris with the hawk's head; 224. Osiris hearing prayers; 228. Osiris as god of the infernal regions; 243. Osiris as Harpocrates (i.e.
as a child). 249. The four genii of death connected with the worship of the god. 248. (five small groups) Harpcrates, led by Isis and Nepthys. Above, 223. Tomb-monument in the form of a small chapel; in a niche stands Osiris, while above, on the arch of the façade, two dog-faced apes are represented in the act of adoring the rising sun (a red disc with a scarabæus, the symbol of the resurrection). 298. Osiris, with the sun rising from the calyx of a flower. No. 244. Harpcrates with the double crown (Pshent). — In front of these is a glass case containing the cerements of a mummy of a late period, elaborately worked. — Cabinet D: Continuation of the Osiris series. Nos. 260, 261, 259, 262, 263, 258. Statues of Anubis. Below these, a jackal. 251. Handsome statue of Osiris. 264. Jackal lying on its side. A jackal's head in wood. Above these, 273. Tombstone with the adoration of Osiris.

In the centre a series of well-executed statues of Osiris in bronze. On the right, Osiris, with the upper part of the body and the face gilded. 267, 268, 270. Dog-headed apes. Below these, statues of Ibis. — Cabinet E: Continuation of the Osiris series. In the centre, 276. Osiris, with Isis and Nepthys beside him, in different styles. On the right, 284. Winged Isis from the Serapeum. — Cabinet F: On the left several more figures from the myth of Osiris. Adjacent, 295. Ammon; 304. Khons; 297. Several figures of Khnephis; 293. The goddess Bast. In the centre and in 313, 314 below, are figures of the god Ptah. At the right end is the goddess Bast with her cats. — In front of these is a glass-case with paintings on wood and carving of a late Christian period. (Adjacent to these, on the left, 582; see below.) — N. Side. Cabinet G: Besides the more usual deities, which are easily recognised, 349. The goddess Ma; 350. The Nile; 337-339. The goddess Neith; 346 (in the centre) Nefer Tum; 351-353. The god Ra. — Adjoining the cabinet, on the right, 794. A double statue, which the loose drapery, the head-dress, the ribbon in the hand of the male figure, and the flower in that of the female, mark as a product of the later empire. — In the middle of the wall is a wooden stand with fine canopæ (p. 437), in the centre of which is a very beautiful Wooden Figure of a man (early empire); on the wall behind are papyri (see below). A glass cabinet adjacent contains tombstones, statues, and heads of no great importance. — Cabinet V: Tombstones, canopi, small mummies, wooden head-rests, and in the centre a naos. — In front of the last cabinet, 794. Brother and sister, a fine group dating from the 19th Dynasty. The front (between the two figures) and the back bear the representations usual on tombstones. — W. Side. Cabinet U: Fine paintings on wood; 691. Wooden box containing a sacrificial table, which is covered with all kinds of utensils on a very diminutive scale. — Cabinet T: Flowers, painted and chased; large wooden tablet with hieroglyphics from a sarcophagus. Opposite, No. 584. Tombstone, very valuable on account of the inscription, which informs us that the great sphinx of Gizeh existed before the time of Cheops (p. 350). — Cabinet S: Small sarcophagi, mummy-boxes in wood, funerary statuettes, sandal. At the back are papyri. — Cabinet R: Painted objects, mummy covers, boxes for funerary statuettes; in the corner to the left, 423. Two embalmed ibises; 424. Embalmed hawk. In the centre is a small embalmed crocodile. — S. Side. Cabinet Q: Blocks of terracotta with inscriptions, from Thebes, once used to indicate the situation of graves. Adjacent, 504. Sitting figure in granite, with a papyrus on the knees. — In front of the last, Case P: Remarkably fine statuettes in serpentine and bronze. Canop. In the centre, 350. Pasteboard bearing several chapters of the 'Book of the Dead', the great ritual of the ancient Egyptians. Below, 390. Painted monument from the tomb of a woman, the lower part of which is the most curious. — On the other side of the pillar, Case Y: Interesting collection of models for statues and reliefs. — Adjacent, near the door of the Salle de l'Est: 492. (railed in) Wooden Statue from Sakkâra, known as the Shâh el-beled (village-chief), a name given to it by the Arabs on account of its resemblance to a well-fed specimen of that modern functionary. The figure, which dates from the early part of the old empire, affords a proof that the Egyptian sculptors were quite
capable of executing really artistic work whenever they could shake off the fetters of their rigid canon. The individuality and realism of this figure will afford a pleasant surprise to those who have found it difficult to admire the stiff conventional forms of Egyptian art. The feet, which had been broken off, are restored, but the rest of the figure is in its original condition. The upper part of the body and the legs are bare, while from the hips hangs a kind of apron folded in front. In the hand is the long rod of office. The round head with its short hair, and the portrait-like, good-natured face are remarkably life-like. The eyes, which have a somewhat rigid expression, were put in, as in the case of other similar statues, after the work was completed. They consist of pieces of opaque white quartz with pupils formed of rock-crystal, in the centre of which is placed a polished metal knob for the double purpose of securing them and giving them light and sparkle; and they are framed with thin plates of bronze, the edges of which form the eyelids. The figure was once painted. — On the other side of the pillar is Case Z: Historical monuments. Scarabei with the cartouches of various kings. 540. Beautiful vase of porcelain; 572. Assyrian sphinx of the time of Darius; 515. Alabaster vase covered with a disc; 558. Bust of Amasis; 554. Pedestal of a bronze statue of king Taharka; 533. Hoe; 563. Hollow cube of bronze with concave hieroglyphics, inlaid with silver in the concave parts (case unknown); above, jugs in alabaster. In the central passage: 5578. (railed in) Statue of Chephren (comp. No. 792 in the Salle de l'Ancien Empire), or Khafra, the builder of the second pyramid, a portrait, found with eight similar statues, which were all more or less damaged, in a well belonging to the most ancient building yet discovered (see p. 352). The statue is of extremely hard, green breccia, streaked with long, yellowish veins, and, although 5000 years old, exhibits a technical skill which has been never surpassed in modern times. The king is represented in life-size, sitting on a throne, the arms of which terminate in lions' heads. At the sides of the seat are papyrus and lotus plants intertwined around the symbol of union $\nabla$, which indicates the junction of Upper with Lower Egypt, and is perhaps emblematical of the transition from this life to the next. On the pedestal, to the right and left of the feet of the statue, is inscribed in distinct hieroglyphic characters: 'The prince and victorious Horus, Khafra, the good god and lord of the diadem'. In his right hand the monarch holds a fillet. On the top of the back of the throne is a hawk, protecting the king's head with its outspread wings. The torso is of a more thickset type than is the case with the statues of the modern empire, having been modelled in accordance with the rules prescribed by the hieratic canon at that early period. The figure is of a muscular build, and the features wear a benevolent expression. — In the centre is an octagonal wooden stand with a glass case, on which is placed 1015. Granite monument with 'Horus on the crocodiles', of the kind which used to be placed in the houses as a protection against noxious animals. Eight separate cases contain a number of small antiquities, such as amulets and funerary ornaments in terracotta, glass, and a kind of earthenware coloured and glazed. The goddess Ma (truth) with a green face, green feather, blue head-dress, and the upper part of the body coloured.

Animals representing Anubis in black, with feathers in blue glass. Small head of Isis. — Glass Cases H & O: Emblems and deities in glass, agate, cornelian, etc.; uraeus snakes; double feathers; cow-horns with the disc; royal crowns of Upper and Lower Egypt (Pshent) $\nabla$. Dog-headed ape enjoying a siesta and philosophising. Various other
animals. — Glass Case K: Collection of apes, cows, dogs, hippopotami, and other sacred animals. — Glass Case I: Relief statues of the gods Khons, Ptah, and Besa (god of the toilet). — Glass Case N: Amulets and emblems found on and in mummies: ⬣ the heart; ⬤ life; ⬤ constancy; ⬤ rising of the sun; ⬤ perfection and beauty; hearts with the scarabæus (●), the symbol of the heart, which were placed in the bodies of mummies whence the heart had been removed (p. 137), and others with the Phœnix or Bennu. — Glass Case M: So-called uta eyes (●), in terracotta. Numerous amulets, emblematical of the eyes of Ra which illumine the world, the right eye being called the sun, and the left the moon; the former also symbolising the king, and the latter the queen. The dead, when rising from their graves, are represented as uta eyes. Small head-rests, symbolical of the eternal resting-place of pure souls. Signs of the angle and triangle, used as symbols of impartiality and eternity. — Glass Case L: Small columns in green felspar or earthenware, emblematical of the renewed spring or rejuvenescence of the deceased. Seals with a cornelian centre set in green porcelain, bearing the promise of glory that awaits the deceased. Banana-shaped beads in cornelian. — All the objects exhibited here are undoubtedly genuine, and should be compared with the spurious antiquities which are frequently offered for sale. — Opposite, "Statue of Thouveris (female hippopotamus), in serpentine (without a number). Beyond it, railed in, 385-387. Admirable specimens of the smooth, weak style of the Egyptian Renaissance, found in the tomb of Psamtik, a nobleman, at Sakka're. The central statue represents Hathor, the goddess of the infernal regions, bending her head, adorned with the disc and double feather, protectingly over the deceased Psamtik. The treatment of the cow's head and the upper part of the male figure is exceedingly good. At the sides are Isis and Osiris. — Behind this group, 446. Sacrificial slab from the same tomb.

Case X: In front, 465. Figure in a sitting posture (13th Dynasty): 467. Fine female statue with a large wooden wig (18th Dynasty): 463. Graceful statue with an interesting head in green basalt: 475, 476. Mirrors; 474. Well-executed draught-board in wood, with a drawer, found in a tomb, and bearing a pious inscription, probably buried with the deceased in order that he might still enjoy his favourite game in the regions of the Nile; 694. Draught-board with ornamentation in bone. Above it: 472. Hippopotamus in blue porcelain. Balls, phials and other relics. On the right: **693. Handsome statue in a kneeling posture, in granite, of a priest of the 18th Dynasty; 788. Two female statues of the same period.** At the back: 487. Painted basket of reeds (11th Dynasty), with several other baskets; mirrors; earthenware bottles. On the left: Glass bottles; 699. Bronze statuettes, used for the purpose of purifying the sand, which was regarded as Typhonic and unclean, in places where temples were about to be erected (found in the Serapeum at Sakkāra, p 369). Tongs. 479, 480. Phials for eye-powder, with the figure of Besa, the god of the toilet.

**Salle de l’Est. W. Side. Case A.L.:** 777. Statue of Rahotep, sitting in Oriental fashion. Beyond it, 772. Married couple. Adjacent, a man in a sitting posture, in black granite, with a papyrus on his knees. 789. Figure sitting on the ground, holding its hand to its head in an attitude of mourning: 770. Statue, the dress and pose of which indicate that it was executed during the Roman period. Behind it, in the corner. Osiris, in wood (similar to a statue in the other corner). 766. Man with a pitcher between his legs, into which he is putting his hand; 757-764 (below and above). Eight statues of figures kneeling down in the same manner as the modern Nubians. — N. Side. *Cabinets A D, A F, A E:* Canopi (p. 437). — E. Side. *Cabinet A M:* In the centre. 781. Fine wooden statue of the period of the early empire. Behind it, weapons. Below, 790. Moulds with the bird Bennu (Phoenix). *Cabinet A N:* (to the right of the door). Various interesting objects for domestic use. — S. Side. *Cabinet A O:* Similar objects, including mirrors, water-jugs, and small paint-pots. A G: Painted monuments; in the centre. 700. Wooden female figure of the period of the early empire. A Q: Contents similar to AO. — V. Side. *Cabinet B A:* Objects of the Greek and Roman period. A handsome amphora; two bulls fighting, painted red, on terracotta; rams grazing; antelopes, etc.; numerous lamps of various forms; Venus, Cupid, and dancing nymphs carved in bone; Egyptian deities, which bear indications of Greek workmanship; Christian lamps of the 3rd and 4th centuries, from the ancient Crocodileopolis (p. 446). — In the centre, four mummy-covers and four canopae. Near these (to the W.), 2010. Bronze lion of peculiar workmanship, dating from the period of Hophrah (20th Dynasty); the chain fastened between the claws was perhaps used for mooring a boat. — To the left, near the lion, is an octagonal cabinet (Glass Cases AA-AH), containing a fine collection of scarabeï. In AK, trinkets and objects for the toilet. In AC, small emblems. Above these, 755. Lifelike statue dating from the early empire, with remarkably well preserved colouring. Over the cabinet on the right (S.), 756. Companion to the last. Glass Cases AX-AU (beginning on the right): Trinkets and requisites for the toilet, paint-boxes, dice, etc. In AY and AZ: Flint tools found near Esneh, Girgeh, Bibân el-Mulâk, and Heluân (p. 390).

**Salle des Bijoux.** The objects found by M. Mariette at Drâ Abu’l Negga (Thebes) buried with the mummy of Queen Aahhotep, wife of Aahmes (18th Dynasty), are preserved here along with other trinkets and valuable relics. S. Side: Under glass, the lid of the coffin of the queen in the form of a mummy, gilded, and with inlaid eyes and ears. In the coffin was found the body of the queen, wrapped loosely in cloths (and not bound tightly in the usual cements); and within it were also found no fewer than 213 valuable relics, all of which are now preserved in the adjoining **Glass Case B B:** In front, a bracelet for the upper part of the arm, with a vulture in front, with lapis lazuli, cornelian, and glass, set in gold, in the wings, and with turquoise at the back. A dagger of
gold, of remarkably beautiful workmanship. An axe with a handle of cedar-wood encased in gold, on which the full titles of King Aahmes are inscribed in hieroglyphics; the head is of bronze, plated with gold, adorned with figures, and inlaid with precious stones. Gold flies from a necklace. A gold chain of exquisite workmanship and remarkably pliable, 35 inches long, terminating in a goose's head at each end, on the neck of which is engraved the name of Aahmes. Attached to the chain is a beautiful scarabæus, perhaps the finest yet found; the breast and coverings of the wings are in delicate blue glass, overspread with a network of gold threads; and the feet are very skilfully soldered to the body. On the glass slab are gold bracelets bearing the name of Aahmes in inlaid work of pearls, lapis lazuli, cornelian, and glass. Diadem of Queen Aahhotep, adorned with two small sphinxes in gold, and bearing the name of Pharaoh Aahmes. A bracelet of gold with beautiful blue glass, in imitation of lapis lazuli, and adorned with a kneeling figure of Aahmes and the figures of the god Seb and his companions. On the right, a beautiful uskh necklace, of the kind put round the necks of mummies on their burial. Ammon and Ra pouring the water of life on the head of King Aahmes, who stands in a boat in a small chapel; two hawks, executed in gold and precious stones, are flying upwards. Necklace with a kind of enamel. Lion's head in gilded bronze, formed like the syllable-sign 𓊉, which occurs in the pronoun of Aahmes (Ra-neb-peh). At the back:

Nine small axes [], or neteru, three of gold, and six of silver, representing the nine principal gods. Black wooden staff, with a crook at the end, overlaid with gold, of a kind rarely found in the tombs, but similar to the staves used by the modern dwellers on the Nile. Fly-whisk, in wood, gilded; but the ostrich-feathers with which it was originally provided have disappeared. On the left, a mirror and a chain with ornamental pieces of gold hanging from it. Above these, a boat in gold, manned by twelve sailors in silver, standing on a stage with four bronze wheels; in the centre of the bark a small figure with an axe and a crooked staff, another figure near the bows, and the steersman at the stern, all three in gold. — E. SIDE: 𓊉987 (under glass). Portrait-statues of the young prince Rahotep and his wife Nefert, probably the most ancient statues yet discovered (p. 458), the former painted reddish brown, the latter very pale yellow. Their features are noble and pleasing, in spite of the clumsy wigs, which cover nearly the whole of their foreheads and are encircled with diadems. — N. SIDE: 𓊉86. Statue of Queen Ameniritis of the 25th Dynasty, sister of Shabak, wife of the Ethiopian Piankhi, and mother of the wife of Psammetichus I., in alabaster, on a pedestal of grey granite. The details are admirably executed. The proportion of the upper part of the body to the lower is singularly incorrect, but the striking beauty of the head and the nobility of the features make ample amends for this defect. The head was perhaps once adorned with gold feathers, since removed. — Near this statue is Case BC: In front: 𓊉71. Handle of a box for perfume, representing a nude female figure in a swimming posture; among the artistically arranged hair, the large lock distinctive of the Egyptian princesses is observed over the right ear. 481. A pretty casket. Trinkets, including an ornament for the hair with a head of the Medusa, and five bracelets in the form of snakes. On the right, silver plate. Towards the back, alabaster vases. Canœ of blue earthenware, glazed. 696. Serpent in bronze. Nile boat. Above it, 175. Goddess Ma, in blue glass. 529. Pipe of slate, with inscriptions very delicately engraved. On the left, small mummies, figures of animals, etc.

On the W. side of the Salle du Centre a Salle de l'Ouest has recently been fitted up. It contains tombstones, statues, earthenware vessels, canopic, sarcophagi, mummy covers, and other products of ancient Egyptian industry, chiefly interesting to the scientific Egyptologist, and hardly worthy of a visit after the traveller has seen the more important parts of the collection.
The Papyri preserved in the museum of Būlāk are in some instances of the highest value, but some of the great European museums possess more valuable collections of this kind. Among those written in hieroglyphic characters are specimens of the papyrus scrolls of the dead, which were found in sarcophagi or among the cemeteries of mummies, and of which almost every museum now possesses specimens. They were intended to guide, comfort, and instruct the soul throughout all the wanderings and trials it had to undergo before entering into glory (p. 137). Most of them are illuminated with vignettes. Nos. 1 and 2 of the papyri published by M. Mariette refer to Lake Maḥris and its environs. No. 4 contains admirable moral precepts, particularly for the guidance of parents in their conduct towards their children. No. 5 is an extremely interesting tale, or novel, in the Demotic character, and is remarkable for the grammatical accuracy of the language and the clearness of the style. No. 6 is a medical work. No. 9 describes the infernal regions, and contains charts of the soul's journey, figures of the genii of Amenti, etc. No. 17 contains a beautiful and interesting hymn to Ammon, to which we are indebted for important information regarding the character of that god.

4. Environs of Cairo.

Old Cairo, Gezirah, Shubra, Heliopolis, and the Pyramids of Gizeh are most conveniently visited by carriage, and the Mokāṭam hills, Moses' Well, the Petrified Forest, and Gebel el-Aḥmar on donkey-back. The first-named excursion may also of course be made on the back of a donkey, but this mode of travelling is more fatiguing.

Old Cairo (Masr el-ʿAtika).

Traversing the new town of Ismaʿiliya (p. 257) towards the S.W., we proceed by the Boulevard ʿAbdul ʿAzīz, the Rond-Point Bāb el-Lūk, and the Square of that name (beautifully planted with flowers of the Turkish national colours), and past the disused Hippodrome (with the German and the English Church on the right, p. 257), to an open space, from which a road to the S. leads to the Nile Bridge (p. 314). Here we turn to the left and follow the Boulevard Kasr ʿAli. On the left, at the corner, we observe the Palace of Husn Pasha (son of the Khedive), opposite to which, on the right, is the Palace of ʿĪbrāhim Pasha (son-in-law of the Khedive), both surrounded by lofty walls. On the right, farther on, is a new palace of the Khedive (uncompleted); on the left is the new Military School (p. 242); then, on the right, the spacious Kasr ʿAli, the palace of the Khedive's mother. Farther on we reach the Kasr el-ʿAin, or large hospital (p. 232), with the Mosque Kasr el-ʿAin, where the howling derwishes perform their zikr (p. 237). About 2½ M. from the W. end of the Muski we observe on the right and left large straw magazines (ṭōn), and opposite to us the —

Fum el-Khalig, or influx of the city canal into an arm of the Nile, which, however, is dry from May until the period of the over-
bankment take place here in August. The straw-market is bounded on the S. by the *Old Aqueduct of the Citadel*, which has been disused since the completion of the steam-pump in 1872, and is now falling to decay.

The *Head* of this conduit, separated by a street from the arm of the Nile just named, is constructed of solid masonry in a hexagonal form, and consists of three stories, about 150 ft. in diameter. The ground-floor contains stables and magazines, and on the first and second is accommodation for about 150 soldiers. On the terrace, where there are six water-wheels (sâkiyehs), each worked by two oxen, is a large hexagonal basin from which the water flowed into the aqueduct. On the platform there are also stables for the oxen and chambers for the attendants. The aqueduct, constructed of massive blocks of stone, and resting on pointed arches, ascends in four different levels to the citadel, the total height being 278 ft., and the total length 4000 yds. (21/4 M.). When the Nile was at its lowest, the water had to be raised to a height of 80 ft. to the first basin. A branch of this conduit supplied the Jewish quarter with water in the neighbourhood of Imâm Shâfe'î (p. 313). The aqueduct dates from the time of Saladin (12th cent.; p. 280). The entrance is in the N. wall, at the back of the head of the aqueduct, where a Berber is posted as a custodian (fee 1 fr. for each person). Views from the openings of the platform, very fine. Easy ascent by an inclined plane.

Towards the left, a few hundred yards from the gate of the head of the aqueduct are situated the *Christian Cemeteries*, surrounded by lofty walls. The first is the English Cemetery, the second the Roman Catholic, beyond which are those of the Greeks, Armenians, and Copts, which present no attraction.

Leaving the head of the aqueduct, we follow the direction of the arm of the Nile, which, however, is not always visible, as there are houses and walls between the road and the water, and reach (1 1/4 M.) the mansion which formerly belonged to Sulêmân Pasha el-Fransâwi (Colonel Selves), with two fine Arabian portals (visitors not admitted). The second narrow and short road to the right beyond the château leads to the ferry crossing to the **Island of Rôda**.

We descend the slope, enter the ferry-boat (1/4 fr. for one person, there and back; for a party more in proportion; payment made on returning), ascend the opposite path, and turn to the right. A young gardener is usually in waiting at the landing-place to conduct travellers through the intricate lanes to the garden. At the S. extremity of the island is the *Nilometer* (*Mikyâs*), situated on land belonging to the heirs of Hasan Pasha. The garden, laid out in the Arabian style, is miserably neglected. The paths are paved with a kind of mosaic of round pebbles, obtained partly from the desert, and partly from the island of Rhodes, and the most important of them are bordered with low walls, supporting wooden verandahs and arbours, over which climb immense vines. The gardens contain orange and lemon trees, dates, palms, and bananas, and also the henna plant, which is not met with in the public gardens of Cairo.

The *Nilometer* (*Mikyâs*), a square well, 16 ft. in diameter, connected by a channel with the Nile, has in the centre an octagonal column, on which are inscribed the ancient Arabian measures and
Cufic inscriptions. The four straight sides are constructed of massive masonry, and contain niches adorned with columns with Byzantine capitals. Marble slabs built into the walls bear Cufic inscriptions. The drâ, or old Arabian ell, is 54 centimètres, or about 21/3 inches, and is divided into 24 kirat. The column of the Nilometer, which has been frequently repaired, is 17 ells in height, the first of which is built into the foundations. The upper part is secured by means of a beam attached to the opposite walls. The zero point of the Nilometer (according to Mahmûd-Bey) is 28 ft. above the average level of the Mediterranean, so that the summit of the column is nearly 59 ft. above the sea-level. The water of the Nile, when at its lowest, covers 7 ells of the Nilometer, and when it reaches a height of 15 ells and 16 kirat, the shêkh of the Nile measurement proclaims the wefa (p. 237), i.e. the height of the water necessary for irrigating every part of the Nile valley. The announcement of the wefa is the signal for the cutting of the embankment. The shêkh, however, has his private meter, the zero of which is nearly 7 inches lower than that of the old Nilometer.

The mean difference between the low and high level of the Nile at Cairo is 241/2 feet. When, according to the shêkh's mode of reckoning, the height of 23 ells is attained, the island of Rôda is overflowed.

The Miýâs or Nilometer was constructed in the year 97 of the Hegira (A.D. 716) by order of the Omayyad Khalif Sulêmân (715-17). Mâmûn, the 'Abbaside Khalif (A.D. 809-33), added the Cufic inscriptions on the N. and W. walls and repaired the whole structure in 814. According to the Cufic inscriptions on the S. and E. sides, another restoration took place in the year 233 of the Hegira. Khalif Mutawakkil (847-81) also repaired the Miýâs in 247 of the Hegira (A.D. 859), and transferred the office of measuring the water from the Copts, who had hitherto held it, to the Muslim family of Abu Râbâb. In 485 of the Hegira (A.D. 1092) the Fâtimite Khalif Mustânşir Billâh (1086-94) caused the Nilometer to be covered with a dome, resting on columns, but that structure was destroyed.

† The rate of taxation was determined in ancient times in accordance with the height of the inundation. All the authorities from Herodotus down to Leo Africanus agree in stating that the Nile must rise 16 cubits, or Egyptian ells, in order that the land may produce good crops. The famous statue of Father Nile in the Vatican is accordingly surrounded by sixteen figures of genii, representing these 16 ells. To this day the height of the overflow influences taxation, and the land which is artificially irrigated pays less than that reached by the river itself. The object of the government always is to induce a belief that the inundation is favourable, and the sworn shêkh of the Nilometer is therefore subject to the influence of the police at Cairo. 'The same political motives, from which in ancient times the custody of the Nilometers was entrusted to the priests alone, still prevent the Egyptian public from obtaining access to the Miýâs in the island of Rôda. The real height of the water is always concealed, and false statements made, as it is the object of the fiscal authorities to levy, if possible, the full rate of taxation every year, whatever the height of the Nile may have been. This traditional dishonesty in the use of the Nilometer was first discovered by the French engineers during the occupation of Egypt by Napoleon'. (C. Ritter.)
during the siege of this part of the island by the French under Napoleon. A roof in Turkish taste, resting on wooden columns, now covers the well.

Adjoining the Nilometer is a large kiosk in the Turkish style, which may be inspected when not occupied by any harem. The architecture is uninteresting, but the handsome dimensions of the rooms, which are intended for a summer residence, and the bath are worthy of notice. The S. verandah of the kiosk affords an uninterrupted view of the Nile, with Gizeh to the right, the pyramids in the background, and Old Cairo on the left (fee 1 fr.).

Leaving the island and returning to the opposite bank, we regain the Old Cairo road, and after ¼ M. more we reach the end of the bazaar of this small town. We then turn to the left, and in a few minutes reach a street running from N. to S. Turning to the N. (left), we observe on the right a distinct quarter of the town, built on the ruins of Fostât (p. 239) within the precincts of an ancient Roman Castle, formerly called Babylon. The plan of the fortress is still traceable by means of the numerous characteristic remains of the Roman outer wall. On the S. side, between two projecting towers, is a gateway with a gabled roof, now almost entirely ruined. The castle is said once to have been occupied by one of the three Roman legions stationed in Egypt (p. 239), and to have been connected by a bridge with Roda and with Gizeh, where another Roman station is said to have been situated. Proceeding in a straight direction for about 100 yds., and then about 35 paces to the right of a low doorway situated in a hollow on the W. side and concealed by a small wall, we reach the middle of the Coptic quarter, where, enclosed by a dense mass of houses, is situated the much frequented —

*Abu Sergeh, or Coptic Church of St. Mary, which, according to the statement of the priests, dates from the 6th, but more probably from the 8th cent. (A Coptic boy may be engaged as a guide to the church; fee 1 piastre.) Abu Sergeh is probably equivalent to St. Sergius. According to tradition, the Virgin and Child after their flight to Egypt spent a month in the crypt of this church. One of the Coptic priests (who expects a fee of 1 piastre tariff from each visitor) shows some interesting Byzantine carving and mosaics in ivory, now blackened and discoloured with age. Many valuable art relics have been removed from the church since 1860. A number of old pictures of saints which still remain, some of them on a gold ground and with well preserved colours, possess no artistic value. Above a door to the right of the high altar, engraved in wood, is the Coptic inscription, 'Greetings to the Temple of the Father!' Below it is a modern Arabic inscription with the date 1195. — This church may be regarded as the original model of all the older Egyptian-Byzantine churches in which the Coptic Christians now worship.*

† Coptic Worship. On entering the church, the members of the con-
The basilica consists of a nave and aisles. The tribuna, the two side chapels, the sanctuary, and the parts corresponding to the senatorium and matroneum of northern basilicas are raised a few steps above the level of the nave and aisles, and are almost all as high as the nave, while the aisles are provided with galleries. The nave and tribuna have open roofs, that of the latter being supported by elliptical beams, and both being probably of later date than the church itself. The left side-chapel is surmounted by an Arabian dome, while the aisles have flat ceilings. The lofty side-walls of the nave consist of two rows of columns, one above the other, the columns of the lower row being separated by keel-shaped arches, while the upper series, supporting the gallery, consists of groups of two columns and one pillar alternately, connected by an architrave. The columns of Carrara marble originally belonged to ancient edifices, and, like those in the earlier mosques, have been placed here without the least regard to their suitability in point of diameter, form of capital, or other architectural features. Two of the three original entrances are now built up, while the third, in accordance with the custom of the country, has walls projecting into it in order to prevent passers-by from seeing into the fore-court. The sacristy, now a dark and dirty chamber without a door, contains relics of Coptic paintings on the right wall.

gregation first pay their homage to a number of pictures of saints hanging on the walls (the veneration of saints and of the Virgin being a prominent feature of the Coptic system), and then kneel before the altar and kiss the hand of the priest. They then take their stand (for there are no seats) in the part of the church allotted to them, leaning on crutches which they bring for the purpose, as the service often lasts for three hours. The service begins with the reading or chanting of prayers and passages from the Gospels, partly in the Coptic language, and partly in Arabic, in which the priest is assisted by a schoolmaster and a choir of boys. During this performance the worshippers, with very few exceptions, engage freely in conversation, and the noise is said to be sometimes so great that the priest has to come out of the hêkel, or sanctuary, and
The nave is divided by wooden screens into three sections. The first forms a fore-court, or vestibule, the second is set apart for the

enjoin silence. After a time the burning of incense begins. The priest, swinging his censer, leaves the hékél and joins the congregation, each member of which he blesses, placing his hand on their heads. He concludes this ceremony in the women's section of the church, and the ordinary service now terminates.

The Celebration of the Eucharist is very frequent in the Coptic churches, immediately following the ordinary service. The celebrant priest wears a white and gaily embroidered gown reaching to his feet, and bearing the Coptic cross on the breast and sleeves. After washing his hands, he directs a boy to bring him several small round loaves with the Coptic cross impressed on them. He chooses the best of them, places it on a plate, and pronounces over it the blessing of the triune God. He then carries it into the hékél, places it on the altar, covers it with white cloths, and makes the circuit of the altar several times, reciting prayers, and accompanied by the choristers carrying lighted candles. He next brings the plate with the bread out of the hékél and holds it up before the people, whereupon the whole congregation kneels. Returning to the hékél, he breaks the bread into small pieces, puts it into a chalice, pours wine over it, and eats it with a spoon, distributing a few pieces to the assistant clergy and the choristers. Lest any fragment of the consecrated elements should be profaned, he finally washes all the utensils and his own hands, and drinks the water in which he has washed them. Meanwhile a number of small round loaves, prepared in an adjoining apartment, are distributed among the congregation, each member receiving and eating one or more. The laity partake more rarely of the wine, and only after having previously confessed. In this case the communicants approach the door of the hékél, where the priest administers to them with a spoon a piece of the bread dipped in wine.

A curious ceremony takes place in the Coptic churches on Palm Sunday (i'd esh-sha'ā'ın). After the usual service and the communion which follows it, several basins of water are placed in the space before the hékél. The priest in his white surplice takes his stand in front of them, turning his face towards the hékél, while another priest in his ordinary dress reads the Gospel in Arabic, after which the former consecrates the water by pronouncing a prayer over it. The moment this ceremony is concluded, the surrounding congregation rushes up to the basins in order to dip palm-wreaths into them; and the crowd is often so unruly that the priest is obliged to restore order with the aid of his stick. These wreaths are then worn by the Copts under their turbāshes during the whole of the following year as amulets against the evil eye, the sting of scorpions, and every other misfortune that can befall body or soul.

On 18th-19th January, the anniversary of the Baptism of Christ (i'd el-qhīṭās), men and boys plunge into the large font or bath which is to be found in most Coptic churches, the water having been first blessed by the priest. Or, partly by way of amusement, they perform the same ceremony in the Nile, into which they first pour some consecrated water. On these occasions the river in Coptic districts swarms with boats. On the eve of this festival, as well as on Holy Thursday and on the festival of the Apostles, the priest washes the feet of the whole of his congregation.

It is impossible to resist the impression that the Coptic worship has degenerated into a series of mere empty outward ceremonies, and indeed the more enlightened members of the sect admit this to be the case. Another external form to which they attach great weight is the observance of fasts, and a Copt who is negligent in this respect will rarely be met with. On these occasions all kinds of animal food, not excepting fat, eggs, butter, and cheese, are prohibited, and the usual fare consists of bread, onions, fūl (beans), prepared with walnut or mustard-oil, and dukka (a kind of salad). — Coptic festivals, see p. 154.
of Cairo. OLD CAIRO. 4. Route. 309

women, and the third for the men. Within the vestibule (first section of the nave), as in most of the ancient Christian churches, is a trough in the pavement for washing the feet and other ablutions. Beyond the three sections of the nave, and raised by a few steps, is the choir where the priests officiate; and, lastly, we observe the Hékel, or sanctuary, containing the altar, and enclosed by a wall, doors, and curtains. Inside the apse rise several steps of masonry, in amphitheatrical fashion, towards the place which in European churches is occupied by the episcopal throne, and in Oriental by sacred images. The wall separating the sanctuary from the choir is panelled and richly adorned with carvings in wood and ivory. The oldest of these, probably coeval with the church, represent the Nativity, the Eucharist, and the patron saint of the church, and are surrounded with ornamentation in wood, consisting of rectilineal patterns, the basis of which is generally the Coptic cross (+</>). Another favourite device, which is often seen at Jerusalem, and with which the Copts frequently tattoo their arms, consists of the same cross, with four smaller crosses in the angles. A narrow flight of twelve steps descends to the Crypt, a small vaulted chapel, consisting of nave and aisles. At the end of the nave is an altar in the form of an early Christian tomb- niche, and in the centre of the aisles are apses. The right aisle contains the font, into which, according to the Coptic ritual, the child to be baptised is dipped three times.

The Coptic quarter of Old Cairo contains several other basilicas, used by Coptic, Greek, and Jewish congregations, but interesting only to those who are making a special study of this kind of architecture. Among them we may mention the second Sittek Maryam, or Greek Church of St. Mary, on an elevated site in the castle of Babylon, and sometimes called Er-Mo állaka, or 'the hanging', containing ivory carving and stained glass windows. The church of Marí Mena contains a handsome candelabrum. That of Abo Sefin has a pulpit in coloured marble, inlaid with mother-of-pearl, and a jug and basin with old Arabian enamelled work. The Synagogue (Esh-Shemyan, or Keniset Eliyahu) was formerly a church of St. Michael. The Jews say that Elijah once appeared here, and the synagogue boasts of possessing a scroll of the Thorah written by the hand of Ezra. Benjamin of Tudela mentions a synagogue at Old Cairo where Moses is said to have prayed for the cessation of the plague of the thunder and hail (Exod. ix. 29), and which 'is therefore called the house of prayer of Moses'. — The church of St. Barbara is embellished with many carvings in wood and ivory, and with paintings of more than average merit.

Starting from the door of the castle, we pursue our way towards the N., across the rubbish heaps of the ancient Fostat (p. 239), skirt the town-wall of Old Cairo, and after about 650 yds. reach the —

*Gâm'a 'Amr, the most ancient mosque in Egypt, and sometimes styled the 'crown of the mosques'. The W. side with the entrances, of which near the S.W. corner (Pl. A.) alone is used, the two others having been built up, is partly concealed by peasants' huts and potteries (manufactories of kullehs, p. 312), the occupants of which pester visitors for bakhshish. Prior to the partition of the
land among the soldiers of the victorious army of El-Islâm. The site of the mosque belonged to Greeks and Armenians. The general Késabat ibn Kulthum gave his share as a site for a mosque, and when the space was found too small, his example was followed by other generals. 'Amr ibn el-'Aṣi, the general of Khalif 'Omar (p. 239), also added his share for the extension of the sacred edifice.

of Cairo.  

OLD CAIRO.  

4. Route. 311

and laid the foundation of the present mosque in the year 21 of the Hegira (A.D. 643).

Before us, on entering, lies the large open court. The original edifice is said to have been 30-50 ells in diameter only, but having been partly burned down in 275 of the Hegira (A.D. 897), it seems to have been restored and enlarged to its present dimensions in 357 of the Hegira. In the year 387 it is said to have been sumptuously decorated, but the few traces of painting which now exist seem to be of later origin. In 407 of the Hegira, according to Makrizi, the mosque possessed no fewer than 1290 copies of the Koran, and was lighted every night by 18,000 lamps. A treasury of the Muslims is said to have been adjacent to the mosque. The N. and S. walls, running parallel with the aisles, are not straight. The N. and S. halls are in ruins.

The plan of this edifice is in exact accordance with the typical form of the rectangular mosque with a hypostyle arrangement of columns around an open quadrangle (p. 183). The court is 116 yds. wide, and 130 yds. long, and could easily accommodate thousands of worshippers. 'Notwithstanding the simplicity of its plan, it is a noble and spacious structure, and, although to a great extent in ruins, it still produces a most imposing effect. As the exterior gives no indication whatever of the grandeur of the interior, the surprise of the visitor on entering is all the greater. There is nothing to be seen outside but the long, grey wall; and, as this outside wall is without windows, and entirely destitute of architectural enrichment, it looks all the more expressionless and unpromising. The interior presents a very different appearance. In spite of its simplicity and bareness, we are at once struck with the imposing character of the building. This effect is produced by the vast extent of the space, the great height of the colonnades, the immense number of the columns, and the beauty of the material of which they are all composed.' (M. Lüttke.)

We traverse the great court towards the W., passing the Fountain (Pl. 7), near which rise a palm and a thorn-tree, and enter the E. colonnade of the Sanctuary (Pl. a, b, c, d), which rests on six rows of columns. In front of the Mimbar (Pl. 2) is a Column (Pl. 3) bearing the name of Mohammed in Arabic characters; and by a freak of nature the outline of his 'kurbatsh' is traced on it by a vein of lighter colour than the rest of the marble, which is of a grey colour. This column is believed by the Muslims to have been transported miraculously from Mecca to Cairo; In the N.E. corner is the Tomb of Shekh Abdallah, son of 'Amr. The columns, all composed of marble of various kins, are 366 in number. The masonry consists

† The legend is told by Moritz Busch as follows: — 'When 'Amr was building this mosque, he asked his master, Khalif 'Omar, for a column from Mecca. The Khalif thenceupon addressed himself to one of the columns there, and commanded it to migrate to the Nile, but the column would not stir. He repeated his command more urgently, but still the column remained immovable. A third time he repeated his command, angrily striking the column with his 'kurbatsh', but still without effect. At length he shouted, 'I command thee in the name of God, O column, arise, and betake thyself to Cairo!' Thereupon the column went, bearing the mark of the whip, which is still visible.'
of burnt bricks, and evidently belongs to different periods, the oldest part being near the entrance, in the S. façade of the court. The arches are of very various forms, some of them being almost circular, while others, particularly those in the apertures of the wall, form a nearly acute angle with straight sides. Horseshoe arches also occur, and others are constructed in arbitrary and fantastic shapes. The capitals display a great variety of Roman and Byzantine forms, and there are some interesting capitals, not quite completed, in the ruined N. colonnade, which were perhaps imitations of Ptolemaic capitals executed during the Arabian era. The baths and other buildings once connected with the mosque are no longer traceable.

The colonnades on the W. side (that of the entrance) are supported by one row of columns only. A number of double columns also once stood here but of these one Pair of Columns (Pl. 12) alone remains. They are placed very close together, and it is said that none but honest men can squeeze themselves between them. — In 1808 this mosque, which has long been almost disused, witnessed a very remarkable scene. At the usual period of the rise of the Nile, the water began to fall. Dismayed by this strange phenomenon, the whole of the Mohammedan priesthood, the Christian clergy of every sect, and the Jewish rabbis, with one accord, assembled in the mosque of 'Amr to pray for the rise of the water, and so effectual were their prayers that the river rose long rose to its wonted fertilising height. (Fee to the attendant ½-1 fr.) — One of the traditions connected with the mosque of 'Amr is, that when it fails the religion of Mohammed will cease to exist.

The traveller who does not intend ascending the Nile will find it not uninteresting, on quitting the mosque, to visit one of the above-mentioned Kulleh Manufactory, and to inspect its primitive apparatus (bakhshish, a few copper piastres).

The porous water-jars (Arabic Kulleh) used throughout the whole of Egypt are chiefly manufactured at Keneh in Upper Egypt of light grey clay of very equal consistency. The remarkably uniform and delicate porosity of the vessels is produced by mixing the clay with ashes, which, the first time the vessel is used, are partly washed away by the water. The rapid evaporation caused by the porosity of the kulleh cools the liquid within to a temperature of 12-14° lower than that of the surrounding air. — These vessels, including the balázh, or large jars with handles, chiefly manufactured at Balázh in Upper Egypt, are brought down from Upper Egypt in rafts, consisting of thousands of them tied together by the handles and with their mouths covered.

Continuing to follow the road across the rubbish-hills of Fostát, which we have just left, we observe on our right a Muslim burial-ground, and at a short distance in front of us the old aqueduct. A little to the right, on an eminence, rises an old ruined mosque (Gūm'a Abu Su'ūd), beyond it is the Citadel with the mosque of Mohammed 'Ali, and farther distant are the hills of the Moṣṭam (p. 321). This view is very striking towards sunset.

The road, which becomes bad beyond this point, leads round the ruined mosque and ascends heaps of debris. On the top of the

of Cairo.  OLD CAIRO.  4. Route.  313

hill it divides. The road to the left leads back to the town, from the houses of which the Mosque of Sulṭān Ḥasan (p. 258) stands out conspicuously. The road, first in a straight direction, afterwards inclining to the right, leads to the necropolis known as Imām Shāfeʿī (see below), with the burial-mosque of the viceroyal family, which, however, presents no great attraction. Riders may easily make this short digression (see below).

Between this point and the base of the Mokṣṭām towards the E., and extending for some distance up the steep slopes of the hills, lies an extensive burial-ground, with several conspicuous, but very dilapidated mausolea, known as the —

Tombs of the Mamelukes, which approach close to the city. Like the so-called Tombs of the Khalifs (p. 279) their history is obscure, the names of the builders being unknown, and no inscriptions having been preserved. The ruins of these monuments, however, still bear traces of great artistic merit, and several of the minarets in particular are exceedingly beautiful.

In a somewhat detached position, a little way in the direction of the hills, we observe the ruined dome and lantern mentioned at p. 175. Close to the town, in the midst of a group of other tombs, rises the ruin of a mausoleum which once had a double dome. Inside the building are walls arranged in the form of a fan for the support of the outer dome, which has fallen in.

The whole of this region is still used as a Muslim burial-ground, and in some cases the ancient mausolea have been converted into family burial-places.

The gate by which we re-enter the town is the Bāb el-Ḵarāṣeh (Pl. G, 2). If we quit the main street by the second side-street to the left, we pass through the Abroṭawīl street, and in about 10 min. reach the S.W. and oldest part of Cairo, containing the Gāmʿa ibn Tulūn (p. 263), which may be visited from this point if time permits.

The road to the viceroyal burial-mosque in the necropolis of Imām Shāfeʿī passes the old mosque of Abu Suʿūd mentioned above, descends the hill at the bifurcation of the road, and leads to a group of dome-buildings nearly 1 M. distant, among which the imposing outline of the tomb of Imām Shāfeʿī, of a bluish-grey colour, is most conspicuous. Near it is the Ḥūsh el-Bāsha, or burial-mosque of the family of the Khedive.

To the left of the entrance is a sebil. On each side of the large arcade leading to the mosque are apartments for the accommodation of the women who come to pray at the tombs. At the end of this covered passage, on the left, is a small open space, in which, opposite to us, is a small door leading to the entrance of the mosque. (Nearer us is another door on the left, leading to the mausoleum of a wife of the Khedive.) As usual in all the mosques, the visitor on entering must put on slippers or linen socks over his
boots. (Bakhshish for one person 2, and to the guide 3 piastres tariff.) The monuments are in white marble, and were executed by Greek and Armenian sculptors. The inscriptions and ornamentation are richly gilded and painted. The Koran is regularly read here.

Returning to the sebil already mentioned, we may next visit the neighbouring so-called Hôsh el-Memâlik, erected in the 18th cent., probably the tomb of the Mameluke chief 'Ali Bey and his family, but erroneously pointed out as that of the famous Mameluke general Murâd Bey (Hôsh Murâd Bey), who is interred in the Suhag mosque at Girgeh in Upper Egypt. The principal monuments stand on a hollow pedestal, and the domes rest on marble columns.

Château and Park of Gezîreh.

Ticket of admission from the consulate necessary (p. 239). Distance about 3 M. (a drive of ½ hr.). It should be borne in mind that the Nile bridge is closed from 1 to about 3 o'clock, the time appointed for the passage of vessels through it. A visit to Gezîreh may also be combined with an excursion to the Pyramids (on the way back from the latter).

The road to the château of Gezîreh crosses the handsome Iron Bridge adjoining the Kasr en-Nil (Pl. 17), the extensive barracks of Cairo, which also contain apartments for the use of the Khedive. The bridge, about 420 yds. in length, was built by a French iron company. The buttresses, which were constructed with the aid of air-tight 'caissons', are of solid stone, and are 55 yds. apart. The bottom of the foundations is about 45 ft. below the level of the river when at its lowest. At a very early hour in the morning an interesting and picturesque crowd of peasantry

may be seen congregated here for the purpose of paying duty on the wares they are bringing to market.

Beyond the bridge we turn to the right, and soon observe, close to the Nile, the northernmost part of the great park, the laying out of which is still unfinished. The grounds, which were designed by M. Barillet, the Parisian landscape-gardener (d. 1874), are intended to extend from Gizeh to Embâbeh, and will be about 5½ M. long and 3 M. broad.

The W. Arm of the Nile, which separates Gezireh from the mainland, is at present closed at the upper end, so that when the river is low the channel is filled with water to a point a little above Embâbeh only. It is intended, however, to use this arm as a kind of waste-pipe, to be opened when the water is so high as to endanger the E. bank near Kasr en-Nil and the new town of Isma'iliya. The bed of this arm of the river has been widened, deepened, and protected by embankments (a work which was begun in 1866, and will not be completed for several years); and when the works are finished it is expected that nearly one-third of the volume of the Nile will be capable of being conducted through this channel. The embankments are constructed with the aid of a small transportable railway. The island of Gezireh was often flooded in former times, rendering horticulture impossible, but the whole surface has been raised about 5 ft., so as to elevate it above the level of the highest inundations.

From the Entrance (Pl. 1) we cross the Fore Court (Pl. 2) to the left, and apply to the custodian (Pl. 3; generally a Frenchman; no fee), who shows the palace and grounds. The Palace, which is externally a simple edifice, was erected, after many interruptions and alterations, by Franz-Bey, a German architect, in 1863-68. All the distinguished guests who were invited to attend the ceremony of opening the Suez Canal were entertained here. The palace is occasionally occupied by the Khedive and his family.

The masonry was executed by native workmen, the woodwork by J. Mannstein of Vienna, and the marble-work by Bonani of Carrara. The decorations of the walls in the principal apartments were designed by C. v. Diebitsch, and the silk-hangings were manufactured by Detrogat of Lyons from designs by Franz. Most of the ironwork is from the Lauchhammer foundry near Dresden. The furniture in the N. wing is chiefly Parisian, and the rest was partly manufactured by Parvis (p. 234), and partly by a Berlin firm.

On the N. side is the superb Entrance (Pl. a), with bamboo furniture from Paris. Adjoining it on the E. are the Waiting Room (Pl. b) and the large Audience Chamber (Pl. c). Beyond these are a Drawing Room (Pl. d) and the Cabinet of the Khedive. The visitor should notice the magnificent onyx mantel-pieces with mirrors, each of which cost 3000£, and the handsome metal cupboard in the cabinet. To the W. (right) of the entrance are a large (Pl. e) and a small dining-room, the latter of which contains Arabian cabinets by Parvis (p. 234).

The two other wings (W. and S.), surrounded by the gardens, contain suites of apartments for visitors, each consisting of a bedroom, dressing-room, and sitting-room. The upper floor contains similar apartments, one suite of which was lined with blue
satin when occupied by the Empress Eugenie, and another was fitted up for the reception of the Princess of Wales.

We next visit the Grotto, a little to the N.W. of the palace, and easily recognised by the rock of which it is constructed. The materials were chiefly brought from the wave-worn coast of Alexandria, and partly from the Petrified Forest (p. 324). The pebbles were imported from the island of Rhodes in the Mediterranean, and the coral and shells from the Red Sea.

Pl. 4, a fountain by Bonani, representing the infant Nile. To the N. of it is the Harem Building, part of which was erected by Mohammed 'Ali (not shown). Pl. 5, a pleasant resting-place, a 'volière' enclosed with interesting plants. Pl. 6, a fountain. In the centre of the garden is the long *Kiosque, probably the finest modern Arabian structure of the kind. The ornamentation, in cast iron, is in the Alhambra style. The plan of the building is slightly irregular, as several apartments of an older kiosque have been incorporated with it. The handsome hall and the fountain were executed at the Lauchhammer foundry near Dresden; they weighed 400 tons, and the cost of transport alone amounted to upwards of 2000l.; the hall itself, exclusive of the expense of its erection and decoration, cost 8000l. On the E. side of the kiosque are the reception chambers, and on the W. side the private apartments of the Khedive, consisting of an ante-chamber (Pl. f, g), a small (Pl. i) and a large dining-room (Pl. k), a smoking-room (Pl. h), chambers for reading, resting, and bathing, and a store-room for plate.

The marble work here is also by Bonani, the principal decorations by Diebitsch, and the others by Ercolei, Furcy, Girard, and Parvis. Roman table in mosaic, presented to Mohammed 'Ali by the pope. Several handsome tables in Florentine mosaic. Furniture in cast metal by Barbedienne of Paris. The bronze candelabra in the palace and in the kiosque were for the most part brought from other palaces, so that there is some incongruity in their styles. Furniture French and English.

Pl. 8, green-houses, with a Victoria Regia at the N. end. Pl. 9, a small menagerie with animals from Central Africa (none deserving special mention). Pl. 10, confectionery establishment. Pl. 11, usual exit. Pl. 12, pumps for watering the grounds and the avenues leading to Gizeh. Adjacent, an ice-manufactory.

**The Shubra Avenue.**

About 2½ M. to the N. of Cairo lies the village of Shubra, on the Nile, where a spacious garden and kiosque of Mohammed 'Ali, now neglected, are situated (permission to visit them obtained through the consulate). The broad *Shubra Avenue leading thither is composed of beautiful sycamores and lebbek trees (erroneously called Nile acacias; p. 76). This avenue forms the Rotten Row, or Avenue de Boulogne, of Cairo. The fashionables of the town, both Mohammedan and Christian, drive or ride here daily, but principally on Friday and Sunday evenings. The scene, which is sometimes
enlivened by handsomely caparisoned camels from the stables of the Khedive, resembles the 'corso' of European cities, but is rendered far more picturesque by its Oriental elements. The carriages of the slightly veiled ladies from the harems of the wealthy, and those of the ministers, the consuls, and the merchants, follow each other in gay procession, while the majestic camel stalks moodily amidst the busy throng. Beyond the railway-station (Pl. A, 5), where the avenue begins, are a number of cafés and orange and refreshment stalls. Near the beginning of the drive are several villas, one of which, to the right, a little back from the road, is the beautiful Villa Ciccolani, a visit to which (on the way back) is recommended. The tower commands a good survey of the environs (fee 1 fr.). On the left is the viceregal palace Kasr en-Nusha, for the reception of distinguished foreign visitors (not shown). On the left, halfway along the avenue, is a European restaurant.

At the end of the avenue, and beyond the first houses of Shubra, we turn a little to the right and soon reach the entrance to the garden, where tickets of admission are presented. We first proceed to the kiosque (fee 1 fr.), after which a gardener shows the grounds and presents visitors with a bouquet (fee 1 fr.).

The new garden château, which was erected by Hašim Pasha, son of Mohammed Ali, on the site of an older building, presents no architectural interest, but is worthy of inspection as an example of rich and effective garden architecture. The fine large basin, bordered with balustrades and galleries, was left unaltered. The corners and sides of the square reservoir are embellished with small kiosques. The fountains consist of water-spouting lions, and in the centre of the basin rises a kind of balcony, borne by twenty-four water-spouting crocodiles, which remind one of the proximity of the Nile. The pavement, basin, and columns are of Italian marble, while the upper part of the structure is in wood and stucco only. As already observed, the whole place is in a neglected condition. Several of the windows afford a fine view of the Nile. The rooms, which are handsomely fitted up, contain a number of pictures, including an indifferent portrait of Mohammed Ali.

The *Garden, which covers an area of nearly nine acres, was somewhat incongruously re-modelled a few years ago by M. Barillet of Paris in the old French style, which is ill adapted for the Oriental vegetation, but it also contains some beautiful rose and geranium beds. Among the tropical plants, which have their Latin names attached, we remark the beautiful Indian lemon-shrub and a huge lebbek tree (p. 76). An artificial hill in the garden commands a good survey of the grounds. A large building to the N. has been built for the Khedive's stud.
Heliopolis.

Another pleasant drive may be taken to Maṭariyeh, a village 5 M. to the N.E. of Cairo, where the Tree of the Virgin and the Obelisk of Heliopolis are situated. The drive to the Kubbeh palace takes 3/4 hr., thence to Maṭariyeh 1/2 hr., and to the obelisk 1/4 hr. more. A donkey takes longer.

We follow the Boulevard Clot Bey, leading from the Ezbekiyeh to the station and to Shubra (p. 316), turn to the right at the Rond Point de Faghalla (where we observe the Sebil of the mother of the Khedive on the left; Pl. 93), leave the new guard-house on the left, and then follow the Route de l'Abbasieh, which soon inclines a little to the left. A few years ago this road was flanked with large heaps of rubbish, but these have been removed, and building sites thus obtained. The lebbek trees planted here will soon afford shade to the road. Immediately after crossing the Khalīg (city-canal), the 'Abbāsiyeh road skirts the old mosque of Ez-Zāhir (Pl. 71), a large square pile of buildings, which was called by the French Fort Sulikowsky, was afterwards a government bakehouse, and is now a guard-house. A few paces beyond this building we reach the (right) Bāb Husānīyeh, through which the route to 'Abbāsiyeh lay before the completion of the new road (and which, being shorter, may still be followed by riders or walkers). Beyond this gate the carriage-road runs towards the N.E., skirting the desert. At the beginning of it, on the left, is the slaughter-house. A road to the right leads to the pumps of the water company.

A few hundred paces farther on, the road divides again. The branch to the right, the old Suez road, leads to an uninteresting viceroyal château at the base of the Gebel el-Aḥmar (p. 323), the ascent of which is recommended.

We follow the road to the left, leading direct to 'Abbāsiyeh. On the right we pass a modern public fountain, and on the left an old burial-mosque and the 'European Hospital'. 'Abbāsiyeh is a group of houses and cottages, founded by 'Abbās Pasha in 1849, in order to afford suitable accommodation for the Beduin shēkhs whose friendship he was desirous of cultivating, and who objected to enter the city itself. A large palace which formerly stood here has been replaced by barracks in the most modern style, besides which there are numerous older barracks and a military school with a gymnastic-ground. Near the last barrack on the left is a palace of the Khedive's mother, and a little farther on, also to the left, rises the meteorological and astronomical Observatory. At the end of the houses of 'Abbāsiyeh begin the new gardens which have been reclaimed from the desert. The road crosses two railways, passes the village of Kubbeh (left), intersects beautiful orchards and vineyards, and leads under handsome acacias and past numerous sākiyehs to the Palace of Taufik Pasha (the heir apparent). The vineyards, which were planted by Ibrāhīm Pasha, the father of the
Khedive, and contain various kinds of vines from Fontainebleau, are celebrated. This property formerly belonged to the late Muṣṭafā Fazyl-Pasha, the brother of the Khedive. The present palace, however, has been entirely erected by Taufīk Pasha. In the desert, to the right of the road, about 1/2 M. distant, is situated the Race Course, where races take place annually in January.

A little before reaching Taufīk Pasha’s palace, the road turns to the right and skirts the garden belonging to the palace. It then enters an olive plantation and leads in a straight direction to Matariyeh. This plain has been the scene of two important battles. In 1517 the Battle of Heliopolis made Selim and the Turks masters of Egypt (p. 105); and on 20th March, 1800, General Kléber with 10,000 French troops succeeded in defeating 60,000 Orientals, and in consequence of this victory regained possession of Cairo, although for a short time only.

Near the village of Matariyeh are the Tree and Well of the Virgin and the Obelisk of Heliopolis. The Virgin’s Tree (in a garden to the right of the road) is a sycamore with a decayed and riven trunk, covered with names and inscriptions, but the branches are still tolerably flourishing. According to the legend, the Virgin and Child once rested under the shade of this tree during the Flight to Egypt; and there is another tradition to the effect that the persecuted Mary concealed herself with the Child in a hollow of the trunk, and that a spider so completely covered the opening with its web as to screen her effectually from observation. The present tree, the predecessor of which died in 1665, was not planted till after 1672. At the time of the inauguration of the Suez Canal the tree was presented by the Khedive to the Empress Eugénie. The garden is watered by means of a double sākiyeh, which is supplied from a shallow reservoir fed by springs. This water is good for drinking, while that of all the others, which percolates through the ground from the Nile, is usually brackish. This reservoir has been called the ‘Water of An’ from a very early period, and figures in the Coptic legends connected with the Virgin. (The Arabs named Heliopolis ‘Ain Shems, a name which has been supposed to refer to this well, but should probably be translated ‘eye of the sun’.) It is an interesting fact that the celebrated balsam shrub, the balm of which is said to have been presented to Solomon by Queen Sheba, once thrived in this neighbourhood. The plant, however, does not now occur nearer than Yemen, where its juice is an article of commerce. It is said to have been replanted here by Cleopatra, but apparently without success. In 1830-40 the first experiments with the cotton-plant (p. 70), which now plays so important a part in the commerce of Egypt, were made in this neighbourhood. Quails abound here in the month of April (p. 80).

About 1/2 M. beyond the garden are situated the ruins of the
famous ancient Heliopolis, or city of the sun, of which the obelisk and the outer walls are now the only vestiges. The town was called by the Egyptians the dwelling or seat of Ra (Helios), or of Tum (the evening sun, p. 123), or house of Phoenix (Bennu) or An. The latter, the popular name of the place, is frequently mentioned in the Bible under the Hebrew form of On. Thus, in Genesis, we are informed that Pharaoh gave Joseph the daughter of Potiphera (i.e. ‘dedicated to Ra’), a priest of Heliopolis, named Asenath, in marriage. On lay in the land of Goshen, and we learn from the monuments that even after the Exodus it was still inhabited by a considerable number of Semites.

From a very early period the Sun Temple of Ra (Tum-Harmachis, p. 125), the most famous and ancient shrine in Egypt, with the exception of that of Ptah of Memphis, was the scene of magnificent rites in honour of the cycle of deities connected with the worship of the sun. The chief of these were Tum and Ra-Harmachis, with his companion Thoth, Sehu and Tefnut, children of Tum, Osiris in the character of the soul of Ra (called ‘the ancient of Heliopolis’), Horus, and Isis, the last named deity being specially worshipped here under the highly revered name of Isis-Hathor, or Venus Urania, who was sometimes known as Isis of An. The Mnevis bull was also revered here, being the animal sacred to Ra, while the Apis bull of Memphis, which abode for a time at Heliopolis before its introduction into its sanctuary in the town of the pyramids, was associated with Ptah. The lions which were kept here perhaps had reference to Sehu and Tefnut, the brother and sister, who were represented as lions, or perhaps, owing to the glossiness of their skins and their natural fire, to the shining and glowing orb of day. With regard to the Phoenix, the bird of Ra, which was worshipped here, and which brings its ashes to Heliopolis, see p. 135. Cats and a white sow were also regarded as sacred here.

The foundation of the temple is of very remote origin. In the ‘great hall’ here the wounds of Horus, received in his combat with Seth Typhon (p. 131), are said to have been healed. Amenemhat I., the first king of the 12th Dynasty, restored the shrine of Tum and laid the foundation of the Sun Temple, in front of which his son Usrtesen erected the obelisk which still stands here.

The immense wealth of this shrine is mentioned by various papyri, and particularly the Harris papyrus in London, which gives a list of the gifts presented to it by Ramses III. alone. The staff of priests, officials, custodians, and menials connected with the temple is said to have numbered no less than 12,913. As each Pharaoh was regarded as a human embodiment of Ra, it was natural that he should present special offerings to the chief scene of the worship of that god, and should proudly add to his titles that of ‘lord of Heliopolis’. The most celebrated of the ancient schools, with the teachers of which Herodotus once conversed, was also established at Heliopolis, while in Strabo’s time (born B.C. 60) the famous seat of learning had ceased to exist, although the houses of the priestly scholars were still standing. The guides showed the great geographer the dwelling in which Plato and Eudoxus were said to have resided for thirteen (?) years; ‘for’, he says, speaking of the professors at this university, ‘these persons, so admirably imbued with knowledge of heavenly things, could only be persuaded by patience and politeness to communicate some of their doctrines; but most of them were concealed by these barbarians.’ Obelisks, the emblems of the sun’s rays, were of course frequently dedicated to the god of the sun and his temple; and we are accordingly informed that Heliopolis was ‘full of obelisks’ (see 218).

The Obelisk which still stands here is of red granite of Syene (Assuân), and is 66 ft. in height. With the exception of a
small obelisk found by Lepsius in the Necropolis of Memphis, this is the oldest yet discovered, having been erected by Usortesen, with the pronomen Ra-Kheper-ka, the second king of the 12th Dynasty. The companion obelisk (for these monuments were always erected in pairs) stood, as El-Gizri informs us, down to A.D. 656. Each of the four sides bears an inscription in the bold and simple characters of the old empire; but those on two of the sides have been rendered illegible by the bees which have made their cells in the deeply cut hieroglyphics. The pyramidium at the top was covered with metal at a comparatively late period. The ground on which it stands has been so considerably raised by deposits of mud, that a great part of the obelisk is now buried. The inscriptions, which are the same on each of the four sides, record that Usortesen I. (Ra-Kheper-ka), King of Upper and Lower Egypt, lord of the diadems and son of the sun, whom the (divine) spirits of An (Heliopolis) love, etc., founded the obelisk on the first day of the festival of Set, celebrated at the close of a period of thirty years. Cambyses is said to have destroyed Heliopolis, but it is ascertained that the city still contained many objects of interest down to a late Mohammedan period. Makrizi calls it a small town, the ruins of which showed that it had once been the temple of an idol. 'It contains the large and terrible idols of hewn stone, each of which is 30 ells in length, with limbs in proportion. Each image stands on a pedestal, and others sit on admirable and well-proportioned basements. Upon most of these stones there are figures of men and animals and much writing in an unknown language; there is hardly a stone without writing, or sculpture, or figures. This town also contains the two celebrated obelisks, called the obelisks of Pharaoh, which likewise bear inscriptions in the same language.'

The excursion may be extended to the village of El-Mery (with some ruins of the 18th Dynasty) and the once prosperous, but now ruinous Khânakâh, on the outskirts of the desert (2½ hrs. from Matariyeh), but the sole attraction consists in the duck and snipe shooting around the ponds near Khânakâh.

The Birket el-Hagg, or Lake of the Pilgrims, 4½ M. to the E. of Matariyeh, presents no attraction except during the latter half of the lunar month of Shawwâl, when the great caravan which accompanies the new kisweh, or cover for the Ka'ba, to Mecca, assembles here to celebrate the so-called Mahmal Festival (p. 234). A similar scene may, however, be more conveniently viewed at Abbâsiyeh, where, in the open spaces on each side of the road before its bifurcation, numerous tents are pitched and festivities take place at the time of the departure and arrival of the sacred carpet.

The Mokattam Hills.

The *Mokattam Hills are well worthy of a visit (on donkey-back), especially about sunset, or in the morning between 8 and 9 o'clock; or the ascent may be made by way of termination to the excursion to the Petrified Forest (p. 324). Those who consider the expedition too fatiguing may content themselves with the ascent of

Baedeker's Egypt I.
the windmill hills (p. 284) at the end of the Muski, or with a visit to the Citadel (p. 260).

One route to the Mokattam (or Gebel Giyushi, as the range of hills to the E. of Cairo is sometimes called after the conspicuous old mosque situated on their summit) starts from the Tombs of the Khalifs, and the other from the Citadel. The former is recommended for going, and the latter for returning. The whole excursion takes 3 hours.

Passing the Tombs of the Khalifs, and crossing the railway embankment, we ride in the direction of a dark projecting rock, which we afterwards leave to the right. The road, which is fairly good, then ascends along the S.E. side of the large quarry lying on the right, and bears towards the right. In $\frac{3}{4}$ hr. we reach a large plateau, on the W. margin of which rises the dilapidated Mosque of Giyushi.

The **view from this point, especially with its sunset colouring, is magnificent. The thousand minarets of the city and the picturesque buildings of the Citadel are then tinted with a delicate rosy hue. The grandest of all the burial-grounds of the desert forms a noble foreground, the venerable Nile dotted with its lateen sails flows below us in its quiet majesty, and to the W., on the borders of the immeasurable desert, tower the huge and wondrous old Pyramids, gilded and reddened by the setting sun. At our feet are the Citadel with the mosque of Mohammed 'Ali, the old aqueduct on the left, and the domes of Imam Shafei (p. 313). On a rocky eminence are situated the picturesque ruins of several burial-mosques, which, being of the same colour as the rock, are apt to escape the notice of travellers on the Nile or its banks.

The Mokattam and the adjacent hills which flank the valley of the Nile, belong to the great range of the nummulite mountains which extend from N.W. Africa, across Egypt and India, to China. This nummulite formation is one of the Eocene, or oldest deposits of the tertiary period, and immediately follows the chalk. It is remarkably rich in fossils, the chief mass of which consists of millions of nummulites (a kind of snail-shell), or large rhizopodes of the polythalamica group. The larger kinds are about one inch in diameter, and the smaller about $\frac{1}{4}$ inch. On removing the outer coating of limestone, we find the well-defined chambers within. They are also frequently seen, cut into two halves, in the stones of the Pyramids, which are to a great extent constructed of nummulite limestone. The Greeks also noticed these curious fossils, and Herodotus mentions the smallest kinds as being petrified lentils, of the sort eaten by the ancient Egyptians (comp. 334).

The numerous quarries in the slopes of the Mokattam and the higher side-valleys of the range also yield a profusion of sea-urchins (clypeaster, cidaris, echinolampas, etc.), various kinds of oysters, cerithium, ovula, strombus, nerina, furritella, nautilus, bivalves, sharks' teeth, and bones of the haliocore. Beautiful crystals of isinglass-stone and of strontian also occur, the shells of the nummulites having frequently been crystallised into the latter mineral.

At the N. end of the plateau is an old Turkish fort, whence a bridge descends to the Citadel, but travellers are not permitted to use this route. On the E. and higher part of the Mokattam, to the right, adjoining the summit, is a flagstaff erected in 1875 by the
English party of scientific men who observed the transit of Venus from this point. The S. (right) end of these hills is skirted by the road to the smaller Petrified Forest, which may be reached from this point in about \( \frac{3}{4} \) hour.

On the way back our route bears a little to the right, and away from the lofty perpendicular sides of the above-mentioned quarry. The route back to the town via the Citadel turns to the left after \( \frac{1}{4} \) hr., near some ancient tomb-caverns, crosses a new bridge, and enters the Citadel by the Bāb el-Gebel, passing a number of dirty canteens. Turning immediately to the left, we pass the Well of Joseph (p. 262) on the left, and reach the broad road leading to the city.

The Gebel el-Aḥmar, or Red Mountain, which rises to the N.E. of Gebel Giyūshi (p. 322; most conveniently visited from 'Abbāsiyeh on donkey-back; p. 318), and connected with it by means of a substratum of limestone, consists of a very hard meiocene conglomerate of sand, pebbles, and fragments of fossil wood, cemented together by means of silicic acid, and coloured red or yellowish brown with oxide of iron. According to Fraas, the two colossal statues at Thebes are composed of rock from the 'Red Mountain'. For many centuries the quarries here have yielded excellent and durable millstones, and the neighbouring huge heaps of debris afford abundant material for the construction of the macadamised roads of Cairo and Alexandria. Similar meiocene formations, which owe their origin to an eruption of hot springs impregnated with silicic acid, occur to the S.E. of the Gebel el-Aḥmar, in the direction of the Petrified Forest, and even in a side-valley of the Gebel Giyūshi.

A railway now encircles the whole of the hill, being used for carrying away the conglomerate and the subjacent limestone yielded by its quarries. Messrs. Fraas and Unger have found a few examples of freshwater conchylia among the fossils of the Gebel el-Aḥmar.

The Red Mountain undoubtedly owes its origin to an eruption of silicic springs, which forced their way through the tertiary limestone rock; and to similar agency is probably to be ascribed the mud-volcano near Abu-Za'bal, beyond Khānkhān, 4-5 hrs. to the N. of this point. A little to the E. of Abu-Za'bal, on the borders of the very smooth slope of the sandy desert, protrudes a black basaltic tufa rock, which has not reached the well-known crystallised form of basalt, but is in an amorphous condition, exactly resembling the black blocks lying on the E. side of the Great Pyramid of Gizeh. As there are traces of very ancient quarries near Abu-Za'bal, these blocks may possibly have been brought thence.

Moses' Spring and the Petrified Forest.

Since the time of the French expedition the 'Petrified Forest near Cairo', as part of the Gebel Khashab is now called, has become one of the sights of Egypt which almost every traveller makes a point of visiting. To the natives the Petrified Forest is known as the 'Great' and the 'Little Gebel Khashab'. The scientific traveller will find a visit to the former extremely interesting, but most travellers will be satisfied with an ex-
cursion to the latter, the outskirts of which may be reached in 1½ hour. The expedition may be made in half-a-day on donkey-back. Carriages require extra horses, and notwithstanding their aid sometimes stick in the sand.

A few drops of bitter and brackish water which trickle from a cleft in a narrow and rocky side-valley of the Mokaṭṭam are quite erroneously called 'Ain Mösa, or Moses' Spring, but a visit to this spot (scarcely 1½ hr. from the mouth of the valley) is interesting, and may easily be combined with the excursion to the Petrified Forest.

The services of a guide may be dispensed with, as every donkey-boy is well acquainted with the route to the Little Petrified Forest, but a visit to the 'Great', near the Bir el-Fahmeh, can hardly be accomplished without the aid of a well-informed dragoman.

Leaving the Bâb en-Naṣr (Pl. B, 2; p. 278), we turn to the right to the Tombs of the Khalifs, pass close to the burial-mosque of Sultân Barkûk (p. 288), and, between the Mokaṭṭam and the limestone substrata of the 'Red Mountain' (p. 322), cross a raised ledge of rock, forming a kind of threshold to the first desert valley towards the E., into which the E. spurs of the Mokaṭṭam descend. Near a shallow quarry, in the middle of the valley, the well-defined desert track turns towards the S. After a ride of 1¼ hr., during which an isolated hill of red and black sandstone resembling the 'Red Mountain' is visible in the desert on our left, we cross a deep, dry water-course. The path divides here. That to the right leads to Moses' Spring and the Little Petrified Forest (see below), while that to the left is the route to the Great Petrified Forest and the Bir el-Fahmeh (p. 326).

Following the path to the right, we observe a yellowish hill at the foot of the spurs of the Mokaṭṭam, and reach it in 1¼ hr. more. This hill stands at the mouth of the narrow, winding valley, 1½ M. in length, through which the path to Moses' Spring ascends over large blocks of stone and rubble. The ravine terminates in a lofty amphitheatre of rock, which affords welcome shade. Near it stands a fig-tree, which the quarrymen have enclosed with a wall to protect it from the wind. In the higher angle of the valley to the right is the cleft in the rock from which issues the 'Spring of Moses', arbitrarily so named. The chief attraction of the gorge consists in the numerous desert plants and the fossils it contains.

In order to reach the smaller Petrified Forest, we return to the mouth of the gorge at the foot of the hill above mentioned, turn to the right, and proceed towards the S., skirting the slopes of the Mokaṭṭam, which are here more precipitous. We then cross a black projecting rock, which has a glazed appearance, and pass through a square gap in the rock, beyond which we observe opposite to us gently sloping hills, consisting of limestone, marl, and beds of fossil oysters. The route ascends, a little to the right, between these hills, and soon reaches the plateau of the Gebel Khashab, where the scattered fragments of fossil wood indicate the beginning of the Little Petrified Forest. The farther S. we proceed across this plateau, the more numerous do the fossil trunks become; but they are inferior in length and thickness to those on the Bir el-Fahmeh
Almost all these trunks and fragments have been ascertained by Unger to belong to the same tree, which he has named the Nicolia Ägyptiaca. On examining the grain microscopically, he found that it did not belong to the palm family, but was more akin to the cotton-plant. The trunks show traces of ramification, but do not now possess either roots or boughs. Whether the trees once grew here, or were floated hither by water, became imbedded in the sand, and afterwards converted into stone, is still a matter of controversy. Fraas (see below) is of opinion that the formation resembles that of brown coal of the meiocene period, but that the trunks, instead of becoming carbonised, were converted into flint owing to the abundant presence of silica in the sandstone and to the peculiarity of the climate, which appears to have been much the same at that remote period as at the present day.

Numerous huge trunks of a kind of balsam-tree lie in every direction among the sand or in the strata of meiocene sandstone. The structure of the wood is as follows. There are no annual rings. The wood consists of proenchymal and parenchymal cells, variously distributed, the latter having both thick and thin divisions. Dotted vessels, filled with cells, are scattered throughout the tissue, either singly or in groups, and short in their articulation. These vessels are divided into chambers, all the walls being alike, but the outer walls are sometimes without these divisions; the radiating marks are prolonged by means of a series of 1-4 parenchymal cells. A comparison of the fossil wood with living varieties shows that the vessels of the Sterculia and Astrapea woods are grouped in the same way, and Unger therefore considers it probable that the wood of the Nicolia belonged to the Byttneriacese or to the Sterculiaceae. Thousands of these Nicolia trunks are exposed to view in the desert of Khashab. Where the sandstone became disintegrated and in course of time was converted into the sand of the desert, there the silicised trunks were gradually disengaged from their sandstone bed, and they now cover the surface of the Little Khashab for a distance of 10-15 miles, and that of the 'Great' for a far greater distance. . . . Travellers who are not familiar with the appearance of a vein of coal will be greatly struck by the appearance of this formation, regarding which all kinds of fanciful theories have been set up. The geologist, however, will simply regard it as akin to the coal-measures of the meiocene period, with this difference, that, while the waters of Europe favoured the preservation of the carbon and the fibre of the wood, the silicious sandstone of the Moqattam converted the tissue of the wood into silicic acid. The climatic changes, moreover, which have taken place in the region of the Nile since the meiocene period are doubtless much the same as those, which must have affected the interior of Germany, where the brown coal is chiefly formed of the remains of balsam-poplars and cypresses.' (Fraas.)

Crossing the plateau of the Petrified Forest for about 20 min. more towards the S., we suddenly reach the S. slopes of the Moqattam, through a gap in which, at a spot now concealed by sand, a path descends past table-shaped ledges of calcareous marl, formed by erosion, into the Wâdi et-Tih, or 'valley of wanderings'. On the S. horizon rise the hills of Turra (p. 391), recognisable by the old fortress on their right spur and by two heights exactly opposite to us, of which that to the left somewhat resembles a coffin in shape, while that to the right is of semicircular form. Crossing the bottom of the valley in this direction (S.), we perceive in the Turra hills the entrance to a desert gorge, bounded by lofty and precipitous
slopes. This valley extends for many miles in various windings, communicates with the ravines of the desert which begin in the Gebel Hoff near Heluán, and is abundantly stocked with the plants peculiar to the desert.

We may return from the Little Petrified Forest through the ‘Valley of Wanderings’, skirting the S. and W. slopes of the Mo-katţam, passing the Tombs of the Mamelukes, and entering the city by the Place Mohammedi 'Ali at the foot of the Citadel. Another interesting return-route is across the Mo-katţam hills to the Giyûshi eminence (p. 322). Thence to the city, see p. 322.

A visit to the Great Petrified Forest near Bir el-Fähmeh (4 hrs. to the E. of Cairo, and 2 1/2 hrs. beyond the Little Petrified Forest) takes a whole day, and is fatiguing, especially as the traveller has the sun in his face both in going and returning; but it is interesting to geologists. The route is not easily found (p. 324); the Wâdi et-Tîh (p. 325) forms the best starting-point (comp. Maps, pp. 302, 314).

We leave Cairo by the Bâb el-Kabasseh (Pl. G, 3), pass the Tombs of the Mamelukes, and, leaving the village of Basâtin on the right, ascend to the left by the Jewish Cemetery. After reaching the top of the hill in the Wâdi et-Tîh (whence we observe the entrance of the rocky ravine mentioned at p. 325 to the right), we follow the valley towards the E. for 1 1/4-1 1/2 hr. more. Above the gradual slopes of the desert, about 1 1/4 M. to the left, we then perceive several reddish hills and another of yellowish colour in front. Riding towards the latter, we reach on its E. slopes the débris of the Bir el-Fähmeh (‘coal well’) and remains of some walls, dating from the period (1840) when Mohammed 'Ali caused a search for coal to be made here. The shaft is said to be 600 ft. in depth, the bottom being 200 ft. below the level of the Nile. No coal, however, was found. The hills of the desert to the N., N.W., and W. of the Bir el-Fähmeh are thickly strewn with trunks and fragments of fossil timber. Some of the trunks which are exposed to view measure 65-100 ft. in length, and are upwards of 3 ft. thick at the lower end. They are generally brown and black, with a polished appearance, and frequently contain chalcedony.

A sand-hill 1 1/2 hr. to the N. of Bir el-Fähmeh, to the base of which the Forest extends, affords a good survey of the district. To the N.W. are the Mo-katţam, the ‘Red Mountain’ (p. 323), ‘Abbâsiyeh, and the plain of the Nile. We may now return in this direction, keeping to the N. of the Mo-katţam hills (comp. Map. p. 314), following a level desert valley. The way cannot be mistaken, but is not easy to find in the reverse direction without an experienced guide, as the point for which we are bound, not being conspicuous, is likely to be missed, and there are no good landmarks on the route beyond the Spring of Moses, opposite to which it enters the valley between the Mo-katţam and the Gebel el-Aḥmar.
The Pyramids of Gizeh.

Now that there is a good road from Cairo to the Pyramids of Gizeh, the excursion is almost always made by carriage (20-25 fr.; a drive of 1½ hr.; donkey, 2-2½ hrs.). Travellers formerly crossed the Nile at Old Cairo and rode thence to Gizeh. The inspection of the Pyramids takes 2 hrs. at least (p. 329), so that the traveller can return to Cairo in time for dinner. Those who intend spending a whole day at Gizeh should take provisions with them. Candles will also be required (and magnesium wire is recommended), if the traveller visits the interior of the Great Pyramid (see p. 342) or of any of the other tombs.

A visit to Sakkâra (p. 357) combined with the excursion to Gizeh takes two days, and, unless the traveller is content to pass the night in a cavern, requires a tent and a dragoman, so that the whole expedition is somewhat troublesome and costly. Those who do not care to ride the whole way send donkeys to Gizeh on the day before they start, drive thither early in the morning and dismiss the carriage there (the fare being hardly less than for the journey there and back), and ride in the afternoon or evening along the outskirts of the desert to Sakkâra, where the night is spent. On the following morning the route leads by the site of the ancient Memphis and through palm groves to the railway-station of Bedrashen. Railway thence to Bulak ed-Dakrûr, the station for Cairo, together with fares and the time occupied by the journey, see p. 357.

A visit to Helwan (p. 389) may also be combined with the last mentioned excursion if the traveller crosses the river with his donkey near Bedrashen, and passes the night in the hotel at Helwan. Cairo may then be regained on the third day on donkey-back, or by the new railway (p. 389).

One of the fine and calm days of which there is no lack at Cairo should be chosen for the excursion, the driving sand in windy weather being very unpleasant.

Near Kasr en-Nil we cross the Nile by the great iron bridge (p. 314). On the opposite bank we leave Gezirâh (p. 315), to which an avenue leads, on the right. The greenhouses and gardeners' dwellings belonging to the Khedive also lie on the right. To the left of the road leading across the island we observe the foundations of the new Egyptian Museum (p. 293), the lofty chimney of a water-pump, and the private gas-manufactory of the Khedive. A second and smaller bridge then crosses the other branch of the Nile, which was long choked with mud, but which has lately been re-opened, so that the name of Gezirâh (i.e. island) is now justifiable (comp. p. 315). Immediately beyond the bridge rises a Karakoûl (Turk. 'guard-house'), the road passing which leads to the railway station of Bulak ed-Dakrûr (p. 357) and to a palace of Tusûn Pasha. The road to Gizeh, which is well kept and is shaded by beautiful lebbek trees, diverges to the left by the second bridge. Near the entrance to the viceregal gardens of Gizeh, which are bounded on the S. by an extensive palace, are waterworks for the raising and distribution of the water, immediately beyond which the road turns to the right. On the left rises the high wall enclosing the property of the Khedive, and on the right are palaces of the princes Husên and Hasan Pasha (none of which are shown to visitors). After crossing the Upper Egyptian railway, the road leads between the railway (on the left) and the
canal (on the right) towards the S. to the private station of the Khedive, and thence to the right, direct towards the Pyramids. The now decayed village of Gizeh (which was a railway-station until recently, but has ceased to be so since the opening of the Bûlâk ed-Dakrûr station), which we leave to the left, is said by Leo Africanus to have once contained magnificent palaces, which the Mameluke princes afterwards used as a summer-residence, and it was a place of some commercial importance in the middle ages. A line of fortification between this point and the Nile, which once protected the entrance to the town on the left bank of the river, has entirely disappeared. On this part of the road two bridges are crossed; on the left lie the huts of two fellâhin villages. The fields on each side are intersected by canals and cuttings, containing more or less water according to the season. Small white herons, erroneously supposed to be the ibis, and vultures with light and dark plumage are frequently observed here. The huge angular forms of the Pyramids now loom through the morning mist, and soon stand out in clear outlines, with all the injuries they have sustained during the lapse of thousands of years.

A few hundred yards before the road begins to ascend, it is protected against the encroachments of the sand by a wall 5 ft. in height. On the left are a Sâhiyeh (water-wheel) and stables, and on the right a building once destined to be a hotel, the establishment of which the Beduins, apprehensive of infringement of their rights, succeeded in preventing. The road, 26 ft. in width, and now flanked with walls 6½ ft. in height, winds up the slope to the left, and reaches the plateau 130 yds. from the N.W. corner of the Pyramid of Cheops.

The traveller had better alight at the Viceregal Kiosque (Pl. a), near the N.E. angle of the Pyramid, where the custodian will generally give visitors the use of some of the rooms on the ground-floor on payment of a fee.

The Beduins of Gizeh, who surround the carriage and importune travellers long before the Pyramids are reached, and who strew the last part of the road with sand in order that they may have a pretext for assisting carriages up the hill, are very pertinacious in their attentions and exorbitant in their demands. No attention should be paid to their demonstrations at first, but one of them may be afterwards engaged for the ascent of the Great Pyramid and a visit to the other antiquities. With the aid of the annexed plan the traveller might indeed easily dispense with their services, but as they seem to regard the privilege of escorting travellers as a kind of birthright, he had better engage one of them for the sake of avoiding farther importunities.

The Pyramids of Gizeh occupy a plateau gradually ascending from E. to W., the E. and N. margins of which are very precipitous at places, and extending about 1600 yds. from E. to W., and 1300 yds. from N. to S. The three great Pyramids are so situated on this plateau that a line drawn from the N.E. to the S.W. angle of the largest pyramid is exactly in a line with the diagonal of the second pyramid, while the diagonal of the third pyramid is parallel
with that line. These Pyramids are thus built exactly facing the four points of the compass, although the magnet seems to show an inclination of 80° 30' towards the W. Smaller (and uninteresting) pyramids rise to the E. of the Great Pyramid and immediately to the S. of the third. To the S.E. of the Great, and to the E. of the second and third pyramids, are situated the Sphinx, the adjacent temple of granite, a deep rock-tomb (Campbell's Tomb), and an isolated stone building. Numerous tombs (maṣṭabaš), almost all in ruins, surround the Great Pyramid and extend over the plateau to the E. and W., or are hewn in the form of grottoes in the external rocky slope towards the E. and in a ledge of rock to the S.E. of the second pyramid.

Chief Attractions. Those who are pressed for time should devote their attention to the *Great Pyramid (p. 341; explore the interior, and ascend to the summit), the Sphinx (p. 348), the Granite Temple (p. 351), Campbell's Tomb (p. 353), and the Tomb of Numbers (p. 353). The inspection of these chief objects of interest, which we describe first, occupies about 2 hrs.; but those whose time permits, and who desire to form an accurate idea of the topography of the whole area, should make the Circuit described at p. 354, which will occupy 1⅕-2 hrs. more. Most of the tombs (p. 354) are so badly preserved that they are not worth visiting, unless the traveller is unable to undertake the excursion to Saḳḳāra.

The Pyramids \(^{†}\).

'Everything fears time, but time fears the Pyramids'.

Abdellatif (Arabian physician, born at Baghdād in 1161).

The Pyramids within the precincts of the Necropolis of the ancient capital city of Memphis are the oldest and most wonderful monuments of human industry yet discovered. They stand on the margin of the plateau of the Libyan desert, along a line about 25 M. in length, and may be divided into the five groups of Abu Roāsh (p. 356), Gizeh (p. 327), Zāwyet el-'Aryān and Abuṣīr (p. 356), Saḳḳāra (p. 368), and Dahshūr (p. 388). Beyond the boundaries of Egypt, to the S., there also occur the Ethiopian pyramids in the island of Meroe near Begerawiyyeh, at Nūrī, and on the Gebel Barkal; but these Ethiopian structures, as Lepsius has shown, are comparatively recent imitations of the Egyptian, those at Nūrī and on the Gebel Barkal dating from the 7th cent. B.C. at the earliest, and those of Begerawiyyeh from the 1st century.

History of the Erection of the Pyramids. Manetho has ascribed the erection of the First Pyramid, which was surnamed that 'of

\(^{†}\) The name, according to some authorities, is derived from the Egyptian Pi-Rama ('the mountain'), and according to others from πωρός, wheat, and μέτρον, a measure.
Coehome' (comp. p. 368), to the fourth king of the 1st Thinite Dynasty (p. 86), but the statement is very improbable. The first Egyptian monuments which bear the names of their founders date from the time of Snefru, who formed a link between the 3rd and 4th Dynasties. That monarch was the immediate predecessor of Khufu (or Cheops, B. C. 3091-67), Khufā (or Chephren, 3067-43), and Menkerā (or Mycerinus, 3043-20), the builders of the Great Pyramids (comp. pp. 86, 330-333). It continued customary to build pyramids down to the 12th Dynasty (B. C. 2300); but at a later period, especially after the residence of the Pharaohs had been removed from Memphis to Thebes, the kings, as well as their subjects, seem to have preferred rock-tombs to mausolea above ground. The Greeks were much struck by these monuments when they first came to Egypt, and even erected similar ones themselves (as at Cenchreæ), akin to the Maštābas (p. 365). The Pyramids are therefore invariably described by Greek travellers, as well as by their successors, and they afterwards became famous as one of the greatest wonders of the world.

Herodotus, who was ill informed as to the history of the founders of the Pyramids, describes them admirably, like everything else which he saw in person. Cheops (Khufu), according to his statement, was addicted to every kind of vice; he closed the temples, prohibited the offering of sacrifices, and oppressed the whole nation by exacting compulsory labour. Some of his subjects were employed by him in quarrying blocks of stone among the Arabian mountains, and in transporting them to the Nile, others had to ferry these stones across the river, while others again were engaged in conveying them to the base of the Libyan mountains. Now there were about 100,000 men employed annually for three months in each of these tasks. They took ten years to make the road for the transport of the stones, which, in my opinion, must have been almost as laborious a task as the building of the Pyramid itself; for the length of the road amounts to five stadia (1017 yds.), its breadth is ten fathoms (60 ft.), and its height, at the highest places, is eight fathoms (48 ft.), and it is constructed entirely of polished stone with figures engraved on it. Ten years were thus consumed in making this road and the subterranean chambers on the hill occupied by the Pyramids, which the king caused to be excavated as

† According to Pliny, the Pyramids have been described by Herodotus, Euhemerus, Duris Samius, Aristagoras, Dionysius, Artemidorus, Alexander Polyhistor, Butorides, Antisthenes, Demetrius, Demoteles, and Apion, to whom we might add Strabo, Diodorus, Pompeius Mela, and others. They are mentioned by Aristotle.

+++ Herodotus is accurate in his statement as to the origin of the stone, most of that used in the construction of the Pyramids having been quarried on the E. bank of the Nile (p. 392).

+++ This route is still traceable, and was even restored at a later period for the removal of stones from the Pyramids to the Nile. It terminated on the E. side of the Pyramid of Cheops (see Plan).
his burial-place, having made it an island by conducting a canal thither from the Nile. (As to this erroneous statement, see p. 344.) Now the construction of the Pyramid occupied twenty years. Each of the sides, which face the different points of the compass, for there are four sides, measures eight plethra (820 ft.), and the height is the same. It is covered with polished stones, well jointed, none of which is less than thirty feet long.*

*This pyramid was first built in the form of a flight of steps. After the workmen had completed the pyramid in this form, they raised the other stones (used for the incrustation) by means of machines, made of short beams, from the ground to the first tier of steps; and after the stone was placed there it was raised to the second tier by another machine; for there were as many machines as there were tiers of steps; or perhaps the same machine, if it was easily moved, was raised from one tier to the other, as it was required for lifting the stones. The highest part of the pyramid was thus finished first, the parts adjoining it were taken next, and the lowest part, next to the earth, was completed last. It was recorded on the pyramid, in Egyptian writing, how many radishes, onions, and roots of garlic had been distributed among the workmen, and if I rightly remember what the interpreter (p. 13) who read the writing told me, the money they cost amounted to sixteen hundred talents of silver (upwards of 350,000). If this was really the case, how much more must then have been spent on the iron with which they worked, and on the food and clothing of the workmen, seeing that they worked for the time already mentioned, and I believe that no shorter time could have been occupied with quarrying and transporting the stones, and with the work and the excavations under the surface of the earth.*

*Cheops is said to have reigned fifty years in Egypt, and to have been succeeded in the kingdom by his brother Chephren, who acted exactly in the same manner as his brother, and who also erected a pyramid, which, however, is not of so great dimensions (for we measured this one also). This pyramid does not contain subterranean chambers, nor is a channel conducted to it from the Nile (comp. p. 344). Chephren constructed the foundations of coloured

†† It is not quite clear whether Herodotus means that the 100,000 men were occupied 20 or 30 years in building the Pyramid of Cheops, as he does not say whether it was the building above the subterranean chambers, or the whole of the structure, that took twenty years.

††† This account of the mode in which the pyramid was constructed has been entirely confirmed by modern investigations (comp. p. 336).

†††† If inscriptions, now destroyed, really once existed on the outside of the pyramid, they doubtless contained much more important information than that which the interpreter professed to read. It is, moreover, unlikely that the interpreters, who attended travellers like the dragomans of the present day, were able to read hieroglyphics. They probably repeated mere popular traditions regarding the pyramids and other monuments, with embellishments and exaggerations of their own.
Ethiopian stone (granite of Assuan), but the pyramid was forty feet lower than the other, near which he erected it; for both stand on the same hill, at a height of about a hundred feet. Chephren is said to have reigned fifty-six years.'

'This makes altogether a hundred and six years, during which the Egyptians suffered all kinds of oppression, and the temples constantly remained closed. Owing to their hatred of these two kings, the people would not even mention their names, and they even call the pyramids after a shepherd named Philitis, who at that period pastured his flocks in the neighbourhood.'

'After this king (Chephren), Mycerinus, the son of Cheops, is said to have reigned over Egypt. He is said to have had no pleasure in the conduct of his father, but to have re-opened the temples and to have allowed the people, reduced to extreme distress, to return to their occupations and the worship of the gods. He is also said to have pronounced the most just judgments of all the kings.'

'He, too, left behind him a pyramid, but a much smaller one than that built by his father. Each of its sides measures 280 feet only, and half of it consists of Ethiopian stone. Some of the Greeks state that this was the pyramid of Rhodopis, a courtesan; but they are wrong; nay, when they maintain this, they do not seem to me even to know who this Rhodopis was, for she flourished in the time of King Amasis, and not in the reign of this king (comp. p. 335).'

The account given by Diodorus Siculus (i. 63, 64) is as follows:—'The eighth king was Chembes, the Memphite, who reigned fifty years. He built the largest of the three pyramids, which were reckoned among the seven wonders of the world. They are to be found in the direction of Libya, 120 stadia distant from Memphis, and 45 from the Nile. The sight of these great masses and their artistic construction excites surprise and admiration. The base of the largest, the plan of which is quadrilateral, is seven plethra (700 ft.) on each side; and the height is more than six plethra. The sides gradually contract towards the top, where each is still six cubits broad. The whole building is of hard stone, difficult to hew, and it is of everlasting duration. For no less than a thousand (some writers even say three thousand) years are said to have elapsed from the building of the pyramids down to the present time; and yet these stones, in their original jointing, and the whole structure are preserved uninjured by time. The stones are said to have been brought all the way from Arabia, and the building to have been erected by means of embankments, as no lifting machines had yet been invented. And the most wonderful thing is, that, around the place where this enormous work is built, nothing is to be found but sandy soil, and there is no

+ Obviously a reminiscence of the Hyksos (p. 88), to whom, even at a later period, every national misfortune was popularly attributed.
trace either of the embankment or of the hewing of the stones; so that one might believe that the whole mass had not been gradually erected by human hands, but had been placed by some god in this sandy plain in a finished condition. The Egyptians attempt partly to explain this by the miraculous story that the embankments consisted of salt and saltpetre, and that they were melted by an inundation; that they thus disappeared, while the solid building remained. But this was not really the case; it was more probably the same number of human hands employed in throwing up the embankments which removed them and cleared the ground. It is said that 360,000 men were compulsorily employed in the work, and that the whole was scarcely completed within a period of twenty years.

'On the death of this king, his brother Chephren succeeded to the throne. He reigned fifty-six years. According to others the successor was not a brother of the last king, but a son of his, named Chabryis. In this, however, all the accounts agree, that, imitating his predecessor, he erected the second pyramid, which is indeed as artistically built as the first, but is not nearly so large, each side of the area being a stadium only (193 yds.)... The kings had built these pyramids as tombs, and yet neither of them is buried in them. For they were so hated on account of the excessively laborious work imposed by them and their many cruelties and oppressions, that the people threatened to drag their bodies from their tombs with derision and to tear them to pieces. Both, therefore, commanded their relations, before their deaths, to bury them quietly in some unknown place.'

'These kings were succeeded by Mycerinus (whom some call Mencherinus), a son of the builder of the first pyramid. He resolved to erect a third pyramid, but died before the work was finished. Each side of the area he made 300 feet long. He caused the sides to be constructed, up to the fifteenth tier, of black stone, resembling the Theban. For the completion of the remaining part he employed the kind of stone which had been used for the other pyramids. Although this work is inferior to the others in point of size, it is superior in its much more artistic construction and its valuable stone. The name of Mycerinus, the builder of the pyramid, is inscribed on its N. side.'

'This king is said to have abhorred the cruelty of his predecessors, and to have endeavoured to be courteous to every one and to become the benefactor of his subjects. He is said to have sought in every possible way to gain the affection of his subjects, and among other things to have presented large sums at the public

† These 360,000 workmen (a number perhaps based on the 360 days of which the old Egyptian year consisted), like the 100,000 men of Herodotus, who were relieved every three months, are doubtless a mere myth.
courts of law to honest people who were thought to have lost their causes undeservedly. There are three other pyramids, the sides of which are 200 feet long. In their whole construction they resemble the others, but not in size. The three kings already named are said to have erected them for their wives. These works are unquestionably the most remarkable in all Egypt, whether in respect of the size of the buildings and their cost, or the skill of the artists. And it is thought that the architects deserve even more admiration than the kings who defrayed the cost; for the former contributed to the completion of the work by mental power and praiseworthy exertion, but the latter only by the wealth they had inherited and the labour of others. Neither the natives, however, nor the historians at all agree in their accounts of the pyramids. For some maintain that they were built by these three kings, and others that they were built by different persons.

Strabo's account is remarkably graphic and concise: — 'If you go forty stadia from the city (of Memphis), you come to a hill on which stand many pyramids, the burial-places of kings. Three are particularly remarkable, and two of these are even reckoned among the seven wonders. They are square in form and a stadium in height, and this height is only slightly greater than the length of each side. One pyramid, too, is a little larger than the other. A moderate distance up one of its sides, this pyramid has a stone which can be taken out. When it is removed, an oblique passage within leads to the tomb. These pyramids are near each other in the same open space; and a little higher up the hill is the third, much smaller than these two, but erected in a much more costly style. For, from its foundation nearly up to the middle, it consists of a black stone, of which mortars are also made, and which is brought from a long distance, namely from the mountains of Ethiopia. Owing to its hardness and the difficulty of working it, the building is rendered expensive'.

Strabo then speaks of the fossils resembling lentils, mentioned at p. 322, but does not share the view current at that period that they were the petrified remains of the workmen's food. With regard to Rhodopis, who is mentioned at p. 325, he tells the following tradition, resembling the tale of the modern Cinderella. While Rhodopis was bathing, an eagle carried off one of her shoes, carried it to Memphis, and dropped it into the lap of the king who was then sitting on the judgment seat. The king, admiring the neatness of the shoe, and surprised at the strangeness of the occurrence, then sent out messengers to search for the owner of the shoe. She was found at Naukratis and brought to the king, who made her his wife, and after her death erected the third pyramid to her memory.

Pliny speaks somewhat slightingly of the Pyramids: — 'We must also in passing mention the Pyramids in this same Egypt, an
idle and foolish display by the kings of their wealth; and indeed,
as most persons maintain, they had no other object in erecting them
than to deprive their successors, and rivals plotting against them,
of money, or perhaps for the purpose of keeping the people engaged.
The vanity of these people in this matter was very great.'

His description of the Pyramids is borrowed without remark
from other authors. Thus he does not hesitate to repeat that emb-
bankments for the raising of the stones were made of saltpetre,
which was afterwards washed away, or of bricks, which on the
completion of the pyramid were distributed among private persons.
He also mentions Rhodopis.

Mas'udi, one of the Arabian Historians, says that the Pyramids
were built three hundred years before the flood by Surid, in con-
sequence of the interpretation of a dream which predicted the deluge.
Having assured himself that the world would be repopulated after
the flood, he caused the Pyramids to be erected, the prophecy to be in-
scribed on their stones, and his treasures, the bodies of his an-
estors, and records of the whole store of knowledge possessed by
his priests to be deposited in their chambers and recesses, in order
that they might be preserved for the benefit of those who should
come after the flood. According to a Coptic legend, he caused the
following inscription to be engraved on one of the Pyramids: —
'I, King Surid, have built these Pyramids and completed them in
61 years. Let him who comes after me, and imagines he is a king
to compare with me, attempt to destroy them in 600 (years). It is
easier to destroy than to erect. I have covered them with silk; let
him dare to attempt to cover them with mats!' A tradition recorded
by the same author resembles the German myth of the nymph of
the Lorelei: — 'On the western Pyramid is enthroned a beautiful
naked woman with dazzling teeth, who allure desert wayfarers
from the south and west, embraces them in her arms, and deprives
them of reason'.

'Fair Rhodope, as story tells,
The bright unearthly nymph, who dwells
' Mid sunless gold and jewels hid,
The lady of the Pyramid'.

(Moore.)

According to other myths the spirit of the Pyramid bears the
form of a boy, or that of a man, who hovers around it burning
incense.

The Pyramids have been frequently visited and described by
Christian travellers to Palestine on their way through Egypt. The
spurious itinerary of Antony of Piacenza of the 6th cent., states
that he visited the twelve granaries of Joseph (the Pyramids), and
the same notion was entertained by pilgrims as late as the 14th,
15th, and 16th centuries. It is worthy of remark that many of the
medieval travellers, even as late as the 17th cent., concur with the
most accurate of the Arabian authors in stating that they saw in-
scriptions on the Pyramids. Thus the knight of Nygenhusen, a pilgrim who assumed the name of William of Boldensele (14th cent.), informs us that he saw inscriptions on the Pyramids in different languages, and he gives six verses of one of them in Latin. ‘Abdellaṭif, speaking of the inscriptions on the Pyramids, which no one could decipher in his time, says that — ‘they are so numerous, that, if one attempted to copy on paper those only which appear on the surface of these two Pyramids (those of Cheops and Chephren) they would fill more than 10,000 pages’. A similar account is given by Mas’ûdi, Maḵrīzī, Ibn Haukal, Edrisi, and other Arabs; and yet on the incrustation of Chephren’s Pyramid which is preserved at the top there is now no trace of a single letter. We must therefore conclude that the slabs which have been removed once bore inscriptions, which were perhaps purposely destroyed.

Construction of the Pyramids. In consequence of the investigations of Lepsius and Erbkam, the mode in which the Pyramids were erected and the meaning of the account given by Herodotus are now well ascertained. The following questions have been asked by Lepsius: — (1) How does it happen that the Pyramids are of such different sizes? (2) After Cheops and Chephren had erected their gigantic mausolea, how could their successors be satisfied with monuments so much smaller, and of so different proportions? (3) How is the fact to be accounted for, that an unfinished pyramid is never met with? (4) How could Cheops, when he ascended the throne and chose an area of 82,000 sq. yards for his monument, know that his reign would be so unusually long as to enable him to complete it? (5) If one of the builders of the great pyramids had died in the second or third year of his reign, how could their sons or successors, however willing to carry out the plan, have succeeded in completing so gigantic a task, and in erecting monuments for themselves at the same time? And how comes it that many other kings did not, like Cheops, boldly anticipate a reign of thirty years and begin a work of the same kind, the design for which might so easily have been drawn, and might so readily have been carried out by his subjects? — To all these questions the researches of Lepsius and Erbkam afford but one entirely satisfactory answer. ‘Each king’, says Lepsius in his letters from Egypt, ‘began to build his pyramid when he ascended the throne. He began it on a small scale, in order that, if a short reign should be in store for him, his tomb might be a complete one. As years rolled on, however, he continued enlarging it by the addition of outer coatings of stone, until he felt that his career was drawing to a close. If he died before the work was completed, the last coating was then finished, and the size of the monument was accordingly proportioned to the length of the builder’s reign; so that, had the progress of these structures always been uniform, it would have almost been possible to ascertain the length of each king’s reign from the incrustations of his pyramid, in the same way
as the age of a tree is determined by the number of the concentric rings in its trunk. — The first step taken by the king's architect was doubtless to level the surface of the rock on which the pyramid was to be erected, leaving, however, any elevation in the centre of the area untouched, to form a nucleus for the structure, and to save labour and material. The subterranean chambers were first excavated in the rock, and then extended into the superincumbent masonry. A small building, in the form of a truncated pyramid, with very steep walls, was first erected. If the king died at this stage of the construction, a pyramidal summit was placed on the structure, and its surface was then prolonged down to the ground by filling up the angles formed by the nearly upright sides. If, however, the king survived this first period in the pyramid's history, a new series of stones was placed around it, and the same process was repeated until each successive incrustation became in itself a work of prodigious difficulty. The filling up of the angles could then probably be safely entrusted to the piety of the monarch's successor. The annexed plan will serve to illustrate this explanation.

The rock which in some cases served as the nucleus of the structure is marked a; the first part of the pyramid is b; on this was placed the pyramidal summit c; the angles d were then filled up, and a pyramid on the smallest scale was now completed. Instead, however, of completing the pyramid, the builder, if time permitted, next proceeded to place the two blocks e next to the blocks d, and above these the blocks f. To complete the pyramid on the next largest scale, it was then necessary to crown it with the summit g, and to fill up the angles h and i. If, for some reason or other, the angles were not filled up, the result was a so-called 'step-pyramid' (p. 368).

A confirmation of the accuracy of this theory is afforded by the ascertained fact, 'that the more nearly the interior of the pyramid is approached, the more careful does the construction become, while the outer crusts are more and more roughly and hastily executed, in proportion as the probable time for their deliberate completion gradually diminished'. The smallest pyramids always consist of the simple structure already described. The outer sides of the comple-
mentary triangular stones were entirely polished, except when, as in the case of the third pyramid, the whole surface was to be, as it were, veneered with slabs of granite.

Object of the Pyramids. In accordance with the ancient Egyptian doctrine of the immortality of the soul (p. 137), it was necessary that the earthly tabernacle of the soul should be preserved. In order to remove the bodies of the dead from the influence of the inundation of the Nile, they were buried in the dry rocky soil of the desert. Wealthy persons caused tomb-chambers (p. 355) to be excavated for themselves, while the kings, who wished to maintain their royal pre-eminence even in death, were specially anxious to ensure the durability and permanence of their tombs. The burial-place of a king was worthy, in their opinion, of being distinguished by its situation and its magnitude; they desired that it should surpass all others in magnificence, and that the tomb-chamber should be least capable of violation. It was probably, therefore, at first customary to cover the rock-tomb of a king with blocks of stone, or to raise a mound over it, if sand and earth were procurable in the vicinity. The violent winds from the desert, however, rendered it necessary to consolidate these mounds by covering them with stones. The sepulchral mounds thus acquired a definite form; they became square structures, tapering upwards, and gradually assumed the pyramidal shape, ensuring the utmost strength and durability.

Opening of the Pyramids. The Pyramids are said first to have been opened by the Persians (B.C. 525-333), and it is certain that they were examined by the Romans. The Arabs endeavoured to penetrate into the interior of these stupendous structures, chiefly in hope of finding treasures; and the greater the difficulties they encountered, the more precious and worthy of concealment did they imagine the contents to be. According to 'Abdellaṭif, it was Khalif Mâmûn (A.D. 813-33), son of Harûn er-Rashid (p. 101), who caused the Great Pyramid to be opened; but it is probable that this prince merely continued the investigations of his predecessors, as Dionysius, the Jacobite patriarch of Antioch, who accompanied him, found that an entrance had already been effected. Mâmûn’s workmen are said to have made a new entrance (p. 343) adjacent to the old, with the aid of fire, vinegar, and projectiles. With regard to the success of the undertaking there exist various more or less highly embellished accounts by the Arabian historians; but one thing appears certain, that the hopes of the explorers were disappointed, and that nothing was found in the already plundered chambers and corridors. According to some accounts, the gold found here was exactly enough to defray the cost of the undertaking, having possibly been introduced into the interior by the Khalif himself, in order to obviate the reproach of having spent so much money for nothing. Many of the Arabs relate, that, after the workmen had penetrated to a considerable depth, they found a
the Pyramids was Nicholas Shaw in 1721; but he still entertained the

notion that the Sphinx had a subterranean connection with the Great Pyramid. He was followed by Norden in 1737; Pococke in 1743, who gives a plan and dimensions; Fourmont in 1755; Karsten Niebuhr in 1761; Davison in 1763, a most meritorious explorer, who discovered many new facts concerning the interior of the Great Pyramid; Bruce in 1768; Volney in 1783; Browne in 1792-98; Denon, Coutelle, Jumard, and other savants of the French expedition under Bonaparte in 1799-1801. Jumard in particular has the merit of having taken very accurate measurements, but he exhibited more ingenuity than good sense in attributing to the proportions of the building a hidden significance which they cannot be proved to possess. Hamilton, in 1801, was a dispassionate and critical observer. In 1817, Caviglia, a bold, but illiterate and fanciful seaman, was fortunate in eliciting new facts regarding the interior of the Great Pyramid, and excavated the Sphinx. In 1817, Belzoni (p. 345), an intelligent investigator and discoverer, thoroughly explored the interior of the Second Pyramid. The next eminent explorer was Sir Gardner Wilkinson in 1831. In 1837 and 1838 Col. Howard Vyse and Mr. Perring made very thorough investigations and took careful measurements which will always be considered authoritative. In 1832-45 Prof. Lepsius, the greatest living German Egyptologist, who was president of the Prussian expedition, made several very important discoveries, and has furnished us with much valuable information. He found no fewer than thirty pyramids which had been quite unknown to previous travellers. To M. Mariette, the director of the Museum of Būlāk, is chiefly due the merit of having explored the burial places of Saḫkāra (pp. 364, 374), which yielded him a rich spoil.

Ascent of the Great Pyramid.

**Exterior.** The traveller selects two of the importunate Beduins by whom he is assailed, and proceeds to the N.E. corner of the Pyramid, where the ascent begins. (Payment, see below. The selection of the guides should properly be made by the shākh; but this is seldom done, and even when it is, the traveller is still pestered by the others for bakhshish.) These strong and active attendants assist the traveller to mount by pushing, pulling, and supporting him, and will scarcely allow him a moment’s rest until the top is reached. As, however, the unwonted exertion is fatiguing, the traveller should insist on resting several times on the way up, if so disposed. Ladies should have a suitable dress for the purpose, and a stool may be brought to facilitate their ascent by halving the height of the steps. The ascent may be made in 10-15 min., but, in hot weather especially, the traveller is recommended to take nearly double that time. As the blocks are generally upwards of 3 ft. in height, the traveller will find the assistance of the guides very acceptable, though not indispensable. As persons inclined to giddiness would find the descent a little trying, they had perhaps better forego the ascent altogether. Both in going and returning the traveller is generally importuned for bakhshish, but he should decline giving anything until the descent has been safely accomplished. At the summit of the Pyramid the patience is again sorely tried by the onslaught of vendors of spurious antiquities and dishonest money-changers, all parley with whom should be avoided. Those who make a prolonged stay on the top had better be provided with sunshades and perhaps also with grey or blue spectacles.

**Interior.** A visit to the interior of the Great Pyramid is interesting, but, though the guides represent it as easy and desirable, it will be found fatiguing and far from pleasant. The explorer has to crawl and clamber through low and narrow passages, which, at places, especially near the entrance, are not above 3'/2 ft. high and 4 ft. wide. The stones on the floor are often extremely slippery, and the close air smells strongly of bats.† Travellers who are in the slightest degree

† The temperature of the interior is 79° Fahr., i.e., as is usually the case in subterranean chambers, the same as the mean temperature of the outer air in the neighbourhood.

PYRAMIDS of GIZEH
from a Plan by Lepsius.

Scale 1:13,560.

Ancient Walls, Embankments mostly covered with sand.
Described in the Handbook.
Coloured black.
predisposed to apoplectic or fainting fits should not attempt to penetrate into these stifling recesses.

For the ascent a single traveller usually takes two guides, but three suffice for two travellers. For a visit to the interior each traveller is accompanied by one guide. The customary fee for the whole expedition is 2½ fr. for each traveller, whether he has been attended by one, two, or three guides. The Beduins are never contented with this sum, but the remuneration is ample. The traveller, however, if not dissatisfied, may give an additional gratuity of 1-2 silver piastres to each of his guides. On no account should any payment be made to any of them until the termination of the expedition. One guide of course suffices for a visit to the other objects of interest, the fee for which is 1-2 fr. according to the time occupied.

The **Great Pyramid is called by the Egyptians 'Khufu Khut' or the 'glorious throne of Khufu'.

The length of each side (Pl. AA) is now 750 ft., but was formerly (Pl. BB) about 785 ft.; the present perpendicular height (Pl. EC) is 454 ft., while originally (Pl. EE), including the nucleus of rock (Pl. FF) at the bottom, and the apex (Pl. CE), which has now disappeared, it is said to have been 482 ft. The height of each sloping side (AC) is now 568 ft., and was formerly (Pl. BE) 610 ft. The angle at which the sides rise is 51° 50'. The cubic content of the masonry, deducting the foundation of rock in the interior, as well as the hollow chambers, was formerly no less than 3,277,000 cubic yards, and it still amounts to 3,057,000 cubic yards, which are equivalent to a weight of about 6,848,000 tons. In round numbers, the stupendous structure still covers an area of nearly thirteen acres. With regard to the comparative dimensions of other buildings, see Map, p. 340. The material of which
the pyramid is constructed consists of stone from the Mokaṭṭam and from Turra, containing numerous fossils, chiefly nummulites (p. 332), as already noticed by Strabo (p. 334). With regard to the history and exploration of the pyramid, see pp. 330, 338. Interior, see below.

Escorted by two Beduins, one holding each hand, and, if desired, by a third (no extra payment) who pushes behind, the traveller begins the ascent of the large granite blocks. 'Iskut wallā mūṭīsh bakhshīsh' (be quiet, or you shall have no fee), is a sentence which may often be employed with advantage. We may again remind the traveller that it is advisable to rest once or oftener on the way up, in order to avoid the discomfort of arriving breathless and heated at the summit. The space at the top at present measures about 120 sq. yds. in area, so that there is abundant room for a large party of visitors.

The **View** is remarkably interesting and striking. There is perhaps no other prospect in the world in which life and death, fertility and desolation, are seen in so close juxtaposition and in such marked contrast. To the W. (S.W. and N.W.) extend yellowish brown and glaring tracts of sand, interspersed with barren cliffs. The huge and colourless monuments erected here by the hand of man remind the spectator, like the desert itself, of death and eternity. On a bare plateau of rock stand the other pyramids and the Sphinx, rearing its head from the sand, like some monster suffocated by the dust. To the S., in the distance, rise the pyramids of Abuṣīr, Saḵkāra, and Dahshūr, and to the N. those of Abu Roāsh. The scene is deathlike, the colouring yellow and brown. Towards the E., on the other hand, glitters the river, on each bank of which stretches a tract of rich arable land, luxuriantly clothed with blue-green vegetation, and varying in breadth. The fields are intersected in every direction by canals, on the banks of which rise stately palms, waving their flexible fan-like leaves, and interlacing their shadows over the fellāḥ villages perched like ant-hills on embankments and mounds. In the direction of Cairo runs the long straight carriage-road. Immediately before us rises the Citadel with the striking minarets of the mosque of Moḥammed ʿAli, while the Mokaṭṭam hills, which form the chief mass of colour in the landscape, gleam in the morning with a pale golden tint, and in the evening with a violet hue.

The descent of the Great Pyramid is more rapidly accomplished than the ascent, but is hardly less fatiguing, and the traveller will find the help of the Arabs not unacceptable.

**Interior** (comp. Plan, p. 341). Some of the chambers in the interior of the Great Pyramid are at present closed; but, to prevent confusion, we shall not mention these until we have described those which are still shown. An interval of thorough rest between the ascent and the expedition into the interior is again recommended.

The **Entrance** (Pl. a) is on the thirteenth tier of stones, on the
of Cairo. THE PYRAMIDS OF GÎZEH. 4. Route. 343

N. side of the structure †, and at a perpendicular height of 48 ft. from the ground. The long passage \( a r \), which is now only 3 ft. 4 in. in height and 3 ft. 11 in. in width, descends in a straight direction at an angle of 26\degree 41'\; and is altogether 106\frac{1}{2} \) yds. in length. We follow this passage as far as the point \( d \) only, 20 yds. from the entrance. A huge triangular trap-door of granite (Pl. \( b \)), let into the ceiling, and kept in its place by iron cramps, here arrests the farther progress of the explorer. The hardness of the material of which this barrier consists compelled the Arabian treasure-hunters (p. 338) to avoid it, and to force a new passage (Pl. \( d \)) through the softer limestone. This is the roughest and most awkward spot on the whole route. Beyond the rugged blocks at this point we enter a passage (Pl. \( c e \)), ascending at about the same angle, and 41 yds. in length, beyond which lies the Great Hall (Pl. \( h \)). Before entering the latter, we diverge at the point \( e \), by the horizontal passage \( ef \), to the so-called Chamber of the Queens (Pl. \( g \)). This passage is at first 3 ft. 9 in. only in height, but at a distance of 6\frac{1}{2} \) yds. from the chamber the flooring sinks a little, so that the height increases to 5 ft. 8 inches. The N. and S. sides of the chamber are each 17 ft. in length, and the E. and W. sides 18 ft. 10 inches. The height is 20 ft. 4 in., including the pointed roof, which consists of enormous blocks of rock placed obliquely and leaning against each other, and projecting beyond the sides of the walls to a distance of 5\frac{1}{2} \) ft. into the surrounding masonry. We now return to \( e \) and enter the Great Hall (Pl. \( h \)), the handsomest of the comparatively small chambers in the interior of this colossal mass of masonry. The jointing and polish of the fine-grained Mokattam limestone form an unsurpassable marvel of skilful masonry. As the visitor can now breathe and look about him with more freedom, he may verify the accuracy of 'Abdellaţif's remark (p. 336), that neither a needle nor even a hair can be inserted into the joints of the stones. The Great Hall is 28 ft. high and 155 ft. long. The lower part is 3 ft. 4 in. in width; and the upper part, beyond the last of the panels of stone, each of which is 1 ft. 8 in. thick and 2 ft. high, is 7 ft. in width. The seven courses of stone composing the roof, which seem to have been arranged in imitation of the arch-principle, project slightly one above the other, serving to strengthen and support the horizontal slabs which form the ceiling. The parallel incisions in the pavement and on the walls were perhaps used to facilitate the introduction of the sarcophagus, and they now serve to prevent the visitor from slipping. At the end of the Great Hall is a small horizontal passage, 22 ft. long and 3 ft. 8 in. high, expanding about the middle into an Antechamber (Pl. \( i \)), which was once closed by four trap-doors of granite. The remains of these slabs, in their pendant position, should be noticed. We

† All the pyramids are entered from their N. sides. The stone sarcophagi containing the bodies lay from N. to S.
next enter the King’s Chamber (pl. k), the most interesting of all. The N. and S. sides are each 17 ft. in length, the E. and W. sides 34½ ft., and the height is 19 ft.; the floor of the chamber is 139½ ft. above the plateau on which the Pyramid stands. The chamber is entirely lined with granite, and is roofed with nine enormous slabs of granite, each 18½ ft. in length, the ends of which rest on the lateral walls. It now contains nothing but an empty and mutilated sarcophagus of granite, bearing no trace of an inscription, the lid of which had disappeared before the time of the French expedition. Length 7½ ft., width 3 ft. 3 in., height 3 ft. 4 inches. The very massive sides ring with a clear tone when struck. Curiously enough, the King’s Chamber does not lie exactly in a line with the diagonal of the Pyramid, but is 16 ft. 4 in. to the S. of it. Owing to the prodigious weight of the superincumbent masses, it would have been extremely hazardous simply to roof the chamber with long horizontal slabs, but the cautious architects of Cheops foresaw the danger and relieved the ceiling of the weight by introducing five hollow chambers above it. The first four (l, m, n, o) have flat ceilings, while the last (p) is roofed with blocks leaning obliquely against each other. These chambers are accessible from the Great Hall (see above), but not without great difficulty.

The first chamber (l) is named ‘Davidson’s chamber’, after its discoverer (1763). The four others, discovered by Col. Vyse and Mr. Perring, were named by them Wellington’s (m), Nelson’s (n), Lady Arbuthnot’s (o), and Col. Campbell’s (p) chambers. The discovery of the last of these was particularly important, as the name of Khufu (p. 330) was found in it. Lady Arbuthnot’s Chamber contains the name, Khnum (‘builder’) Khufu. These inscriptions are in red paint, and were doubtless placed on the stones as distinguishing marks by the quarrymen, as some of them are now upside down.

About 3 ft. above the floor of the King’s Chamber are the ends of the Air Shafts (w, x) by which the chamber is ventilated, and which were re-opened by Col. Vyse. They are about 6 in. in height and 8 in. in width only, expanding by a few inches at the outer extremities. The N. shaft is 234 ft., and the S. shaft 174 ft. in length. We now retrace our steps, and, on emerging from these awe-inspiring recesses, hail the light and air with no little satisfaction.

Chambers not now accessible. The only other chambers in the interior of the Great Pyramid as yet discovered are the following. The first passage a, b, c, leading downwards in a straight line, 293 ft. in length, terminates in a horizontal corridor, 27 ft. in length, 3 ft. in height, and 2 ft. in width, which leads to the subterranean chamber s, hewn in the rock. The E. and W. sides of this chamber are each 46 ft. in length, the N. and S. sides 27 ft., and the height 10½ ft. It does not lie in a line with the diagonal of the Pyramid, and its floor is 101½ ft. below the level on which the Pyramid is built. The subterranean horizontal passage t leads nowhere. The statement of Herodotus (p. 331) that the subterranean chamber planned by Cheops for the reception of his body lay on a kind of island, surrounded by a canal which was conducted hither from the Nile, is erroneous, as the chamber lies above the highest level of the overflow of the river, and it has, moreover, been ascertained
that no channel from the river leads in this direction. From the lower end of the Great Hall a shaft, discovered by Davidson in 1763, descends to the lower passage, and is erroneously known as the 'Well'. The enterprising Caviglia found that it terminated in the passage leading to the subterranean chamber (r), and in 1811 Sir G. Wilkinson rightly explained that it must have been made to enable the workmen to quit the Pyramid after the upper passages had been obstructed by blocks of stone. It must at all events have been constructed at a later period than the masonry itself, as it has been obviously bored through it.

The Second Pyramid (which we can neither ascend nor enter), called by the Egyptians \( \overline{\text{ur}} \), the 'great' or 'considerable', was erected by Khafra, who was called Chephren by the Greeks, and whose portrait-statue is preserved in the museum at Bulak (p. 299), but his name has not been discovered on any part of the structure. Owing to the greater height of the rocky plateau on which it stands, it appears higher than its larger neighbour. As the rocky site rises towards the W. and N., a considerable part of it required to be removed in order that a level surface might be obtained. The levelled space surrounding the base of the Pyramid was paved with blocks of limestone (see p. 355). To the E. are remains of the temple erected for the worshippers of the deceased Pharaoh, a structure of the kind which probably adjoined all large pyramids (p. 355). The incrustation of the Pyramid, which must have been preserved down to the middle of the 17th cent., seems to have been laid on in a rough condition and to have been polished afterwards, beginning from the top. The lower courses were left in the rough, a circumstance which led the French savants to suppose that the Pyramid was once surrounded by a pedestal. The merit of having opened this Pyramid belongs almost exclusively to Belzoni, a most enterprising and successful explorer. ✠

✠ The traveller will meet with the name of Giambattista Belzoni so frequently, and in connection with discoveries of such importance, that a brief notice of his remarkable career may not be unacceptable. He was the son of a poor barber, and was born at Padua in 1778. He was brought up as a monk at Rome, where he was distinguished both for mental and physical endowments, and devoted much of his time to drawing. When Rome was occupied by the French, he quitted that city and went to England, and while in London eked out his livelihood by acting as a model for figures of Hercules and Apollo. At the same time he devoted considerable time to study, and especially to the science of water-engineering. Accompanied by his high-spirited wife, he next went to Egypt, where he arrived in 1815 and was at first obliged to support himself by dancing in public. He at length attracted the attention of Mohammed 'Ali, who accorded him relief. His first undertaking of importance was the opening of the Pyramid of Chephren. He next discovered the tomb of Seti I, at Thebes (No. 17), the finest of all the royal tombs; he opened the rock-temples of Abu Simbel, and re-discovered the emerald mines of Zabara and the ruins of the ancient Berenike on the Red Sea. He died in 1823 while on a journey into the interior of Africa. A giant in stature, he inspired the Arabs with such admiration that he could prevail upon them to undertake the most unusual tasks. At the
The Interior is entered by two passages on the N. side, both of which are now choked with rubbish. The mouth of one of these is in the level surface in front of the Pyramid, and was concealed by the pavement; that of the other is on the N. side of the Pyramid itself, now 35 ft., but formerly 49 ft. above the level of the ground. This upper passage, which was lined with granite at the beginning, descends at an angle of $25^\circ 55'$ to a depth of 105 ft., leading first to a horizontal corridor, and thence to 'Belzoni's Chamber', which once contained the tomb of the deceased, situated 3 ft. 10 in. to the E. of the diagonal of the Pyramid. This chamber is hewn in the rock, and roofed with painted slabs of limestone leaning against each other at the same angle as that formed by the sides of the Pyramid. It is $22^1/2$ ft. in height, $46^1/2$ ft. in length from E. to W., and $16^1/2$ ft. in width from N. to S. Belzoni here found a granite sarcophagus set into the ground and filled with rubbish, 3 ft. in height, 6 ft. 7 in. in length, and $3^1/2$ ft. in width, and destitute of inscription. The lid was broken. The lower passage, entered from the pavement on the N. side of the Pyramid, descends at first at an angle of $21^\circ 40'$, reaches a trap-door, runs in a horizontal direction for 59 ft., and then ascends, terminating, after a distance of 97 ft. in all, in the horizontal corridor leading to Belzoni's Chamber. On the E. side of the middle of the horizontal portion of this lower passage was introduced a small chamber; and, connected with it on the W. side by means of a descending passage, $22$ ft. in length, was another chamber hewn in the rock, 8 ft. 5 in. in height, 34 ft. 3 in. in length, and 10 ft. 1 in. in width. The perpendicular height of this Pyramid is now 450 ft. (formerly 458 ft.), each side of the base measures $69^1/2$ ft. (originally $71^1/4$ ft.), and the height of each sloping side is $566^1/4$ ft. (originally $575^3/4$ ft.), while the sides rise at an angle of $52^\circ 20'$. The solid content of the masonry is now 2,156,960 cubic yds., equivalent to 4,883,000 tons in weight (originally 2,428,710 cub. yds., equivalent to 5,309,000 tons).

The Third Pyramid (which, like the Second, cannot be ascended), named by the Egyptians $\varphi \triangleleft \text{her}$, or 'the upper', was erected by Menkera, the Mykerinos of Herodotus. The rock on which it stands has a shelving surface, and the necessary horizontal site was formed by building up a pedestal of enormous blocks, instead of by removing a portion of the rock. The stones of which the Pyramid is constructed are remarkably large and well hewn. The lower part of it is covered with slabs of polished granite, and the upper part with rough stones. The incrustation and the material which once filled the angles of the exterior are now so damaged that the tiers of the internal nucleus are almost everywhere visible. On the E. side are relics of a temple (comp. p. 345). With regard to the construction of the Third Pyramid and the attempts which have been made to destroy it, see pp. 332, 333, 339.

The Interior of the Third Pyramid is in many respects particularly interesting, and the access to it was formerly easier than that to the Pyramid of Cheops, but the indolent Beduins have unfortunately allowed it to become choked with sand. The entrance is on the N. side, 13 ft. above the ground. A passage $a$ descends at an angle of $26^\circ 2'$ to a distance of $104^1/2$ ft., being lined with granite where it passes through the masonry from $a$ to $b$, and then penetrating the solid rock from $b$ to $c$.

same time he was an intelligent explorer, and a very able and accurate draughtsman. His works, partly published by himself, and partly by his widow, are still valuable.
From c a slightly descending passage cd leads to a white-washed ante-
chamber f, 7 ft. in height, 12 ft. in length, and 10 ft. in width, and,
beyond this chamber, passes three trap-doors g, which were intended to
arrest the progress of intruders. The passage hd then becomes nearly
horizontal (gradient 4\(^\circ\)) for a distance of 41\(\frac{1}{2}\) ft., and finally descends to
the chamber e, which is 44\(\frac{1}{2}\) ft. long, 12\(\frac{1}{2}\) ft. broad, and owing to the
unevenness of the rock from which the pavement has been removed,
varies from 13 ft. to 13 ft. 5 in. in height. The remains of a sarcophagus
let into the ground were found here, but not that of Menkera, which
was carefully ensconced in a still lower tomb-chamber.

The pavement of the chamber e covers the mouth of a shaft 29 ft. in
length, which was closed by a trap-door, and is flanked with a project-
ing block of granite on each side, 11 ft. wide and 2 ft. 4 in. high, de-
signed to prevent the removal of the sarcophagus. Beyond the trap-door
the passage descends 2 ft. 5 in. more, and a horizontal shaft, 10 ft. in

\[ BB. \text{ Present perpendicular height of the Third Pyramid, 294 ft.} \]
\[ BC. \text{ Former perpendicular height, 219 ft.} \]
\[ AA. \text{ Side of base, 356\(\frac{1}{2}\) ft.} \]
\[ ABA. \text{ Sloping sides, each 26\(\frac{3}{4}\) ft.} \]
\[ ACA. \text{ Original sloping sides, each 279\(\frac{3}{4}\) ft.} \]
\[ \text{Angles at AA, 51\(^\circ\).} \]

Length, finally leads thence to the Tomb Chamber (Pl. 4), which is by far
the most interesting of all those yet discovered within the pyramids. It
is paved with blocks of granite, 2\(\frac{1}{2}\) ft. in thickness, and its ceiling is
arched in the English Gothic form. The arch has been formed by plac-
ing the stones against each other at an angle so as to resemble a roof,
and then hollowing them out on the inside. The sarcophagus of Men-
kera was found here by Col. Vyse in a good state of preservation. It
was externally 2 ft. 7 in. high, 8 ft. long, and 3 ft. wide. The lid was
gone, but its remains were found in the chamber e, and beside them the
upper part of the wooden coffin, which, as the inscription on it recorded,
once contained the body of Menkera. The finely executed sarcophagus
was composed of brown basalt, showing a blue tint where broken. The
vessel in which it was being conveyed to England was unfortunately lost
off Carthagena in the S. of Spain, but drawings of the precious relic
have been preserved. The inscription on the wooden lid, now preserved in the British Museum, runs as follows: — 'Osiric King Men-ke-ra ever-living, who are descended from heaven, who was born under the heart of Nut, and heir of the sun. Thy mother Nut spreads herself over thee in her name, which is the mystery of heaven. She has granted thee to be like a god, annihilating thy enemies, King Menker, ever-living!' — Herodotus is, therefore, doubtless right in stating that Mykerinos (Menkera) was the builder of the Third Pyramid, though Manetho mentions Queen Nitokris of the 6th Dynasty (p. 87) as one of the builders.

The three Small Pyramids situated to the S. of the Third Pyramid are uninteresting. The tomb-chamber of the one in the centre also contains the name of Menkera, painted on the ceiling.

About 600 paces to the E. of the plateau of the Second Pyramid, from amidst the sand of the desert, rises the —

**Sphinx**, which, next to the Pyramids themselves, is the most famous monument in this vast burial-ground. It is hewn out of the natural rock, and where this material has failed it has been moulded into the shape of a recumbent lion with the head of a man. The body was left in a rough form, but the head was originally most carefully executed. The entire height of the monument, from the crown of the head to the pavement on which the fore-legs of the lion rest, is said to be 66 ft. (see below), but the head, neck, and a small part of the back are generally alone visible, the rest being concealed by the constantly shifting sand. The ear, according to Mariette, is 4½ ft., the nose 5 ft. 7 in., and the mouth 7 ft. 7 in. in length; and the extreme breadth of the face is 13 ft. 8 inches. If the traveller stands on the upper part of the ear, he cannot stretch his hand as far as the crown of the head, and the space between these points must have been greater when the head-decoration, which, as well as the greater part of the beard, is now broken off, was still intact. The face was deplorably mutilated at a comparatively recent period by a fanatic, iconoclastic sheikh, and afterwards by the barbarous Mamelukes, who used it as a target. It would appear from 'Abdellaṭif's (p. 336) account that it was in perfect preservation in his time: — 'This face is very pleasing, and is of a graceful and beautiful type; one might almost say that it smiles winningly'. He also describes the proportions of the head very minutely. An older writer, however, states that the nose was mutilated in his time, and, as it is now entirely destroyed, the face somewhat resembles the negro type, though the mouth still has a smiling appearance. The stone formerly had a reddish tint which has now entirely disappeared. The Arabs have given the Sphinx

† The Egyptian Sphinx (p. 165), being of the masculine gender, is represented with the head of a ram or of a man, and never with that of a woman.
the name of 'abu'l hōl', i.e. 'father of terror', or formerly 'belhit', probably derived from the Coptic ḫελ-ἡχτ (bel-hit), signifying a person who carries his heart or his intelligence in his eyes, or 'the watchful'. This last expression has frequently been used, by authors who were ignorant of its antiquity, as an appropriate epithet for the Sphinx. The Arabs believed that the figure possessed the supernatural power of preventing the encroachment of the sand. The complete excavation of the Sphinx was first undertaken by Caviglia (p. 340), at the cost (450£) of an English society. He discovered the flight of steps which ascended to the stupendous monument, and also found between the paws of the lion a carefully laid pavement, at the end of which next to the breast of the Sphinx rose a kind of open temple, divided by two partitions, through which ran a passage, containing a small figure of a recumbent lion, facing the Sphinx, in the middle. In the background rose a pillar, and at the sides were two others, forming a kind of wall. The one next the breast of the Sphinx was particularly interesting from the fact that it bore the date of the reign of Thothmes III. of the 18th Dynasty. Several of these relics are now preserved in the British Museum. The Sphinx has also been entirely excavated by M. Mariette.

History of the Sphinx. It was pointed out by Lepsius in 1843 that the Sphinx must have been founded earlier than the 18th Dynasty, notwithstanding the above mentioned inscription on one of the tablets. The date there given is the first year of the reign of Thothmes IV., which contains the account of the dream of that monarch while practising at a target and hunting near the Sphinx. From the inscription at the end the Sphinx appears to have been a representation of Khafra or Chephren, whose cartouche
occurs at the left end of the last but one of the consecutive lines of the inscription, the alone having been obliterated. In his dream Thothmes is asked by the Sphinx to clear away the encroachments of sand. As the Sphinx lies nearly in a line with the Pyramid of that king, it was not unnaturally thought that he was the founder of both monuments. This conjecture seemed to be confirmed by the discovery of the statue of Chephren in the rock-temple adjoining the Sphinx (p. 356). The monument has even been supposed to be entitled to claim still higher antiquity; for M. Mariette, while examining a ruined building at the foot of the southernmost of the three pyramids which rise to the E. of the Great Pyramid, found a stone built into a wall (p. 298), bearing an inscription which seemed to imply that the Sphinx already existed in the time of Khufu, the builder of the first pyramid. The inscription on the right side of the stone runs literally thus: — 'The living Horus, the King of Upper and Lower Egypt, Khufu, the life-dispensing, found (in making excavations) the Temple of Isis, the patroness (ḥant) of the Pyramid in the place (i.e. in the immediate vicinity) of the Temple of the Sphinx'.

The Sphinx is written ẖu, which signifies 'to guard' or 'watch', or 'the watchman', an expression precisely equivalent to the 'bel-hit' (p. 349) of a later period. The above inscription, however, is of later date than the time of Cheops. The large tablet of Thothmes III., found between the paws of the Guardian of the Necropolis, has been already mentioned. This celebrated Pharaoh (p. 89) restored the Sphinx, and seems specially to have revered it, as is indicated by numerous small monuments which bear the figure of the Sphinx coupled with his name or his portrait. In the inscription already referred to, the Sphinx is said to speak to Thothmes 'as a father to his son', and to address him in the words — 'I am thy father Harmachis'. Though more or less buried in sand at various periods, the Sphinx was highly admired and revered down to so late a period as that of the Roman emperors, as numerous inscriptions upon it, now concealed by the sand, testify. Curiously enough, the Sphinx is mentioned neither by Herodotus nor any later Greek traveller.

**Signification of the Sphinx.** The Greeks and Romans call the Sphinx Harmachis, or Armachis, which is equivalent to the ancient Egyptian Har-em-khu, i.e. Horus on the horizon, or the sun in the act of rising. Harmachis is the new-born light which conquers darkness, the soul which overcomes death, or fertility which expels barrenness. Being the powerful antagonist of Typhon, he was victorious over evil in different shapes. He achieved some of his most brilliant exploits in the form of the winged disc of the sun, and conquered his enemies in that of a lion.
of Cairo. THE SPHINX. 4. Route. 351

with a human head, i.e. in the form of a sphinx. The scene of this victory was the Leontopolitan Nome, the name of which is derived from the myth. In a papyrus preserved at Berlin the solar god is said sometimes to take the form of a lion, and other shapes also. Harmachis, in the burial-places, promises resurrection to the dead. Turned directly towards the E., his face first reflects the brilliance of the rising sun, and he illumines the world after the darkness of night. Harmachis, dwelling on the outskirts of the desert, overcomes sterility and prevents the sand from overwhelming the fields. This last attribute was still ascribed by the Arabs at a late period to the Sphinx-Harmachis, who is called by Greek inscriptions Agathodæmon, or the ‘good spirit’. The morning was considered sacred to Harmachis, and it is in the E. that he first shows himself to the world. The East belonged to him; and as Thothmes III. carried his sway farther to the E. than any of his predecessors, it was not unnatural that he should have showed special veneration for the Sphinx-Harmachis, and chosen him for his tutelary god. Every Pharaoh was, as we are aware, regarded as an earthly incarnation of Ra, and also, as many monuments testify, of Ra Harmachis. The kings, therefore, afterwards chose the Sphinx to symbolise the divine nature of their mission as monarchs, and it was a favourite practice to crown the lion’s body with a head bearing their own features. The sphinx representing a king is called neb, or ‘lord’. The Assyrians provided their sphinxes with wings as symbols of speed and of the power of rising above earthly things.

About 3/4 hr. in a due S. direction from the Sphinx, on the outskirts of the desert, is a spot known to the Beduins where numerous fossils occur in the melocene sand-formation. Among the commonest are the curious sea-urchins (Clupeaster), which the Beduins frequently offer for sale. — In the desert, about 4 hrs. farther distant, petrified wood is said to occur (comp. p. 325).

A few paces to the S.E. of the Sphinx is situated the *Granite Temple, a large building constructed of granite and alabaster, discovered by M. Mariette in 1853. The different chambers are now kept free of sand, so that they can be examined in every part. The object of the building has not yet been ascertained, but there can be no doubt that it was in some way connected with the Sphinx. The inscription of Khufu mentioned at p. 298 speaks of a Temple of the Sphinx. The statues of Chephren (p. 352) found here seem to indicate that he was the founder of this structure; and, if so, this would be the only temple handed down to us from the primæval monarchy. At the same time the building so closely resembles a maḳṭaba (p. 365), that, particularly as it stands in the Necropolis of Memphis, it was perhaps rather one of those monuments which were dedicated to the rites of the dead; and it seems not improbable that Chephren, who built the Second Pyramid as his tomb, erected this edifice as a place of assembly for the worshippers, of his manes. The building is a fine example of the simple and majestic architecture of that remote period, when the art of working the hardest kinds of stone had already attained perfection. The chisel which in the hand of the stone-mason shaped these blocks of granite with such exquisite skill, could doubtless, when wielded by the sculptor, easily create a statue of Chephren.

Descending by a recently constructed Passage (Pl. aa) in steps, protected by walls against the encroachment of the sand, we pass through a door (b) into a Passage (bb) descending towards the E.,
6 ft. 8 in. in width and 79 ft. in length. On the right, halfway down this passage, is the entrance to a Chamber (c) constructed entirely of blocks of alabaster; opposite to it, on the left, is the Entrance (d) to a flight of steps, which turns at a right angle and ascends to a small chamber, where an opening on the S. side leads to the granite roof of the temple. This passage and chamber are also constructed of alabaster. At the E. end of the corridor we enter a Hall (Pl. e), 79 ft. in length (N. to S.) and 23 ft. in width, embellished with six monolithic pillars of granite varying from 3 ft. 4 in. to 4 ft. 7 in. in thickness. The pillars are connected by enormous blocks of similar dimensions which are still in situ. Adjoining this hall on the W. is another similar Hall (Pl. f), 57½ ft. long and 29 ft. wide, the ceiling of which was borne by ten columns of granite in two rows. At the S.W. corner of Hall e is a Door g, leading into the Corridor gg, which is adjoined on the left by the Chamber i. At hh, farther on, and also at the end of gg, are niches in two stories, one above the other, probably destined for the reception of mummies. Returning to Hall e, we proceed to Passage k, in the middle of the E. side, which leads between walls 13 ft. in thickness to Chamber l, the last on the E. side of the building, and destitute of columns. At the point m in this apartment, M. Mariette found a deep well containing water, but now filled with sand, in which he discovered no fewer than nine statues of Chephren. The best of these are now in the Museum of Bûlâk (p. 299). Several dog-headed apes (p. 132), executed in stone, were also found in the sand here. At the N. and S. ends of this apartment are two side-chambers, one of which (Pl. n) only is now accessible, the other having been built up.
Among the tombs surrounding the different pyramids, where the relatives, priests, and state officials of the kings were interred, one of the most interesting is the

**Tomb of Numbers** (Pl. n), so called from the enumeration it contains (as usual in other tombs also) of the cattle possessed by the deceased. This tomb, which lies on the E. slope of the plateau of the Pyramids (p. 340), belonged to a certain *Khafra-ankh* and his wife *Hermeka*. The representations and hieroglyphics it contains are either partially or entirely obliterated. Khafra was a ‘semer’ or companion, and a ‘suten rekh’, or blood-relations of the king, to whom his wife, a priestess of Neith, was also related. He is extolled as the illustrious priest of the Pyramid of Khafra, surnamed ‘the great’. On the E. wall of the principal chamber we see writers engaged in recording the number of cattle of each kind possessed by the deceased. The representatives of the different flocks placed beside the numbers are admirably executed, and faithful to nature even in their attitudes. The sign 𓊧 is equivalent to 1, 𓊧𓊧 to 10, and 𓊧𓊧𓊧 to 100, these symbols being repeated so as to represent the hundreds, tens, and units of which the various flocks consisted. Thus 𓊧𓊧𓊧𓊧𓊧𓊧𓊧𓊧𓊧 coupled with the figure of a bull, indicates that Khafra possessed 835 bulls, and in a similar manner we are informed that he had 220 cattle without horns, 760 asses, 2235 goats of the antelope kind, and 974 goats. Besides these animals we also distinguish the more or less obliterated representations of a voyage on the river, the measurement of corn, the felling of trees, etc., and on the S. wall we find a portrait of the deceased and his wife, both in a sitting posture, with tables covered with offerings before them.

*Campbell’s Tomb*, which may be visited on the way back from the Sphinx to the Great Pyramid, is larger than most of the others mentioned below. It is of comparatively late origin, dating, as the inscriptions record, from the 7th cent. and the 26th Dynasty. The upper part has been entirely destroyed, and the deep and wide shaft, at the bottom of which is a tomb-chamber vaulted with an arch having a span of 11 ft., is now uncovered. The tomb was discovered in the course of excavations made by Col. Vyse in 1837, and named by him after Col. Campbell, the British consul-general of Egypt at that period. The shaft is 301/2 ft. wide from E. to W., 26 ft. from N. to S., and 533/4 ft. in depth. The sarcophagi found here were in niches, and not in the vaulted chamber. One of these, now in the British Museum, is composed of red granite, and prismatic in form, and bears numerous inscriptions. The arched lid bears the portrait of a bearded mummy at its upper end, and a profusion of funereal scenes and inscriptions in the style of the 26th Dynasty. Two sarcophagi in basalt and another in whitish quartzose stone were also found here. From all of these the bodies
had been removed. The vaulted chapel had also been forcibly
to the N. side, but the passage is now closed.

*Circuit of the Pyramid Plateau of Gizeh* (comp. p. 329). After having inspected the Great Pyramid externally and internally (p. 340), we turn (following the dotted line on the Map, p. 340) to the left (W.) of the entrance, descend the mound of debris, and proceed to the N.W. angle of the Pyramid, where its foundation-

We may, however, notice two of these maštabas, situated not far from the above mentioned foundation-stone, but now covered with sand. In one of these, built by a certain Senet' em-ab, were found several carefully executed scenes, including a representation of the deceased in a litter, borne by thirteen servants, and followed by two large dogs. The other tomb belonged to another Senet' em-ab (i.e. 'good' or 'perfect name'), surnamed 'Meha', who seems to have been one of the most distinguished dignitaries of his time, and was married to Khent-kau-s, a king's daughter. He was a priest of high rank, treasurer, and superintendent of the corn-magazines, which last office, recalling the history of Joseph, was in stituated at a very early period. He was at the same time a minister of war, or literally 'president of the double house of war'.

Opposite the N.W. angle of the Second Pyramid, and also now filled with sand, are the tombs of three other Egyptian magnates of the 5th Dynasty, containing a genealogical record of a family which enjoyed the distinction of being 'suten rekh' (p. 333), or related to the king, for four generations. As the kings themselves are also mentioned here, these tombs have materially facilitated the compilation of an accurate list of the members of the 5th Dynasty. The ancestor of this family, Shepseeskaf-anhk, lived in the reign of the Pharaoh Shepseskaf. His eldest son Aimeri served under Nefer-ar-ka-ra; and Ptah-bau-nefer, the son of Aimeri, was a priest of Ra-en-user, and is also styled a prophet of Khufu, i.e. of the *ma'at* of the builder of the First Pyramid. Two jambs from this maštaba, and the architrave belonging to them, are now in the museum at Berlin. The eldest son of Ptah-bau-nefer was called Ptah-nefer-seam. To the same family belonged Ata, who also served under Ra-en-user, apparently in the capacity of a director of music, as he styles himself 'president of song, who delights the heart of his lord by his beautiful song in the inner chambers (khennu) of the lofty gate'. The Egyptian word 'peraa' which occurs in this inscription is the root of the word Pharaoh used in the Bible.

The largest and best preserved of these tombs lie to the N.W. of the Second Pyramid (see dotted line in Plan, p. 340), near the point e. A handsome gateway and a well-preserved hieroglyphic inscription are still to be seen here. To the N. of this point are also several rows of tombs now filled up.

We now skirt the W. side of the vast necropolis, and reach the N.W. angle of the rocky enclosure of the court of the *Second Pyramid*. A natural cleft in the rock here facilitates our descent from the top of the rock, which is 16 ft. in height. At the foot of it we reach the plateau which was hewn in the rock in order to prepare a level surface for this pyramid (p. 346). Part of the surface on the N. side is divided by means of deep incisions and transverse
furrows into six rows of squares, the object of which is unknown. On the rock above is inscribed the name of Ramses II. in hieroglyphics. On the E. side of the Second Pyramid are remains of the temple once connected with it (p. 345). We follow the W. side of the Pyramid. On the rock to the right is a hieroglyphic inscription (Pl. f; the name of an architect, and uninteresting), near which are several rock-tombs. One of these tombs (Pl. g), nearly opposite the S.W. angle of the Pyramid, has a *Ceiling hewn in the rock in imitation of palm-stems. (Visitors should beware of falling into the tomb-shaft.)

In passing the W. side of the Pyramid the visitor has an opportunity of observing, that, although several triangular blocks of granite are strewn around, which perhaps once formed the lower portion of the external incrustation of the Pyramid, the upper quarter of the Pyramid is covered with a hard kind of conglomerate composed of limestone, broken bricks, and plaster.

Our route now leads towards the S.W. to the Third Pyramid (p. 346), once entirely covered with huge blocks of granite, the lower courses of which are still in tolerable preservation. We walk round the Pyramid on the W. and S. sides, near the latter of which stand three smaller pyramids (p. 348), we leave the temple (p. 346) belonging to the Third Pyramid on the left, and descend by a good path towards the E.

We observe here on the left another series of rock-tombs dating from the 4th and 5th Dynasties. Among these is that of *Tebehen (Pl. h), containing a long list of offerings with representations of persons dancing with raised arms and feet before the altar. In a small hollow a little farther to the N. is a tomb embellished with four columns (Pl. i), the well-preserved inscriptions of which contain the name of Psamtik. Another tomb belonged to a priest, a relation of the Khafra 'who had to honour the Pyramid Uer ('the great') of King Khafra'.

In the valley before us, to the right, rises a projecting ridge of rock containing tombs of no interest. Adjoining this rock, on the left, are two sycamores and a date-palm, rising above an Arabian burial-place. Still farther to the E. we observe the remains of the stone dam leading from the plain of the Nile to the Third Pyramid (p. 330). To the left of the trees rises a kind of truncated *Tower, constructed partly of the natural rock and partly of masonry, and supposed to have been a tomb. Passing through it, we come to other tombs on the left, also covered with sand. One of these was that of *Urkhuu (Pl. k), who seems to have been a kind of minister of public instruction in the reign of Nefer-ar-ka-ra, as he bore the titles of — 'the royal and learned writer of the lofty gate, the learned president of the art of writing, who brings light into the writings of the double house of the tomb'. We next reach the *Sphinx (p. 348), 150 paces to the S.E. of which is the entrance to the *Granite Temple (p. 351). On the S. horizon, at a distance of 6½ M., rise the pyramids of Abuṣir (p. 356) and the step-pyramid of Saḫkāra (p. 368).
In order to complete our circuit of the plateau of the Pyramids, we proceed from the Sphinx towards the W. to 'Campbell's Tomb' (p. 353), ascend thence to the Great Pyramid, and pass three uninteresting small pyramids on the right. (That in the centre, according to Herodotus, was the tomb of a daughter of Cheops; that to the S., according to an inscription preserved in the Museum of Būlāk, belonged to Hentsen, another daughter of the same king.) We skirt the E. side of the Great Pyramid to the left, where there are two long 'mortar-pits' (Pl. m), and soon regain the Kiosque of the Khodive (p. 328), from which we started. The so-called Tomb of Numbers (p. 353) is on the E. side of the plateau, a little above the mud-huts of the Beduins.

The Pyramids of Abū Roash, the northernmost group in the Necropolis of Memphis, present little attraction, and are not worth visiting. Standing in front of the viceroyal kiosque on the plateau of the Great Pyramid of Gizeh, we perceive towards the N. an abrupt ridge of rock descending to a branch of the Nile, and to the right, at its base, two villages shaded by palm trees. The nearer of these is Kerdasa, the inhabitants of which are occupied in cutting flints for the primitive guns still used in Egypt. The large quantities of splinters seen here suggest to us that the so-called 'flint tools' (p. 301) found in other parts of Egypt may possibly be merely the refuse from similar workshops. Immediately beyond Kerdasa is Abū Roash, which may be reached in 1½ hrs. by a route skirting the desert. On the margin of the plateau close to Abū Roash on the N.W. side, rise the shapeless remains of a Pyramid of Nile Mud, which is constructed round a nucleus of massive stone. On a ridge of rock descending precipitously to the margin of the desert, and reached by a path ascending a hollow, near the white tomb of a sheikh, and ¼ hr. before the Mud Pyramid is reached, are situated the remains of two pyramids. One of these now consists of four or five courses of stone only, and (according to Col. Vyse) contains a chamber reached from the N. side by a passage inclined at an angle of 92°, and 53 yds. in length. Each side measures 12½ yds. The other pyramid, to the W. of the last, is now a mere heap of ruins. A stone dyke, about 600 yds. in length, leads from the N. to the hillock on which these two pyramids stand. Numerous fragments of granite strewn about here indicate that this material has been used either for the construction of the tomb-chambers or for the external incrustation of the pyramid. No inscriptions were found here. Distinct traces of a necropolis now entirely destroyed are observable in the vicinity of these two pyramids, and also on the plateau ascending to the N. from the Mud Pyramid. The pyramids of Abū Roash seem to belong to one of the first dynasties, but nothing certain is known about them.

From Gizeh toabusir and Sakkara (p. 357) is a ride of about 2½ hrs., skirting the margin of the desert. To the left lie patches of cultivated land and a number of ponds, containing more or less water in accordance with the height of the last inundation, bordered with vegetation, and frequented by numerous birds; beyond which flows the Bahr Yūsuf arm of the Nile (p. 445). After 1 hr. we observe the remains of two pyramids on the right. The first of these (N.), near the village of Zawayet el'Arqa, must once have been an important monument, as the sides are still nearly 100 yds. in length. The second (S.), near the hovels of Riga, is now a mere heap of debris. In one hour more, passing the village of Shoherment, we reach the Pyramids of Abusi (comp. Map, p. 364), the ancient Busiris (2 hrs. to the S.S.E. of the Pyramids of Gizeh, and 3½ hr. to the N.N.E. of Sakkara), situated on a rocky eminence covered with sand. The masonry of these monuments, having originally been constructed with no great care, is now much damaged, and their bases are covered with sand, so that a visit to them is uninteresting.
They were erected by kings of the 5th Dynasty. The entrances are on the N. sides, and, as in all the other pyramids, there is a passage, at first slanting and afterwards horizontal, leading to the chamber in the centre. The northernmost of the three largest pyramids (once fourteen in number), lying close together, belonged to a certain Saka, and was styled that of the 'glorious emerging' (i.e. of the deceased into another world). At a very early period divine honours were accorded to this Pharaoh, and sacrifices were offered to his mummies so late as the time of the Ptolemies. The pyramid was enclosed by a wall, to which a still traceable path ascended from a building (probably a temple) situated in the plain. Its perpendicular height was 163½ ft. (now 118 ft.), its sides were 258½ ft. (now 217½ ft.) in length, and they were inclined at an angle of 51° 42' 30". With regard to the central one of these pyramids, that to the S. of the last, the inscriptions state that 'the dwelling of Ra-en-user stands fast'.

Ti (p. 375) and other priests, whose mastabas were found at Sakkara, presided over the rites connected with this pyramid. According to very ancient inscriptions, a peculiar kind of monument (an obelisk standing on a truncated pyramid), dedicated to the sun, and bearing the name of Rashepuaah, is said once to have stood near the pyramid of Ra-en-user. The name of the largest pyramid (sides 168, formerly 120½ yds.; perpendicular height 163, formerly 229 ft.), situated a little to the S.W., is unknown. Perring (p. 340) found that all the chambers had been entered and plundered. The other pyramids are mere heaps of ruins, and one of them (to the S.W. of the largest) seems never to have been completed.

Continuing our route to Sakkara, we leave to the left a pond and the village of Abusir, situated beyond a group of palms to the S.E., and soon reach the sandy eminences of the Necropolis of Memphis, at the beginning of which the tomb of Ti is situated.

The Site of Ancient Memphis and the Necropolis of Sakkara.

A visit to Memphis and Sakkara may easily be accomplished in one day by the aid of the railway, but 1½-2 days may profitably be devoted to the excursion. There are, indeed, but few of the tombs in the Necropolis of Sakkara which are accessible to the ordinary visitor, but the interiors of these are so interesting, that many travellers will find them worthy of careful and repeated inspection. A tent is not absolutely necessary for the expedition. The traveller may pass the night at M. Mariette's house (p. 364), or on its covered terrace, or, if necessary, in one of the numerous caverns in the neighbouring rocks. A blanket is a sufficient covering in spring. Provisions should not be forgotten, and liquors may, if necessary, be procured at Bedrashen at the shop of a Greek 'bakkal' (on the right, beyond the bridge).

Railway (Ligne de la Haute-Egypte). The station of Bâlâk ed-Dakrûr is situated on the left bank of the Nile, 3 M. from Cairo, a drive of ½ hr. (5 fr.). The train, starting daily at 8 a.m., runs thence to Bedrashen (see below) in ½-3¼ hr. (1st class, 2½ fr.; fare for donkey and attendant, 2½ fr.; see below). The inspection of the site of Memphis, and the ride to M. Mariette's house, occupy 2 hrs.; for luncheon and a visit to the tombs 4 hrs. should be allowed, and for returning to the station of Bedrashen 2 hrs. more. The train from Upper Egypt generally reaches Bedrashen between 5 and 6 p.m., so that the traveller should leave Sakkara a little before 4 o'clock. The hotel at Cairo will thus be regained between 7 and 8 p.m.

Those who wish to spend a night at Sakkara, may return from Bedrashen to Cairo either on the second evening (as above), or at 12 noon by the special train from the Fayum (see p. 445); or the traveller may start at 2.30 from Bâlâk ed-Dakrûr for Bedrashen by the Fayum train, ride in the evening to Sakkara, and thus have the whole of the next day at his disposal. It should, however, be remarked that the trains to and from the Fayum start from Bâlâk ed-Dakrûr at the time when the Nile
bridge at Gezireh is open for the passage of vessels (during 2 hrs.). Crossing the river in a small boat is not recommended, owing to the great confusion which prevails.

The donkeys required by the party had better be taken from Cairo, as they are scarce and bad at Bedrashên. (Carriage of donkey by railway 1\(\frac{1}{4}\) fr., fare for the attendant also 1\(\frac{1}{4}\) fr.) If the traveller drives (see above) from Cairo to the station Bûlûk ed-Dakrûr, he should see that the donkeys start in good time (1 hr. before the departure of the train). The traveller should also be at the station early, as it occasionally happens that the trains on this unpunctual line start a few minutes before their time.

The traveller bound for Heluân (p. 389) rides from Bedrashên to the bank of the Nile, crosses the river with his donkey by boat (1 fr.), and reaches the baths in \(\frac{3}{4}\) hr.

From Saqqâra to the Pyramids of Gizeh (2 hrs.), via Abûsîr, skirting the desert, see p. 356. — From Saqqâra to the Pyramids, see p. 445; a dragoman and tent necessary.

On leaving the station we observe the Pyramids of Gizeh (p. 329) on the right, in such a position, that the Pyramid of Cheops conceals the other two. The view to the left is at first hidden by the lofty walls of the large viceregal estate at Gizeh (p. 327), at the S. end of which is the Khedive’s private station. On the left, beyond the Nile, we now perceive Old Cairo with its windmills, above which rises the long ridge of the Mokâţâm separated from the heights of the Wâdî el-Tîh (p. 325) to the S. by the broad depression of the Gebel Turra (p. 396). On the banks of the Nile are the large military establishments of Turra. To the right rise the hills of the Libyan desert with the Pyramids of Abûsîr (p. 356). We next observe the step-pyramid, which, however, soon disappears behind a grove of palms. On the right and left of the line are tracts of arable land.

The station of Bedrashên lies to the left of the line, and near it is a very ancient and most interesting Jewish burial-ground. We ride across the railway, turn to the right, and cross a bridge to the mud-huts of Bedrashên, scantily shaded by palm-trees. Beyond the bridge (a Greek ‘bâkâl’ on the right; p. 357) we turn to the S. (left), leaving the village on the right, and ride on the embankment to the W. towards a conspicuous palm-grove. Immediately beyond the last houses of Bedrashên we observe to the right, at a distance of \(\frac{1}{2}\) M., a lofty heap of rubbish, belonging to a government manufactory of saltpetre. On each side of the embankment lie green fields in spring and summer, and large expanses of water in autumn and the first half of winter. The embankment at present terminates near the first trees of the palm-groves, 20 min. from the station.

There are two different routes hence to Saqqâra, used at different seasons. One of these (the ‘summer-route’) leads due W., past the colossal figure of Ramses II., and leaving the village of Mitrohineh on the right, to the village of Saqqâra, but it is not practicable at the season of inundation. The other route (‘winter-road’) diverges from the embankment to the right, traverses the
whole length of the palm-grove, leaves the village of Mitrahineh a long way to the left, and reaches another embankment farther on. The statue of Ramses II. (see p. 361) lies 5 min. to the W. (left) of the end of this embankment in a hollow (near the summer-route), which is generally filled with water in winter, so that the whole statue is not visible till February or March.

The insignificant sandy expanse before us, shaded by palms, and strewn with blocks of granite, broken pottery, and fragments of brick, is the ancient Site of Memphis, which is now interesting in an historical point of view only. We observe from the characteristics of the ruins, that the ancient Egyptians built their edifices, with the exception of palaces and temples, of large sun-dried bricks of Nile-mud. Were it not for the vast Necropolis to the W. of the ancient city, no one would imagine that one of the most famous and populous capitals of antiquity had once stood here. It is not now possible to form any precise idea of the situation of the city; and as its stones were carried off in former centuries to build edifices on the right bank of the Nile (see p. 361), the relics found here have been very scanty. The narrow streets, which are still said to have been half-a-day's journey in length down to the 12th cent., extended between the Nile and the Bahr Yusuf, to the N. as far as Gizeh, and to the S. about as far as the latitude of the Pyramids of Dahshûr. The most important quarters of the city and many of its public buildings appear to have stood in the fields of the villages of Bedrashên, Mitrahineh, and Kašriyeh.

Menes (p. 86), 'the enduring', 'the eternal', who is placed by the Egyptians at the head of all their dynasties (having been immediately preceded by the dynasty of the gods), and is described as a man of This (near Abydos in Central Egypt, the district which Diodorus calls the oldest part of Egypt), is said to have been the founder of the Empire, and the builder of Memphis. Herodotus states that he was told by the Egyptian priests, that Menes had constructed an embankment across the Nile about 100 stadia above Memphis, and thus compelled the river, which had formerly flowed past the Libyan chain, to quit its old channel, and to run between the two ranges of hills. When the land thus reclaimed had become sufficiently firm, he built upon it the city of Memphis, situated in the narrow part of Egypt. To the N. and the W. of the city, as they informed him, Menes caused a lake to be excavated for its defence, and to be filled from the river, which protected the town on the E. side; while within the city he erected the great and memorable Temple of Ptah. The whole history of the city is associated with this vast sanctuary, which included within its precincts the temples of other gods, was surrounded by a wall, and must have commanded the city like a huge castle.

Memphis, like all the Egyptian towns, was known by several different names. In the first place, like the nome around it, it was called the 'city of the white wall', after the castle, which was well known even
in the Greek period. Another name, derived from the deity most highly revered by the citizens, was *Ha Ptah* (‘house of Ptah’), which the Greeks translated *Hephaistopolis*. Lastly it was known by the popular name of *Men-nefer*, i.e. ‘good place’, or ‘haven of the good’. The *r* at the end of *Men-nefer* was then dropped, and thus arose the Coptic form *Menf* or *Memphi*, which the Greeks and Romans changed to *Memphis*, and the Arabs to *Menf*. The quarter where the licentious rites of the Egyptian and Phoenician goddess of love were celebrated, and where strangers were afterwards allowed to settle, was called *Ta-ankh*, i.e. ‘the world of life’.

Menes was succeeded by his son *Atahuti*, or *Atothis*, who made Memphis his capital, and is said to have built the royal palace. During his reign and that of his successors of the primæval monarchy, Memphis attained its greatest prosperity. Each of the Pharaohs extended and embellished the temple. Memphis suffered severely from the invasion and during the domination of the Hyksos (2194-1683). The Pharaohs of the new empire who expelled the intruders (p. 89) resided at Thebes, the city of Ammon, but by no means forgot their ancient capital, the city of Ptah and Apis. During the 21st Dynasty the seat of government was transferred to Sais (p. 435), the proximity of which restored to Memphis a share of its ancient glory, though but for a short period. The city was besieged and captured several times by the Assyrians, and also by the Ethiopian Piankhi who offered great sacrifices to Ptah in the ‘City of the White Wall’. Cambyses, the first monarch of the Persian dynasty, took the city by storm after his victory at Pelusium (B.C. 525) over Psammetich III. (the last king of the 26th Dyn.); and two centuries later it was entirely eclipsed by the foundation of Alexandria (B.C. 332), although it still retained some importance during the Roman period (B.C. 30). In consequence of the edict of Theodosius (A.D. 379-395; comp. p. 100) the temples and statues were destroyed, and under the later Byzantine monarchs the heretical Monophysites (p. 101) seem to have been very numerous here. Makaukas, the leader of the Copts, was established at Memphis while negotiating with ‘Amr Ibn el-‘Asi, the general of ‘Omar. The Mohammedan conquerors transferred their residence to the right bank of the Nile (comp. p. 239), opposite the northernmost part of Memphis, using the well-hewn blocks, which had once composed the venerable palaces and temples of the ancient city of Menes, for the construction of their palaces, castles, and mosques. Memphis, however, was so vast, that it was long before its plunderers succeeded in entirely destroying it. Down to a late period its ruins excited the admiration of all visitors. Thus ‘Abdellaţīf (at the end of the 12th cent.), after a lively account of numerous attacks sustained by the enormous city, assures us that even in his time, the ruins contained a profusion of wonders which bewildered the mind and baffled description. ‘The more profoundly we contemplate the ruins (he says), the greater does the admiration become with which they inspire us; and every new survey we take becomes a source of fresh delight.’ On beholding the ruins
he cannot help regarding as pardonable the popular belief, that the
ancient Egyptians were giants of prodigious longevity, who had
the power of moving masses of rock with a magician's wand. — After
the time of 'Abdellatif the rapidly dwindling ruins of Memphis are
rarely mentioned. Stone after stone was transferred as from a
quarry to the opposite bank of the Nile, and we are told that the
site was systematically explored by treasure-seekers, who took
many centuries to exhaust its precious relics.

The "Colossal Statue of Ramses II. lies in a hollow, having
unfortunately fallen with its face to the ground. The head is turn-
ed towards the S.W. This huge statue was discovered by Messrs.
Caviglia and Sloane (p. 340) in 1820, and presented to the British
Museum, but owing to the difficulty of transport, it has never
been removed. It consists of remarkably hard and fine-grained
limestone, and before it was injured was about 42 ft. in height.
The workmanship is admirable. The features, which resemble
the Semitic type, are exactly similar to those of this great mon-
arch (the Sesostris of the Greeks) as portrayed on numerous
other monuments, particularly at Thebes. He wears the royal
head-dress (pshehnt) with the Uraeus snake, which is crowned with a
cylinder sloping slightly outwards, and resembling the modius in
the head of Serapis. An artificial beard is attached to the chin.
On his breast the king wears a shield terminating in a grove at the
top (perhaps a kind of pouch, such as were worn by the Jewish priests
and those of Serapis), in the centre of which is inscribed his pro-
nomen Ra-user-ma setep en Ra, i.e. 'god of the sun, mighty in the
truth, approved by the sun', while the god Ptah (p. 125), and the
lion-headed Sekhet (Bast) stand by as bearers; the girdle, in
which a dagger is worn, bears both the pronomen and the surname
of Ramses, the favourite of Ammon, which is also inscribed on the
front of the scroll or staff which he holds in his left hand. On
the back of the support of the left leg, which is in the attitude of
stepping forward, are two vertical rows of hieroglyphics, the lower
parts of which are broken off: — 1st Line: 'the princess and
great ...'; 2nd Line: 'the king's (daughter); the great ...'
These fragments of inscriptions show that the figure of a daughter
of the king was placed at his feet. The figure of a son is still
distinctly recognisable, the arm being raised in an attitude of
prayer, and the hand touching the knee of the statue. — There
can be no doubt that this statue, the face of which, when erect,
was turned towards the N., is one of those erected by Ramses II.
in front of the temple of Ptah (p. 359) at Memphis. In the time
of Strabo it perhaps stood alone in the anterior court, which was
used for bull-fights. 'A colossal statue of a single stone', he ob-
serves, 'stands in the entrance court before the temple of Ptah.
Bull-fights were exhibited here, for which express purpose some
persons keep bulls, as horse-trainers rear horses’. According to
Herodotus two of these statues were 30 cubits in height, which, as
the Greek cubit was only about 1½ ft. in length, nearly corresponds
with the 42 ft. which the statue actually measures. Both Herodo-
tus and Diodorus state, that Sesostris (Ramses II.), on his re-
turn from a great and victorious campaign, was invited at Pelusium
on the Egyptian frontier, with his wife and children, to a banquet
at the house of his brother. The latter, desiring to assassinate
Ramses, caused his tent to be surrounded with dry reeds after
the banquet, and to be set on fire. The intoxicated servants ren-
dered inefficient aid, and the king’s wife and children were in the
utmost danger. The king, thereupon, raised his hands in prayer,
dashed into the flames, and rescued them. Out of gratitude he
then erected this statue, at the foot of which the figures of a prince
and princess were placed. Accessory figures of a similar kind,
however, are frequently found with other statues to which no such
story attaches.

Close to the statue, on the left, in front of a fellâh-hut for-
merly used by M. Mariette as a magazine, are remains of a statue,
including a colossal foot, which, however, being of sandstone, pro-
bably did not belong to the statue of Ramses, which is composed of
limestone. In a number of hollows, to the right of the colossal statue,
we observe remains of foundations, the most important of which
are 5 min. to the N.W., beyond the projecting angle of the palm-
grove, and due E. from the village of Mitrahîneh. M. Mariette
supposed these to be the foundation of a temple of Ptah (Vulcan).
During the inundation the whole of the low ground is under water,
and then resembles a lake surrounded by palm-groves.

In 1851-54 Hekekyan Bey, an Armenian, was employed by the Lon-
don Geological Society to make excavations here; and having sunk shafts
at 96 different places, he found bones of domestic animals, fragments of
pottery and bricks, and various implements (e.g. a copper knife), at dif-
f erent depths. Near the colossal statue, beneath strata of Nile-mud,
which had not been covered with sand from the desert, was discovered
a fragment of red terracotta, at a depth of 30 ft. It therefore appears,
that since the erection of the statue of Ramses, about the middle of the
14th cent. B.C., the deposit of Nile-mud around it has attained a thick-
ness of nearly 10 ft., without reckoning a layer of sand 8 in. in thickness.
The alluvial deposits at this spot must thus have increased at the rate
of 3½ in. in each century from the middle of the 14th cent. B.C. down to
the present time. If the thickness of the deposit above the terracotta
fragment increased at the same rate, it would follow that the earthenware
vessels were manufactured on the banks of the Nile 11,646 years before
Christ. It need hardly be said, however, that this mode of computation
is very untrustworthy. And yet ‘who would venture to deny that this
fragment of pottery, buried at a depth of 30 ft., may be at least 4000 years
older than the monument of the great Ramses?’ (Poschel.)

From Mitrahîneh (Memphis) to Sakkâra. (1) Spring Route.
We ride towards the W. from the statue of Ramses, leaving the
village of Mitrahîneh at a little distance to the right (see Maps,
pp. 358, 364). On quitting the palm-grove we obtain an interest-
ing view; immediately to the right, shaded by palm-trees and leb-
beiks, is a small villa belonging to Tigran Bey, a nephew of Nubar Pasha. About 1 M. to the W. is another long palm-grove surrounding Saḫkāra and bordering the desert; beyond this, on the yellow sands of the desert, rise eleven pyramids. The first of these, to the left, is the outer mud-pyramid, beyond which are the blunted pyramid, the first mud-pyramid, and the great pyramid, all belonging to the group of Dahshûr (p. 368). Not far from these we next perceive the Maṣṭaba Farûn, with a pyramid adjacent; then, exactly above the houses of Saḫkāra, two dilapidated pyramids of different sizes; and, lastly, to the right, the great step-pyramid, and two smaller ones of the same kind. These seven last pyramids belong to the group of Saḫkāra. — Having nearly reached (¾ hr. from the statue of Ramses) Saḫkāra, we leave the village, which is uninteresting, to the left, turn towards the N., and skirt the palm-groves. (At the end of these, on the left, is a beautiful, shady sycamore, close to a spring of good water, and the tomb of a shâkh.) We now reach the margin of the desert, the route still leading towards the N., and ascend to the plateau of the Necropolis (p. 364).

(2) Winter Route. During the period of the inundation, after having visited the statue of Ramses, we return to the (5 min.) end of the embankment (see p. 368), which leads back to Bedrashên, and then turn to the N. and traverse the whole of the plantation, until we reach another embankment which winds across the plain towards the W., and is interrupted by two bridges. Distance from the statue of Ramses to the 1st bridge 20 min.; thence to the second bridge ¼ hr.; from this bridge to the margin of the desert 20 min.; and to M. Mariette’s house 20 min. more. (The return-route to the station of Bedrashên will take nearly 1½ hr., without stoppage.)

The two routes unite on the outskirts of the desert, and ascend to the plateau over the ruins of an ancient village which was perhaps inhabited by the embalmers of the dead. On the right arc grottoes hewn in the rocks. Near the first of these is a deep shaft, now covered up, where human mummies, and those of several cats, were found. In the third grotto, on the right, is the figure of a cow hewn in the rock, representing the goddess Hathor (p. 133).

The traveller may inspect the step-pyramid (p. 368) of Saḫkāra on the way to the house of M. Mariette, at which he is recommended to rest before visiting the rest of the Necropolis. This pyramid is reached by either of the paths indicated on the map (p. 364) in 20 minutes. One of these leads to the N., round the small pyramid nearest to the step-pyramid, and then turns to the W. through a sandy depression; the other path leads more to the left (N.W.), passing several tombs and shafts, straight in the direction of the Step-Pyramid (described at p. 368, and most conveniently visited in going or returning). Having crossed the E. enclosing wall, and passed round the N.E. corner, we ob-
tain, near the closed entrance on the N. side, a striking view towards the N. In the foreground lies the green valley of the Nile, bordered by palm-trees, and framed on both sides with the yellowish-grey desert; and we also observe the alabaster mosque of Mohammed 'Ali at Cairo. On the left tower the three pyramids of Gizeh, 9 M. distant, and the three nearer pyramids of Abūṣir. The path pursues a W. direction for a short distance, then turns to the right beyond the next heap of rubbish (N.W.), crosses the hollow, and joins the above-mentioned path leading to M. Mariette's house.

Although this house is the private property of this indefatigable explorer, who began to build it whilst making excavations about the middle of this century at the cost of the French government, he has most liberally placed its handsome, broad, covered terrace at the disposal of strangers, except when the house is required for himself and his staff. No charge is made for admission to the terrace, but it is usual to give a fee of 1 fr. or more, according to the number of the party, to the Beduins who take charge of the house, and who are much better conducted than their rapacious brethren of Gizeh. A guide to the tombs must be taken at M. Mariette's house, as visitors are not admitted to them unattended. (Bakhshish for the tombs of Apis and Ti, 2 fr.)

The Chief Attractions of the Necropolis of Sakkâra are the 'Step-Pyramid' (p. 368), the 'Tombs of the Apis Bulls' (p. 374), and the 'Tomb of Ti' (p. 374). M. Mariette has indeed discovered nearly 150 tombs dating from the ancient empire, but most of them were in a ruined condition. Many of them, however, yielded interesting spoil to the scientific explorer, and copies were made from their monuments and decorations, but most of them have again been covered up to preserve them from the influence of the air and the rapacity of relic-hunters, so that the visitor is now hardly aware of their existence. It is, therefore, to M. Mariette's care, that these precious treasures are indebted for their preservation. The scientific traveller, however, may obtain special permission from him to unearth the interesting tomb of Ptahhotep (p. 387), or any of the others.

The rocky margin of the plateau of the desert, between the village of Abūṣir (p. 356) and the road ascending from Sakkâra, contains numerous Tomb-Chambers (comp. p. 368), none of which now merit a visit, except perhaps that of Bekenrauf, of the period of Psametik I. The Maṣṭaba Farūn, see p. 387; the Pyramids of Dahshûr, p. 388.

The Grottes of the Ibis Mummies and of the Cats, containing a number of mummies piled up together, are now closed, being considered dangerous. The whole of the soil of the Necropolis is indeed so honey-combed with tombs, that great caution should be used in traversing it. Some of the open shafts are no less than 50 ft. in depth.

'The traveller is lost in the immense expanse of desert, which he sees full of Pyramids before him; is struck with terror at the unusual scene of vastness, and shrinks from attempting any discovery amidst the moving sands of Saccara.' Bruce.

The Necropolis of Sakkâra (from Sokar, p. 124) extends over an undulating tract of the desert, which, according to M. Mariette's computation, is about 7700 yds. in length, and 550-1600 yds. in width. It contains sepulchral monuments of every kind, from the pyramid to the rock-hewn cavern, dating both from the ancient and the later empire. Many of the recent excavations are now covered
with loose heaps of light-coloured sand. The whole of the Necropolis has been repeatedly explored both by the Byzantines and the Khalifs, as well as by modern explorers. Many generations have been enriched by its treasures, and yet an immense profusion of relics was still left to be discovered by the indefatigable M. Mariette. It is nevertheless probable that this mine of antiquities, which has so marvellously preserved everything committed to its keeping, is still far from being exhausted.

Ancient writers have recorded many interesting facts regarding the Necropolis of Memphis, and have mentioned various parts of it by name. The Pyramids, eleven in number, have indeed been identified, and the Serapeum has been excavated, but all trace of many other features have been irrevocably lost. Who, for example, can possibly tell where now to look for the sacred lake across which the mummy of Apsis was conveyed by boat; or the beautiful pastures near it, which were once compared with Homer's asphodel meadows; or the temple of the gloomy Hecate, and the gates of Cocytus and of Truth; or the site of the statue of Justice without a head; or the multitude of sacred and profane buildings mentioned by the later Greek papyri, as having belonged to this burial-ground? On the other hand, the numerous tombs within its precincts afford sufficient information with regard to the different periods at which its silent denizens were admitted.

The Tombs are of two kinds, viz. Maṣṭabas (literally 'benches') and Rock-Chambers. The Maṣṭaba is a mausoleum of solid masonry constructed on the surface of the earth. Its form is usually rectangular, and the walls slope inwards, so that the whole structure forms a kind of low truncated pyramid. Many of them are built of limestone-blocks of moderate size, and others of Nile-bricks. While the pyramids are always entered from the N., the door of the Maṣṭaba is usually on the E. side. On the stone door-posts generally rests the drum, a cylindrical block of stone, probably in imitation of the round section of a palm trunk, such as still usually covers the doorways of huts built of Nile-mud or sun-dried bricks. The drum usually bears the name of the deceased, but rarely his titles, which are often very lengthy. Grand-children and other near relations of the Pharaohs, however, are distinguished by the added to their names, being a title of honour which might be translated—'blood relation of the king'. The door-posts occasionally bear a full-length representation of the deceased; and, where there is no drum, the architrave of the door sometimes bears an inscription. The arrangements of the interior vary. At the back of the principal chamber there is usually a monument with numerous inscriptions, giving the whole of the titles of the deceased, the names of his nearest relations, and a number of prayers, generally addressed to Anubis, the guide of souls in the infernal re
gons and the tutelary god of the realms of the dead. In front of these monuments, and in presence of the family, it was usual for the priests appointed for the purpose to perform the rites due to the *manes* of the deceased (p. 137). Osiris is rarely mentioned by the inscriptions, and death is hardly ever alluded to. Near the principal chamber there is generally a niche closed with masonry, to which M. Mariette has given the name of *serdâb* ("hollow space"), and which in many of the *maṣṭabâs* either contains, or formerly contained, a statue of the deceased. Most of the *serdâb* are entirely closed, but some of them have small openings in the wall, through which it was probably customary to introduce incense. The well, or perpendicular shaft into which the body of the deceased was sunk, is usually on the W. side of the *Maṣṭaba*; for it was in the direction of the setting sun that his soul would cross the threshold of the next world. The sarcophagus (comp. p. 217) is usually an oblong stone box with a flat lid, containing a wooden coffin tapering towards the feet, with a human face represented on it at the head. Within this coffin was placed the body, either wrapped in a cloth, or without any covering. There is here no trace of the careful mummifying process of a later age.

The ornamentation of the interior of the *maṣṭabâs* is very rich. The first chamber usually contains well-executed bas-reliefs, mostly coloured, of members of the family of the deceased, and short inscriptions in the simple hieroglyphics of that period, with their scanty determinative symbols, recording the dignities of the deceased, and mentioning the estates from which his faithful servants have brought offerings to the *manes* of their master. Other chambers contain carefully arranged lists of the appropriate offerings to be presented to the deceased at different seasons, and on the various festivals, such as meat and poultry, vegetables and fruit, drinks and essences; and adjoining these are represented the altars laden with these gifts. We seldom find any allusion to death, or the life in the next world, but there are generally faithful representations of the favourite pursuits of the deceased (bird-catching, fishing, etc.), of his most valuable possessions (herds of cattle, ships, etc.; but curiously enough, neither camels, sheep, nor horses, which last seem to have been introduced by the Hyksos), and the tasks performed by his servants (agricultural operations, vintage, carpentering, glass-blowing, gold-washing, papyrus-gathering, writing, etc.). These coloured bas-reliefs form a most interesting link in the history of ancient art, and are not without aesthetic attraction also. They constitute, as it were, a picture-book in stone, illustrative of the manners and customs which prevailed during the earliest known stage of human civilisation.

If we enquire into the motives of these primordial inhabitants of the Nile Valley in decorating the walls of their tombs with these curious scenes, it would appear that they intended to hand down to posterity a record of the earliest achievements of mankind in the province of art
and civilisation. Having hardly emerged from the simplicity of the primordial condition, they seem to have been proud of displaying the results of their peaceful conquests over the animate and inanimate world around them, and to have been desirous of informing posterity of these triumphs. At that remote epoch, to behold was to admire. The chief occupation of the period was apparently to embellish the tombs in the best possible manner; and it is these decorations which constitute the pictorial history of primitive Egypt. — Brugsch.

These tombs probably originated somewhat in the following manner. Every Egyptian of moderate means, and particularly the great and wealthy, began during his lifetime to plan the construction of a tomb worthy of his position in society. The longer he lived and the wealthier he became, the handsomer and the more spacious was the structure. When the architect had lined the interior with smoothly hewn stones from the quarries of Turra, the task of the draughtsman and the decorator began. In accordance with certain rules regarding the objects to be represented and their grouping, which seem to have been followed in all the tombs of a similar kind, or perhaps according to well-defined patterns, the draughtsman first proceeded to divide the walls into sections of different sizes, and sometimes into regular squares, with red chalk, and then to fill them up with sketches of the representations and the hieroglyphics with which the tomb was to be adorned. The stone-mason then converted these sketches with his chisel into relief figures, some of which were flat, while others were raised about 2\(\frac{1}{2}\) lines or more. Lastly the painter coloured these designs, the most conspicuous tints being black, reddish brown, pale brown, yellow, light and dark blue, and green. Parts of the design that were intended to be white were not painted, but left in the natural colour of the stone. All the colours, so far as they have been chemically analysed, are earthy substances, and are beautifully preserved, except in cases where they have been too long exposed to the sun and wind. The women are always painted of a pale yellow colour, and the men of a reddish brown tint. The metals also have their conventional colours, iron being blue, and bronze yellow or red, while wood is painted brown, or, when in logs, greenish grey. In painting animals the artists endeavoured to imitate their natural colours, and we accordingly find that the cows and calves are black, brown, and dappled. — On the death of the proprietor of the tomb, his remains were deposited at the bottom of the mummy-shaft, and the task of decorating the tomb was at an end, so that the most perfect sculptures are to be seen in juxtaposition with the mere designs in red chalk. If other members of the family died, their mummies were likewise deposited in the common shaft, but no allusion to their history was recorded on the walls of the principal chamber. An exception, however, was made in the case of the widow of the deceased, whose statue was placed on the W. side of the tomb-chamber beside that of her husband, as has been done in the tomb of Ti. It is also worthy of remark that the
name of the proprietor of the tomb is always engraved in hieroglyphs on the so-called drum of the doorway and on that of a ‘stele’ fashioned in imitation of a door on the W. side of the tomb (as in the case of the tomb of Ti, p. 374). In a number of the tombs it has been observed that a single figure has been obliterated, while the whole of the rest of the decorations are well preserved and intact. The figures thus defaced are supposed to have been those of dishonest servants, whose misconduct induced the family to erase their portraits. At stated intervals, on holidays, and probably also on the anniversary of the death of the occupant of the tomb, the family was wont to assemble in the decorated tomb-chamber and the anterior court, bringing offerings of food which they consumed in honour of the deceased, while homage was done to the statue by burning incense around it.

The Rock Tombs, placed in long rows, and most of them excavated on the E. and S. slopes of the plateau, are in a far simpler style than the maṭṭabas, both in point of construction and of internal decoration; but they sometimes contain similar decorations, particularly in Upper Egypt.

With regard to the Construction of the Pyramids, see p. 336. The peculiarities of the ‘Step Pyramid’ are mentioned below.

The *Step-Pyramid* of Saqqāra (Arab. El-Haram el-Medarraya, i.e. ‘provided with steps’), a very conspicuous feature in the landscape, and the ‘Cognisance of Saqqāra’, may be inspected by the traveller externally either in going or returning. Egyptologists differ as to the period of its construction. Some authorities, relying on a passage of Manetho, in which it is stated that ‘he (Unenephes) built the pyramid at Cochome’, attribute the monument to a king of the 1st Dynasty. Cochome was the Greek form of the hieroglyphic name Ka-kam (‘the black bull’), which occurs on the ‘stcles’ and sarcophagi of the Apis tombs as a place in the vicinity of the Necropolis. If this view be correct, we have before us the most ancient structure in the world. Other authorities, however, reject this view, and assign the monument to the period of the 5th Dynasty, but for equally slender reasons. The pyramid consists of six stages, the lowest of which is about 373/4 ft. in height, the next 36 ft., the third 341/2 ft., the fourth 323/4 ft., the fifth 31 ft., and the sixth 291/3 ft., while each stage is about 61/2 ft. in width. The peculiarity of the pyramid is not its graduated form, as every other pyramid when deprived of its external incrustation would present the same appearance (comp. p. 336), but consists in the facts that it does not stand like all the others exactly facing the principal points of the compass, that the area it covers is oblong instead of square (N. and S. sides 354 ft., E. and W. sides 398 ft.) and in particular that it contains a very numerous and complicated series of passages and chambers in the interior. The unique form of these
Step Pyramid of Sakkâra.

Interior of the Apis Tombs.
(Principal Passage.)
chambers, which were explored by General Minutoli in 1821, has led M. Mariette to conjecture that they once contained the Apis tombs of the primæval monarchy. Two of the chambers are said to have been decorated with convex pieces of green fayence, inlaid in a peculiar way in stucco, so as to form a kind of mosaic. A richly gilded skull and gilded soles of feet, together with other interesting relics found here and numerous treasures collected by Minutoli, were unfortunately lost at the mouth of the Elbe. The door of the step-pyramid with its architrave of white limestone covered with hieroglyphics, and the door-posts formed of somewhat rough blocks of limestone and green glazed bricks, were removed by Lepsius in 1845 to the museum at Berlin. — This pyramid must have been used for different purposes from the great pyramids of Gizeh, but the scanty inscriptions found here afford no information on the subject. At one point on the S. side, where the outer masonry has been destroyed, the jointing of the stones may be inspected. The material used is an inferior, clayey kind of limestone quarried in the neighbourhood. The pyramid may be ascended, but not without danger, and on no account without the help of the Beduius, as the surface is crumbling and treacherous. (On one occasion, during the period of the inundation, M. Mariette met with a troop of wild boars on the third step.) The view from the summit is very inferior to that from the Pyramid of Cheops (p. 342), as the perpendicular height is 197 ft. only.

The Serapeum. Standing on the terrace of M. Mariette's house, we observe, immediately to the N., a sandy hollow, from which rise several heaps of stone and hillocks of sand. These mounds mark the site of the statues of the Græco-Egyptian period, standing on the walls which flanked the approach (Dromos) from the Egyptian to the Greek Serapeum (see below). The statues (including a marble Cerberus in the form of a lion with its tail terminating in a snake's head) are in a very mutilated condition, and have been purposely covered with sand. On the W. side was situated the Egyptian Serapeum, or Mausoleum of Apis, the sacred bull, which had spent its life in its temple (Apieum) at Memphis (p. 359), and after its death was buried in the vaults of Sakkarā. Owing to an erroneous translation, the Greeks regarded Serapis as a distinct Egyptian deity.

The Dead Apis, or Osiris-Apis (Asar-Hapi, or Serapis), is termed the 'reviving Ptah' (p. 123), and probably symbolised the perpetual regenerating power of the god. So, too, Apis was associated with the moon, which seems to undergo hourly change, while remaining unaltered. Hapi, the genius of death, bears the head of the cynocephalus, which was also a symbol of the moon. The Nile, the great regenerator of the parched soil, bore the same name (Hapi), and its rise was associated with the light of the moon, which by one of its rays impregnated the cow which bore Apis. As the embodiment of the soul of Osiris in the infernal regions, Apis was the principle which revives everything dead. The great festival of the rise of the Nile, which at many places measured as many ells as there were
days in each phase of the moon, was also called the 'Festival of the Birth of Apis', and the period of 25 years, which was named after Apis, was a lunar epoch, consisting of 300 average synodic months, equivalent to about 25 Egyptian years. When Apis survived his allotted period of 25 years, it is said that he used to be drowned in the Nile, but this cannot have been the invariable practice, as the Apis inscriptions mention that one of these sacred bulls lived 26 years.

The whole of the area was excavated and explored by M. Mariette, who in 1850 found a number of sphinxes from Saqqara in private gardens, and was thus led to conjecture that they belonged to the Serapis Temple mentioned by Strabo and in several Greek papyri. The passage in Strabo runs thus: — 'There is also a temple of Serapis there in a very sandy place, so that mounds of dust are heaped up by the wind, by which the sphinxes are either buried up to their heads or half concealed, whence one may understand the danger incurred by a person going to the temple and overtaken by a gust of wind'. — In the course of his excavations M. Mariette first came upon the Sphinx Avenue, which led from the Apis tombs to a Serapeum of the Greek period. It terminated on the E. side, where the chief entrance was situated, in a semi-circle formed by eleven statues of Greek philosophers and poets, which now grace the Louvre. The narrow approach (Dromos) was flanked by a double wall, on which stood the figures of animals mentioned above.

The Greek Serapeum, which was in the best preservation, was a small example of the simple form of a Greek temple 'in antis', and consisted of a cela and a pronao, approached by a flight of steps, with two Corinthian columns between the 'ante' or pilasters of the façade. Adjoining this Greek temple stood an Egyptian chapel with walls sloping inwards and a concave cornice, which was once adorned with the fine statue of the Apis bull now preserved in the Louvre. In the sand under the pavement in front of these buildings were found an immense number of small bronze images of gods, of which no fewer than 634 were collected in one day. The desert and the sterile sand with which it is covered were regarded by the Egyptians as 'typhonic', or under the influence of Typhon, the god of evil, and these images were accordingly placed in it with a view to purge and consecrate it.

The upper part of an Egyptian Serapeum, which seems to have been built in the usual form of the Egyptian temples (with pylons, anterior court, etc.), was also discovered here, but was partly destroyed or overthrown in the course of the excavations. These scanty remains, together with those of the Greek Serapeum, are now completely covered with sand, to a depth, it is said, of 60 ft. or more.

Within the extensive chambers of the Serapeum there was also established a colony of hermits, who lived in the strictest seclusion in cells attached to the various chapels of the temple, as appears from recently deciphered Greek papyri in the British Museum and the Louvre, which were brought from Memphis. Connected with the worship of Serapis, the deity revered above all others in the Alexandrian period, there was a regularly organised monastic system. The monks (αὐτόχοι, ἐγκατοχοί or of εἰς κατοχῆς ὑπάρχοντες, i.e. 'recluses') on entering the order gave up all their worldly possessions, and subsisted entirely on food brought to them by their relations. They were not permitted to leave their cells, and a kind of air-hole formed their sole channel of communication with the outer world. They called each other brethren, and spoke of a common
father. Some of their dreams and visions, in which battles with demons play an important part, have been recorded. Buried alive in these dismal recesses, they hoped to purify themselves by the prolonged service of Serapis. We also learn from the papyri that similar monastic institutions were connected with other temples of Serapis and with those of Isis, which were often associated with the Serapis temples. There is no doubt that these νεκταρία in the service of Serapis were the prototypes of the Christian monks and ascetics of a later period. The first Christian hermits (ἐγκαταστάσεις) are also said to have received their food through the air-holes of their cells, and to have chiefly aimed at attaining to a condition of ἀσθενεία, or gradus impatibilitatis (i.e. insensibility to external impressions). — The Christian monastic and ascetic orders are said to have been founded by SS. Paul and Anthony of Thebes, but there is no sufficient historical foundation for the statement (p. 99, 469).

In the subterranean part of the Egyptian Serapeum, hewn in the rock, where the Apis bulls were interred, there were found no fewer than 3000 monuments, and it was ascertained that the bulls were interred in different ways at different periods of Egyptian history. No Apis sarcophagus dating from the primæval monarchy was discovered, and it would seem that the first placed here dates from the reign of Amenophis III. (18th Dynasty). On the surface above, a chapel was erected in honour of each bull, while his remains were deposited in one of the square chambers hewn in the rock, to which a sloping passage descended from the chapel. No trace of these chapels now remains. Every Apis was interred in this way down to the thirtieth year of the reign of Ramses II. (19th Dynasty), after which the vaults began to take a different form. A subterranean gallery, about 110 yds. in length, was now hewn in the rock, and flanked with rudely excavated chambers, forty in number, which were walled up after having received the remains of the sacred bull. This was done down to the twentieth year of the reign of Psametik I., the first king of the 26th Dynasty, when four of the Apis vaults fell in, and another site was chosen for a new series of tombs. In the thirty-third year of that king's reign a new gallery, flanked as before with vaults, was accordingly excavated for the purpose. These vaults, which are much more carefully constructed than the two series of earlier date, are still accessible, while the others have long since been filled up.

Leaving M. Mariette's house, and turning to the left, we observe on our right (N.) the above mentioned hollow with its heaps of sand and stones, which conceal the badly preserved statues of the Greek period. The trodden path leads hence, to the N.W., in 2 min. to the entrance (Pl. α) of the **Apis Tombs (Egyptian Sera-peum), situated between sharply hewn rocks. The ceiling having threatened to fall in at places, the Khedive caused the vaults to be thoroughly repaired at considerable expense, and closed with a gate in 1869, so that they can now be visited with perfect safety.

The sixty-four Apis vaults now accessible, which were begun in the reign of Psametik I. and extended at intervals down to the time of the last of the Ptolemies, form a series of vaults on both

24*
sides of a lofty horizontal corridor hewn in the solid rock. These chambers average 26 ft. in height, and their pavement and vaulted ceilings are constructed of excellent Mokaţam stone. The passages into which they open have an aggregate length of 380 yds., and are about 10 ft. in width and 17½ ft. in height. Twenty-four of the chambers still contain the huge sarcophagi in which the Apis mummies were deposited. These monster coffins average 13 ft. in length, 7 ft. in width, and 11 ft. in height, and no less than 65 tons in weight. The covers, five of which are composed of separate pieces of stone cemented together, have in several instances been pushed on one side, and on the top of some of them the Arabs, for some unexplained reason, have built rude masses of masonry. All the sarcophagi, when discovered by M. Mariette, had been emptied of their contents, with the exception of two, which still contained a number of trinkets.

Twenty-four of the sarcophagi are of granite, but three of them only bear inscriptions, briefly recording the name of the king by whom they were erected. One of these sarcophagi bears the name of Amasis (the last king but one of the 26th Dynasty), another that of Cambyses, and a third that of Khabbash (p. 94), a king of the house of the Saites, who gained possession of the throne during the reign of Darius and occupied it until the second year of Xerxes. The cartouches on a fourth sarcophagus, dating from one of the later Ptolemies, are empty. The most instructive relics found here were the 'Apis Steles', or small stone votive tablets presented by pilgrims to the shrine of the bull last interred, and which, it is said, could only be received within seventy days of the sacred animal's death. These tablets during the earliest period were attached to the basement of the small temple of Apis erected above the vault, and afterwards to the wall which shut off the vault from the main passage. As time rolled on, they were set up at a still greater distance from the tomb, although, curiously enough, specially favoured persons were permitted to place Statuettes, bearing inscriptions similar to those on the steles, near the sarcophagus. These tablets have yielded most valuable information as to the ancient Egyptian mode of reckoning time, and partiu-
larly regarding the later periods of Egyptian history, as they record
the days, months, and years of the king's reign on which the Apis
revered by the donor was born, enthroned, and interred respectively.
We have thus been enabled to determine with precision the dur-
ation of the reigns of many of the Pharaohs and the order in which
they succeeded each other. Most of these relics are now preserved
in the Louvre. If the ceremonies which accompanied the obsequies
of the Apis bulls were as magnificent as the sarcophagi were cost-
ly, Diodorus probably does not exaggerate when he informs us that
the chief priest of an Apis bull which died of old age shortly after
the accession of Ptolemy Lagi expended on its burial not only the
whole of a large sum then in the coffers of the temple, but a far-
ther sum of fifty talents of silver (about 11,700£) advanced by
the king. Diodorus also assures us that in his time the keeper of
Apis (whose office was doubtless a very honourable one) spent no
less than a hundred talents on the obsequies of a bull.

Passing through the gateway, we enter a Chamber (Pl. b) of
considerable dimensions, with niches of various sizes in the bare
limestone walls, where votive tablets of the kind mentioned above
were once placed. Visitors light their candles here. The guide
now proceeds towards the right. After a few paces we observe at
our feet a huge block of black granite (Pl. c), which once formed
the lid of a sarcophagus. Beyond it we turn to the left, and after
ten paces reach an enormous granite sarcophagus (Pl. d), which so
nearly fills the passage that there is only just room to pass it on its
right side. The lid and the sarcophagus belong to each other, hav-
ing doubtless been executed for the reception of one of the sacred
bulls, but were probably stopped here on their way to the vault
for which they were destined, in consequence of the crisis in
Egypt's history which caused the overthrow of the worship of Apis.
Beyond this sarcophagus we continue to proceed towards the W.
between bare walls of rock, and then turn to the left (S.) into an-
other passage destitute of ornament. This leads us to the Prin-
cipal Passage (Pl. A, B), running parallel with the first, from E. to
W., and penetrating the solid rock. This passage is flanked with
the side-chambers, about 26 ft. in height, which contain the co-
lossal sarcophagi of the Apis bulls (see above), each consisting of
a single block of black or red polished granite or of limestone. One
of the finest (Pl. e), composed of black granite, and bearing the
best executed hieroglyphic inscriptions on its polished exterior,
may be entered by means of a ladder. After having traversed the
whole of the W. part of the main gallery and returned to the point
at which we entered it, we next visit the E. part of the gallery,
where we observe several more sarcophagi. We then reach a side-
passage (Pl. f) diverging to the right, from which another passage
leads to the right, in a direction parallel with the main corridor,
but now built up, as it was in a dangerous condition. A little
beyond this point we reach the E. end of the main gallery (Pl. B). Retracing our steps for a short distance, we turn to the right, pass over another sarcophagus which blocks the way by means of steps, and thus regain the door by which we entered the vaults. The temperature in these subterranean chambers, to which the outer air has little or no access, is always about 79°, that being the mean temperature of Cairo.

Before taking our leave of this extraordinary place, we may quote the interesting words of its discoverer: —

'I confess', says M. Mariette, 'that when I penetrated for the first time, on 12th Nov. 1851, into the Apis vaults, I was so profoundly struck with astonishment that the feeling is still fresh in my mind, although five years have elapsed since then. Owing to some chance which it is difficult to account for, a chamber which had been walled up in the thirtieth year of the reign of Ramses II. had escaped the notice of the plunderers of the vaults, and I was so fortunate as to find it untouched. Although 3700 years had elapsed since it was closed, everything in the chamber seemed to be precisely in its original condition. The finger-marks of the Egyptian who had inserted the last stone in the wall built to conceal the doorway were still recognisable on the lime. There were also the marks of naked feet imprinted on the sand which lay in one corner of the tomb-chamber. Everything was in its original condition in this tomb, where the embalmed remains of the bull had lain undisturbed for thirty-seven centuries. Many travellers would think it terrible to live here alone in the desert for a number of years; but such discoveries as that of the chamber of Ramses II. produce impressions compared with which everything else sinks into insignificance, and which one constantly desires to renew!'

The **Maṣṭaba of Ti** (260 paces to the N.E. of M. Mariette's house; see Map, p. 364) is the most interesting and best preserved monument of this kind (comp. p. 365) in the extensive Necropolis of the ancient capital of the primeval monarchy. It lies in an old street of tombs, now covered up; and the surface of the soil has been so raised with deposits of the sand of the desert that the tomb rather resembles a subterranean rock-structure than a building on
of Ti. SAKKARA. 4. Route. 375

the surface of the earth. Very little of the exterior is therefore now visible, but the interior, which has been completely excavated, is executed with the utmost care, and the sculptures on the walls exhibit a skill which is truly marvellous when it is remembered that the mausoleum was erected in the 5th Dynasty, in the time of the builders of the pyramids of Abuṣīr, that is, about 4500 years ago. Both the paintings and the hieroglyphics which cover the walls are executed in remarkably delicate and flat bas-relief, the outlines being sharp and distinct, while the projecting parts are at the same time subdued and harmonious. The hieratic canon (p. 159) has already imparted to the human figures a somewhat conventional type, notwithstanding their spirited action, but there is a refreshing fidelity to nature in the attempts of the artists to represent animals. The painting of the figures is preserved at places. Each of the larger scenes is presided over by the commanding figure of Ti himself, the proprietor of the tomb, who is easily distinguishable by his loftier stature. He wears a wig with the usual locks, and his features were doubtless copied from life, as is proved by their resemblance to those of his statue now preserved at Bûlâk (p. 295). In some cases his chin is prolonged by a small false beard. Around his loins he wears a kind of apron, carefully folded, and pointed in front, and from his neck hangs a broad necklace. With one hand he leans on a long staff, and in the other he holds his baton of office. Ti (hieroglyphic 𓊪𓊫𓊨𓊩𓊨), as the inscriptions in the tomb-chamber inform us (p. 382), was a dignitary of the highest rank in the service of Ra-nefer-ar-ka, Ra-en-user, and Kaka, monarchs of the 5th Dynasty. He was a ‘semer’ (companion, adjutant, or chamberlain) of the king, ‘enthroned in the heart of his lord’, a ‘master of the secrets’ (privy counsellor), ‘loving his sovereign’, a ‘president of the gate of the palace’, a ‘secret counsellor of the king in all his royal assemblies’, a ‘secret counsellor for the execution of the commands of the king’, and a ‘president of all the royal works and the royal department of writing’. He also held a high sacerdotal office at the pyramids of Abuṣīr (p. 356), and he is elsewhere called one of the chiefs of the prophets, a president of the sacrifices and purifications, and a guardian of the mystery of the divine speech. His wife Neferhotep-s, who is frequently represented by his side, was a member of the royal family, but he himself was a man of humble parentage, who had risen to distinction by his merit. His sons Ti and Tamut (Tamuz) enjoyed the title of princes in consequence of the high rank of their mother. Like other Egyptian ladies of distinction, the wife of Ti is termed the ‘beloved of her husband’, the ‘mistress of the house’, and the ‘palm of amiability towards her husband’.

Three Entrances (Pl. A), the side-walls of which are built of blocks of stone inclining slightly inwards, lead to the first small au-
terior Court (Pl. B), which contains the remains of two pillars. On the E. wall (Pl. a) are represented the offering of gifts; on the S. wall, to the left of the entrance (Pl. b), a poultry-yard and the fattening of geese (see below); and to the right of the entrance (Pl. c), the catching of fish in traps. These three scenes are small and damaged by exposure. On the front-walls of the entrance, on each side of it, is a figure of Ti (see above), above which are mutilated hieroglyphics mentioning several of his titles. We next enter the Great Court (Pl. C), an extensive quadrangle, which was once covered with a roof borne by twelve square pillars. The roof has disappeared, but some of the pillars are still standing. This hall is said to have been the scene of the rites performed in honour of the deceased and the sacrifice of victims. In the centre of the court was sunk the mummy shaft (Pl. d), not perpendicularly, as usual, but in an oblique direction, communicating with the tomb-chamber below, where a sarcophagus without inscription was found.

On the N. side (Pl. e), which is much injured by exposure, are represented the offering of gifts, the sacrifice of cattle, and the conveyance of a slave in a boat. A particularly successful figure is that of a long-horned bull, whose hind-legs a man is binding together with visible effort, while another is dragging it down to the ground. Beside it lies another victim already slain. The inscription above this
scene informs us that the young bull sacrificed here would, 'according to the judgment of the man skilled in slaughtering', yield 50 men, or pots (probably of fat). †

Behind the wall here is another chamber ('Serdâb'; Pl. D), not now accessible, in which nothing was found.

On the E. side (Pl. f), which is also much damaged by exposure to the air, are represented the offering of gifts, a number of servants, and other scenes. There are no figures on the S. side. Those on the W. side are well preserved, except towards the top.

Close to the entrance, on the right (Pl. g), is the very interesting scene of the feeding of the geese (showing that the ancient Egyptians were acquainted with the modern modes of fattening poultry), and also that of the 'feeding of the cranes'; above which is represented the 'putting in of the fattening cakes to boil'.

We next observe (Pl. h) a complete poultry-yard, with geese, pigeons, and cranes, which are being fed with corn, and then the figure of Ti (Pl. i). Farther on is a slab of stone (Pl. k), 9 ft. long and 1½ ft. broad, bearing on the lower part a representation of four Nile barges (the fourth to the right being without rowers), which 'descend the Nile with much corn'; above these are antelopes, a pleasing

† We annex woodcuts of some of the best of these scenes, which will serve to impress them on the traveller's memory. They are from photographs taken from impressions obtained by Dr. Reil, and are therefore almost facsimiles. With the exception of the large tableau of Ti engaged in hunting (p. 385), they are reduced to one-twelfth of the original size. Dr. Reil is about to publish his admirable collection of impressions taken from the reliefs in the tombs of Sakkâra in plates reduced to one-fifth of the actual size, with accompanying explanations (in German).
group of doves, cranes, a mountain-goat, two more antelopes, and to the left, in the corner, four more mountain-goats. Adjoining these figures on the left is another figure of Ti (Pl. 7).

Adjoining the right corner of the S. side of this court (see above) is a corridor, formerly closed by a door, and also divided by another doorway in the middle. It is now entered by a wooden door, the key of which is brought by the guide.

On each side of this Corridor (Pl. E) are several series of bearers of offerings (comp. p. 366), one above the other. On the right is a niche 91/4 ft. high and 6 ft. wide, containing a 'stele' dedicated to the wife of Ti. On the left, on the inner part of the pillar of the doorway, is Ti with his titles; then (between the first and second doors) the transport of the statue of Ti and persons offering incense. Hieroglyphics in different places inform us that 'this is the statue of thorn-acacia wood of the deceased Ti', and 'this is the statue of ebony, which they are drawing'; 'the drawing of the statue is a good drawing'. — 'The servants pour out water is the inscription at the place where a servant is wetting the runners of the sledge which bears the statue. — On the right (between the niche and the second door) are several more rows of gift-bearers. On the door-posts (left) two male figures and (right) Ti with his titles. Over the door (N. side) musicians and dancers, and (S. side) Ti in a boat (damaged). We then come to a door on the right, leading into an oblong, covered, and therefore somewhat dark, chamber (Pl. F), the scenes adorning which afford us an insight into the domestic economy of the deceased. Among them are represented a complete pottery and a bake-house, and numerous vessels of various forms, destined for different uses. On the upper part of the left door-post of this chamber a piece of the sycamore wood to which the door was attached is still in its place.

Above, on each side of the door of this chamber (on the E. side of the corridor), are several barges, some of which are light boats with a number of rowers with broad, shovel-shaped oars, while others of heavier build have lateen sails and are also steered with oars. In the bow of the vessel stands a man with a long pole, used for sounding, in the same way as is done at the present day. These boats are conveying retainers of the deceased to Sakkāra to pay homage to his remains; for we read beside one of the sailing-boats: — 'Arrival from the north country, from the villages of the family estate, in order that they may behold the chamberlain who is perfect in consequence of his distinction in occupying the first place in the heart of his sovereign, and the master of the mystery of the kingdom of the dead, Ti'. The captain of the vessel, of which we annex a woodcut, wishing to land on the W. bank, is represented as giving the command — 'Direction, starboard, starboard!'
Leaving the corridor, we pass through the door opening to the S. (with a figure of Ti on each side), and enter the Tomb Chamber (Pl. 6) itself, 23\(\frac{3}{4}\) ft. broad, 23\(\frac{3}{4}\) ft. long, and 12\(\frac{1}{2}\) ft. in height, and embellished with special care. The ceiling, in imitation of palm-stems, rests on two massive square pillars, coated with stucco and coloured to imitate red granite, and has two openings on the E. side through which light was introduced.

**E. Side of the Tomb Chamber of Ti.**

On the E. side (to the left of the entrance) are six series of harvest scenes, representing the reaping, storing, and transport of the corn, the treading of it out by oxen or asses, the separation of the straw from the grain by means of three-pronged forks, the sifting of the grain, and the filling of the sacks, which last operation is done by women. The dress of the female workers is represented as fitting tightly, leaving the form of their figures well-defined. All seem intent on their occupations, the scenes are full of life and spirit,
and the imaginative artists have even credited the dumb creation with intelligence. The reaper says to the ears — ‘Ye are seasonable’, ‘ye are now large’; and at another place he is made to say — ‘this or is reaping; when a man does this work he becomes gentle, and so am I’. The driver of a herd of donkeys addresses them with — ‘people love those who go on quickly, but strike the lazy’; ‘if thou couldst but see thy own conduct!’ Gleaners of the remains (sep) left by the reapers are also represented. In the centre of this wall is a half-mutilated representation of
Ti. To the right of it are two perfectly preserved and several damaged ship-building scenes, representing the various operations, from the hewing of the stems to the caulking of the vessel resting on the stocks. The primitive saws, axes, hammers, borers, and other tools used by the workmen are particularly interesting.

S. Side of the Tomb Chamber of Ti.

The S. side is richly covered with representations, but the upper parts are damaged. We here find lists of the whole of the domestic animals belonging to the deceased, including oxen, gazelles, and antelopes, which were domesticated at that period, and a stag, which is separately noted by the writers. Then figures of Ti and bearers of offerings. On the lower half of the wall are four rows
tf workmen of different trades, including carpenters, masons, sculptors, glass-blowers, chair-makers, leather-workers, and water-bearers. To the right of these, at the bottom, are geese, ducks, pigeons, and cranes; above which are oxen, and then a scene in a court of justice, consisting of a number of judges writing, before whom several criminals are being dragged. To the right of the last scene are several figures bearing offerings, and below these is represented the slaughtering of various animals.

Behind this wall is concealed another Serdâb (Pl. H), in which a statue of Ti, now preserved in the museum at Bûlâyûk, and several broken statues were found.

On the W. side are two large 'steles', extracts of the contents of which have already been given (p. 375). These inscriptions also contain an invocation of Anubis, the jackal-headed guardian of the infernal regions, who is to take the deceased under his protection. In front of the left stele is a slab for the reception of offerings (p. 366), of the kind which occurs in every tomb. In the centre of the wall are slaughterers and the presentation of gifts (damaged). In front of these stood statues of Ti and his wife, which are now in the museum of Bûlâyûk.

**N. Side of the Tomb Chamber of Ti.**
The **North Side of the chamber is adorned with the most elaborate and best preserved scenes. The lowest of these consists of a long procession of 36 female figures (of a pale yellowish colour, see p. 367), bearing on their heads large baskets filled with various kinds of agricultural produce, bottles, jars, and loaves, carrying poultry in their hands (and in one case a porcupine in a cage), and leading cattle by ropes. The inscription above them records that this is an — 'Offering of sacrificial drink and food from the villages of the family estate of the chamberlain Ti situated in Lower and Upper Egypt'. Adjoining each figure is the name of the place which it represents. Each name is accompanied by that of Ti, the proprietor, and the order is in accordance with the most valued products, the industries, and the situation of the place represented. Thus we observe a Water-drawing Ti (probably so called from its irrigation system), a Field Ti, a Palm Ti, a Ship Ti, an Island Ti, a Sycamore Ti, a Bread Ti, and a Cake Ti.

Above these are rustic cattle scenes. A cow is represented calving, and another is being milked, while an overseer, apparently tired with doing nothing leans on his staff and orders the servants to — 'milk while you hold fast the young calf by the knees'. To the right of these are a number of frisky young calves, tethered to blocks of wood, and browsing or skipping about. Near the left angle we observe a dwarf leading an ape, resembling the long-tailed monkeys of the Sudan, and a man with a deformed shoulder
with a couple of prick-eared greyhounds, of the kind known in N. Africa as 'slughi' (p. 387).

Higher up (comp. Plan, p. 364) we observe scenes representing the snaring of birds and the catching of fish in nets and baskets; and we here read the last of the hieroglyphic inscriptions — ‘Let what is in it fall down', and 'the emptying of the receptacle formed of rushes'.

To the right, towards the door, is a large and striking tableau, representing **Ti engaged in hippopotamus hunting. He stands in a light papyrus boat, leaning on a staff, and is more than double the size of his attendants. The hunting of crocodiles and hippopotami on the Nile formed a favourite pastime of the wealthy Egyptians, and we find scenes of this kind recurring frequently, especially in the burial chapels of the earliest period of the Egyptian monarchy. The bearing of Ti is calm and dignified, while the captain of the vessel, 'the chief over the people of the bird-pond Atet', seems to be attending to the directions of his master with a view to communicate them to the crew. In the foremost vessel three of the men are engaged in securing two aquatic monsters floundering in the water, one of which has been caught with a kind of snare and is threatened with the spears of the hunters. An allusion to this kind of hunting is said to be contained in the following passage in the Book of Job (xli. 1, 2): — ‘Canst thou draw out leviathan with an hook? or his tongue with a cord which thou lettest down? Canst thou put an hook into his nose? or bore his jaw through with a thorn?' — The other hippopotamus which the men are endeavouring to secure has a small crocodile in its mouth. At the stern of Ti's vessel is a smaller boat containing a boy, who is about to strike on the head a silurus which he has caught. The other fish represented in the water are so faithfully drawn that the species to which they belong are easily determined. The three boats are surrounded by papyrus plants, among the tops of which various birds are sitting on their nests or fluttering about. A pair of kingfishers with their young, in a nest faithfully copied from nature,
are defending themselves against the threatened attack of some kind of weasel.

This scene is nearly double the size of the others, and the above copy is about 1/10th of the original size.

Below these hunting scenes is the procession of women bearing offerings, already described. Above these, to the right, are cattle being driven through the water during the inundation.

Above the inundation and over the door are a number of rams. According to Herodotus the Egyptians sowed their seed on the wet mud, and caused it to be trodden in by swine, and this task is here.

Baedeker's Egypt I.
being performed by the rams, stimulated partly by blows and partly
by food held before them. The explanatory hieroglyphic inscription
is to the effect that — ‘it is well for him who loves work’!

Above the rams is a ploughing scene, adjoining which is a man
hoeing the ground, while another is scattering the seed.

In the fishing scene (above) the overseer, leaning on his staff, says
to his servants, ‘Ye are like apes’, to which they good-humouredly
reply, ‘Thy command is executed; it is done excellently’. At the
top (not easily distinguished) is a quarrel among sailors, who ap-
pear to be interchanging violent blows and remonstrances — ‘Thou
art of a pugnacious hand, but I am so gentle’.

Among the maṣṭabas which are now shown by special permis-
sion from M. Mariette only, and from which the sand requires to be
removed, the most interesting, and after that of Ti the best preserved, is the —

*Maṣṭaba of Ptahhotep*, which lies a little to the W. of the path from the step-pyramid to M. Mariette’s house.

Ptahhotep, like Ti, lived in the 5th Dynasty, and was a priest of the Pyramids of Aser, Ra-en-user, and the ‘divine dwelling of Men-kau-Hor’. He also bore a number of other titles. The best portrait of him is on the E. wall. His costume is similar to that of Ti (p. 384). His young son, with the lock denoting infancy, is holding his staff with his right hand and a hoopoe in his left. The visitor should observe the harvest of the papyrus plant, and the games which were probably connected with the vintage festival. The grapes are being plucked, trodden, and pressed. A hunting scene lower down is full of humour and life, and some of the animals will interest zoologists. Most of the hounds are ‘slughi’ (p. 384).

The attack and slaughter of the gazelle is a very spirited scene. Ptahhotep also indulges in lion-hunting. A lion is represented seizing in its jaws the muzzle of a cow tied up as a bait, and fastening its claws into the animal’s neck, while the calf stands behind its mother, and the kneeling hunter with his two hounds points out to them the lion on which he is about to let them loose. The fishing and fowling scenes are particularly well executed. Another successful representation on the same wall is the procession of the retainers of Ptahhotep bearing offerings from the different villages on his estates. Like the modern processions of pilgrims at Cairo, this cortège is headed by pugilists and prize-fighters. Captive lions and other smaller wild animals are being carried in cages, and the master of the dogs is guiding his greyhounds and another kind of hound resembling a hyena. Next follow mountain-goats, antelopes, and oxen. A cow is calving with the aid of a veterinary surgeon, and a number of calves on the ground are struggling violently to disengage themselves from the cords with which they are bound. After these come flocks of poultry. If the inscriptions are to be believed, Ptahhotep possessed 121,000 geese of one kind and 11,210 of another, 1225 swans, 120,000 small geese, 121,022 pigeons, and 111,200 goslings. Among the domestic poultry are included cranes, which their keeper brings before his master, counted, and in good order. Ptahhotep, sitting on a throne, wearing a panther skin, and anointing himself with oil, surveys the rich produce of his estates, watches the slaughter of his cattle, approves of the order kept by his clerks, and listens to the music of harps and flutes. The list is exceedingly instructive owing to the distinctness of the determinative symbols which accompany the carefully written words. This maṣṭaba also contains a false door, bearing a representation of the entrance to a tomb as a symbol, on the W. wall.

The *Maṣṭaba of Sabu*, to the E. of that of Ti, contains similar representations, and an enumeration of the various kinds of cattle possessed by the deceased.

Of one kind of cattle he possessed 405, of another 1237, and of a third 1300; of calves 1220 of one kind, and 1138 of another. Besides these he had 1308 antelopes, 1135 gazelles, 1244 goats of a species resembling the antelope, and 1010 herons. The poultry (geese, ducks, and pigeons) is reckoned by thousands \(\frac{\text{300}}{\text{3}} = 1000\).

After having visited the Necropolis, the traveller may, if time permit, proceed to the ‘*Maṣṭaba Farʿūn*’, which belongs to the S. group of Saḵkāra, a ride of 1½ hr. to the S. of M. Mariette’s house.

We pass the step-pyramid, as well as all the tombs to the W. of it, on the left. Exactly in a line with the step-pyramid, parallel
with its W. side, and about a thousand paces to the W. of it, we observe a space of ground enclosed by broad and massive, but now very dilapidated, walls on the E., N., and W. sides, while the S. side is bounded by the natural hills of the desert. The object of this enclosure is a mystery to Egyptologists. M. Mariette, however, conjectures, with much probability, that the place was used as a pen for the numerous cattle slaughtered here as victims. Repeated excavations have been made within the precincts of the enclosure, but without result. Each side is 440 yds. in length.

Proceeding hence towards the Maṣṭaba Farʿūn, we observe the tomb rising before us at no great distance, so that the route to it cannot be mistaken. On the N.W. side of the maṣṭaba is a very dilapidated pyramid now used by the Arabs as a quarry. The maṣṭaba, which may be ascended, is oblong in form, like all the other tombs of the kind, with walls sloping inwards. The entrance is on the N. side. It was first explored by M. Mariette, who ascertained that it was the tomb of King Unas of the 5th Dynasty.

We may either retrace our steps hence to M. Mariette's house, or traverse a depression to the N. of the maṣṭaba, opening towards the E., and leading direct to the village of Saḵkāra.

If several days have been allowed for the excursion to Saḵkāra, the traveller may next proceed to visit Daḥshūr, situated 3/4 hr. to the S. of the Maṣṭaba Farʿūn. This place is perhaps identical with the Acanthus of Diodorus, where a leaky cask is once said to have stood, into which water from the Nile was daily poured by 360 priests. On the margin of the desert there still grow numerous sycamore trees, as in ancient times. On the desert plateau of Daḥshūr rise two large and two smaller pyramids of limestone, and two of brick, together with remains of others, all of which are at a considerable distance from each other. The northernmost brick pyramid, which was once covered with slabs of stone, is curious. It is sometimes pointed out, but without any authority, as the fabulous pyramid which Herodotus mentions as having been erected by King Asycheis, who is said to have compelled his labourers to make bricks of mud laboriously obtained from the bottom of a lake by means of poles. The entrance on the N. side was once approached by a vestibule. The present height of the pyramid is about 90 ft. only.

On the S. side of another ruined pyramid, situated to the S.W. of the last, are traces of two embankments (p. 330), descending towards the E. from the larger Stone Pyramid on the W. The latter is still 326 ft. in height and 234 yds. in width, being nearly as large as the Great Pyramid of Gizeh, and in its solitude presents a very imposing appearance, even to an accustomed eye.

To the E. and S. are remains of several other pyramids. Still farther to the S. rises a pyramid of peculiar form, sometimes called the Blunted Pyramid (comp. p. 156), the lower slopes rising at an angle of 54° 41', while the sides of the apex form an angle of 42° 59'. The whole pyramid was probably originally intended to have the same slope as the apex (as the sides of the neighbouring pyramid rise at an angle of 43° 36'), but the lower part was never completed. This pyramid is 206½ yds. square and 321 ft. in height. The interior was explored so early as the year 1660 by Mr. Melton, an English traveller. In 1860 M. Le Brun found a small chamber in the interior. No clue to the name of the builder has been discovered. On the extreme S. side of the plateau rises a brick pyramid, 99 ft. in height, marking the S. extremity of the vast Necropolis of Memphis, which extends down to Abu Roash (p. 356), towards the N., a distance of 23 M. — From Daḥshūr to the Pyramid of Mēḏūm, and to the Fayūm, see R. 9.
Quarries of Turra and Baths of Heluân.

Railway on the right bank of the Nile (opened in 1877) in 1/2-3/4 hr.; 1. cl. 2½ fr.

The Baths of Heluân are situated about 14½ M. to the S. of Cairo. The route is interesting, especially in returning and in the evening, when the lights and shades on the Mokattam Hills (p. 321) are very picturesque. The excursion may be made on the back of a donkey (5-7 fr.; a good animal should be selected) in 3½-4½ hours. A sum of 50-70 fr. is demanded for a carriage, which requires an extra horse to drag it through the sand, and is liable to frequent stoppages.

The new railway on the right bank, which was constructed mainly for the purpose of connecting the great military establishments at Turra with the Citadel, runs round the town, between the Citadel (on the right) and the Mokattam (on the left), through a deep cutting. The new passenger station is to be constructed at the S. end of the town, in or near the Place Mehemet Ali. The line then skirts the base of the Mokattam, on the slopes of which are the interesting ruins of a mosque, and traverses the burial-ground of the Mamelukes (p. 313). To the right lies the oldest part of Cairo, which was erected during the supremacy of the Tulunides (end of 9th cent.), with the Mosque of Tulun (p. 263). On the same side we next observe the Necropolis of Imam Shafe'i (p. 313), beyond which is the valley of the Nile, with the various groups of pyramids rising above it (p. 390).

Before reaching stat. Basatin, a village situated in one of the angles of a triangular piece of arable land which extends a considerable way into the desert, we perceive the Jewish burial-ground on the left, and, farther on, the broad Wadi et-Tih (p. 325), which separates the Mokattam range from the Gebel Turra. Traversing a tract of desert sand, the line approaches the Nile, where large military establishments and gunpowder mills have recently been erected. To the right, on the Nile, is the monastery Der el-Geber, and on the left are the Quarries of Turra (see p. 392). On the hill stand the ruins of an old fort. Stat. Masara, a village on the Nile, is noted for the slabs of stone obtained in the neighbourhood, known as 'palastes', and used for paving purposes in almost every house of the better class in Egypt. From this point we may visit the quarries of Turra, which yielded material for the construction of the ancient temples, and are still worked. Their entrances in the rocks are visible from the railway. The ride thither occupies 1/2 hr., but it is more convenient to visit them from Heluân (1½ hr.), where good donkeys are more easily obtained.

Beyond stat. Masara the line skirts the slopes of the Gebel Turra, and after ascending a considerable incline, reaches the plateau on which the Baths of Heluân are situated.

Heluân, an artificial oasis in the desert, 3 M. from the Nile, consists of a few villas, a hotel, and a bath-house, and presents a very dull appearance. The vegetation around it is still very scanty, but as the fertilising water of the Nile is pumped up for the pur-
pose of irrigation, it is expected that the shrubberies and pleasure-grounds will ere long become more attractive. No one will care to make a prolonged stay here unless in quest of health and retirement, as the place is almost entirely destitute of the usual amuse-
ments of a watering-place. Heluan lies about 112 ft. above the level of the Nile, on a firm plateau of sandy soil, and enjoys a remarkably pure and dustless atmosphere (comp. p. 67).

The Hotel, a large square building, with a court planted with trees in the interior, and about forty rooms upwards of 16 ft. in height, affords accommodation similar to that of the hotels at Cairo. Board and lodging 15 fr. per day; sitting-room 10-15 fr. extra. The terrace of the house affords an interesting view, towards the W., of the Nile Valley and the heights of the Libyan desert, with the pyramids of Gizeh, and thence to Dahshûr. To the E. rise the mountain ranges of the Arabian desert.

The sulphur springs, which were also probably used in ancient times, resemble those of Aix in Savoy in their ingredients. In 1871 they were utilised for sanitary purposes by Dr. Reil (p. 232), by order of the Khedive. The principal springs are covered in. The bath-house for Europeans contains fourteen cabinets, for warm and tepid baths, shower-baths, and inhalation. There is also a basin containing water strongly impregnated with sulphur, 5-6½ ft. deep, and 1200 sq. yds. in area. The interior of the Khedive's bath-house may also be inspected.

Near the sulphur springs, especially those situated farther to the W., which are still uncovered, a quantity of flint splinters have been found, the largest of which are now in the museum at Bulâk (comp. p. 356). The banks of the Nile afford good wild-fowl shooting, but the desert game is shy and not easily reached.

The subterranean quarries of Ma'sara and Turra, which are still worked, yielded the stone used in the construction of the Pyramids. A visit should be paid to these vast caverns, if time permit. The ride thither from Heluan takes 1½ hr.; candles and matches should not be forgotten. The stone is transported to the bank of the Nile by means of tramways and carts drawn by horses, camels, and mules.

These immense quarries are hardly less imposing than the Pyramids themselves, for which they afforded material. The Arabs make very poor miners, as they dread the darkness of shafts and pits. They quarry the stone on the outside of the rocky slopes only, while the quarrymen of the Pharaohs penetrated into the interior of the mountain and excavated large chambers, tunnelling their way until they came to serviceable stone, and leaving the inferior untouched. The roofs of the rock-halls, which are of different sizes, are supported by pillars of rock left standing for the purpose. A few remains of hieroglyphics and coloured bas-reliefs are still preserved in the quarries, but they are of no historical value. During the construction of the railway in 1875 a number of sarcophagi of soft limestone, without inscriptions, were found in a sand-hill in the neighbourhood, belonging probably to a burial-place of the quarrymen of the Pharaohs.
These quarries were also worked during the Ptolemaic and Roman periods; and Strabo, who was generally well-informed, states that the quarries which yielded the stone used in building the pyramids lay on the Arabian bank of the Nile. He says that they were excavated in a very rocky mountain, called ‘the Trojan’, and that near them and the Nile lay the village of Troja, ‘an ancient residence of captive Trojans who had followed Menelaus to Egypt and remained there’. Diodorus gives the same account of the foundation of the Egyptian Troja, but adds that Ctesias has a different version of it. Both authors were probably misled by the statement of Herodotus, that Menelaus was hospitably received in Egypt when returning home with Helen from the siege of Troy. There is, however, little doubt that the village called Troja by these authors is the modern Turra, which had no connection whatever with the city of Priam. Inscriptions dating from the ancient empire and others of the later monarchy, found in the quarries themselves, inform us that the ancient name of the place was Ta-ro-fu, or more recently Ta-roue, or region of the wide rock-gateway, whence the stone of the pyramids was obtained. This name was corrupted by the Greeks to ‘Troja’, and as prisoners of state and of war, including many Asians, were chiefly employed in the quarries, it was not unnatural to suppose that the colony of quarrymen at the foot of the hill was a settlement of captive Trojans. Several slabs of rock bearing figures and hieroglyphics have been found in one of the great rocky halls of Turra. One of these represents King Amenophis III. (18th Dynasty) sacrificing to the gods Ammon, Horus, and Iyrfeshet; and on the other we find him worshipping Ammon accompanied by Anubis, Sekhet, and Hathor. The inscription under the first slab (with which that on the second is nearly identical) runs thus from the second line onwards: — ‘His Majesty ordered new halls (het-tu) to be opened, for the purpose of quarrying the light-coloured and excellent stone of An for the construction of his buildings founded for perpetuity, after His Majesty had found that the halls of Rufai (Troja) had been tending to great decay since the time of those who had existed at the beginning (i.e. former generations). These were newly established by His Majesty’, — Another inscription, of the time of Nectanebos II., runs thus: — ‘This excellent quarry of Rufai was opened in order to construct the temple of Thoth, the twice great, the double Aperu, the commander of the divine speech, etc. . . . May (its) continuance be everlasting!’

The Barrage du Nil.

Railway. As a train runs from the Bâlāk ed-Dakrûr station (p. 223) to El-Mendshi (p. 223), the station for the Barrage, in the evening only, and returns on the following morning, travellers cannot visit the Barrage by this line in one day. They will therefore find it more convenient to take a train on the Cairo and Alexandria line as far as (25 min.) stat. Kâlyûb (p. 226); fare 7 pias. t. 20 par., or 5 pias. t.; donkeys and attendants, see p. 231; departure of the trains, see p. 221. Donkeys may be hired at Kâlyûb; but, as the saddles are bad, the short ride to the Barrage (11/4 hr.) is often uncomfortable. George Politi keeps a tolerable restaurant in the bazaar of the village near the Barrage.

Permission to inspect the works connected with the Barrage must be obtained from the minister of war through the traveller’s consulate.

The barrier, which at present consists of two bridges built across the two arms of the Nile at the S. extremity of the Delta, dates from the time of Mohammed ‘Ali, but is still unfinished, as the
lock-gates necessary for closing the bridges and the greater part of
the canals for carrying off the water are still wanting.

Fortifications of considerable strength were constructed here by
Sa'id Pasha for the purpose of arresting the progress of any invading
army, and storing munitions of war. The place was therefore
called Kal'at Sa'idlyeh (Sa'id's Castle), but is now known as 'Ka-
nāṭir' (bridges).

The object of the Barrage was to keep the water of the Nile at
the same level in all seasons, so that the necessity for irrigation
machinery throughout the district below it would have been entirely
superseded, while those fields to the S. of it which are on a level
with the reservoir would also have benefited. The Barrage was also
intended to remove the difficulties of navigation below this point
during the three months when the Nile is at its lowest. During
that period the water is too shallow for large vessels, and even
small vessels are often impeded by shoals and shifting sandbanks;
and it was therefore proposed that the whole of the communication
by water should then be kept up by means of large canals.

Of the original projects of Linant-Bey and Mougel-Bey, which
were the same in principle, but differed in the mode of execution,
the latter was selected. Linant proposed that the bridges should
be erected on the land, a little more to the N., and in a position
less exposed than the apex of the Delta, and that the Nile should
afterwards be conducted through them; but his plan was rejected
owing to the difficulty of constructing the large embankments re-
quired for its execution, and that of Mougel-Bey, as indicated in
the sketch of the environs of Cairo, was preferred.

It is now generally admitted that Linant's scheme was the pre-
ferrable, as the foundations of the bridges are already seriously sapp-
ed, and admit the passage of the water at several different points.
A French contractor, who has recently examined the works, esti-
mates the cost of repairing them at 50 million francs, a sum which
would suffice for the construction of a new movable barrier.

In its present condition the Barrage is nothing but an impedim-
ent to the navigation, as vessels often take several hours to effect
the passage of the locks, which is sometimes even attended with
danger, and have to pay heavy dues. As the openings of the Ro-
setta branch of the river only are provided with lock-gates, the
greater part of the water flows through the Damietta branch, for
which no barrier has yet been constructed. It is, moreover, doubted
whether the present works would bear the great additional pressure
which would be caused by the completion of the system, so that
these costly structures will probably never answer the purpose for
which they were intended; but they are said still to be important
from a military point of view as works of a defensive character.
5. From Cairo to Suez.

No special preparations need be made for this journey, and a dragoon is superfluous. At Suez, Isma'iliya, and Port Sa'id there are good hotels in the European style, where local guides may be engaged for the environs. These towns present little attraction beyond their situation; but the harbours, the Red Sea, and the Suez Canal will interest most travellers. The excursion may conveniently be made on the way home, as most of the steamers which ply between Alexandria and the European ports touch at Port Sa'id.

The journey takes four days: 1st Day. By train at 9 a.m. (or in summer, after 15th April, at 10 a.m.) from Cairo to Suez, which is reached at 7 p.m. — 2nd Day. Excursion in the morning to Moses' Spring, and in the afternoon to the harbour of Suez. — 3rd Day. By train at 8 a.m. from Suez to Isma'iliya, arriving at 11 a.m. (or by steamer if there happens to be an opportunity; see p. 411); excursion in the afternoon to El-Gisr. — 4th Day. By canal steamer (p. 411) at 9 a.m. to Port Sa'id, arriving at 4 p.m.

From Cairo to Suez (153 M.) by railway in 10 hrs.; fare in piastres tariff, 116 p. (35 fr.) or 73 p. (23 fr.). From Cairo to Isma'iliya only (99½ M.), in 7 hrs.; fare 73 pias. 20, or 52 pias. 20 paras. There is only one through-train daily, starting at 9 a.m., and arriving at Zakāzīk at 12.30, where a stoppage of one hour takes place (dinner 6½ fr.; also quarters for the night). The through-train leaves Suez at 8 a.m., reaches Isma'iliya at 10.55, Zakāzīk at 1.27 p.m. (halt of ½ hr.), and Cairo at 5.25 p.m. (A train leaves Zakāzīk for Alexandria via Benha at 1.57 p.m., reaching Alexandria at 7.45 p.m.) — There was formerly a direct railway from Cairo to Suez, traversing the desert, but the line had to be abandoned, partly on account of the want of water, and partly owing to the difficulty in keeping it clear of sand (comp. Map of Lower Egypt).

From Cairo to (9½ M.) stat. Kalyūb, see p. 226. The slender minarets of the mosque of Moḥammed ʿAli (p. 260) and the Moḳāṭāṭam hills (p. 321) remain in sight for a considerable time, and as we approach Kalyūb the Pyramids of Gizeh become conspicuous to the W. of the line. Beyond Kalyūb a line of rails diverges to the Barrage (p. 392) to the left, and the main line to Alexandria (R. 2) diverges on the same side, farther on. Our train turns towards the N.E., and traverses a fertile and well-watered district, shaded by numerous trees. The next stations are (14½ M.) Na'ūwa and (21 M.) Shībīn el-Kanāṭīr.

About 1½ M. to the S.E. of Shībīn el-Kanāṭīr is the ruined site of Tell el-Yehūdiyeh (Hill of the Jews). On this spot Onia, the high priest of the Jews, son of Onia III., aided by Ptolemy Philometor, erected a temple for his countrymen who had been expelled from Palestine by the Syrian party and had met with a hospitable reception in Egypt. To the objection that no true temple could exist anywhere but in Jerusalem he answered in the words of Isaiah (xix. 18, et seq.): — 'In that day shall five cities in the land of Egypt speak the language of Canaan, and swear to the Lord of hosts; one shall be called the city of destruction (or, according to others, 'city of deliverance'). In that day shall there be an altar to the Lord in the midst of the land of Egypt, and a pillar at the border thereof to the Lord.' Some critics have supposed that these and the following verses were interpolated for the purpose of justifying the erection of a temple on the bank of the Nile. At all events Onia effected his purpose and erected the sacred edifice. The temple is said to have occupied the site of a ruined sanctuary of Pasht (Sekhet), and recent excavations made here have led to the discovery that a town stood on the spot as early as the time of Ramses II., and attained to great prosperity in the reign of Ramses III., the wealthy Rhampsinitus of Herodotus. The
pronomen and surname of the latter monarch (Ramesses hak Aan) are of frequent recurrence, and he was probably the founder of the ancient sanctuary, of which but few traces now remain. Every vestige of that edifice, as well as of the Jewish temple, which was built after the model of the Temple of Solomon, and tended materially to widen the breach between the Syrian and Egyptian Jews, had long been lost, when, in 1871, Brugsch found under the rubbish here some massive substructions of Oriental alabaster, and a number of interesting mosaic tiles with which the walls had once been overlaid, and on which were not only rosettes and decorative figures, but representations of battles and sacrificial and other scenes. The well-known Oriental type of head, so characteristically drawn by the Egyptian artists, was found to recur very frequently. Cartouches of Ramesses III. in fayence and his easily recognised portrait in alabaster were also found at different places. The most valuable of are now exhibited in the museum of Bulak. A walk to this spot is pleasant, and the hills command a picturesque view, especially by evening light, but of the ruins themselves there is very little now to be seen.

Next stations (31½ M.) Inshat, and (39 M.) Belbes, which is supposed to be the ancient Pharbaethus. The town was formerly a place of some importance from its situation at the junction of most of the routes leading from Cairo to the East. The railway now approaches the Fresh Water Canal, which was probably constructed by the early Pharaohs, and certainly existed in the 14th cent. B.C., but afterwards fell to decay and was not again utilised until the construction of the modern canal.

Near Zakazik were the sources of those streams which intersected the land of Goshen, rendering it famous for its productiveness; they then fell into the Bitter Lakes, which were connected with the Red Sea by means of an artificial canal. "Now another canal," says Strabo, "falls into the Red Sea and the Arabian Gulf near the town of Arsinoë, which some call Kleopatra. It also flows through the so-called Bitter Lakes, which were formerly bitter. But when the canal was constructed they changed their character through the blending of the waters, so that they are now well stocked with fish and frequented by water-fowl." The channel of the old canal, which was re-discovered by the French expedition of 1798, is still traceable at places, and its direction has frequently been followed by the engineers of M. de Lessseps. From the not inconsiderable remains of the old canal near Belbes, it appears to have been about 50 yds. (100 ells, according to Strabo) in width, and 16-17¼ ft. in depth. The somewhat steep banks are still strengthened at places with solid masonry. According to Herodotus the canal was four days' journey, and according to Pliny 62 Roman miles, in length. It certainly had a branch. towards the N.E., to Lake Timsah ("crocodile lake"), or it may have flowed entirely in that direction, and been continued thence to the Bitter Lakes. The name of Lake Timsah (p. 421), moreover, indicates that it must once have been connected with the Nile. In ancient times the canal was primarily constructed for purposes of navigation, and it is now used by numerous small barges which convey the produce of the Egyptian soil to Isma'iliya for exportation, and bring back cargoes of coal and imported wares in exchange; but the canal is now chiefly important as a channel for conducting fresh water to the towns on its banks, particularly Isma'iliya and Suez, and as a means of irrigating and fertilising the country through which it passes (comp. p. 416). Near Cairo the canal diverges from the Nile to the N. of the viceroyal palace Kafr en-Nil. The volume of water passing through it is regulated by locks, three between Neflisheh and Suez, and another of larger size at Suez itself. The surface of the canal is 54 ft., and the bottom 26 ft. in width, and it averages 7 ft. in depth. — The construction of a new and larger fresh water canal between Cairo and Isma'iliya was begun in 1876.

52 M. ZAKÂZÎK (halt of about one hour; good refreshment-room, with a civil Italian landlord, and tolerable quarters for the night; Arabian market every Tuesday). In the vicinity, near Tell Basta, lay the ancient Bubastis, or Bubastus (Egyptian Pi-bast; the Pibeseth of Ezekiel xxx. 17), the capital of the Bubastite nome (p. 91). ZAKÂZÎK, a thriving, semi-European town, lies on a branch of the fresh-water canal (see above) and on the Mu'izz Canal (the ancient Tanite arm of the Nile, p. 427). It is the capital of the E. province of Sherkiyeh and seat of a mudîr, and is said to contain about 40,000 inhabitants.

The situation of ZAKÂZÎK, in the midst of a fertile tract watered by several canals, and connected with the richest districts of the Delta, is extremely favourable, and it is a rapidly improving place. The soil here has been very carefully cultivated since the time of MOHammed 'Ali (1826), and ZAKÂZÎK forms the chief centre of the Egyptian cotton and grain trade. No less than 50,000 tons of cotton are said to be sold here annually. During the American war the production of cotton in this district was carried to such an extent as to threaten all other branches of agriculture with extinction, but a just equilibrium has fortunately been again restored. Many European merchants have offices here, and the large cotton-factories give the place an almost European appearance. ZAKÂZÎK is also important as a railway junction.

The ruins of the ancient Bubastis consist of large and dark mounds of debris, visible from the railway, and situated 2, M. from the station; but the place is uninteresting except to those who endeavour to identify these shapeless remains with the description given by Herodotus (ii. 137, 156) of the town and temple of the Egyptian Artemis (Sekhet, Bas or Pasht). The site was re-discovered by MALUS. Wherever an ancient Egyptian town has stood, there are always to be found mounds of earth, rubbish, and potsherds, which the Arabs call 'Kom'. These mounds here are of unusual height, recalling the account of the place given by Herodotus. He informs us that Sabaco, an Ethiopian monarch, who reigned for 50 years, never caused criminals to be executed, but sent them back to their native places for the purpose of heaping up rubbish to raise the height of the sites (which had already been done in the reign of Ramses II.). The town of Bubastis in particular, which contained the beautiful temple of Bubastis, seems to have been specially favoured in this respect, so that, if the story is true, the inhabitants must often have been getting into trouble. It is these mounds which are visible from the railway, but the 'notable temple', of which Herodotus says that 'there are many larger and more costly, but none equal to it for beauty of form', has entirely disappeared. It was situated on an island, which was connected with the mainland by one approach opposite the entrance to the temple, and formed by two moats conducted from the Nile. Each moat was 100 ft. in width, and bordered with trees. As the temple stands in the centre of the town', says Herodotus, 'it may be seen from every direction, and, as it remained unaltered when the site of the town was raised, the spectator overlooks it wherever he may happen to be. A wall with raised stone-work surrounds it, and another encloses both the temple, containing the image of the goddess, and a grove of trees of considerable height. The temple is a stamium in length, and the same in width. From its entrance runs a paved road, three stadia in length and 40 ft. in width, towards the E., across the market-place,
and straight to the temple of Hermes. On each side of it rise gigantic
trees. — The temple of Sekhet, the goddess revered here, was the most
important of the pilgrimage shrines in Lower Egypt; and the same joyous
and licentious festivals which were celebrated in honour of Hathor at
Dendera also took place here in presence of Bubastis, another form of
Isis and Hathor, with similar magnificence and riotousness. 'The young men
of Aven (or On, p. 320) and of Pibeseth shall fall by the sword', says
Ezekiel (xxx. 17), when speaking of their idolatrous practices. Bubastis
was the Aphrodite of foreigners, the golden Cypris, and also the Artemis
of the Greeks; under the name of Bast she was the Ashera, and under
that of Sekhet the Ashtaroth, of the Phœnicians (p. 134). The Upper
Egyptians celebrated their joyous festivals at Dendera during the first
half of the month corresponding to our October, and the Lower Egyp-
tians probably held theirs at the same season, and also about the period
of our Christmas, on the 16th Khoiak (Kiaḥk, or commonly Kiāk), the
'very auspicious' day dedicated to the goddess. Bubastis is represented
with the head of a lion or a cat (p. 134). The cat was sacred to her,
and, according to Herodotus, cats are said to have received honourable
burial at Bubastis.

'When the Egyptians travel to Bubastis', says Herodotus, 'they do so
in this manner. Men and women sail together, and in each boat there
are many persons of both sexes. Some of the women make a noise with
rattles, and some of the men blow pipes during the whole journey,
while the other men and women sing and clap their hands. If they
pass a town on the way, they lay to, and some of the women land and
shout and mock at the women of the place, while others dance and make
a disturbance. They do this at every town that lies on the Nile; and
when they arrive at Bubastis they begin the festival with great sacri-
fices, and on this occasion more wine is consumed than during the whole
of the rest of the year. All the people of both sexes, except the children,
make a pilgrimage thither, about 700,000 persons in all, as the Egyptians
assert.' — These ancient festivals are recalled to some extent by the
modern merry-makings at the fair of Tańa (p. 224).

On leaving Zakâzik the train runs round the town, into the
market of which we look down on the right. Immediately afterwards
the Manṣūra line diverges to the left (p. 427). The fertile tract
which we now traverse is part of the Goshen of the Bible. During
the Turkish régime it fell into a miserable condition, and at the be-
inning of the century afforded a very scanty subsistence to barely
4000 Arabs; but the cultivation was so rapidly improved by means of
the fresh-water canal that it now supports upwards of 12,000
prosperous farmers and peasants. The viceroy Sa'id Pasha ceded
this tract to the company of M. de Lesseps, but it was purchased
by his successor Isma'il Pasha for 10 million francs, erected into a
separate province, and garrisoned with cavalry.

The Goshen of the Bible (Egyptian Gosem) is frequently mentioned
by Moses. Thus, in the Book of Genesis (xlv. 10), Pharaoh says to Jo-
seph: — 'And thou shalt dwell in the land of Goshen, and thou shalt be
near unto me, thou, and thy children, and thy children's children, and
thy flocks, and thy herds, and all that thou hast'. Gen. xlv. 28, 29: —
'And he sent Judah before him unto Joseph, to direct his face unto
Goshen; and they came into the land of Goshen. And Joseph made
ready his chariot, and went up to meet Israel, his father, to Goshen, and
presented himself unto him'. Gen. xlvii. 5, 6: — 'And Pharaoh spake
unto Joseph, saying, Thy father and thy brethren are come unto thee.
The land of Egypt is before thee; in the best of the land make thy fa-
ther and thy brethren to dwell; in the land of Goshen let them dwell'.
Gen. xlvii. 27: — 'And Israel dwelt in the land of Egypt, in the country
of Goshen; and they had possessions therein, and grew, and multiplied
exceedingly'. In a later passage the sacred record mentions the cities in Goshen in which the Israelites were compelled to work at the tasks imposed on them by Pharaoh. Exodus i. 11:—'Therefore they did set over them taskmasters to afflict them with their burdens. And they built for Pharaoh treasure cities, Pithom and Raamses'. Lastly, the first camping-places of the retreating Israelites are enumerated in Numbers xxxii. 6. et seq.:—(1) Raamses, (2) Succoth, (3) Etham, and (4) Pi-hahiroth, 'which is before Baal-zephon: and they pitched before Migdol. Leaving Pi-hahiroth, they then 'passed through the midst of the sea into the wilderness'.

We thus find that the Bible mentions a considerable number of places belonging to Goshen, and as the sites of several of these have been identified with the aid of the Egyptian monuments, we are enabled approximately to determine the boundaries of the district, within which also lay Tell el-Yeḥudiyeh (p. 344), Belbēs (p. 395), and Bubastis (p. 396). That Goshen lay to the E. of the Delta there can be no doubt, as it was situated between the residence of the Pharaohs and Palestine, and the Scriptures make no mention of the Nile having been crossed. This province was afterwards called the Nomos Arabia, or Arabian nome, and the ancient Egyptian Gosem is spoken of as one of the E. districts of the empire. The name still survives in that of the town called Kūs by the Copts, and Fakūs by the Arabs (the ancient Phacusa; comp. p. 440).

The southernmost point of the triangle formed by the land of Goshen was probably Heliopolis (Matariyyeh), whence the district seems to have extended in a narrow strip as far as Belbēs. The S. boundary ran thence, in the latitude of the present Fresh Water Canal, as far as Lake Timsāh. On the W. the district was probably bounded by the Tanitic arm of the Nile, on the N. by Lake Menzaleh, and on the E. by a branch of the same, as well as by the Balah and Timsāh lakes, which in ancient times were connected by a line of fortifications, and formed a kind of moat behind the bastions erected for the purpose of warding off the attacks of the warlike tribes of W. Arabia. To the S. of the district of Goshen extended a desert tract intersected by ranges of hills, ramifying from the hills which bound the Arabian bank of the Nile. These hills generally run from W. to E., and attain their greatest height in the 'Alākā Mts., which command the N.W. shore of the Gulf of Suez. It is probable that the Jews, who settled in Goshen as shepherds, and afterwards appear as inhabitants of the towns in that region, were compelled to assist in the cultivation of the soil, which seems to have attained a high state of perfection at that period. Several records written on papyrus by Egyptian officials about that epoch are still preserved. They describe the charms of the country in the most vivid colours, stating that life there was 'sweet', and that the soil yielded all kinds of crops in abundance. In a papyrus preserved at Leyden the writer, Keniamen, writes the following report to his superior Hui, an important official under the Pharaoh of the oppression (Rameses II.):—'Therefore I heard the message of the eye (an official title) of my master, saying: Give corn to the Egyptian soldiers, and to the Hebrews who polish stones for the construction of the great store-houses (bekhennu) in the city of Ramses', etc.—The Israelites were doubtless also employed in the construction of the new canals which converted the sterile land into a smiling agricultural tract, affording abundant subsistence both to man and beast, so that it is not surprising that the emigrants fondly remembered the 'flesh-pots of Egypt'. Pithom, where the Israelites made bricks, probably lay, as mentioned below, near Abu Sulēmān, which is situated to the S. of the railway between Zaḳāzık and Tell el-Kebir, and near which there is a small lake. Farther on, near the ruin-covered hill of Biqābah, are several muddy ponds, which contain a considerable volume of water during the inundation, and are probably identical with the 'Barkabuta' (בָּרָכַבְתָּה), or ponds of Pithom, mentioned in a papyrus of Anastasi VI.†

† According to Brugsch, who relies on the geographical and topographical information afforded by the monuments, Pithom was situated in
Another scene of the forced Israelitish labour was Ramses, which has been identified by Lepsius with the ruins of Tell el-Maskhûta (see below), while Brugsch and others suppose it to have been Tanis-Zoan, the modern Sân (see remark, p. 441). The environs of these towns were richly cultivated, while another part of Goshen was, as at the present day, of a sterile character, and probably suitable for pasturage at certain seasons only. In this E. province of the empire the Egyptian element of the population preponderated in the towns only. On the coast were settled Phœnician colonists, and the desert tracts bounding and extending into the cultivated land were occupied by Beduins, living in tents, as at the present day; while the marshes in the region around Lake Menzaleh were peopled by cowherds, as to whose Semitic origin the monuments afford conclusive evidence. The higher culture of the Egyptians would doubtless in many cases influence and attract these strangers, but the constant influx of immigrants from the vast neighbouring Semitic countries of Asia would on the other hand seriously impede the progress of civilisation in this part of the empire. Down to the present day the character of the population of the N. and E. parts of the land of Goshen has remained nearly the same as in ancient times. The European merchants represent the ancient Phœnicians, the Beduins who haunt the sterile regions are the wandering Semites of antiquity, and the peculiar inhabitants of the Menzaleh region (p. 440) are similar to the primitive pastoral population.

Beyond (62½ M.) stat. Abu Hammûd, on the left, begins the Arabian desert, which is here an undulating sandy plain with scanty desert vegetation. It is intersected in an easterly direction by the fertile Wâdi Tâmûlât and the fresh-water canal, which present a striking contrast to their surroundings. On the right, beyond the canal, stretches a beautiful green tract of country, beyond which rise the hills of the desert.

69 M. Stat. Tell el-Kebîr, an insignificant place, lays claim to the honour of occupying the site of the Pithom of the Bible; but that city must have lain more to the S.W., on the site of the present Tell Abu Sulâmûn (see above). Beyond Tell el-Kebîr a tower and a palace come in sight.

82½ M. Stat. Mahsameh possesses the remains of a monument which probably belonged to one of the cities of Ramses where the Israelites made bricks for Pharaoh. We next pass the small station of Ramses, which is chiefly used for the traffic connected with the construction of the new fresh-water canal (p. 395).

Near the fresh-water canal is situated the ruin-covered Tell el-Maskhûta, the debris of which is not worth visiting. It possesses, however
a large and interesting block of granite, on the front of which is a representation of Ramses II., enthroned between the gods Ra and Tum. The figures were once elaborately executed, but have suffered much from exposure to the air, particularly the heads. On the back of the monument the name of Ramses is inscribed six times. Lepsius is probably right in identifying this spot with the Ramses of the Bible, and his opinion is corroborated by the existence of huge bricks of Nile mud in the enclosing wall of the buried city, which still contain an admixture of chopped straw, recalling the sacred narrative (Exodus, i. 13, 14): — 'And the Egyptians made the children of Israel to serve with rigour: And they made their lives bitter with hard bondage, in mortar, and in brick, and in all manner of service in the field'. — 'And (Exodus, v. 6, 7) Pharaoh commanded the same day the taskmasters of the people, and their officers, saying, Ye shall no more give the people straw to make brick, as heretofore; let them go and gather straw for themselves'.

Beyond this point the train runs through an entirely desert track, passes the small junction of Nefisheh, and reaches —

99½ M. Stat. Isma'iliya (p. 421), where the blue Lake Tim- säh (p. 421) presents a beautiful and striking contrast to the desert just traversed, especially if some large sea-going steamer happens to be passing, with its masts overtopping the low houses of the town. Isma'iliya is a terminal station. To the right of the station lies the Arabian quarter of the town.

The Suez train returns by the same line of rails to stat. Nefisheh (good refreshment-room, embellished with antlers, stuffed birds, and other curiosities), and then turns to the S. (left). On the right we observe a large nursery for trees, the property of the Khedive's mother. The train traverses the desert, frequently skirting the fresh-water canal, which it crosses immediately beyond Nefisheh. This canal runs between the railway and the great Suez Canal, and is navigated by a few small craft only. The Suez Canal, connecting the Mediterranean and the Red Sea, and traversed by large sea-going steamers, and the extensive Bitter Lakes lie on our left (comp. p. 420). Towards the S.W. rises the Gebel Genéffeh, or Gebel Ahmed Daher, with its productive quarries, which yielded material for the construction of the canal. Beyond (108 M.) stat. Serapeum (p. 420) we obtain a fine view of the bluish green Bitter Lakes (p. 420) on the left. Farther on, the heights of the Gebel 'Uwābid rise on the right. The next station is (118 M.) Fāyid. Near (127 M.) stat. Genéffeh we reach the S. end of the Bitter Lakes. On the left again stretches a vast sandy plain. On the right, above the lower hills, tower the dark masses of the 'Atāka Mts. (p. 401), the outlines of which stand out very prominently by evening light.

Near (141½ M.) stat. Shatūf (p. 419) the canal is visible for a short time. Then (153 M.) Suez (see p. 401).

On arriving at the busy station, the traveller is usually beset by a number of cicerones who speak broken English, French, and other languages.

Hotels. Hôtel Suez (Plate 9), situated on the coast, at a considerable distance from the station, is a first-class house, fitted up in the English style, and kept by a German; board and lodging 16s. per day (less if a prolonged stay is made). There are two scales of charges: (1st breakfast 4, tiffin 4, dinner 6s.; (2nd) 2, 2, and 4s. respectively. Bottle of ale or porter 1s. 6d. The servants are Indians — quiet, attentive people, with delicate features and of slender build. English Church service on Sundays. The shady court of the hotel affords a pleasant lounge. Newspapers for the use of visitors. — Hôtel d'Orient, in the Rue de Colmar, the principal street, ¼ M. from the station; pension, with wine, 10 fr. per day; unpretending, but tolerable. — There are also several disreputable looking cafes and beer-houses.

Post and Telegraph Offices (Egyptian) at the station.

Consuls. British, Mr. West; German, Hr. Meyer; French, M. Eynaud; Austrian, Hr. Remy Bergenowich; Russian and Spanish, Señor Costa.

Disposition of Time. If the weather is calm, the harbour and entrance to the canal may be visited by small boat. Calm weather is also very desirable for the excursion by land to the Springs of Moses (p. 406), as the driving sand is excessively disagreeable in a high wind. The beautiful clearness of the green water, with its curious shells and seaweed, and the almost invariable beauty of the sunsets render a boating excursion here usually attractive. The situation of the sandbanks and of the navigable channel is of course best inspected at low tide.

A charge of 6-8s. is usually made for a rowing-boat for half-a-day. The boatmen are apt to be extortionate in their demands, as travellers on their way to or from India, and making a short stay only, are often too lavish in their payments. In fine weather a day may be pleasantly spent as follows. Row early in the morning down the gulf to the mouth of the canal, ascend the canal for a short distance, and land at the usual starting-point for the Springs of Moses. Donkey (which is brought in the boat from Suez) 3-6 fr. for the day. We now traverse the desert, which extends down to the sea-shore, to the (2 hrs.) Springs, where luncheon (brought from Suez) may be taken. An hour or more may be spent here in resting or looking for shells on the shore, after which we regain the boat in 2 hrs. more. We next row (again taking the donkey with us) to the quays, land there, and dismiss the boat. Re-mounting the donkey, we ascend to the docks, inspect them, at our leisure, and then return to the hotel. The whole excursion, occupying about 8 hrs., may be accomplished without much fatigue. If the wind is favourable, the traveller may sail as far as the so-called caravan landing-place (comp. Map, p. 406), whence the Springs are reached in half-an-hour; but the charge for the boat is then higher, and if the wind is favourable in one direction, it is adverse in the other, so that nothing is to be gained by this arrangement, unless donkeys are altogether dispensed with. In stormy weather, the pier and docks only can be visited, comfort, as the waves render the boating tedious, and the driving sand makes the ride through the desert very unpleasant.

The Atâka Mountains (p. 405) may be ascended on the S.W side, but not without great difficulty, as the rocks are bare and precipitous, and competent guides are not procurable. The view, according to Fraas, is most beautiful and interesting, as the whole of the isthmus and the canal lie at the spectator's feet like a vast map.

Natural History of the Red Sea (by Dr. C. B. Klunzinger). Among the numerous natural products of the Red Sea, which is of a tropical character, with a fauna almost entirely different from that of the Mediterranean, we need only mention those of commercial value and those frequently offered for sale to travellers as curiosities. The prices demanded are usually exorbitant, but may be reduced by bargaining.

RED SEA
The Mother-of-Pearl Shells (sadaf) of the Red Sea form an important article of commerce, but, owing to the undue extent to which the fishery has recently been carried, the yield has greatly fallen off. The Beduins of the coast, who train slaves as divers, carry on the fishery during the summer. The price of the shells averages 12-15 piastres tariff per okka (2½ lbs.), varying according to the size. The largest of the shells, the rarely more than two pounds in weight, and the finest are apt to be perforated by worms, in which case they are valueless. The principal mart on the Red Sea for mother-of-pearl and pearls is Jeddah (p. 410), the seaport of Mecca. Pearls may sometimes be purchased direct from the Beduins or their slaves, but they ask more than the pearls are worth in Europe, 4-5 fr. being often demanded for one of small size. The small discoloured pearls, though valueless, are also frequently offered for sale. The Arabs grind them down, and prepare an eye-salve from the powder.

Another common bivalve is the busr (Tridacna gigas), a huge kind of clam-shell. The indigestible flesh, called ‘surumbâk’, is dried and sold in the markets as an article of food. This shell also yields pearls, but they are dull and worthless.

Among the univalves the most important is the Bûk, a kind of whelk, which the ḥāwi, or conjurer at fairs, uses as a horn. Large and unstained specimens are rare, costing 2-4 fr. each. Other large varieties of the same species are of less value. A very common shell-fish is the large gemel or abu sab‘âa (Pteroceras lambis), which has six long finger-like projections; its flesh is also dried and sold a surumbâk (see above). The divers frequently bring up specimens of the large mahâ (Cassis cornuta), which is of a stone-grey colour externally, and covered with a thick yellow substance at the mouth, in which cameos may be cut. The wadâ‘a, or cowry, or ‘porcelain shell’ as it is sometimes called (Cypraea), and the morsâ‘a, or cone-shell (Conus), are very abundant and rarely worth more than a few paras each. A small white cowry is used in the ‘troll-madam’ game. A small black-and-yellow striped cowry (Columbella mendicaria), known as the sâlîm, is sometimes exported to the Sûdân, where it is used instead of small coin. The glossy mosmâ‘ (Nerita polita), which is often found on the sea-shore, is sometimes used for the same purpose. One of the prettiest shells of the Red Sea is the abundant small pink wârdân or sîlesîfu (Monodonta Pharaonis) with its black and white knobs. Among other shells frequently offered for sale are the Murex, with its long spines, the gibrîn (Oliva), the long conical mirwad, or screw shell (Terebra), the large and thin Doliïum, and the small Haliotis, or ear-shell. The neḥé‘d, or top shell (Trocucus), and the sâr‘a (Turbo) are sometimes polished with muriatic acid so as to resemble mother-of-pearl, and are used for ornamental purposes. Black coral, or yusr, which realises a high price, is used for the manufacture of rosaries, pipe mouthpieces, and ornaments. The purple dem el akhuâ‘n, or organ coral, is sometimes used as a dye, and the blocks of the porous coral (Porites) for building purposes. Other kinds of coral, or stony zoophytes, known as sha‘ab, bleached perfectly white, are frequently seen in the shops. They sometimes resemble roses, trees, leaves, and bulbous growths. The traveller should, if possible, make a point of seeing the Subaqueous Coral Formations, which resemble a scene from fairyland. A boat is taken in calm weather as far as the slope of the coral reef of Sha‘ab which skirts the shore. The coral in the immediate vicinity of Suez is not so fine as some of the formations a little farther off. Those who are interested in marine zoology should walk along the cliffs at low tide, when they will find thousands of curious shell-fish and zoophytes in the pools, under the stones, and on the beach. They may also amuse themselves by gathering edible mussels, limpets, and sea-urchins, and watch the eccentric movements of the crabs. A visit to the Fish-Market is also recommended, where the curious and brightly coloured members of the finny tribe are seen to far better advantage than in a museum. The singular looking ball-fish (p. 84) is often stuffed and offered for sale. A large crab, known as the bint umm er-rubbân, which is caught on the shore by moonlight without difficulty, is esteemed a
404 Route 6. SUEZ.

delicacy. The tortoise-shell yielded by the loggerhead turtle, and the thick skin of the gild, or dugong (Halicore elitacea), form considerable articles of commerce. According to some authorities the Jewish ark of the covenant was covered with dugong leather.

History of Suez. Little is known regarding the ancient history of Suez. A town mentioned for the first time by Lucian under the name of Klysma, or Kleisma, seems to have occupied this site at a very early period. It was a fortified place, and the special task of the garrison was to protect and maintain the old isthmus-canal completed by Darius (p. 414). Ptolemæus calls the place Clyisma Præsidium, but places it much farther to the S. During the supremacy of the Arabians, who reopened the old canal for a short time (p. 415), the town was named Kolzum or Kolzim. After the 8th cent. it seems to have sunk into insignificance, but it is mentioned by Abdulfida as the starting-point for Tur (p. 505). — The chief historical interest attaching to the place lies in the fact that it is usually supposed to be close to the point where the Israelites crossed the Red Sea (comp. pp. 406, 474).

Suez, a town with about 14,000 inhab., lies at the head of the gulf of that name, one of the N. extremities of the Red Sea, and to the S.W. of the mouth of the Suez Canal. On the W. it is commanded by the picturesque blue heights of the Atâka Mts., and on the E. by hills belonging to the Asiatic coast range. Before the construction of the great work of M. de Lesseps, Suez was a miserable Arabian village, with 1500 inhab. at most.

'The place', says Dr. Schweinfurth in 1864, 'still consists of confused groups of miserable mud hovels, and ruinous, half-European buildings of lath and plaster. On the quay rises the one-storied block of the English hotel, in front of which are the iron railway shed, a few warehouses, and the consulates of the western powers. Such is the poverty-stricken appearance of the town, where moreover a deathlike stillness prevails, notwithstanding the fact that three different quarters of the globe join hands over its walls. Not a tree, not a spring, not even the meagre saltwort, or a trace of vegetation of any kind, is to be seen on the extensive and flat coast or anywhere in the environs of the town. The blue of the sky and the sea, where half-a-dozen steamers and a few sailing vessels are lying at anchor, affords the only relief to the eye of the spectator.'

To this day the town presents a very dreary appearance, and its trade has again greatly fallen off, the stimulus given to it by the opening of the canal and the large docks having apparently been transient. Neither the Arabian quarter with its seven insignificant mosques, nor the streets of the European quarter, which contain several buildings and warehouses of considerable size, present any attraction. The Arabian bazaar is unimportant, but at the entrance to it are stalls of beautiful shells and coral from the Red Sea, for which exorbitant prices are asked (comp. p. 403). Near the Suez Hotel are several stalls where Chinese articles are sold. On a mound of debris to the N. of the town, not far from the station and the magazines of the familiar 'Peninsular and Oriental Steam Navigation Company', is situated a kiosque of the Khedive, which commands a fine view of the mountains of the peninsula of Sinai, the sea, the harbour, and the town. The hill is called by the Arabs Kom el-Olzum, and was probably the site of the ancient Kolzum (Clysma, see above).
A little farther to the N. is the mouth of the Fresh Water Canal (p. 395), the flow of which into the conduits, as well as its discharge into the sea, is regulated by means of a large lock. The level of the canal is here 61½ ft. above that of the Red Sea. The large buildings to the N. of it are the English Naval Hospital and the engine-house of the 'Compagnie des Eaux.' To the E. of the canal is the large camping-ground for the caravans coming from Arabia, which sometimes number as many as a thousand camels and present a most interesting sight. On the way from the kiosque of the Khedive to the canal are a number of salt pools, sometimes tinged red by innumerable microscopically small crabs, which, in the morning especially, diffuse an odour resembling that of violets. The small neighbouring eminence is called the Beduins' Hill. Opposite, to the E., beyond the railway, is the Arabian sailors' quarter, consisting of dirty mud-hovels.

A massive *Pier, about 13/4 M. in length, resting on a substructure of artificial stone, 48 ft. in width, extends into the sea to the S. of the town, leading to the *Harbour. (Boat thither, see p. 401.) The foundation of the pier and of the whole of the quays rests upon a sandbank stretching out from the land in the shape of a hook, and heightened by the addition of large quantities of earth dredged from the S. end of the canal. The deposits of earth thus made also enabled the canal company to embank an area of about 50 acres, on which the arsenal, magazines, workshops, and buildings connected with the docks were erected. The pier affords a pleasant and interesting promenade (donkey 1-2 fr., according to the time), commanding beautiful views of the bay and the mountains enclosing it. At low tide the outline of the sandbank is distinctly traceable.

'The 'Atâka Mts. to the W. of the town looked as if composed of a liquid mixture of molten garnets and amethysts. They were reflected in the water at their base, the ebb of which gradually disclosed more and more of the ramparts and buildings around the harbour and the entrance to the canal. The lofty pier, carrying the railway from the anchorage of the large vessels to the town, overtopped all the other buildings, the sandbanks, and the deep pools left isolated by the retiring tide. Men riding on donkeys and camels were passing along the pier, and the lower the sun sank, the sharper did their outlines become against the glowing horizon, until at length they looked like black shadows on a transparent golden yellow and violet wall of glass. At length the darkness closed in, and the roads were shrouded in night.'

At the end of the pier we first reach a small dock of the Canal Company on the left, with a lighthouse (white light), beyond which

† Before the construction of the canal the inhabitants of Suez derived a supply of bad water from the Springs of Moses, which was brought to the town by camels and donkeys; and they were afterwards supplied with Nile water by railway, at a cost of 1½ centimes per quart. 'What a notable day (29th Dec., 1863) was it then in the town's history when the fresh-water canal was opened, and the life-giving element flowed from the desert into the town in exhaustless abundance! It seemed like a repetition of one of the miracles of Moses.' H. Stephan.
is the Waghorn Quay, bearing a Statue of Lieutenant Waghorn, an enterprising Englishman, who after having spent the best years of his life in establishing regular communication between England and India via Egypt, died in London in poverty in 1850. M. de Lesseps has placed a French inscription to his memory on the W. side of the monument.

The large basin farther S., which has been named Port Ibrâhîm, and is capable of containing 500 vessels of the largest size, is divided by massive bulwarks into two parts, one for vessels of war, and the other for the mail steamers and trading vessels.

The mouth of the dock is protected by gates. The masonry is everywhere admirably constructed, particularly that of the massive breakwater outside the docks. The dry dock is 123 yds. long, 25 yds. wide, and 29 ft. in depth.

On the E. side of these docks are stakes indicating the entrance to the Suez Canal (p. 419), which is at a considerable distance from the N. extremity of the gulf. (Small boat, see p. 401.)

The Springs of Moses, Arabic ʿĀin (pl. ʿAyûn) Mûsa, lie on the E. side of the gulf, about 7½ M. to the S.S.E. of Suez, or 4½ M. from the new docks. (Boats and donkeys, see p. 401.) The whole of the route thither by land traverses the sand of the desert, skirting the sea, which lies to the right. Towards the W. tower the imposing ʿAtâka Mts. (p. 401), which present a most picturesque appearance on the return route. To the left rise the yellowish ranges of the Gebel er-Râha, belonging to the long chain of the Gebel et-Tîh, and facing the S.E. We are now traversing Asiatic soil, while at the same time the eye ranges over part of the African continent.

'At this point, as at the Hellespont, two different quarters of the globe adjoin each other; but, instead of Europe, we here have the greater continent of Africa lying to the W. of Asia. The meeting of these two neighbours here, however, is of a very different character. While Europe and Asia salute each other across the Bosphorus and Hellespont, adorned with verdant robes and crowned with laurel, as if about to vie with each other in a peaceful contest of song, Asia and Africa seem to scowl at each other across the Red Sea like wrestlers who have divested themselves of their garments and are on the point of entering the lists to fight a fierce battle for the sovereignty of the world. On the African side the 'Ataka Mts. present a bold and menacing appearance, while the dreary desert of Asia, situated among the Gebel er-Râha, bids defiance to its loftier adversary'. (Schubert.)

Those who make the excursion by water need hardly be reminded of the profound historical interest attaching to this part of the Red Sea.

'This is the scene of Pharaoh's attempted passage, and these waves were once ploughed by the ships of King Hiram and King Solomon, which every three years brought gold from Ophir, and ivory, ebony, and incense, to the harbours of Elath and Ezion-Geber. Here, too, once plied the light Moorish vessels mentioned in the Old Testament, and similar to the craft now used by the Indo-Arabians. From this point the Phoenician mariners employed by King Necho began their famous circumnavigation of Africa about the year B.C. 600, and at a later period enter-
prising Greek sailors set forth to solve the great geographical problem of the ancient Hellenic world regarding the true character and situation of India. The Red Sea was also navigated by the merchantmen of the Ptolemies and the Romans, who by this route imported precious stuffs from India and spices from Arabia — the robes and pearls which decked Cleopatra, and the frankincense which perfumed the halls of the Palatine. The waves of this sea, moreover, wash the shores of places deemed sacred by two different religions, viz. Mt. Sinai, and Jedda, the seaport of Mecca. (Stephan.)

With regard to the Exodus of the Israelites and their passage of the Red Sea, see p. 472. If the Red Sea is really meant, and not the Sirbonic Lake, as supposed by Brugsch, the scene of the passage was most probably near the modern Suez.

'Ain Mûsa is an oasis, the property of M. Costa (p. 401), about five furlongs in circumference, and watered by several springs. The traveller will easily find a pleasant resting-place for luncheon. The vegetation here is very luxuriant. Lofty date-palms and wild palm saplings, tamarisks, and acacias thrive in abundance; and vegetables are successfully cultivated by the Arabs who live in the mud hovels near the springs, and who expect a bakhshish from visitors. Their gardens are enclosed by opuntia hedges and palings, at the entrances to which the traveller is beset by barking dogs. The springs, situated in the midst of these gardens, consist of several turbid pools of brackish water. The largest of them, enclosed by an old wall, is said to have been the spring called forth from the rock by the rod of Moses, or the bitter waters which the prophet sweetened by casting a certain tree into them. The scene of these miracles, however, must have been a considerable distance to the S. of this point; but this oasis may have been the spot where Moses and the Israelites sang their beautiful song of praise, recorded in Exodus, xv.

'I will sing unto the Lord, for he hath triumphed gloriously: the horse and his rider hath he thrown into the sea. The Lord is my strength and song, and he is become my salvation: he is my God, and I will prepare him an habitation; my father's God, and I will exalt him. The Lord is a man of war: the Lord is his name. Pharaoh's chariots and his host hath he cast into the sea: his chosen captains also are drowned in the Red sea. The depths have covered them: they sank into the bottom as a stone. Thy right hand, O Lord, is become glorious in power: thy right hand, O Lord, hath dashed in pieces the enemy. And in the greatness of thine excellency thou hast overthrown them that rose up against thee: thou sentest forth thy wrath, which consumed them as stubble. And with the blast of thy nostrils the waters were gathered together, the floods stood upright as an heap, and the depths were congealed in the heart of the sea. The enemy said, I will pursue, I will overtake, I will divide the spoil; my lust shall be satisfied upon them; I will draw my sword, my hand shall destroy them. Thou didst blow with thy wind, the sea covered them: they sank as lead in the mighty waters'.

The oasis is also interesting in a geological point of view, particularly on account of the formation of a number of springs, which lie in funnel-shaped cavities at the top of isolated mounds, 4-6 ft. in height. These springs have been described by Fraas, the geologist, whose account will be best appreciated by the traveller if
he visits the mound marked by a solitary palm, about 10 min. to the S.E. of the gardens (view).

'The temperature and character of these springs vary. They range from 70° to 84° Fahr.; and while some of them are quite drinkable and but slightly brackish, others are very bitter and nauseous to the taste. The springs rise in the midst of gardens, where the natural hillocks have been levelled, in funnel-shaped basins, within which the water wells up from numerous small holes; and every new hole the visitor makes with his stick becomes the source of a new spring. The natural condition of the springs, however, is more satisfactorily observed in the desert, outside of the opuntia enclosure. About a thousand paces to the E. of the oasis stands a solitary palm, at the foot of a hillock rising about 16 ft. above the level of the plain. On the top of this hillock is a pool, 4 ft. in diameter and 1½ ft. in depth. The water, 70° in temperature, is very salt and bitter, and the bottom of the pool is covered with inky-black mud. The discharge of the spring forms a stream 3-4 inches in width, which, however, is soon swallowed up by the desert sand at the foot of the hill. Numerous water-beetles, which clung to the hand when touched, the Melania fascioluta Oliv. which seemed to luxuriate in the tepid water, and, as I was much pleased to see, myriads of transparent water-flies (Cypris delecta Müll.) disported themselves in the basin. In the hollow of my hand I caught dozens of them, which swam about for a time with their fringed feelers, and at length got ashore. I next observed in the mud the innumerable transparent scales of dead insects, and I at length discovered that the rock enclosing the hill was entirely composed of Cypris skins. It was now obvious that the Cyprides had built the hill. Millions of these little insects had in the course of ages cemented with their calcareous integuments the sand through which the springs rise, thus at length forming a kind of wall around it; and when the surface was in this way raised beyond the height to which the pressure of the water forced the springs, some of them were entirely shut off and compelled to seek some other outlet. . . . The pressure of the water evidently comes from the Rábah Mts., although they are 10-14 miles distant. . . . Had it not been for this organic life, and particularly that of the Cyprides, which gradually walled in the channels of the springs with their remains, so that the surface of the water is at some places 40-50 ft. above the level of the desert, and 100 ft. above the level of the sea, these waters would simply have been lost among the sands of the desert.' (O. Praas.)

Conchologists (p. 401) will find a number of interesting shells on the beach at low tide, but the best places are farther S.

Unless the traveller is bound for Mt. Sinai, he will probably not extend his journey farther in this direction. To some of our readers, however, the following brief description of the Red Sea and its shores will not be unacceptable.

The Red Sea and its Coasts (by Dr. C. B. Klunzinger; comp. Map, p. 30). The Red Sea, Arab. El-Bahr el-Åhmar, or Bahr el-Hejâd, the ancient Sinus Arabicus, is an arm of the sea extending from the Indian Ocean towards the N.W., between Arabia and Africa, to a distance of 1400 miles. It is entered at the S. extremity by the Bab el-Mandab, a strait 18 M. only in width. At the broadest part (in 16° N. lat.) it is 221 miles in width. Towards the N. end it gradually contracts, and at length divides into two arms, the Gulf of 'Akaba (Sinus Ætnites), and the Gulf of Suez (Sinus Heroopolites; Arab. Bahr Sues, or Bahr Kolzum, so called after the ancient Kyana). The sea averages 400-600, and is at places 1000 fathoms in depth, but the shores are flanked with a network of subterranean coral reefs and islands, which often extend a long way from the coast. These reefs render the navigation of this sea very dangerous, particularly at the narrower parts of it, the most dreaded point being the so-called Bahr Far'ân (p. 477), near Tûr. The course of the
large steamers is in the middle of the sea, which is free from these reefs, but the smaller Arabian vessels always steer close to the shore, with the configuration of which their captains are well acquainted, in order that they may run into one of its numerous creeks (shehrn) on the slightest threatening of bad weather. The Arabs adopt the cautious policy of never sailing at night or in stormy weather, unless compelled; and when they are obliged to cross the sea, they always wait for settled weather. In spite of the miserable construction of their vessels, shipwrecks are accordingly of rare occurrence.

No rivers fall into the Red Sea, but a number of intermittent rain-torrents descend from its banks. The water is of a beautiful blue colour, changing to pale green where there are shoals or reefs near the surface. No satisfactory reason for the modern name of the sea has yet been given. The difference between high and low tide is 3½ feet. The prevalent wind in the N. part of the sea, particularly in summer, is the N. wind, and in the S. part the S.E. wind in winter, and the N.W. in summer. The sea is therefore unsuitable for large sailing vessels, which, when bound for India, always sail round the Cape of Good Hope.

The coasts of the Red Sea consist of barren rock or sand, and are almost entirely uninhabited. A little way inland the mountains rise to a height of 4000-7600 feet. So far back as the time of Solomon the navigation of the Red Sea was of considerable importance, and several of the seaports, such as Berenike and Myos Hormos, were celebrated. Since the opening of the Suez Canal the sea has been regularly traversed by the Indian steamers, which run direct from Suez to Aden. The traffic between the different places on the coast is carried on by means of the Arabian coasting vessels (katera. barge; sambak, vessel of medium size with a short cutwater; baghleb, the same, without cutwater; dau, or dow, a vessel of considerable size with a prodigious development of stern; rangeb, the same, with a long cutwater). Regular communication between some of the more important places is also kept up by Egyptian steamers, which ply fortnightly between Suez, Jedda, Sauakin, and Musaua. Steamers of the Austrian Lloyd and others also ply between Suez and Jedda at the time of the Meccan pilgrimage.

African Coast. On this side of the Red Sea there is not a single place of consequence between Suez and Kosér. At Günsah, opposite Tûr, sulphur-mines were formerly worked, and it was then a place of some importance; but the mines have been abandoned, and the whole district is now inhabited by a few nomadic Beduins only.

Kosér (1200 inhab.) is the harbour of Upper Egypt, from which it is 4½ days' journey in a straight line. It was formerly one of the chief outlets for the products of Egypt, particularly grain, and was also the starting-point of numerous pilgrims, but since the opening of the Suez railway it has lost nearly all its importance. It was a place of no importance down to the first decade of the present century, when, under the auspices of Mohammed 'Ali, it increased to a town of 7000 inhabitants. It is now a neglected place, as all the pilgrims, except the poorest, now prefer the route by Suez. Even its grain trade, its only other resource, has greatly declined, as steamers now convey corn to the Hejaz at a cheaper rate than it can be obtained from Kosér. The steamers rarely touch here, and the traffic is carried on by native craft only, which ply almost exclusively to Jedda, Yenba', and Weijs.

Kosér is the residence of a governor, and possesses a quarantine establishment, a government corn magazine for the supply of the Hejaz (Dakhireh), and a telegraph office communicating with the valley of the Nile. The town is a well-built place, crowned with a citadel, which was erected by Sultan Selim in the 16th century and still contains a few cannon dating from the French period and a mortars with the inscription, 'L'an III de la Rép. francaise'. In the distant background rise picturesque mountains, culminating in Gebel Abu Tigyar and Abu Subata', 4200 ft. in height. The harbour is sheltered from the prevailing N. wind only. Drinking water has to be brought to the town in skins from the mountains, one day's journey distant.
About 5 M. to the N. is Old Koser, with the remains of the ancient Leukos Limen, a famous harbour in the time of the Ptolemies, but now blocked up with coral, and accessible to small boats only.

Between Koser and Ras Benas, where Berenike was situated, dwell the nomadic 'Ababdeh' (p. 45), and between the latter and Sauakin the 'Bisharin' (p. 46), both being tribes of a Nubian type.

Sauakin (10,000 inhab.), situated in a sterile region with a saline soil, possesses a good harbour. It belonged to the Turks down to 1865, when it was ceded to Egypt, and since that period it has rapidly improved. The principal part of the town lies on a small island, and there are also a number of substantial stone houses belonging to it on the mainland. Behind it extends the busy village of Gef, which is inhabited by the native Bisharin. About 1½ M. farther inland are the springs which supply the town with water and irrigate the gardens. The chief exports, besides products of the district, are cattle, hides, butter, indiarubber, tamarinds, and mother-of-pearl; while ivory, ostrich-feathers, and other commodities from the Sudan are brought to Sauakin via Kassala and Berber, and exported hence. Sauakin was formerly an important depot of the slave-trade, which is not yet entirely extinct. This seaport is a convenient starting-point for the exploration of the Sudan.

Masau'a (5000 inhab.), the seaport of Abyssinia, belonged to the Turks as early as 1557, and has recently been ceded to Egypt. Like Sauakin, it lies on an island, opposite to which, on the mainland, are situated the pleasant villages of Arkiko and Mokulla, with their country-houses and gardens. Masau'a carries on a brisk trade in commodities similar to those of Sauakin. The population consists of Ethiopians, Arabs, and a few Europeans. The climate is very hot, but not unhealthy.

Arabian Side. The seaports of the province of Yemen, on the E. side of the Red Sea, are Mokha, Hodeda, and Lohaya. Mokha has fallen entirely to decay, and Hodeda alone is visited once monthly by the steamers of the Austrian Lloyd. These places have long since been superseded by the English seaport of 'Aden.

The most important seaport on the Red Sea, a great focus of Oriental trade, and one of the wealthiest towns in the Turkish empire, is Jeddah, situated 46 M. to the W. of Meca, of which it is the port. Pilgrimages from every Mohammedan country converge here, and the merchants transact business with the devotees on their arrival and departure. The inhabitants trade with the interior of Arabia, with Egypt, E. Africa as far as Mozambique, Mesopotamia, Persia, India, and the Malay Islands. Jeddah is the chief market for pearls, mother-of-pearl, and black coral, and for the coffee, balsam, senna leaves, aromatic herbs, and horses and donkeys which Arabia produces. It is also a great depot of Oriental carpets, muslins, woollens and silk stuffs, spices, cocoa-nuts, essential oils, and other products which are exported to the western Mohammedan countries. The imports are corn, rice, butter, oil, and not unfrequently slaves. The covered bazaars and khans are therefore very interesting, and the markets are well supplied with fruit, which does not grow in the utterly sterile environs, but is imported from El-Yemen by water and still more extensively from Taff by land. The harbour lies at a considerable distance from the town, which can only be approached by small craft. Water for drinking is collected in cisterns. The houses are lofty and substantially built, and the town possesses handsome government buildings and a castle. Outside the walls the Muslims point out a stone structure, 120 yds. long and 6 yds. wide, as 'Eve's Tomb'. Over the 'holy navel' is placed a chapel, containing a hole in the interior through which the visitor can look down on the stone covering that part of the sacred remains. This spot is only one-third of the way from the feet to the head (59 yds.), so that the upper part of Eve's frame must have been disproportionately large. At the time of the Wahhabite wars the town was taken by the Egyptians, but has again belonged to the Turks since 1840. In 1858 a terrible massacre of the Christians took place here, on which occasion the French and English consuls were murdered, and the town was bombarded by the English in consequence.
Farther to the N. lies Yenba', the seaport of Medina, which lies about 92 M. to the E. of it. Yenba' el-Baḥr, situated on the coast, with about 2000 inhab. only, lies in a sterile region, while the larger town of Yenba' en-Nakhl, with about 5000 inhab., situated nearly a day's journey inland, is surrounded with palms and other vegetation. The chief exports are sheep, hides, honey, and dates. Steamers touch here at the season of the pilgrimage only. As Yenba' en-Nakhl is only nominally under the Turkish supremacy, Europeans cannot safely visit it except under the protection of one of the principal inhabitants of the place. Medina, like Mecca, is forbidden ground to Christians.

There are no harbours of note between this point and Suez, but El-Wejj, opposite Koşer, is an important quarantine station. Since the cholera was brought to Egypt by the Meccan pilgrims in 1865, the quarantine establishment here has been annually fitted up for a month and a half or two months, at the time of the return of the pilgrims after the Great Beirūm. Both the caravans travelling by land, and vessels of every nation from Arabian ports, must undergo quarantine here for five days, or for a longer period if the outbreak of an epidemic is apprehended. While the quarantine lasts, Wejj presents a very busy appearance. The great Mecca caravan, which travels via 'Akkaba, passes this way both in going and coming. The town itself has 600-800 inhab. only, a castle built by Sultan Sa'id, with a garrison of a few soldiers, a spring of fresh water, and, as the latter is insufficient during the quarantine season, a steam engine for the distillation of sea-water. — The N. part of the Arabian coast, as far as El-Wejj, is under the supremacy of Egypt.

7. From Suez to Port Sa'id. The Suez Canal.

Between Suez and Isma'ilīya there is no regular steamboat service on the Canal; but large steamers traverse it daily on their route to India and China, and in one of these a passage may generally be obtained by applying to the agent of the company, to whom an introduction may be obtained through the traveller's consul. The usual charge for the trip is 10 fr., besides which food must be paid for in accordance with the steward's tariff. The vessels of the Messageries Maritimes (p. 10), however, issue cabin tickets for the whole trip from Suez to Port Sa'id for 100 fr., including food and wine.

The S. part of the Canal, from Suez to Isma'ilīya, including the Bitter Lakes and the entrance to Lake Timsāḥ, is the more interesting. The steamers generally make a very short stay at Suez, where a small boat must be hired by the passenger who desires to land, but they halt at Port Sa'id for half-a-day or a whole day, and lay to at the quay, so that passengers can walk ashore. The passage from Suez to Port Sa'id occupies 16 hrs. (see below), but it now and then happens that vessels run aground, in which case part of the cargo has to be discharged, and a detention of several days takes place.

The deck of the large steamers affords a good survey of the surrounding country, but from the small steamboats which ply regularly between Isma'ilīya and Port Sa'id the passenger cannot see beyond the embankments of the Canal.

Railway from Suez to Isma'ilīya (a train 'starts every morning at 8 o'clock, arriving at 10.50), see p. 400. From Isma'ilīya to Port Sa'id a small Egyptian steamer runs every evening, starting at 5.30, after the arrival of the train from Cairo and Alexandria, and arriving at Port Sa'id about midnight (fare 24½ fr.). A small screw-steamer belonging to the Canal Company also runs every alternate day from Isma'ilīya to Port Sa'id (fare 19½ fr.; the additional 5 fr. charged by the other steamers are paid by them to the Canal Company as a tax). None of these steamers accommodate more than 20-25 passengers. A place on deck should be secured, if possible. The passage from Isma'ilīya to Kantara (p. 422), where a halt of 1½-3½ hr. is made for refreshments, occupies 2½ hrs., and
thence to Port Sa'id 3½ hrs., or about 6½ hrs. in all. As already mentioned, the large steamers take 16 hrs. to perform the passage between Suez and Port Sa'id, Isma'iliya being about half way. They are not allowed to steam at greater speed, as their wash would injure the embankments.

The Canal is 160 kilometres (100 M.) in length, and the E. bank is furnished with posts at intervals of 5 kilomètres. Near the stations, which generally consist of a few wooden huts only, are passing places for the large steamers, named 'Gare du Nord' and 'Gare du Sud' respectively. The Canal is about 26 ft. in depth, thus admitting vessels drawing 24-25 ft. of water. The surface varies in breadth from 65 to 120 yds., while the width of the bottom is about 24 yds. only. The dues amount to 10 fr. per ton, to which a farther sum of 3 fr. has recently been added, 10 fr. for each passenger, and 10-20 fr. for pilotage according to the tonnage of the vessel. The use of the Canal is open to vessels of all nationalities.

The **Isthmus of Suez**, a narrow neck of land which connects Africa with Asia, is at its narrowest part 70½ M. in width. On the S. side it is washed by the N. part of the **Gulf of Suez** (Arab. **Buhr Kolzum**, Greek **Hieroopolite Bay**), the western of the two arms of the Red Sea which separate Africa and Asia. The Isthmus is a low-lying tract of land, the S. part of which may be regarded as a kind of continuation of the gulf. About halfway across it rises an eminence about 50 ft. in height, called El-Gisr (the 'threshold', p. 422), and dividing it into two nearly equal parts. Within the S. half, and adjoining this barrier, lies Lake Timsâh, or the Crocodile Lake (p. 421), a little to the W. of which begins the Wâdî Tûmilât (p. 399), a transverse valley, traversed by the Fresh Water Canal, and now partially cultivated. Farther S. we come to a belt of sand-hills in the region known as the Serapeum (p. 420), about 10 M. in width, and beyond them to the Bitter Lakes (p. 420), consisting of a large and a smaller basin. Before the construction of the Canal the deepest part of these lakes, the bottom of which was covered with an incrustation of salt, was 24 ft. below the average level of the Red Sea. In 1856, before the water of the Mediterranean was introduced into the lakes, they covered an area of 14½ sq. miles. Between them and the Red Sea extends a desert tract, 12½ M. in width, and 2½ ft. only above the level of that sea. To the N. of the barrier of El-Gisr lies Lake Balah, or the Date Lake (p. 422), a little beyond which is Lake Menzaleh (p. 423), originally a shallow sheet of water, extending a long way to the W., as far as the Damietta arm of the Nile, and separated from the Mediterranean by a narrow strip of land only, in which there are now four openings. By the second opening from the E. the harbour of Port Sa'id has been constructed. The numerous ruins which have been discovered below the surface of this lake indicate that its site was once cultivated land, sprinkled with a number of towns (p. 423).

At a very remote period the Red Sea and the Mediterranean were probably connected, or at all events the former extended as far as Lake Timsâh, as fossil couchylia, particularly varieties of the
Spondylus, now occurring in the Red Sea, but not in the Mediterranean, have been found there. The isthmus, however, is undoubtedly of very ancient formation, having been as broad at the time of the journey of Herodotus (B. C. 454) as it is now. With regard to the formation of the isthmus we may quote the following passage from M. J. Schleiden:

'We suppose a strait substituted for the isthmus, it is not difficult to foresee what would happen. The waves of the Red Sea entering it at one end would soon choke it with sand, while the same result would be caused on the Mediterranean side by the prevalent N. and N.W. winds, the Etesian winds of antiquity. About halfway between the seas these different agents would come into collision, and throw up a bar of sand, the situation of which would naturally be a little to the N. of the central point, as the action of the waves on the S. side would be more regular than that of the wind on the N., and thus be generally able to penetrate farther. This bar would gradually be raised by the action of the waves, and that at an accelerating rate in proportion as its growth would present an obstacle to the motion of the water, until its level came to be above the level of low tide. The surface would then become dry by exposure to the air, and the loose sand, blown about by the winds, would form sand-hills of the kind found on every sea-shore. In this way the connection between the seas would at length be cut off, and the barrier of El-Gisr formed'.

The Isthmus of Suez has, from a very early period, formed an important highway between Asia and Africa. A considerable part of its area was occupied with lakes and swamps, while the higher points were fortified to prevent the passage of invaders. Near Pelusium, the 'Key of Egypt', at the E. extremity of the curve formed by the coast of the Delta, to the S.E. of Port Sa'id, were situated the passes by which the empire of the Pharaohs was entered. The high road from Asia skirted the coast of the Mediterranean, passing Rhinocolura (the modern El-'Arish, p. 466), traversed the neck of land separating the Sirbian Lake from the Mediterranean, and led by Casium (see below), with the temple of Jupiter Casius (the modern Râs el-Kasrîn†), and by the town of Gerrha‡, to Pelusium (p. 423), whence several roads diverged to the interior of the Delta. Three other roads, one from

† The agnomon of Casius is derived by Brugsch from the Semitic Egyptian word Hazi or Hazion, signifying the asylum, or land of the asylum, a name which applies admirably to a shrine situated on the extreme E. margin of the Egyptian frontier. He also identifies the Baal-Zephon of the Bible, which lay beside Pi-hahiroth (Exod. xiv. 9), with this hill and the shrine of Zeus Casius. The word Ba'al Zephon occurs in a papyrus in the British Museum in the form Baal Zepûnā, and is the Semitic equivalent ('lord of the north') of the Egyptian Ammon. Pi-hahiroth again literally means the 'entrance to the reed and papyrus swamps', by which was doubtless meant the Sirbian Lake, so that Pi-hahiroth itself probably lay at the W. end of the lake, at the entrance to the neck of land when approached from Egypt (p. 473).

‡ Gerrha (plur. of the Greek geryphon, a wall, or fortified place) is identified by Brugsch with Anbu (a word also signifying fortified place), which is mentioned as early as the 19th Dynasty. This place was called Shur ('wall') by the Hebrews (Gen. xvi. 7; xxv. 18; Exod. xv. 22; i Sam. xv. 7; xxvii. 8). The town lay a little to the S.W. of Pi-hahiroth, which is mentioned above.
Mt. Casius† leading to the E., the second from Gerra, and the third from Pelusium, converged in the middle of the isthmus (probably near the barrier of El-Gisr), joining the route leading thence past the Serapeum and the W. bank of the Bitter Lakes to the ancient Arsinoe, at the N. end of the Gulf of Suez. The Mediterranean was thus connected with the Red Sea by an overland route at a very early period. After the powerful monarchs of Thebes had expelled the Hyksos and subjugated a great part of the W. side of the continent of Asia, the coast districts of S. Arabia, and many islands and maritime towns of the Mediterranean, Seti I. and Ramses II. (p. 90), the great and warlike princes of the 19th Dynasty, became desirous of establishing communication by water between the Nile and the Red Sea in order that their navies and merchantmen might thus pass between the latter and the Mediterranean. This project was probably carried out as early as the reign of Seti I., as a representation of his time on the outer N. wall of the great banquet hall of Karnak (see vol. ii. of the Handbook), elucidated by inscriptions, informs us that, on his victorious return from Asia, Seti had to traverse a canal (ta tenat, or 'the cutting') swarming with crocodiles (so that it must have communicated with the Nile), and defended by bastions, the names of which distinctly indicate that it must have been situated on the frontier of the empire. The construction of the canal is, moreover, attributed by many ancient authors, including Herodotus, Aristotle, Strabo, and Pliny, to Sesostris (Seti I. and Ramses II.). The canal may possibly have led from Lake Timsâh to Pelusium, and thus have connected the two seas directly. Blocks bearing the names of Ramses I., Seti I., and Ramses II., found near Kanîâra (p. 423), seem to favour this conjecture. At a much later period, after Seti's canal had probably been obliterated owing to neglect, Pharaoh Neko (p. 92) undertook to construct a canal between the Nile and the Red Sea. The new canal quitted the Nile at Bubastis (p. 396), and entered the Arabian Gulf near the ancient Patumos. No fewer than 120,000 Egyptians perished while engaged in the work, and the king afterwards abandoned the work, as he was informed by the oracle that the barbarians alone would profit by the work. By the 'barbarians' were chiefly meant the Phoenicians, whose fleets at that time commanded both the Mediterranean and the Red Sea. The canal was probably completed, after the conquest of Egypt by the Persians, by Darius, the son of Hystaspes, the great organiser of the Persian empire, and not by Ptolemy Philadelphus, as stated by some authors. Numerous traces of the work, and fragments of monuments with inscriptions both in

† Brugsch mentions that another route traversed the desert of Shur (to the S. of the Sirbonic Lake) to the Gulf of Suez, but was little frequented, being described by Pliny as 'asperum montibus et inops aquarum' (mountainous and destitute of water).
the Persian and Egyptian character, have been found (p. 419). Under the Ptolemies the canal system was extended. While one arm led from Phakusa on the Nile to the lakes towards the S. of Pelusium, that is, direct to the Mediterranean through the connected lakes of Balah and Menzaleh, another branch was now constructed from Lake Balah to the Bitter Lakes, into which the fresh-water canal watering the scriptural land of Goshen also fell (p. 395). It was thus feasible in the time of the Ptolemies to travel by water from the Nile to the S. part and also to the N. part of a canal, which, like the modern Suez Canal, connected the Red Sea and the Mediterranean in a nearly direct line. When Antony returned to Egypt after the battle of Actium in B. C. 31, Cleopatra made an unsuccessful attempt to convey her ships across the Isthmus of Suez in order to escape with her treasures from Octavian. As, however, it is very improbable that she would have attempted to transport vessels of considerable size for so long a distance by land, there can be little doubt that the canal still existed in her time, although in a dilapidated and unserviceable condition.

The canal is said to have been restored during the Roman period. Another canal, beginning near Cairo, and terminating in the Gulf of Suez, the precise course of which, probably following the earlier channel, is nowhere described, is said to have been called the Amnis Trajanus, and was probably constructed during the reign of that emperor (A.D. 98-117). A canal of Hadrian is also mentioned. It is certain, however, that the chief mercantile route between the Red Sea and Italy did not follow the Nile and the canal thence to the Gulf of Suez. The Indian vessels of the Romans touched at Berenike, a little to the N. of the tropic of Cancer, and still more frequently at Leukos Limen, the modern Koseh, or at Myos Hormos in the latitude of Siut (Lykopolis) on the Red Sea. From these two last-named seaports, which were much frequented, especially in the month of September, goods were conveyed by the great caravan-route to Koptos on the Nile (near the modern Keneh), and were then transferred to boats which carried them down the Nile to Alexandria, where they were shipped for their ultimate destination. After the Arabs had conquered Egypt, they must have been desirous of connecting the Lower Egyptian part of the Nile as directly as possible with the Red Sea. 'Amr ibn el-'Asi (p. 101) accordingly restored the ancient canal (of which the Khalig at Cairo is said to be a portion), and used it for the transport of grain from Fostat (p. 239) to Kolzum (Suez), whence it was exported by the Red Sea to Arabia. The bed of the ancient canal is said to have been pointed out to 'Amr by a Copt, to whom a remission of the poll-tax was granted as a reward. The canal is said to have been filled up by the morbidly suspicious Khalif Al-Mausur ibn Mohammed (754-775), in order to cut off the supplies of the army of the rebel Mohammed ibn Abu Talib at Medina, but the truth of
this statement is questionable. It is at all events certain that the canal became unserviceable after the 8th century. At a later period the Venetians frequently thought of constructing a canal through the Isthmus with a view to recover the trade which they had lost owing to the discovery of the route round the Cape of Good Hope, and several travellers advocated the scheme; but no one seriously attempted to carry it out. Leibnitz, too, in his proposal regarding an expedition to Egypt, made in 1671 to Louis XIV., the greatest monarch of his age, strongly recommends the construction of such a canal.

'The lord of Egypt,' he says, 'is not only in a position to do great injury to the welfare of the world, as the Turks undoubtedly have done by the stoppage of trade; but he might, on the other hand, confer a great benefit on the human race by uniting the Red Sea with the Nile or with the Mediterranean by means of a canal, in the same way as France has merited the gratitude of Europe by the construction of a canal along the foot of the Pyrenees. The statement that the level of the Red Sea is higher than that of the Mediterranean (as Darius was assured) is a mere myth; and even if such were the case, the opening of such a canal would not expose Egypt to the danger of inundation'.

Sultán Muṣṭafa III., the admirer of Frederick the Great, 'Ali Bey, the enterprising Mameluke prince, and Buonaparte all revived the scheme, and the latter on his expedition to Egypt in 1798 (p. 106) even caused the preliminary works to be undertaken, but the actual execution of the project seemed almost as distant as ever. Lepère, his chief road engineer, and a man of great ability, surveyed the ground under the most unfavourable circumstances, and not without personal danger, but owing to a serious miscalculation he threw great doubt on the feasibility of the undertaking. While in reality the level of the two seas is nearly the same, Lepère estimated that of the Red Sea to be nearly 33 ft. higher than that of the Mediterranean. Laplace among others protested against the accuracy of this calculation, as being in defiance of all the laws of hydrostatics, but the supposed obstacle was sufficiently formidable to prevent any farther steps from being taken, although the scheme still had many supporters, until M. de Lesseps directed his attention to the matter. It was reserved for this shrewd and energetic Frenchman to carry out the task which had seemed impracticable to a series of wealthy and powerful princes. In 1831 he was sent from Tunis to Egypt as a young consular élève. At Alexandria, where he had to perform quarantine for a considerable time, he was supplied with books by M. Mimaut, the French consul. Among them was Lepère's Mémoire regarding the scheme of connecting the two seas, which led him to consider its great importance, although Lepère himself doubted its feasibility. In 1838 he made the acquaintance of Lieut. Waghorn, an Englishman (p. 406), whose zealous advocacy of the construction of a route between Europe and India via Egypt stimulated his zeal for a similar project. In 1841 and 1847 Linant Bey, the viceroy's engineer
of waterworks, and Messrs. Stephenson, Negrelli, and Bourdaloue, demonstrated the inaccuracy of Lepère's observations, and proved that the level of the two seas was nearly the same, so that the construction of a canal between them was possible. In 1854 M. de Lesseps, having matured his plan, laid it before Sa'id Pasha, who was then viceroy, and who determined to carry it out. Difficulties were thrown in the way of the enterprise by the English government during Lord Palmerston's ministry, but on 5th Jan. 1856 permission to begin the work was formally granted by the viceroy. A considerable time, however, elapsed before the necessary capital was raised, and it was not till 25th April 1858, that the work was actually begun. The viceroy undertook to pay many of the current expenses, and provided 25,000 workmen, who were to be paid and fed by the company at an inexpensive rate, and were to be relieved every three months. In order to provide these workmen with water, 4000 water-casks suitable for being carried by camels had to be constructed, and 1600 of these animals were daily employed in bringing them supplies, at a cost of 8000 fr. per day. On 29th Dec. 1863 the fresh-water canal (p. 395) was completed, so that the company was thenceforth relieved of the enormous expense of supplying the work-people with water. The hands now employed, among whom were a number of Europeans, were less numerous, and much of the work was done by machinery, of 22,000 horse-power in all.

On 18th March, 1869, the water of the Mediterranean was at length allowed to flow into the nearly dry, salt-encrusted basins of the Bitter Lakes, the N. parts of which lay 26-40 ft. below the level of the Mediterranean, while the S. parts required extensive dredging operations.

'The first encounter of the waters of the two seas was by no means of an amicable character; they met boisterously, and then recoiled from the attack; but soon, as if commanded by a 'quos ego' of Neptune, they peacefully mingled, and the ocean once more gained possession of the land which it had covered at a very remote period, but only on condition of rendering service to the traffic of the world.' (Stephan.)

The cost of constructing the canal amounted to about 19 million pounds sterling, of which 12,800,000 was paid by the shareholders, while the rest of the sum was almost entirely contributed by the Khedive. The capital was raised in the following manner: —

<table>

Besides the Canal the company also possesses considerable tracts of land.
The opening of the Suez Canal was inaugurated on 16th Nov. 1869, and the magnificent festivities which took place on the occasion are said to have cost the Khedive no less than 4,200,000£ sterling.

The great mercantile importance of the Canal is apparent from the following data. The distance from London to Bombay via the Cape of Good Hope is 12,548 English miles, and via the Suez Canal 7028 M. only. The saving thus effected is 44 per cent of the distance. From Hamburg to Bombay by the Cape 12,903 M.; by the Canal 7383; saving 39%. From Trieste to Bombay by the Cape 13,229 M.; by the Canal 4516 M.; saving 63%. From London to Hongkong by the Cape 15,229 M., by the Canal 8735 M.; saving 47%. From Marseilles to Bombay by the Cape 12,144 M., by the Canal 5022 M.; saving 59%. From Constantinople to Zanzibar by the Cape 10,271 M., by the Canal 4365 M.; saving 57%. From Rotterdam to the Sunda Strait by the Cape 13,292 M., by the Canal 9779 M.; saving 26%.

The traffic on the Canal is rapidly increasing, as appears from the following statistics, and many vessels (not exceeding 425 ft. in length) pass through it at regular intervals.

The number of vessels passing round the Cape is still far greater than that passing through the Canal, and it is therefore believed that the traffic may in time be nearly doubled.

In 1875 the British vessels which passed through the Canal were 1061 in number, French 54, Austrian and Hungarian 64, Italian 57, Dutch 59, German 36, Spanish 21, Russian 17; and there were also a number of vessels of other nationalities. The large steamers carried 81,000 passengers (22,000 travellers, 17,000 pilgrims, and 42,000 soldiers of different nations), and the small screw steamers about 2000.

The net receipts are also steadily increasing:

</tbody>
</table>

Total: 1,056,000£ sterling.

Expenses: 248,000£

Net Receipts for 1874: 808,000£ sterling.

The net receipts now represent a revenue of upwards of 5 per cent on the capital of the company. The reserve fund amounts to 10,000,000£.
Passage of the Suez Canal. The entrance to the Canal from the Gulf of Suez is not at the N. extremity of the gulf, but much farther to the S., and is approached by a navigable channel in the sea which is indicated by certain landmarks (p. 406). The vessel first passes the lighthouse (red light) at the end of the pier running out from the Asiatic shore, and then a second (green light) near the docks at the end of the great railway pier. It then follows the deep navigable channel, which at the end of the Canal is 300 yds. in width, but gradually contracts. A number of shoals, which are dry at low tide, lie on the E., and others on the W. side of the ship's course. We pass a handsome pier on the left, from the S. side of which the navigable channel to Suez, bordered by shallows, branches off to the N.W., and then, nearly in the latitude of Suez, we enter the mouth of the canal. On that part of the W. bank of which the Canal has made an island by separating it from the mainland, rise the workshops and coal magazines of the company and the quarantine establishment. At low tide the shallows in the N. part of the gulf are visible, and a series of islands is always to be seen at the extremity of the gulf, which, but for the Canal, might be crossed on foot at low tide. On the westernmost island, situated opposite the railway station and the hotel, is an old burial-ground, and on a larger island farther to the E. are the company's furnaces and workshops.

At the 150th kilometre (the 83rd on the fresh-water canal) the desert rises in a slight eminence, on which lie a number of huge granite blocks, the remains of two monuments erected here by Darius, during the Persian period, and still bearing traces of hieroglyphics and of the Persian cuneiform characters.

They were doubtless intended to arrest the eye of the passenger travelling through the canal, and were therefore imposing dimensions, and placed on a massive pedestal. The bed of the ancient canal is, moreover, traceable in the neighbourhood. It does not seem to me probable that Darius should have limited himself to the three monuments of which there are still remains, particularly as the distance between the second and third (at Shalûf and Serapeum respectively) is much greater than that between the first and second. One other monument at least may therefore be supposed to have stood between the second and third. . . . These three monuments have been destroyed by violence, perhaps during the successful rising of the Egyptians in the reign of Artaxerxes, or after they had finally shaken off the Persian yoke. Fire, which is very injurious to granite, seems to have been used in destroying them. — (Leipsius.)

Near Shalûf-et-Terrâbîh (a station on the left, near the 139th kilometre, with a village in the midst of vegetation, founded by the company), no less than 40,000 cubic yds. of limestone, coloured red and brown with iron, had to be removed in the course of the excavation of the Canal (p. 60), and interesting geological formations have been brought to light.

The lower stratum of the bank contains a layer of sharks' teeth (Carcharodon megalodon Ag.). . . . The limestone rock of which the bank consists, and which is rapidly decomposed by exposure to the air, is mingled with salt and gypsum, and betrays its pure oceanic origin; for not only does its lowest stratum contain numerous teeth and vertebrae of

27*
the Carcharodon, but the rock itself contains bivalve shells and remains of Bryozoan, which fall out as the rock disintegrates. Above the limestone lies a layer of loose sand. A thin stratum of the rock, which is full of remains of boring conchylia and crocodiles' teeth, also contains bones and teeth of large quadrupeds, Cetacea, and sharks. — (O. Fraas.)

Near Shaluf is the second of the monuments erected by Darius (see above), which was discovered by MM. Rozière and Devilliers, two of the savants attached to the French expedition, and was excavated by M. de Lesseps in 1866. The red blocks, which belong to two different monuments, bear Persian cuneiform and hieroglyphic inscriptions. In the latter the name of Darius occurs. The representations still preserved exhibit a curious combination of Persian and Egyptian characteristics. The winged disc of the sun of the Egyptians resembles the 'Feruer' of the Persian monuments. The Persian tiara is adorned with the heads of two kings, opposite to each other. The figures are in the Egyptian style, and between the outstretched hands of each is an Egyptian 'cartouche', or frame for the name of a king. One of the blocks bears hieroglyphics in front (half obliterated) and cuneiform characters at the back.

The Canal now enters what is called the Small Basin of the Isthmus, which consists entirely of shell formations, and thence leads into the Large Basin of the Bitter Lakes (p. 412). At each end of the large basin rises an iron lighthouse, 65 ft. in height. The water is of a bluish green colour. The banks are flat and sandy, but a little to the left rises the not unpicturesque range of the Gebel Geneffeh (p. 400). A little farther on (near the 89th kilomètre) is the cutting which conducts the Canal through the rocky barrier of the Serapeum. The railway station (p. 400) is near the fresh-water canal. A flight of steps ascends to the top of the left bank of the Canal. The village, which was founded in 1860, contains several pleasant little gardens.

The ruins from which the station derives its name were formerly supposed to have belonged to a Serapeum, which, according to the itinerary of Antonine, once stood in this neighbourhood; but they can hardly have belonged to a temple of Serapis or to any other sanctuary, and Lepsius is doubtless right in pronouncing them to be the remains of a third monument erected on the bank of the ancient canal by Darius (p. 414). He found here a fragment of the wing of a disc in the Persian style, a stone with cuneiform characters, and a third bearing hieroglyphics, all of which confirmed his opinion. The blocks of limestone lying on the ground belonged to the pedestals of the monuments. The ruins of the real Serapeum have been probably discovered in the remains of a stone building, about 74 paces long (from E. to W.), and 53 paces broad (from N. to S.), situated about ¼ M. to the S. of the 14th kilomètre stone on the fresh-water canal. Excavations made there have brought to light a few Egypto-Roman antiquities, which probably once belonged to a village connected with the Serapeum. In accordance with the rule regarding the temples of Serapis, the village must have lain entirely beyond the precincts of the sanctuary.

† Brugsch identifies the Bitter Lakes with the Marah of the Bible (Exod. xv. 23): 'And when they came to Marah they could not drink of the waters of Marah, for they were bitter'.
At the 85th kilometre is situated Tusun, which is easily recognised by the whitewashed dome of the tomb of a certain Shékh Ennedek, a wealthy chief, who, after having made a pilgrimage to Mecca, is said to have presented his cattle and his gardens to the poor, and to have spent the rest of his life on the Gebel Maryam near Lake Timsâh in pious meditation. Excavations in the neighbourhood of Tusun have led to the discovery of many interesting fossil remains of large animals belonging to the meiocene tertiary formation, and pieces of fossil wood have also been found here (p. 325). — Before entering Lake Timsâh we pass the foot of the Gebel Maryam, which an Arabian legend points out as the place where Miriam, when smitten with leprosy for her disapproval of the marriage of Moses with an Ethiopian woman, spent seven days, beyond the precincts of the camp of the Israelites (Numbers, xii.).

At the 80th kilometre stone the Canal enters Lake Timsâh, or the Crocodile Lake (p. 395), on the N. bank of which lies the town of Isma‘iliya. The lake, which is now about 6 sq. M. in area, and of a beautiful pale blue colour, was, before the construction of the Canal, a mere pond of brackish water, and full of reeds. On 18th Nov. 1862 the water of the Mediterranean was let into this basin, which is traversed by two artificial channels for the passage of large vessels.

Isma‘iliya. Railway Station, see p. 400; steamer to Port Sa‘id, see p. 411. — In the Place Champollion, between the station and the harbour, is the Hôtel de Paris, a good, though very unpretending, inn. On the lake is the small Hôtel des Bains de Mer, pension 12 fr., bath 1 fr. — Post and telegraph offices and chemist’s shop near the railway station.

While the Canal was being constructed this town was the central point of the works, and the residence of numerous officials and traders, so that its traffic soon became very considerable, and it has even been extolled by modern poets as a ‘wonder of the desert’. Its suddenly acquired prosperity declined almost as suddenly when the canal works were completed, but the town has lately regained a little of its former animation. The houses and gardens and the viceregal château, which had fallen into a dilapidated condition, have recently been restored. M. de Lesseps usually spends part of the winter here, and his presence attracts numerous visitors. The climate is pleasant and the air dry, notwithstanding the proximity of the water. The ground, which has been reclaimed from the desert by means of irrigation, has been planted with tasteful gardens. On the N.E. side of the town are the château of the Khedive and the waterworks; on the W. side is the Arabian quarter.

The best way of spending a few leisure hours here is to visit the hill of El-Gisr (see below; 1-2 hrs.; doukey 1 fr.). The route to it passes the Pierre Gardens and the engine-house of the waterworks.

Canal Journey to Port Sa‘id. The steamer (p. 411) at first follows the navigable channel indicated by stakes. To the S. rises the Gebel Abu Batlah range. In 1/4 hr. we reach the entrance to the
Canal, which now intersects the plateau of El-Gisr ('the threshold') in a straight direction. The hills of El-Gisr cross the course of the Canal a little to the N. of Lake Timsah, and presented a serious obstacle to its construction. The average height of the 'threshold' is 52 ft. above the sea-level, and it is now about 82 ft. above the bottom of the Canal. In order to form a cutting through it, no less than 18,767,000 cubic yds. of earth had to be removed, and 20,000 fellahin were employed in the work before machinery could be brought into operation. At the top of the hill is the deserted village of El-Gisr, with a chapel to the Virgin of the Desert, a small Swiss house, and a mosque. A flight of steps ascends to this point from

the Canal. In clear weather the view hence embraces a great part of the Isthmus, the frowning 'Ataka Mts. rising above Suez, the majestic mountains of the peninsula of Sinai, the course of the Canal, and the green expanse of the Bitter Lakes.

The Canal is flanked with high banks of yellow sand. At the next passing-place we obtain a glimpse of the desert. Near El-Ferdân (at the 63rd kilomètre stone) the Canal passes through a cutting, and then traverses Lake Balah, from which it is separated by a low embankment. We next reach El-Kantara ('the bridge'),
or properly Kantarat el-Khasneh (‘bridge of the treasure’), situated on a rising ground between the Menzaleh and Balâh lakes, and forming a kind of natural bridge between Africa and Asia. The caravans starting from the town of Šâliḥiyeh, situated on the old Pelusiac arm of the Nile, and the point where the chief commercial routes of the N.E. part of the Delta unite, pass this way, and the projected Egypto-Syrian railway will take the same direction. The old bridge was removed by the Canal Company, and replaced by a ferry. The station here contains several restaurants (Hôtel de la Poste, déjeuner 4 fr., very fair; opposite to it are ‘Refreshment Rooms’ and a ‘Buffet des Voyageurs’; halt of 1/2-3/4 hr.). The hill to the left commands a tolerable survey of the environs.

About 1½ M. from Kantara lie a number of large blocks of the same sandstone conglomerate as that of which the colossal figures of the Memnon consist. They appear to have been used as altars in some monumental edifice, which, as the inscriptions inform us, was erected by Seti I. in honour of his father Ramses I., and completed by Ramses II., the son of Seti. To what ancient town these ruins belonged has not been ascertained. A moderate day’s journey distant are situated the extensive ruins of Pelusium, the celebrated eastern seaport and key to Egypt, which now contains no objects of interest. The ruin-strewn Tell el-Herr, and the more extensive Geziret el-Parana, which is also covered with debris, were once occupied by the ancient fortress.

Immediately beyond Kantara begins Lake Menzaleh, through which the Canal is constructed in a perfectly straight line to Port Sa'îd (45 kilomètres).

The brackish waters of this lake extend over an area of about 1000 sq. M., covering what was once one of the most fertile districts in Egypt, and was intersected by the three most important arms of the Nile in ancient times, the Pelusiac, the Tanitic, and the Mendesian. Among the numerous towns and villages situated here were the important cities of Avaris, the name of which, afterwards changed to Pelusium, is connected with several important and stirring historical events; Tanis (p. 441), situated on the Tanitic arm and on a canal connecting that arm with the Mendesian, a place where trade and science once prospered; and Tennis (p. 441), of the ruins of which there are still traces on an island in Lake Menzaleh. Not only has this vast tract been lost to cultivation, but the environs of the lake also are in a miserable condition from long neglect. I have rarely seen a more desolate region than this, which was once so smiling. In the midst of the interminable expanse of sand, swamp, and water, the only relief to the eye was afforded by immense flocks of pelicans and silver herons and a few herds of buffaloes. The right of fishing here is farmed out by government at a rent of 1,500,000 frs. per annum, but what a paltry sum is this compared with the value of the lost land!” (Stephan).

The operation of draining the lake has been begun, particularly of the part adjoining the Canal. Curious mirages are sometimes observed here.

Râs el-‘Esh is the last (15th) station. We soon come in sight of the numerous masts of Port Sa'îd, which we reach in 3/4 hr. more. To the N.W. are the white stones of the cemetery, the tombs in which are constructed in the form of vaults of masonry above ground, as the soil is saturated with salt water at a depth of 2 ft. below the surface.
Port Sa'id.

Hotels. "HÔTEL DES PAYS BAS (Netherlands Hotel, Pl. a., opened in 1876), established in the palatial main building of the Dutch factory (p. 426), with upwards of 60 bedrooms and other apartments; board and lodging 20-25 fr. per day. HÔTEL DU LOUVRE (Pl. b), 16 fr. per day, and HÔTEL DE FRANCE (Pl. c), 12 fr. per day, both tolerable. The best of the 'Brasseries' is one in the Hôtel du Louvre. There is also a Café Chanteur with a roulette table (p. 229), and an Alcazar for musical performances.

Egyptian Post Office, Pl. 15; French, Pl. 16; Telegraph Office, Pl. 1.

Consuls. American, Mr. Page; Austrian, Hr. v. Stefenelli; British, Mr. Percival; French, M. Chaffray; German, Hr. Bromm; Greek, M. Michos.

Steamboats, see p. 7. Voyage to Yâfa or to Alexandria 15 hrs. — On arriving at Port Sa'id by sea, as in the case of Alexandria (p. 201), the traveller sees nothing of the low, sandy coast until the steamer reaches the yellowish green water near it, which is rendered turbid by the mud of the Nile. The lighthouse and the masts of vessels at anchor in the roads first come into view, after which we observe the massive piers (see below) which protect the entrance to the port. The custom-house examination takes place immediately on landing. Passports, though asked for, are not indispensable. If the vessel does not lay to at the quay, 1/2 fr. is charged for taking each passenger ashore. Travellers wishing to secure a passage in one of the steamers bound for Syria during the travelling season (February to April) had better do so by telegraph.

Lake Menzaleh (see p. 423) affords excellent Wild Fowl Shooting in March and April. Flamingoes are observed among many other species. The charges for the necessary boats vary greatly according to the demand. If possible, the sportsman should return to Port Sa'id every evening, as the nights are often cold and rainy; but, if provided with a tent, a cook, and other necessary appliances, he may camp out on several of the different islands in succession.

The town of Port Sa'id, which owes its origin to the Suez Canal, lies at the W. extremity of an island which belongs to the narrow strip of land separating Lake Menzaleh from the Mediterranean. It was expected that the prosperity of the place would increase rapidly, but its progress has hitherto been very gradual. The broad, regular streets consist chiefly of light and temporary brick buildings. The population (about 9000 souls) is similar in character to that of Suez, but the French element preponderates here still more. The construction of the harbour was attended with immense difficulty. It occupies an area of 570 acres, and has been excavated to a depth of 26 ft. by means of laborious dredging. It is protected by two massive piers; the eastern running out into the sea towards the N. for a distance of an English mile; and the western, running towards the N.E. for 1 1/2 M., being still unfinished. Where they start from the land these piers are 1440 yds. apart, but their extremities approach within 770 yds. of each other. The navigable entrance, marked by buoys which are lighted at night, is only 100-160 yds. in width. (Those who have leisure may hire a boat for a cruise in the harbour or for the purpose of visiting one of the large steamers lying at anchor.) The most serious risk to which the harbour is exposed is that of being choked up with the Nile mud which is deposited on the
Pelusiac coast by a current in the Mediterranean, constantly flowing from the west (comp. p. 205). The western pier is intended two and off these accumulations of sand and mud, and also to shelter the harbour from the N.W. winds which prevail during two-thirds of the year; and it is therefore of great length and solidity. Both piers were constructed by the Frères Dussaud of blocks of artificial stone, manufactured of seven parts of sand from the desert and one part of hydraulic lime imported from Ardèche in France. The concrete was mixed by machinery and poured into large wooden moulds, in which it remained for several weeks. The moulds were then removed, and the blocks exposed to the air to harden them more thoroughly. Each block weighed 20 tons, and measured about $13\frac{1}{3}$ cubic yards in solid content. Thirty of them were manufactured daily, and no fewer than 25,000 in all were required.

Above the wooden moulds, which covered an extensive piece of ground, was constructed a tramway, bearing a steam-crane, which could be moved to any required spot, for the purpose of hoisting the blocks and conveying them to their destination. After having been hoisted by the crane, the blocks were transported to a boat, where they were placed on an inclined plane in twos or threes, and secured by means of wedges. They were then conveyed to the place where they were to be sunk. The wedges were removed, and the huge masses then slid down the incline, splitting the wood and emitting sparks of fire on their way, and plunged into the water with a tremendous splash, while the boat staggered from the effects of the shock and was lashed by the waves thus artificially caused. These huge 'pierres perdues', as they are technically called, were thus gradually heaped up until they reached the surface, and the last layers, rising a little above the level of the water, were finally deposited by means of a crane on board of a steamboat.

On the strip of land separating Lake Menzaleh from the Mediterranean rises the *Lighthouse*, constructed of concrete, 164 ft. in height, and one of the largest in the world. Its electric lights are visible to a distance of 24 M. To the E. of it are quays and workshops. The streets extend along the W. side of the Inner Harbour, which consists of three sheltered basins in which vessels discharge and load. The first of these, beginning on the N. side, is the basin of the commercial harbour, the second is that of the quays, and the third the 'Bassin Chérit', flanked with handsome buildings, which have been lately erected by Prince Henry of the Netherlands as a depot for facilitating the Dutch goods and passenger traffic between Europe and the colonies of Holland. The establishment, which deserves inspection, comprises large warehouses, quays, cranes, shipping offices, a bazaar, and a hotel.

8. Towns of the Central and Northern Delta.

A tour in the inland and northern districts of the Delta, including a visit to the towns of Mansúra, Damietta, and Rosetta, and the exploration of some of the ruins of towns near the embouchures of the Nile, is attended with considerable difficulty and discomfort, with which the attractions are by no means commensurate. A week at least is required
for the excursion, unless the traveller confine himself to places lying
close to the railway.
Those who are unacquainted with the language, and propose to pen-
etrate into the interior of the country, should be provided with a dragoman
or a servant (p. 19), a tent, and a cook, as there are no tolerable hotels
except at Tanṭa, Damietta, and Rosetta. Introductions should be ob-
tained through the consulate at Cairo to the consular agents at Mansūra,
Rosetta, and Damietta, and to the shēkh of the fisheries at Tanis.
As wet weather and cold nights are not uncommon in the Delta in
winter, the traveller should be well provided with warm clothing and
rugs. A moderate supply of provisions and wine will also be found useful.

DISPOSITION OF TIME. The railway communication is very imperfect,
as there is usually only one train daily in each direction, so that wherever
the traveller alights he must probably remain for the next twenty-four
hours. No attempt is made to time the trains on the different lines so
as to correspond with each other. The fares (in piastres) and the hours
of departure and arrival are given in the following routes, but as they
are liable to alteration, the traveller should test their accuracy at the
stations.

1st Day: From Cairo (9 a.m.) to Mansūra (arr. 5, 7 p.m.). — 2nd Day:
At Mansūra; excursion to Behbīt el-Hāger; and start from Talkha (4.19
p.m.), opposite Mansūra, for Damietta (arr. 6.17 p.m.). — 3rd Day: At
Damietta, as the train starts at 7 p.m., before which hour there is of
course too little time to see the place. — 4th Day: From Damietta (7 a.m.)
to Tanṭa (arr. 11. 20 a.m.); a train leaves Tanṭa at 4.25 p.m. for Damanhūr
(arr. 6.2 p.m.), where, however, no accommodation for the night is ob-
tainable unless the traveller is provided with an introduction to one of
the inhabitants. — 5th Day: From Tanṭa to Rosetta. — 6th Day: From
Rosetta to Alexandria. — A visit to Tanis takes two days more, and to
Saiṣ also two days.
The tour may also be made in the reverse direction, and some trav-
ellers will find it convenient to proceed from Tanis direct to Port Saʿīd.
The journey itself presents little attraction. The chief characteristics
of the monotonous scenery are extensive and often remarkably fertile
fields, canals, and dirty villages surrounded by palm-trees.

a. From Cairo to Mansūra.

99 M. RAILWAY (at 9 a.m.) in 8 hrs.; fare 87 piastres, or 57 piastres
20 paras.
From Cairo to (52 M.) Zakāžūk, see R. 5; halt of 1 hr. (*Re-
freshment Room). The Mansūra train crosses the Pelusiac arm of
the Nile and proceeds to the N.N.E., following the E. bank of the
Muʿizz Canal, the ancient Tanitic branch of the Nile, and travers-
ing a fertile district. Stations (60 M.) Mekīyeh and (67 M.) Abu
Kebīr. Route from Abu Kebīr to Tell el-Faḵūs, anciently Phacusa,
and Tanis, see p. 440.

Beyond Abu Kebīr the line turns to the N.W., crosses the Muʿizz Canal and a number of other smaller canals, and next
reaches (72 M.) El-Bāḥa, (761/2 M.) Abu Shēkūk, and (851/2 M.)
Sinbelāwīn. (Route thence to Tanis, see p. 440.)

99 M. Mansūra (seven poor cafés-restaurants, kept by Greeks;
refreshments of all kinds and ice at the Basar Universel, opposite
to which is a tolerable lodging-house of one story; a British and
a German consular agent), a town with 16,000 inhab., surrounded
by cotton-fields, lies on the right bank of the ancient Bucolic or
Phacitic arm of the Nile, now the Damietta branch, from which
diverges the Ashmu'ın or Sughayyir ('the little') canal. Next to Tanta, Mansura is the most important provincial town in the Delta; it is the residence of the Mudīr of the province of Dakhalīye, and is the chief depot of the bread-stuffs, cotton, indigo, tobacco, hemp, and flax which this part of the Delta produces. There are several large manufactories here, and many European inhabitants, chiefly Greeks. The older houses are badly built and in a dilapidated condition, while the modern buildings look like barracks.

History. Mansura (i.e. 'the victorious'), a comparatively modern place, was founded by Sultan Melik el-Kāmil in 1220, after the capture of Damietta by the Christians (p. 432), and doubtless as an advantageous substitute for that place in a strategic point of view, as it lies securely ensconced in the angle formed by the Damietta arm of the Nile and the Ashmu'ın Canal. The new fortress, according to the chronicles of Jordanus, was called New Damietta, to which the epithet of Mansura, or 'the victorious', was afterwards added. Melik el-Kāmil constructed the place with great care, and threw a bridge, strengthened with iron, across the Nile, which served both for the purpose of communicating with the opposite bank and as a barrier to prevent the Christians from forcing their way farther up the Nile. The first serious attack made on Mansura was by the Crusaders under Louis IX. of France in 1250. After encountering great difficulties they succeeded in crossing the Ashmu'ın Canal, and on the first day of battle, after a severe struggle, they were eventually victorious. In the neighbourhood of Mansura, however, they were repeatedly defeated by the young Sultan el-Mu'azzam Turanshah. Their fleet was destroyed, and 'famine-fever' broke out. Negotiations of peace proved fruitless, and when the ill-fated Crusaders attempted to escape they were intercepted by the vigilant Turks, who thinned their ranks terribly and captured the king with his brother Charles of Anjou and a number of the knights attending them. Louis thus expresses himself regarding this misfortune in a letter which is still extant: — 'The Saracens with their whole army and in immense numbers fell upon the Christian army during our retreat, and thus it happened that by divine permission, and as our sins merited, we fell into the hands of the enemy. We ourselves, our brothers the counts Alphonso of Poitiers and Charles of Anjou, and all who were retreating with us by land, fell into captivity, though not without many losses by death and much shedding of Christian blood, and not one escaped'. During his captivity at Mansura Louis IX. was treated with consideration, even after the young Mu'azzam Turanshah had been assassinated before his eyes, and the crown of Egypt had passed from the house of Saladin to the so-called Bahrite Mamelukes (p. 104). On 6th May, 1250, Louis and his barons were released on payment of a heavy ransom, and on surrendering the town of Damietta.

Leaving the Mudirīyeh and following the curve described by the street, we pass a small mosque on the left and the German consulate on the right, and after a few hundred paces reach a lane on the left, containing the Gāmi'a es-Šīgh (here pronounced Sagna), or 'mosque of the prison', which is pointed out as the prison of Louis IX., although Abulfeda has stated that the king was confined in the house of Ibn Fakhreddin, the scribe of the town, situated on the Nile. (A small room on the bank of the Nile is shown as Fakhreddin's house, but without the slightest authority.) The mosque contains columns brought from older edifices, with Byzantine capitals of Corinthian tendency, bearing Saracenic ar-
Excursion to Behbit el-Hager. The excursion by boat takes 2 hrs. up the river, and 1 1/2 hr. in the reverse direction, so that, including a stay of 2 hrs., it occupies 6-7 hrs. in all. The charge for a good boat is 6-8 fr.; bad walkers should take donkeys with them. In ascending the stream, the boat passes the town on the left, lying close to the bank of the river. On the right is the village of Goger, also known from an early period as Tell el-Yehudiyeh ('hill of the Jews'), inhabited by Arabs. Many of the Jews of Mansura still cause their dead to be interred here. The next places are Mit Nabit on the right, and Kafr Wish on the left. The Sheikh el-Builed (mayor of the village) of the latter place possesses a pleasant garden, which is often visited by the inhabitants of Mansura, particularly on feast-days, for the purpose of 'smelling the air'. Nearly opposite this village we land (on the right) near an old bulwark of blocks of limestone and bricks, near the Kantarat el-Wish, a bridge across a canal which joins the river here. From the river to the ruins is a pleasant walk of 40 minutes. The luxuriant trees on the route have quite a European appearance, as they include limetrees, silver poplars, and willows, besides the sunt tree, the lebbek, the tamarisk, and the bernûf shrub. We traverse well cultivated fields, and soon reach the distinct traces of a wall enclosing a heap of ruins, known to the Arabs as 'Hager el-Gâmûs' (buffaloes' stone), which form the remains of the once magnificent Isis Temple of

Hebt or Hebit, or Pa Hebit, i.e. the town of the panegyrics or festive assembly. The words Pa Hebit were corrupted by the Arabs to Behbit. The Copts knew the place by its sacred name of Nûisi (Ναηζί), and the Romans called it Isecum or Isidis Oppidum. It lay in the Semennûd nome, the capital of which was Sebennytus, situated on the same site as the modern Semennûd (p. 434), once the home of Manetho, and about 6 1/2 M. distant from Pa Hebit. Some idea of the immense changes which have taken place in the vegetation of this region since the era of hieroglyphics may be formed from the fact that, while the papyrus plant was sedulously and successfully cultivated on both banks of the Nile in the neighbourhood of Sebennytus, not a single specimen of this useful plant is now to be met with, either here or in any other part of the Delta. On the N.W. side of the ruins of the temple lies the village of Behbit, and adjoining it still exists the sacred lake of the temple. The ruins of the venerable sanctuary of Isis form an imposing and most picturesque mass of blocks, fragments of columns and architraves, ceiling slabs, and other remains, altogether about 400 paces in circumference. We are reminded of
the animal sacred to Isis by the reliefs of cows and figures with cows' heads on several of the blocks of stone. The name of Ptolemy II. Philadelphus I. (B.C. 284-246), the founder of the temple, occurs in several places. The structure must have been a very costly one, as it consisted entirely of beautiful granite, chiefly grey, and partly red in colour, brought from a great distance. The sculptures (hautreliefs and reliefs en creux) are most elaborately executed. Several of the female heads and busts, and some of the cows' heads also, are remarkably fine. In some of the inscriptions the hieroglyphics are unusually large, in others they are of small and elegant form, and in all they are executed in the somewhat flourishing style peculiar to the age of the Ptolemies. The chief deities revered here were Isis, with Osiris and Horus, besides whom occur Seb and Nut, Hathor and Khonsu, the triad of Sehu, Tefnut, and Anhur, Sebek, Hapi (the Nile), and Anubis in the form of Horus, as the avenger of his father. We may also remark here that Anubis, the martyr, was a native of Naisi, or the Iseum, on the site of which we now stand. On the W. side of the ruins is an interesting large slab of grey granite, veined with red, on which is represented the king offering a gift of land to Osiris and Isis, 'the great divine mistress of Hebit'. Higher up there is another block of grey granite, with a representation of Isis enthroned, and of the king offering to 'his mother' two small bags of the green mineral called mafkat and meslem, or eye-paint. The inscriptions consist of the usual formulæ regarding offerings. None of them are perfect, but many must still be concealed among the ruins. The pylons have disappeared, and with them the historical inscriptions also. One of the sculptures represents a procession of the gods of the nome, but unfortunately their names are not given. In one case Isis calls the king 'her brother'. Adjoining a figure of the goddess is the inscription: — ‘Isis, mistress of Hebit, who lays everything before her royal brother’. On a grey block of granite, lying in an oblique position, is represented the sacred bark of Isis, resembling those seen elsewhere in bronze only. The cabin is like a house of two stories, in the upper of which sits the goddess, with cow's horns and a disc, on a lotus flower, and attended on her right and left by a female genius with long wings. Each of the genii bears in her hand the pen of the goddess of truth. The ruins of the temple are now so confused that it is impossible to form even an approximate idea of its original form. A number of blocks resembling millstones show that the shafts of the columns were round. The capitals were embellished with the Hathor mask. On the N. side lies an unusually large capital, in granite, and upwards of 7 ft. in circumference. Numerous remains of pillars and architraves also still exist. The steps which led to the roof of the temple, and probably resembled those at Dendera and Edfu, were also of granite. A huge block is still to be seen here with four steps attached to it.
The ruins of Mendes, 11 M. to the E. of Mansūra, whence they may be visited in one day, have recently been excavated, and it is not unlikely that they may afford a rich spoil to the learned explorer.

b. From Mansūra to Damietta.

40 M. Railway from Talkha (on the left bank of the arm of the Nile, opposite to Mansūra; ferry in 5 min., ½ fr.). Train at 4.19 p.m., arriving at Damietta at 6.17 p.m.; fare 38 piastres 20 paras; or 25 piastres. — From Tanta (whence the train comes to Talkha) to Damietta, 73 M., in 4\(\frac{1}{4}\) hrs.; fare 68 piastres 20 paras, or 45 piastres.

The train follows the left bank of the Damietta arm of the Nile. The land is carefully cultivated in the neighbourhood of Mansūra, and we observe a number of steam engines which are used for the irrigation of the soil. The train stops at (1\(\frac{1}{2}\) M.) Shirbīn, an insignificant little town built of crude bricks. The next stations are Rās el-Khāliq and Kafr el-Baṭīlikh. The latter lies in a monotonous, sandy plain, extending as far as Lake Burlus, and covered in summer with crops of water-melons. An important melon market is held here in July. The railway-station of Damietta lies on the left bank of the arm of the Nile (ferry in 5 min.; 1 fr.).

40 M. Damietta, Arabic Dūmyāt, situated between the Damietta branch of the Nile and Lake Menzaleh, about 4 M. from the sea, possesses a harbour, annually frequented by about 500 vessels of an aggregate burden of 40,000 tons.

*Bertrand’s Inn*, small; French landlord. European Café kept by Costi, a Greek, who also lets a few rooms. M. Sūrār, a wealthy Levantine, the British and German consular agent, will be found very obliging. A well-educated Egyptian physician resides here. Post-office and Arabic telegraph-office. A Roman Catholic and a Greek church.

Seen from the railway station, situated near the harbour, Damietta, which now has a population of 29,000 souls, presents an imposing appearance, with its lofty houses flanking the river. The interior of the town, however, by no means fulfils the traveller’s expectations. On every side lie ruinous old buildings and walls; many of the houses seem to be uninhabited; and new edifices are sought for in vain. There are few European residents here, the insignificant trade of the place being chiefly in the hands of native merchants (Arabs and Levantines). Small vessels only can enter the Damietta arm of the Nile, as the bar at its mouth is constantly altered in form by the wind and waves, so that vessels are liable to a long detention in the open roads. Under the most favourable circumstances the navigable channel varies from 6 to 16 ft. in depth. The industries to which the town was indebted for its former prosperity (see below) still exist to some extent, and the traveller will find it interesting to visit one of the streets inhabited by the silk and cotton weavers.

History. Little or nothing is known of the early history of Damietta. It is mentioned by Stephanus of Byzantium as Tamiathēs, a name which has been preserved in the Coptic Tamiati. The town must, however, have been a place of some importance during the Roman period, if we may...
judge from the numerous and occasionally very handsome columns in the mosques, many of which were found on the spot, though others were brought by the Arabs by sea from Alexandria or Pelusium. Domitian seems either to have visited Damietta, or to have been one of its patrons, as a stone bearing his name, doubtless found in the ancient town, now stands in front of the kādi’s house. At a later period there were probably a good many Christian residents, as a remarkably fine Christian church, which was destroyed by the Crusaders, once stood in ancient Damietta. During the Arabian era Damietta attained a great reputation on account of the resistance it offered to the Crusaders; but the town of that period stood farther to the N. than its modern successor (see below). It was besieged for the first time, but without success, about 1196 by Amalarich and the troops of Manuel, the Greek emperor. Saladin devoted special attention to the fortification of the place. In 1218 Damietta was besieged by King John of Jerusalem with a German, Dutch, English, and French army, under the generalship of the Count of Saarbrück, aided by the knights of three ecclesiastical orders. The Christian army, which was afterwards reinforced by a number of Italian troops, is said to have consisted of 70,000 cavalry and 40,000 infantry, and although this account is probably much exaggerated, it was doubtless very numerous. With the aid of an ingenious double boat, constructed and fortified in accordance with a design by Oliverius, an engineer of Cologne, the Frisians, Germans, and others of the besiegers succeeded after a fight of twenty-five hours in capturing the tower to which the chain stretched across the river was attached. The success of the Christians was however considerably marred by the interference of the ambitious, though energetic Pelagius Galvani, the papal legate, and by the vigilance of the Egyptian prince Melik el-Rāmil. In 1219 many pilgrims, including Leopold of Austria, quitted the camp of the besiegers, believing that they had done their duty. At length, after various vicissitudes, the Christians captured the place. They obtained valuable spoil, sold the surviving townspeople as slaves, and converted the mosques into churches, but in 1221 they were compelled by a treaty to evacuate the town. In 1249, when Louis IX. landed near Damietta, it was abandoned by its inhabitants, who had set all the warehouses on fire. Without striking a blow, the Crusaders marched into the deserted streets of the fortress, but in the course of the following year they were obliged to restore it to the Saracens as part of the ransom of Louis IX., who had been taken prisoner at Manṣūra (p. 428). During the same year, by a resolution of the Emirs, the town was destroyed, and re-erected on the E. bank of the river, farther to the S., on the site which it now occupies. The new town soon became an important manufacturing and commercial place. Its staple products were leather-ware, cloth, and essence of jasmine, for which it was famous, and its harbour was visited by ships of many different nations. After Mohammed ‘Ali’s victory over the Turks at Damietta in 1803, he constructed the Mahmūdiyeh Canal with a view to restore Alexandria’s ancient importance. Damietta thus lost most of its trade, and its decline was farther accelerated by the foundation of the ports on the Suez Canal.

The town contains no attractions. The principal mosque is a huge, shapeless edifice, the only redeeming features of which are the lofty minarets and the spacious dome. All the houses of more stories than one are provided with handsomely carved wooden jutties and lattice-work, which differ materially in style from the mushrebiyehs of Cairo. The principal street, which is upwards of 1 M. long, forms the busy and well-stocked bazaar of the place.

An interesting excursion may be made to the mosque of El-Gebâneh, situated near a cemetery, to the N. of the town (see below). The building appears to date from the period of the old town of Damietta, and has Cufic inscriptions in front. The interior con-
tains numerous columns dating from the Roman period, the bases of which are about 3 ft. below the level of the pavement of the nave. Two of the columns bear curious inscriptions. Some of the shafts are of beautiful verde antico, and others of porphyry. The capitals, including several in the Corinthian style, are partly of Roman and partly of Byzantine workmanship. Two columns standing on the same base are believed, like those in the Mosque of 'Amr at Cairo, to possess miraculous powers. (Fever-patients, for example, are said to be cured by licking one of them.) The minaret is embellished with early Arabian ornamentation.

About 3/4 M. farther from the town is a hollow containing a cemetery and a number of brick houses. The soil here and on the slopes of the adjoining hills is of a dark red colour, whence the place derives its name of Baḥr ed-De'm, or 'sea of blood'. According to tradition, 30,000 martyrs of El-Īṣlām were once massacred here. The neighbouring hills, particularly those on the right, are called Tell (plur. tuʿāl) el-ʿAẓm, or 'hills of bones', being said to contain multitudes of human skeletons. Reminiscences of the siege of Damietta by the Crusaders in 1219, and of the victory gained here by Moḥammed 'Aṭī over the Turks in 1803, are curiously mingled in the minds of the natives, and have given rise to various unfounded legends. It is not improbable that part of ancient Damietta once stood on the Tell el-ʿAẓm.

Sportsmen and fishermen will probably desire to visit Damietta and Lake Menzaleh (p. 424), 3/4 M. distant. The town is built on both banks of the arm of the Nile, the deposits of which have formed a terrace-like embankment, sloping down to the deeply indented salt lakes at the mouth of the river. In the environs are extensive fields of rice, the harvest of which takes place in September and October. The fields are intersected in every direction by cuttings and canals, which are crossed by numerous bridges for the use of the cattle. Cows are extensively reared here, and the milk and butter of Damietta are the best in Egypt. A walk in the environs will be found interesting. The fields are pleasantly shaded at intervals with plantations of sycamores, Cordia, and other trees. The ditches are filled with beautiful white and blue water-lilies (Nympheae Lotus, N. caerulea, and N. stellata) and other aquatic plants. The larger canals are bordered with lofty reeds, the haunt of the ichneumons, which often surprise the traveller by their tameness. Notwithstanding its girdle of inundated plains, canals, and lakes, Damietta enjoys a remarkably healthy climate at all seasons. The atmosphere is never so damp here as at Alexandria, which lies in more immediate proximity to the sea, and even in the height of summer it is often refreshingly cool.

A trip by boat down to the Mouth of the Nile (Būghaz) takes 3-3½ hrs., or, if the wind is favourable, 1½ hr. only (fare 5 fr.). Numerous dolphins will be observed in the river near its mouth.

From Damietta to Rosetta (p. 437), via Lake Burtul (Burtulos), a route which is not recommended, takes 2-3 days at least, and sometimes much longer.

c. From Damietta to Tanta.

69 M. RAILWAY (7 a.m.) in 4½ hrs.; fare 68 piastres 20 paras, or 45 piastres. To Mahallet-Rūḥ (junction of the line to Desūk) in 3½ hrs.; fare 59 or 39 piastres.

Baedeker's Egypt I. 28
From Damietta to (40 M.) ʻTalkha (Manṣūra), see p. 431. Beyond ʻTalkha the train runs at a little distance to the W. of the Damietta arm, and next reaches (54½ M.) Semmenūd, an uninteresting little town, consisting of a densely packed mass of low mud-hovels (no inn). The ruins of the ancient Sebennytus, the site of which is now occupied by Semmenūd, are also insignificant. The old Egyptian name of Sebennytus was Ṭeb-en-nuter, which the cuneiform inscriptions render Zabnuti (Coptic Sjemnouti and Sebennet itu). It was the capital of the nome of Sebennytus Superior, in which Manetho (p. 85) is said to have been born, and where, according to the myth, Horus gained one of his victories over Seth. The figure stamped on the coins of the province represents Horus as a warrior.

Crossing several canals, the train runs towards the S., and stops at stat. Maḥallat el-Kebir, a populous town, with numerous European houses, cotton-cleaning mills, and considerable trade. The next stations are (62 M.) Maḥallat Rūh, the junction for Zīfṭeh and Desūk (see below), and (69 M.) Tanṭa (see p. 224).

From Maḥallat Rūh to Zīfṭeh (23⅓ M.), by a branch-line in 1½ hr.; fare 20 piastres 20 paras, or 14 piastres. Stations Bedrashiyeh, Ṣonṭa, and Zīfṭeh, which lies on the left bank of the Damietta arm.

From Maḥallat Rūh to Desūk (30 M.), by a train at 3.8 p.m. (leaving Tanṭa at 2.1 p.m.), in 2½ hrs.; fare 32 or 20 piastres (from Tanṭa 41 piastres 20 paras, or 26 piastres). Those travellers only will take this route who intend proceeding from Desūk to Rosetta.

The train runs towards the N.W., crossing numerous canals. Stations Kūṭār; Neshart, a village on the right bank of the Bahr Kalīn, which the train crosses; Shabbās; and Desūk, the ancient Naukratis, on the right bank of the Rosetta arm, which is here of considerable width. No accommodation is procurable here, and it is not easy to hire a boat for the whole journey to Rosetta. A small boat may, however, be hired as far as Fāa, where a larger craft for the rest of the route is more easily obtained.

d. Saïs.

From the Kafr ez-Zaiyāt station (p. 223) an excursion may be made to Saʿ el-Ḥager, the site of the ancient Saïs, the cradle of several royal families (24th, 26th, and 28th Dynasties); but there is no great inducement to visit the place, and even the scientific traveller is not likely to be rewarded unless prepared to make costly excavations. At all events a visit to this spot had better be paid in the course of a tour in the Delta, and not on the traveller's first journey to Cairo. A donkey may be hired at Kafr ez-Zaiyāt for 15 piastres per day. For a party it is pleasanter and cheaper to make the excursion by boat (easily procured; fare for two days about 25 fr.). The journey by land takes 5 hrs., by water 3-8 hrs., according to the wind.

The plain watered by the Rosetta arm of the Nile is extremely fertile. A little to the N. of Kafr ez-Zaiyāt the river describes a long curve; and somewhat farther to the N., on the W. bank, a little inland, but visible from the water, rise the ruins known as Ed-Daharīyeh, a series of heaps of debris which mark the site of a town of considerable size. On the W. bank, farther on, is the pleasant-looking village of Nakhleh. The village of Saʿ el-Ḥager
Northern Delta. SAÏS. 8. Route. 435

(on the E. bank), at which we disembark, lies to the S. of the ruins.

The ancient SAÏS is mentioned in history at a very remote period, and as early as the 18th Dynasty it was regarded as a cradle of sacerdotal wisdom. The goddess Neith, whom the Greeks identified with their Athene, was the tutelary deity of the place. She was one of the maternal divinities, a manifestation of Isis (p. 133), and was named the 'great cow' which gave birth to the sun. She was worshipped both by the Egyptians and the Libyans. On the Roman coins of the Saïte Nome is seen a figure of Minerva with an owl in her right hand and a lance in her left. It was this identification of Neith with Athene that probably led Pausanias to suppose that Pallas-Athene originally came from Libya, to which Saïs was frequently considered to belong. According to an ancient tradition, Athens is said to have been founded by Cecrops of Saïs, and a fanciful corroboration of the myth is sought for in the fact that the letters of A-neth-a and Athene are identical. Most of the Greek scholars who repaired to Egypt for purposes of study went either to Heliopolis or to Saïs. According to Plato, Solon associated here with the learned men of Egypt, Herodotus obtained much information here, and the fame of the Saïte knowledge of mysteries was maintained down to a late period. The 26th Dynasty originated in the city of Neith, and its kings were specially devoted to that goddess, to whom they erected monuments of great splendour. Cambyses also visited Saïs after his conquest of Egypt, and showed himself favourable to the temple of the goddess and her rites. It is not known when the town was destroyed. It was probably an episcopal see at a very early period.

There is now no trace of the famous buildings erected here by Amasis and others (p. 93), or of the chapel formed of a single block of granite brought from Elephantine to Saïs, which must have weighed at least 250 tons. The site of the temple of Neith, which was connected with the royal palace and with a mausoleum for the Pharaohs of the 26th Dynasty, cannot now be identified with any certainty. The columns with palm-capitals, the tomb of Osiris, the obelisks, statues, and andro sphinxes, mentioned by Herodotus, have all entirely disappeared. The sacred lake, however, on which, according to Herodotus, mystery-plays were acted at night in honour of Osiris, is probably identical with a sheet of water to the N. of a huge wall enclosing an open space, on the E. side of which the wall is upwards of 500 yds. long and nearly 60 ft. in thickness. The outline of the lake was probably once elliptical, but is now of very irregular form. On its S.E. side rise vast heaps of rubbish, marking the site of the royal palace and the temples connected with it. It is, however, impossible to trace the outline of a single building, either here or among the ruins between the village of Sa el-Hâger and the enclosing wall of the Acropolis,
lying to the N. of the cluster of humble fellâhin dwellings which have inherited the proud name of Sai in the form Sa. M. Mariette's excavations at this spot have brought a few antiquities to light, but have led to no discovery of importance.

e. Rosetta.

From Alexandria to Rosetta by railway in 3 hrs.; fares 43 pias. 20. 27 pias. 20, 17 pias. 20 paras (to Rosetta one train daily, to Abukir three, and to Siyâf nine). The station is outside the Porte Moharrem-Rey, whence the Cairo trains also now start (see p. 204). — From Damânkîr (p. 223) to Rosetta is a journey of one day only, but the start should be made at an early hour. As far as Fum el-Mahmûdiyeh a donkey takes 2½-3 hrs. (charge about 4 fr.); thence to Rosetta by boat in 5-7 hrs., according to the wind (20-30 fr.; or, including stay, which must be specially bargained for, and return, about double that sum).

From Alexandria to Rosetta there is a recently opened railway, skirting the coast, from which short branch-lines are to be constructed to the various coast fortresses. The journey is monotonous and uninteresting. The famous towns which lay on this coast in ancient times have entirely disappeared. As far as Sidi Gaber (p. 221), the second stopping-place, the train runs parallel with the railway to Cairo, which then diverges to the right, while our line continues to follow a N.E. direction. The next station of any importance is Ramleh (p. 220; the station lies ½ M. to the E. of the town). Stations El-Mohammûdiyeh and Azûbêt es-Siyûf, the latter of which is a considerable village. Near stat. El-Mandara the train enters upon the neck of land which separates the Lake of Abûkîr (Beheret Mutâdiyeh) from the Mediterranean, and reaches stat. Abûkîr (6 M. to the N.E. of Ramleh), an insignificant village, famous for the naval battle of 1st Aug. 1798, in which the English fleet under Nelson signally defeated the French, destroying thirteen of their seventeen vessels. The precise site of the ruins of Heracleopolis and Canopus is unknown. The latter, which lay 120 stadia from Alexandria, was probably situated a little to the E. of Abûkîr. Between that village and an opening in the neck of land which separates Lake Edku from the sea are some heaps of ruins which perhaps belonged to the ancient Canopus.

The city of Canopus, which, according to the decree of Tanis (p. 296) passed here, was known by the sacred name of Pakot, and by the popular name, still existing in the Coptic language, of Kah en-Nub, or 'golden soil,' was a very famous place in ancient times. The resemblance of the name Kahennub to Canobus, the helmsman of Menelaus, gave rise to the Greek tradition that that pilot was interred here. Strabo describes the pleasure-loving town as follows: — 'Canobus is a city which lies 120 stadia from Alexandria, if one goes by land, and is named after the helmsman of Menelaus who died there. It contains the highly revered temple of Serapis, which, moreover, works such miracles that even the most respectable men believe in them, and either sleep in it themselves, or get others to sleep there for them. Some persons also record the cures, and others the effects of the oracle dreams experienced there. A particularly remarkable thing is the great number of parties of pleasure descending the canal from Alexandria; for day and night the canal
swarms with men and women, who perform music on the flute and licentious dances in the boats with unbridled merriment, or who, at Canopus itself, frequent taverns situated on the canal and suited for such amusements and revelry. — The jars known as 'canopi' (p. 298) derive their name from this place.

On the shore of the semicircular bay of Abukir are several small forts, and on the promontory rises a lighthouse. The train continues to traverse the narrow neck of land between the Lake of Abukir and Lake Edku beyond it, on the right, and the Mediterranean on the left. Stations El-Ma'adiyeh, near the former Canopic mouth of the Nile (p. 59), and Edku, a village situated on a sand-hill to the right. The train finally traverses a dreary expanse of sand, and reaches Rosetta (p. 438).

From Damanchur to Rosetta. We ride past several wells and along the bank of a small canal, traverse some fields, leave the ruins of Kom ez-Zargun to the right, and in 1 1/4 hr. reach the Mahmúdiyeh Canal (p. 222), which lies between lofty banks, and is traversed by barges and small steamers plying between Alexandria and Rosetta. After a ride of about 10 min. more, we observe, on the opposite bank of the canal, a long, desolate-looking, one-storied house, which was used for the accommodation of the workmen employed in cleaning the canal in the reign of Sa'id Pasha. The canal, which connects Alexandria with Cairo and the Delta, and at the same time supplies the former city with water from the Nile (see p. 213), was constructed by Mohammed Ali in 1819 at a cost of 7 1/2 million francs. In the execution of the work he employed the forced labour of 250,000 felláhin, of whom no fewer than 20,000 are said to have perished from disease and over-exertion. We follow the bank of the canal, and about 1 1/2 M. from Fum el-Mahmúdiyeh reach two rows of remarkably fine trees, under the shade of which we continue our route. Near Fum el-Mahmúdiyeh, where the canal receives its supply of water from the Rosetta arm of the Nile, its banks are lined with solid brick masonry, and at this point we observe a number of barges awaiting the opening of the lock-gates which separate the canal from the river. The engines by means of which an impetus is given to the water so as to cause it to flow towards Alexandria are four in number, each being of 100-horse power. The large and handsome engine-rooms may be visited by the traveller. Adjacent is a workshop for repairs.

The banks of the Rosetta arm are monotonous, but are enlivened by a considerable number of towns. The first place on the right bank is Sindýun, with a handsome minaret. Opposite to it is Derût. The angular pieces of wood at the top of the minarets are used for bearing lamps on festive occasions. Numerous pumps are observed on the banks. The next places on the left are Minyet-es-Sa'id and Fesûr, and on the right Shemshir; then, on the left Adfinch, with a palace erected by Sa'id Pasha, and on the right Metûbis. Farther towards the N., Dibch lies a little to the left, and on the right are
Kuni, Minyet el-Murshid, and the important-looking little town of Berimbdl. On the same bank are Yeggârûn and the village of Kasha, and opposite, to the left, is the town of Mahallet el-Emîr, crowned with two minarets. On the right we next observe Faras, and on the left Shemâsme and El-Khimmâd; then, on the right, El-Basreh, and on the left El-Gedîyeh. The citadel of Rosetta (Reshid), usually known as the Kalâa (‘castle’) next comes in sight. Near it, also on the left, we observe a fine grove of palm-trees rising close to the town, and the hill of Abu Mandûr (see below).

Rosetta, Arabic Reshid (a Coptic name, Ti Rashit signifying ‘city of joy’), the ancient Bolbitine, with 15,000 inhab., lies at the mouth of the Bolbitinic arm of the Nile, which was also called the Taly (Tâlya). As the Rosetta Stone (see below) was found near Fort St. Julien, 4 M. to the N. of the town, it is supposed that the ancient town lay in that neighbourhood.

There is no inn at Rosetta, but, if necessary, the traveller may apply for accommodation to the hospitable Franciscan monks.

History. Little is known regarding the early history of the town. It was founded on the site of the ancient Bolbitine, and early in the middle ages attained considerable mercantile importance. It continued to flourish down to the beginning of the present century, but its prosperity declined rapidly in consequence of the construction of the Mahmûdîyeh Canal and the improvement of the harbour of Alexandria. There are now very few foreign residents here. In 1871 the harbour was entered by 906 small coasting craft, but by three large vessels only. The rice trade of Rosetta is of considerable importance, and shipbuilding is carried on with some success.

The town possesses numerous gardens, which yield excellent fruit. The hill of Abu Mandûr, to the S. of the town, which commands a fine view, is supposed by some topographers to have been the site of the ancient Bolbitine. The interesting streets contain many small, but substantial, houses in a peculiar, half-European style, with projecting stories and windows towards the outside. Numerous columns from edifices of the heathen and Christian periods, many of them of granite and some of marble, are seen lying in various open spaces, particularly one of considerable size near the river, and a number of others are built into the houses. The very spacious Mosque of Sakhtân is embellished with many ancient columns, but is otherwise uninteresting. The fortifications to the N. of the town are not shown except by permission the commandant (at present Sibley-Pasha, an American). In 1799 M. Bouchard, a French captain of engineers, discovered in Fort St. Julien the celebrated Rosetta Stone, which afforded European scholars a key to the language and writing of the ancient Egyptians, which had been lost for nearly fourteen centuries.

The Rosetta Stone, now preserved in the British Museum, is a stele of black basalt, the corners of which are unfortunately damaged, bearing three different inscriptions on its face. The subject is the same in each case, but the first is in the sacred hieroglyphic language and character of the ancient Egyptians, the second in the demotic, or popular, language and writing, and the third in the Greek language and character. The 54 lines
of the Greek text, which is written in 'uncial' letters, are well preserved, but of the 14 hieroglyphic lines all on the right side and twelve on the left are seriously damaged. The subject of the inscription is a decree of the priests in honour of Ptolemy V. Epiphanes (B.C. 204-181), issued on 27th March, 195, when the king was still a boy of fourteen. The high-sounding titles of the king, the date, and the place (Memphis) where the resolution was passed are first set forth in eight lines. Next follow in twenty-eight lines the motives which induced the hierarchy to issue the decree, — viz., the numerous benefits conferred by the king on his country, the gifts presented by him to the clergy and the temples, the reduction and remission of taxes, the indemnity granted to criminals, his leniency towards the rebels who had 'returned to peace', his vigorous resistance to enemies approaching by land and by sea and to the town of Lycopolis, his prudent conduct on the occasion of an inundation which took place in the eighth year of his reign, and his liberal contributions towards the support of the sacred animals and the repair and adornment of the temples. The remainder of the inscription gives the resolution itself, to the effect that a statue, a chapel of gold, and an image of the king should be placed in every temple, decorated on feast-days, and revered: and farther, that the decree, inscribed on a slab of hard stone in hieroglyphic, demotic, and Greek writing should be placed in every temple of the first and second rank. — The last paragraph of the Greek inscription informs us that we shall find the two translations, one in the sacred, the other in the popular language of the Egyptians, adjacent to it. The first step towards deciphering these last was to endeavour to discover the alphabet of each kind of character. The demotic part was first scrutinised, and M. S. de Sacy and Hr. Ackerblad, a Swedish scholar, first succeeded in determining the groups which contained the word Ptolemy. In the hieroglyphic part (p. 109) some of the groups were framed, and, as had been ascertained from the Roman obelisks and other sources before the finding of the Rosetta Stone, it was inferred that these were names of kings. Dr. Th. Young, an Englishman, and M. F. Champollion, the French Egyptologist, then succeeded, independently of each other, the former in 1819, the latter in 1822, in discovering the missing alphabet by means of a comparison of the names of the different kings. Champollion afterwards prosecuted his researches with such marvellous success, that he justly merits the highest rank among the decipherers of hieroglyphics. Taking the framed group which recurred most frequently on the Rosetta Stone to be Ptolemaios, as the Greek inscription indicated, he compared it with other framed symbols on an obelisk found at Philae contemporaneously with the Rosetta inscription. The symbols on the obelisk, which occurred in connection with the name of Ptolemy, he conjectured to signify Cleopatra, as the number of letters also indicated. He then proceeded to compare the two groups:

\[
\begin{align*}
(1) & \quad \text{he took to be Ptolemy.} \\
(2) & \quad \text{Cleopatra.}
\end{align*}
\]

The first symbol in the second of these groups is a triangle, which he supposed to represent \( k \), and which does not occur in the first group (Ptolemy). The second symbol in the second group, a lion, he took to be \( l \), and he was confirmed in this view by the fact that the same symbol occupied the fourth place in the first group. The third symbol in the second group, a reed, according to his hypothesis, would be \( e \), and this again was confirmed by the two reeds in Ptolemaios, representing the Greek diphthong \( \alpha \). The fourth symbol in the second group, a cord with a loop, was also, according to his expectation, found to occupy the third place in the first. So, too, the square, representing \( p \) in the second group was found to correspond with the first letter of the first
group. The sixth letter of the second group, a bird, did not occur in the first group, but was repeated in its proper place in the second. The seventh sign in the second group, a hand, would be \( t \), but the same letter was represented in the word Ptolemy by a semicircle. This discrepancy might have misled the decipherer, had he not rightly conjectured that two different symbols might possibly exist for the same letter, and that the semicircle at the end of Cleopatra represented the Coptic feminine article \( t \), which, as he afterwards found, is placed at the end of many female names. The eighth letter in the second frame he took to be \( y \), and this letter did not occur in the first frame. By this process the nine letters of Cleopatra's name, or ten including the article, were ascertained, while the different letters in the case of Ptolemy were afterwards verified by comparing them with the names of other kings, and particularly with that of Alexander the Great. 

The other steps in the task of deciphering the hieroglyphics have already been noticed at p. 108.

**f. Şān (Tanis).**

A visit to the ruins of Tanis is not only somewhat tedious and troublesome, but will not repay the ordinary traveller, as they are now covered by sand. The finest relics discovered there have, moreover, been carried off to grace the museum of Būlāṭ. Most travellers will require a dragoman, a tent, and rugs for the journey.

Down to the middle of January, that is before the Nile is too low, the traveller may proceed by the Mu'izz Canal from the Abu Shekūk station (p. 427) to Şān. Enquiries as to the state of the water should preferably be made at Zakāžik. The train from Zakāžik arrives at 3.45 p.m. at Abu Shekūk, where the party embarks in a boat previously ordered by the dragoman. Şān may be reached the same day (7-8 hrs., but more in the reverse direction), and the night should be spent in the boat. The boats are large, but dirty. The charge for the voyage to Şān is about 45 fr., and for the journey there and back about 80 fr., including stoppages, which must be specially stipulated for. If the water in the canal is too low for navigation, the traveller should proceed to the Abu Kebr station only (p. 427), where he arrives at 3.7 p.m.; if successful in procuring horses or donkeys here, he may then ride in 1½ hr. to the neighbourhood of the village of Tell Fākūs (whence there is a branch-line, recently opened, to Ǧālāhīyeh, p. 428). On the opposite bank of the canal, about 1 M. from the ruins of the ancient Phacusa, and near the modern Mit el-'Azz, is a cotton factory belonging to an Egyptian bey. Mr. Robertson, the manager, an English engineer, accords a kind reception to travellers.

The ruins of Tell Fākūs, the site of the ancient Phacusa (Φακοῦσα), which was once the capital of the Arabian nome, and of Goshen, and is called Phakos, or, without the article, Kos, by the Copts, are interesting to Egyptologists only. The district of Goshen (p. 397) and the ancient city bear the same name. The scanty remains bear a few inscriptions, some of which date from the period of Ramses II.

Donkeys and a guide should be ordered at Mit el-'Azz in the evening, and the journey continued on the following morning.

The route from Abu Kebr traverses fertile fields, chiefly planted with cotton, and frequently intersected by ditches and cuttings, through which the traveller must ride or wade. This tract was formerly the pasture-land of the ancient Amu (p. 441), and was overgrown with reeds and marsh-plants. The distance to be traversed depends on the state of the water, and route varies at different seasons. The villages resemble those on the Upper Nile,
except that there are no large dovecots here. About noon we reach the margin of the desert, on the parched and cracked surface of which there are occasional pools of salt water. Towards sunset we regain the cultivated land, and, after a good deal of waiting and shouting, are ferried across the Mu'izz Canal. We then either pitch our tent among the ruins of the ancient Tanis, or ask hospitality of Ahmed, the wealthy farmer of the fishings. His son Mustafa will be found obliging. Insect-powder should not be forgotten.

From Port Said (p. 423) to Tanis, across Lake Menzaleh (p. 423), is a voyage of 15-30 hrs., according to the wind. No fixed fare. On the island of Tanis are the ruins of the ancient Tennis, most of which appear to date from the time of the Crusades. The ruins on several other islands indicate that a great part of the lake was once cultivated land, sprinkled with towns (p. 423). We at length quit the lake and enter the Mu'izz Canal (p. 427), the ancient Tanitic arm of the Nile, and in 1-2 hrs. more we disembark opposite to San.

From Tanis to Damietta or Mansura by boat in about 18 hrs., via Matarineh, a miserable fishing village. From Tanis to Sinkelawn (p. 427) we may also proceed by land (one day's journey), and continue our journey thence by train, but it will be found difficult to obtain horses or donkeys at San.

San is a fishing village (p. 423), where an amusing fish-auction takes place every Tuesday and Friday at the house of Ahmed. The faces and figures of the inhabitants are peculiar. They are doubtless the descendants of the wild and rebellious Bashmurites and Biamites who gave so much trouble to the troops of the khilifs Merwan II. (744-50) and Mamun (813-33), and also of the Semitic shepherds who inhabited the Menzaleh region at a very remote period. They were called Amu, or, with the article, Pi-Amu, by the Egyptians, and the name was afterwards corrupted to Biamites. They were also known as Pi-Shemer, which was corrupted to Bashmurites. In the Christian period they belonged to the orthodox church, and styled themselves Melekites, or 'royalists', a name which they still apply to themselves in the form 'Malakiyn', although they have long since embraced El-Islam. The hope of bakshish makes them civil to travellers.

Ancient Tanis. The name Tanis is the Greek, and the modern name of San the Arabic, form of the ancient Zan or Zoan (Psalm Ixxviii. 12). The scriptural name is the same as that given to the place by the Egyptian monuments. A statue found here, and now preserved at Balak, for example, bears an inscription to the effect that the dignitary it represents was 'a governor in his town, a magnate in his province, and a prefect of the towns of the field of Tan' (i.e. Zan or Zoan). The Semitic inhabitants also called the town Tar, i.e. Zar, and 'the Egyptians named it Ta or Za (or Zor, plur. Zoru, signifying 'a fortified place'), while the sacred name was Khont-ab. or Mesent, the place of Horus and of Phoenix, and the Edfu of the north. Tanis was the capital of the fourteenth

† Brugsch identifies Tanis with the Ramses of the Bible (comp. p. 399), and supposes it to have been the town where Moses wrought his miracles before Pharaoh (Ramses II.), and from which the Israelites started on their wanderings. The now bleak and sterile plain around Zoan is called by the monuments Sokhot Zoan, or plain of Zoan. It was
nome of Lower Egypt, and lay on the arm of the Nile named after it, the modern Mu'izz Canal, with which many ancient legends are associated. Thus it was by this arm of the river that the body of Typhon (Seth), when slain by Osiris, floated down to the sea. On this account the Tanitic arm of the Nile is said to have been an object of hatred to the Egyptians, but it is more probable that their dislike was caused by the fact that Seth, under the name of Ba'âl, was worshipped on its banks by the natives of the district. Among the other gods specially revered here were Ammon of Thebes, with Khnus and Mut, Tum neb-On, or lord of Heliopolis, and Horus along with Isis and Sokar Osiris. The favourite deities, however, were Tum and Khnus, the god of the moon, who in one of his aspects was identified by the Greeks with their Heracles. The Egyptian priests who performed the rites of the 'gods of Ramses' in this town, are also called by the monuments Khar-tot, or 'warriors', a name which is identical with the Hebrew name Khartum which given in the Bible to the Egyptian magicians who attempted to imitate the miracles wrought by Moses (Exodus viii, ix).

We learn from the Bible (Numbers xiii. 22) that Tanis was founded seven years later than Hebron, which, however, is mentioned as having been a very ancient place as early as the time of Abraham. This notice of the place was perhaps copied into the sacred writ of the Israelites from some earlier Phoenician work. At all events it is probable that it was founded so far back as the primeval monarchy by Phoenician mariners, and that it then lay much nearer to the sea than at the present day. The mud of the Nile has formed the broad piece of land which separates the site of Tanis from Lake Menzaleh. In the Sethotic nome, adjacent to Tanis, lay Heracleopolis (pp. 87, 399), the cradle of the kings of the 6th and 10th Heracleopolite Dynasties, monarchs of foreign origin, who reigned in Lower Egypt until expelled by the 11th and 12th Dynasties. Monuments were erected at Tanis by Amenemhat and Usortesen (p. 87), but a statue of the 13th Dynasty found here may have been brought from elsewhere at a later period. When the Hyksos overran Egypt, they found at Tanis a population of a race kindred to their own. While Abaris (Hauâr), on the E. frontier of the empire, formed the basis of their military operations, they constituted Tanis their capital. Here they employed Egyptian artists, who executed sculptures for them in the conventional style, faithfully pouring the features of their conquerors (p. 205). After the expulsion of the Hyksos, Tanis was neglected by the Egyptian kings, but it was again specially favoured by the great monarchs of the 19th Dynasty. Seti I., Ramses II., and Menepthah, the Pharaoh of the Exodus, frequently held their courts here, and even condescended to participate in the rites of Seth peculiar to the place. At the same time they embellished the city so liberally, and promoted its prosperity so effectually, that it is described by several papyri as being a particularly beautiful and pleasant place, and the name is therefore written ΞΑΝΗ, i.e. 'the beautiful, the agreeable', by later writers. In the time of Isaiah and Ezekiel (8th and 6th cent. respectively) Zaan must still have been a very important place. 'Surely the princes of Zaan are fools, the counsel of the wise counsellors of Pharaoh is become brutish' (Isaiah xix. 11). Before this period the city had surrendered to the armies of the Assyrians, as we also learn from the cuneiform inscriptions, which mention Tanis in the time of Sardanapalus as Šanu, and its prince Pu-tu-bi-si-ti (Petubastes). Under the 26th Dynasty, which favoured foreigners, Zaan again prospered; but in the reign of Amasis, who patronised Sais and the Greek Naucratis in preference to Tanis, Mendes, and Bubastis, the half-Semitic cities of the Delta, it began to decline perceptibly, although slowly. Flavius Josephus calls the place a πολίες, or small town only, but Strabo and Stephanus of Byzantium not till the time of Ramses II., when a new town with temples and shrines was erected adjacent to the ancient fortress of Zor or Zoru (see above), that the place was called Pi-Ramses ("city of Ramses").
call it 'the great'. In the course of the frequent invasions in Egypt from the E., Tanis was usually the first place which suffered after Pelusium, so that its ancient monuments were thus gradually destroyed, and the edicts of Theodosius contributed not a little to the same result. The work of destruction was finally completed in consequence of Turkish misrule, and 'the great Tanis' has thus dwindled down to the fishing village of Sân, the sole attraction of which consists in the scanty ruins in the neighbourhood.

**Ruins of Tanis.** The wall, built of bricks of Nile mud, enclosing the temple of Ramses II., the sanctuary of which perhaps existed as early as the primæval monarchy, was 250 paces long and about 150 wide. The temple stood in the centre of the town, and the latter lay on the slopes of hills which had been thrown up on both sides of the temple, partly for the protection of the temple itself, and partly to raise the houses above the level of the inundation (p. 396). Ascending a slight eminence close to the village, we first reach a large and much mutilated colossal figure in granite. We next come to a hollow made in the course of M. Mariette's excavations, with solid substructions of huge blocks of limestone, in the side of which there is a small chapel. Farther to the E. another and larger fragment of ruin was lately excavated, but, like most of the remains mentioned below, it has again been covered up with sand. Among the broken figures in black basalt lying here is a female torso, a singular peculiarity of which is that the left breast is much larger than the right. A damaged colossal figure, prostrate on the ground, is worthy of notice, as it shows that even granite monuments were painted. The flesh parts of these Tanitic coloured statues were painted bright pink, or almost red, the eyebrows reddish brown, and the 'kalantika', or headdress resembling a wig, yellow of various shades. Most of the statues and blocks bear the name of Ramses II. The finest of those of the early monarchy (such as the colossal statue of Usortesen at Berlin) are now deposited in different museums. The name of Meneptah is also observed on a number of ruins, and so also is the cartouche of Sheshonq, or Sesonchis III., of the 22nd Dynasty, of Bubastis, but only on those architectural fragments and statues which owe their origin to Ramses II. A little farther to the E. was probably situated the hypostyle, or colonnaded hall of the temple, as is evidenced by the broken columns lying on the ground, including several huge shafts of granite, crowned with finely executed palm capitals. At the bottom of the opening made by the last excavations, lie shattered obelisks, colossal statues, capitals of columns, shafts, and bases, in grand confusion. All these fragments are of granite, grauwacke, or other hard stone. On a blackish figure in a sitting posture is inscribed the name of Ramses II., who is here called 'lord of the diadems', 'protector of Egypt', and 'destroyer of foreign nations.' The shaft of a huge column also bears the still traceable name of one of his successors. About 20 paces farther on, a large broken obelisk lies prostrate on the ground. Ten other obelisks
near it, in a still more shattered condition, testify to the ancient glory of the city. The loftiest of them measured 46 and 49 ft. in height, and nearly 5 ft. in thickness. Some of them consisted of very dark, and others of light-coloured syenite. Even the great temple of imperial Thebes contained fewer obelisks than this vast sanctuary. All these edifices owed their origin to Ramses II. The museum at Būlāk contains the finest of the Hyksos sphinxes (p. 295) found here, while four others, more or less mutilated, still remain here. Besides these there is a sphinx in the Egyptian style, dating from the 19th Dynasty. The visitor should also notice an interesting little chapel, resembling a sarcophagus, and composed of a single block of a granulous kind of alabaster. The cavity is not much wider than the thickness of the sides. At the back is represented the triad of Ammon, Tum, and Mut. Another colossal statue here, composed of rose-coloured or almost purple granite, and a lion-headed statue of Sekhet were also erected by Ramses II. Adjacent is a second statue of Ramses II., executed in a flinty kind of sandstone, and coloured. Further on, towards the S., we next observe a large granite 'stele', with finely executed inscriptions, still easily legible, although damaged, mentioning a mode of reckoning dates which has been met with nowhere else. They are in honour of a distinguished official of the time of Ramses II., and bear the date of 400 years after the Pharaoh Aset-pelti, a Hyksos monarch. A new era was perhaps held to begin with that king, as the Egyptian gods were recognised by the foreigners of Tanis in his reign. A considerable way beyond this monument is another excavated hollow containing fragments of a temple, including several remarkably fine columns with curious palm capitals. These capitals, which, like the columns themselves, are of rose-coloured granite, are narrower at their bases than the shafts on which they rest. All the columns, now overthrown, are remarkable for slenderness of form, and the bases on which they stood were no less than 3 ft. in height, being higher than any others yet discovered in Egypt. Towards the S.E. are several round blocks, probably dating, according to the two inscriptions, from the period of the Ptolemies. Leaving the hollow containing the palm columns, we ascend without difficulty to the tomb of a sheikh which commands the best survey of the ruins of Tanis. Around the grey plateau of the town rise a series of hills, nearly forming a circle, and once covered with dwelling-houses. The ruins of the temple form a mass of cubical blocks and black and red fragments of obelisks, while the heaps of rubbish are mingled with innumerable chips of broken pottery. The empty houses resemble caverns, and show that the Tanites were contented with dwellings of very moderate size. The limestone 'stele' discovered here by Dr. Lepsius in 1866, known as the Tablet of Tanis, or Decree of Canopus, is now preserved in the museum at Būlāk (p. 296).
THE NILE
from Cairo to Feshn, including the Fayum and the Pyramids.

Names of Railway Stations are underlined.

1:1,000,000.

A Tour through the Fayûm, including a visit to the Labyrinth, the site of Lake Moeris, the Birket el-Kurûn with its abundant wildfowl, and the ruins in its neighbourhood, takes 6-8 days, and requires a tent, a dragoman, and a supply of provisions. Travellers pressed for time may visit the town of Medinet el-Fayûm (p. 447) by railway, but it offers little attraction. A dragoman charges 30-40 fr. a day for each person (comp. 13), according to the requirements of his employers, and for that sum, he is bound to provide them with a tent, provisions (wine excepted), and donkeys, or other means of conveyance, and to pay railway fares and all other expenses. A written contract (comp. p. 450), specifying the places to be visited, the points where some stay is to be made (on which occasion a reduced charge per day should be stipulated for), and other particulars, should be drawn up before starting. Those who intend to visit Medînet el-Fayûm and its immediate environs only, and who do not object to rough quarters for one or two nights, may dispense with a dragoman and a tent, but should be provided with a moderate supply of food. An introduction to the mudir will be of great service in enabling the traveller to procure the necessary horses or donkeys, which the inhabitants are often unwilling to let (comp. p. 447).

Since the completion of the railway this excursion has usually been undertaken from Cairo, but it may also be combined with a visit to Sâkkâra (p. 358). It was formerly usual to visit the Fayûm in connection with a journey up the Nile, but this plan entails needless expense, as the Nile boat and its crew have to be paid for while lying idle for several days. If, however, the traveller prefers this plan, he disembarks at Wâsta and sends on his dahabiyyeh to Beni Suèf, which he afterwards reaches by railway.

Railway from Cairo to Medînet el-Fayûm (Ligne de la Haute-Egypte).

81 M. - A train starts daily at 8 a.m. from the Bûlak ed-Dakrûr station on the left bank of the river (1½ hr. by carriage from the Ezekiye); comp. also p. 357), reaching Wâsta about 11.10, where the traveller alights, and has to wait till 2.10 p.m., when the train starts by the branch-line for Medîineh, arriving there in 1½ hr. - A train leaves Medîineh daily at 9.40 a.m., reaching Wâsta at 10.53; the train on the main line leaves Wâsta at 1.55 p.m. and arrives at Bûlak ed-Dakrûr at 3.12. The trains are often late.

Situation and History of the Fayûm. In the great plateau of the Libyan Desert, which rises 300-400 ft. above the sea-level, is situated the province of the Fayûm (from the ancient Egyptian 'Phiom', i.e. marsh or lake district), the first of the oases, which is usually considered to belong to the valley of the Nile (p. 68), and is justly celebrated for its extraordinary fertility (see below). This tract is in the form of an oval basin, 840 sq. M. in area, and supports a population of 150,000 souls; it is enclosed by the Libyan hills, which are here of moderate height, and lies about three-fifths of a degree to the S. of Cairo. It enjoys a remarkably fine climate, and has but rarely been visited by the plague. This 'land of roses' is still one of the most beautiful parts of Egypt, and more than any other part of the Nile valley deserves the well known epithet of 'the gift of the Nile', bestowed on Egypt by Herodotus, as it is entirely indebted for its fertility to the waters of the Nile with which it is artificially irrigated. The Bahr Yusuf, a channel 207 M. in length, which is more probably a natural branch of the river, artificially adapted, than a canal, diverges from the Nile to the N. of Sisit, and flows through a narrow opening in the Libyan chain into the Fayûm, where it divides into numerous ramifications, abundantly watering the whole district. One of its branches runs towards the N., skirting the E. slopes of the Libyan hills. At the point where the Bahr Yusuf enters the Fayûm, the district forms a plateau of moderate height, descending towards the W. in three gradations towards the Birket el-Kurûn, a long, narrow lake, extending from S.W. to N.E. On the easternmost and highest part of the oasis the Labyrinth and Lake Moeris (p. 401) were once situated; the central part yields the
luxuriant crops for which the province is famous; while the western-most part chiefly consists of sterile desert land. To the W. and N. of the Birket el-Kurün rise precipitous limestone hills, beyond which lies the immense sandy desert of Sahâra. The Fayûm must have been reclaimed from the desert at a very early period, probably during the early empire, in the reign of Amenemhat III., as monuments of his period indicate that he was perhaps the first of the Pharaohs who sought to regulate the whole course of the Nile. On the Upper Nile Prof. Lepsius has found Nilometers constructed by that monarch, and in the Fayûm, on the site of the Labyrinth, a number of blocks of stone inscribed with his name. The Greeks called him Ameris, or Môris, and believed that the lake known to them as ‘Lake Môris’, which they regarded as a marvel of engineering skill, was named after him. The word merî, however, is the Egyptian for lake or overflow, so that the great basin of the Fayûm was simply ‘the lake’, and it was from his exertions in connection with the irrigation works that Amenemhat obtained the name of Môris. We learn from several inscriptions, and from a papyrus roll treating of the Fayûm, that the province was known in the time of the Pharaohs as ta shet, or the lake-land, and that Lake Môris was called huit, signifying the discharge or posterior lake. On its bank rose the celebrated Labyrinth, which was probably renewed by the Bubastite monarchs of the 22nd Dynasty. About the same period the town of Crocodilopolis, situated on Lake Môris, and afterwards called Arsinoë after the wife of Ptolemæus Philadelphus, was so extended and embellished by Osorkon I. that it is called the ‘city of Osorkon I.’ in the inscription on the celebrated stele of Piankh. The whole province was at first called the lake-land, then the district of Crocodilopolis, and lastly the Arsinoite Nome. The deity most highly revered here was the crocodile-headed Sebek (p. 195), the reptile sacred to whom was carefully tended in Lake Môris. At the same time the voracious and dangerous monster, notwithstanding the reverence paid to it on account of its connection with the inundation, was also regarded as Typhonic, and the Crocodilopolitan nome was therefore passed over in the lists of nomes. — At the period preceding that of the Psamtikides of the 26th Dynasty the Labyrinth appears to have been used as a hall for great imperial assemblies. At the period of the Ptolemies and the Romans the products of the Fayûm were much extolled. ‘The Arsinoïte Nome’, says Strabo, ‘is the most remarkable of all, both on account of its scenery and its fertility and cultivation. For it alone is planted with large, perfect, and richly productive olive-trees, and the oil is good when carefully prepared; those who are neglectful may indeed obtain oil in abundance, but it has a bad smell. In the rest of Egypt the olive-tree is never seen, except in the gardens of Alexandria, where under favourable circumstances they yield olives, but no oil. Vinea, corn, podded plants, and many other products also thrive in this district in no small abundance’. — Strabo’s description is still applicable at the present day. The oranges and mandarins, peaches, olives, figs, cactus fruit, pomegranates, and grapes grown here are much esteemed, and the beautiful, rich-coloured red roses of the gardens of the Fayûm, which were once so lavishly strewed at the banquets of Cleopatra, still thrive here. At the station of Medinet el-Fayûm small phials of attar of roses, of inferior quality, are frequently offered for sale. Isma’il Pasha devotes special attention to this favoured part of his dominions. The fields, which are watered by means of wheels of peculiar construction, yield rice, sugar, cotton, flax, and hemp, besides the usual cereals. The beginning of November is probably the season at which the traveller will obtain the most distinct idea of the fertile character of the district. — The Inhabitants are fellâhin, or tillers of the soil, and Beduin. To the latter race belong the poor fishermen who inhabit the banks of the Birket el-Kurün. Many of the peasants also call themselves ‘Arabs’, and the wealthier of them are generally well mounted.

The Railway Journey is preferable to the voyage up the Nile in point of speed, and the passenger obtains a good view of the
left bank of the river, and sometimes of the opposite bank also. The Nile with its lateen sails is frequently visible to the left, while on the right we obtain glimpses of the Pyramids, rich corn-fields, canals, water wheels, palm-groves, and villages with tall dovecots in rapid succession. The journey has already been described as far as Bedrashén (see p. 358). We next observe on the right the pyramids of Dahshûr and the so-called false pyramid of Médûm (see p. 456). Abu Raqûn, Kafr ed-Dabâi, Kafr el-'Ayât, Kafr Amar, and Girzeh are unimportant stations.

56 M. Wâsṭa (post and telegraph office) lies in the midst of a large palm-grove, a few hundred yards to the left of the line, in the direction of the Nile. Carriages are changed here, and there is usually a stoppage of two or three hours, but there are no attractions in the neighbourhood.

The branch-line to the Fayûm runs towards the W., across cultivated land, to the village of Bûsh, where the dovecots are roofed in a style resembling the gables of European houses of the 17th century. Beyond this point the train traverses a desert tract for 35 min., and then crosses the low and bleak Libyan chain of hills. On the right, beyond these, we again perceive cultivated land, and the village of 'Adua (station). On the left is a cemetery with the dilapidated tombs of several shékhs. Numerous palm-branches are placed by the tombstones as tokens of affection. Beyond stat. Mâsûb we traverse rich arable land, and soon reach —

Medînet el-Fâyûm, the 'town of the lake-district', situated to the S. of the site of Crocodilopolis-Arsinoë, the ancient capital of the province. It contains about 9000 inhab., and is a not unpleasing specimen of an Egyptian town. Between the station and the town we observe a peculiar, undershot sâkiyeh, or water-wheel driven by the water itself. The very long covered bazaar contains nothing of special interest. The traveller, even if unprovided with an introduction, should pay a visit to the mudîr, who will protect him from extortion in case of any difficulty with the owners of horses and others (comp. p. 445). Quarters for the night may be procured at the house of the Italian curé (an introduction to whom had better be obtained from the French monks at Cairo), but not elsewhere without difficulty. A broad arm of the Bahr Yusûf (p. 445) flows through the middle of the town. The mosque of Kait Bey (p. 266), on the N. side of the town, now somewhat dilapidated, is the only interesting building of the kind. It contains numerous antique columns, brought from the ancient Arsinoë, some of which have shafts of polished marble with Arabic inscriptions, and Corinthian and other capitals. Below the mosque, on the bank of the Bahr Yusûf are some remains of ancient masonry. No ancient inscriptions have been discovered here, but the walls of some of the houses contain fragments which must have belonged to ancient temples.

— To the N. of the town are the extensive ruins of Crocodilopolis-
Arsinoë, which has been entirely destroyed. The site is now called Kom Fāris. Many antiquities, both of the Roman and the Christian period, have been found here, including numerous small terracotta lamps. The very extensive cemetery of the town, with its picturesque tombstones, covers part of the site of the ancient city; the highest of the mounds of rubbish command a survey of the whole of the Fayûm. At the W. end of the town the Bahr Yûsuf radiates into numerous channels, which water the country in every direction. The ruined mosque of Sâli situated here forms a picturesque foreground.

The village of Beyahmu, about 4 M. to the N. of Medineh, was doubtless once situated on the bank of Lake Mæris. It still contains some shapeless ruins of ancient origin, destitute of inscription, but supposed to be the remains of the pyramids which according to Herodotus once stood in the lake. They are now called Kurt Fârûn, or chair of Pharaoh, and resemble dilapidated altars rising above other fragments of solid masonry. If they were once pyramids, the greater part of them must have been removed, as the walls are now but slightly inclined inwards. Distinct traces of the water in which they once stood are observable on their bases, and they are still surrounded by remains of walls, the purpose of which is unknown.

In the fields near Ebgig, 2½ M. to the S.W. of Medineh, lies a fine obelisk, broken into two parts, which must have once been at least 46 ft. in height (route to it rough and dirty). Like other obelisks, it is, horizontally, of oblong rectangular shape, and its summit is rounded. The inscriptions, which are damaged at many places, inform us that the monument was erected by Usortesen I., who also founded the obelisk of Heliopolis (p. 320), and belonged to the same family (12th Dynasty) as Amenemhat III., the founder of the Labyrinth. — A visit to Beyahmu and Ebgig is chiefly interesting to archaeologists, and perhaps to botanists also.

Excursions. A whole day is required for a visit to Hawâra el-Kebîr, the Pyramid of Hawara, and the Labyrinth (horse 10, donkey 5 fr.). The route leads at first for 3/4 hr. along the bank of the Bahr Yûsuf. The first village of any importance is Kahâfîh. Our path traverses well cultivated land with numerous waterwheels. The corn and cotton fields are shaded by numerous sycamores, lebbeks, palms, and other trees. About 1/2 hr. from Kahâfîh, and after having passed two smaller villages, we reach a bridge of ancient brick masonry. Traversing the slightly undulating tract a little farther, we reach the Bahr Betâ Mâ (‘river without water’), a deep, dry channel, extending in a wide curve, and terminating near the N.E. end of the Birket el-’Kurûn (p. 454). In winter it contains a few scanty pools of water, which trickles down from its lofty banks. At the bottom of the channel grow reeds and tamarisks. The S. bank rises at places nearly perpendicularly to a height of 26 ft., so that the sequence of the strata of the soil is distinctly observable. We now ascend the plateau (the highest in the province) on which lies Hawâra el-Kebîr (also called Hawâra el-Kasat or Hawâra el-Ma’âta), a considerable village, with a mosque (reached in 1 3/4 hr. from Medinet el-Fayûm). The traveller may apply to the shâkh-el-beled (prefect of the village) for a guide
to the pyramid of Hawâra. If the water is high, and the canals have to be avoided, we have to make a circuit of nearly 2 hrs. to the Labyrinth, but by riding through the water, where necessary, it may be reached in \( \frac{3}{4} \) hour.

The longer route is preferable, as we here find several relics of antiquity. A little beyond the village rises the bridge of Kanââir el-Agani, the ten buttresses of which rest on a foundation of massive stone. We continue to ride along an ancient embankment, and thus reach the Kata'santa structure, which consists of a terrace of six carefully jointed steps of large and well-hewn blocks, but bears no inscription whatever. We cross the Bahr Eqib, which is conducted into the Bahr Yusuf, and reach the copious Bahr Wardâni, which now intersects the ruins near the Pyramid of Hawâra, and which is sometimes called by the Arabs Bahr esh-Sherki, i.e. river of the East. On the left side lies the mass of buildings, which, according to Lepsius, was probably the Labyrinth. In order to obtain a survey of these interesting ruins the traveller is recommended to ascend the pyramid. It consists of unburnt bricks of Nile-mud mixed with straw (comp. p. 359), and, when its sides were perfect, covered an area of upwards of 116 sq. yards. It has been ascertained that the nucleus of the structure is a natural mass of rock, 39 ft. in height. The dilapidated summit is easily reached in a few minutes by a flight of well-worn steps. Towards the S. we observe a congeries of chambers and passages of unburnt bricks, bounded by the Bahr esh-Sherki, and pronounced by Lepsius to be the right side of the Labyrinth, and the only part of it which is to some extent preserved. On the other side of the Pyramid there was doubtless a similar collection of rooms which has now disappeared; and several other structures beyond them, of which traces still remain, must have once existed there. The whole Labyrinth must have been in the shape of a horse-shoe. Between the wing of the Labyrinth which still exists, and that which has disappeared, lies an extensive space strewn with broken pottery, in the middle of which are large fragments of a magnificent ancient temple. The base of the shaft of a small papyrus column, and a capital of the same order, both in the red stone of Assuân, with sculptured stalks and foliage, are worthy of notice. Some blocks disinterred here bearing the name of Amenemhat III. have again been covered with sand. Several large blocks of limestone are also observed in the middle of this large court of the Labyrinth. The inscriptions are almost entirely destroyed, but faint traces of painting, and the symbols (\( \text{āā} \)) and (\( \text{u} \)), are still recognisable. From the traces still existing, the whole structure would appear to have occupied an area of 8800 sq. yds., and the large inner court an area of about 60 acres.

The Chambers of the Labyrinth which are preserved are situated Bâeâdeker's Egypt 1.
on the opposite bank of the Bahr esh-Sherki, across which the traveller may easily ride or get himself carried by an Arab. The chambers, the ceilings of which have long since fallen in, are very numerous, and of various sizes. The entire structure, which the Arabs believe to have been the Suk or bazaar of a ruined town, is traversed by several passages. Although nearly the whole of the buildings consists of Nile bricks, we occasionally observe blocks and slabs of limestone lying on the ground. On the N.E. side is a curious, low, double passage built of large and carefully hewn limestone blocks, both the first and second floors of which are covered with huge slabs of limestone. The end of the passage is closed by a stone slab, beyond which there are perhaps other corridors. On the site of the wing of the Labyrinth which has disappeared, beyond the river, there are also some fragments of walls built of Nile bricks. Beyond these is an old burial ground, now covered up, several of the tombs of which have been excavated by M. Mariette. Several wells here are carefully lined with blocks of limestone.

The Ancient Labyrinth. According to Brugsch, the Greek name Labyrinthos, which has been differently interpreted, is derived from ‘erpa’, or ‘elpa-rohant’, i.e. the 'Temple of the mouth of the Lake'. The inscriptions found here by Lepsius prove that it was founded by Amenemhat III. of the 12th Dynasty (p. 88). Herodotus declares that the Labyrinth, which was afterwards reckoned as 'one of the wonders of the world', was so vast as to surpass all the buildings of the Greeks taken together and even the Pyramids themselves. For the best description we are indebted to Strabo, who visited the Labyrinth in person. He says: 'There is also the Labyrinth here, a work as important as the Pyramids, adjoining which is the tomb of the king who built the Labyrinth. After advancing about 30-40 stadia beyond the first entrance of the canal, there is a table-shaped surface, on which rise a small town and a vast palace, consisting of as many royal dwellings as there were formerly nomes. There is also an equal number of halls, bordered with columns and adjoining each other, all being in the same row, and forming one building, like a long wall having the halls in front of it. The entrances to the halls are opposite the wall. In front of the entrances are long and numerous passages which have winding paths running through them, so that the ingress and egress to each hall is not practicable to a stranger without a guide. It is a marvellous fact that each of the ceilings of the chambers consists of a single stone, and also that the passages are covered in the same way with single slabs of extraordinary size, neither wood nor other building material having been employed. On ascending the roof, the height of which is inconceivable, as there is only one story, we observe a stone surface consisting of large slabs. Descending again, and looking into the halls, we may observe the whole series borne by twenty-seven monolithic columns. The walls also are constructed of stone of similar size. At the end of this structure, which is more than a stadium in length, is the tomb, consisting of a square pyramid, each side of which is four plethra (400 ft.) in length, and of equal height. The deceased, who is buried here, is called Ismandes. It is also asserted that so many palaces were built, because it was the custom for all the nomes, represented by their magnates, with their priests and victims, to assemble here to offer sacrifice and gifts to the gods, and to deliberate on the most important concerns. Each nome then took possession of the hall destined for it. Sailing about a hundred stadia beyond this point, we next reach the town of Arsinoe', etc.

This account, on the whole, applies to the ruins which still exist,
though not in its details. As it was possible to survey one series of chambers from the roof of the other, the two wings of the building must have been opposite each other. The pyramid 'at the end of the labyrinth' also still exists, but although Strabo assures us that the different chambers were built of large blocks, the fact is, that with the exception of the rooms on the N.E. side already mentioned, which were constructed of blocks of limestone, and roofed with huge slabs, Nile bricks are the only material which has been used. This discrepancy is, however, perhaps susceptible of explanation: the wing of the building which was destroyed may have consisted of massive blocks which were carried off and used elsewhere, while the worthless Nile bricks were abandoned to destruction. It is possible also that the finer and more substantial part of the wing now destroyed was shown to Strabo, and that the one still preserved was covered with stucco and resembled the other. Between the two wings fragments of the two columns alluded to still exist. The statement that the town of Arsinoë was 100 stadia distant by water is doubtless correct, as the town probably lay to the N. of the modern Medinet el-Fayûm.

Lake Möris. The Birket el-Kurûn ('Lake of the Horns', p. 454) was formerly believed to be identical with Lake Möris; but Linant Bey has shown on indisputable grounds, that that lake can never have fulfilled the purpose for which, according to the uniform testimony of ancient authorities, Lake Möris was intended, and that the latter, which has long since been dried up, must have lain further to the S.E., and nearer to the Labyrinth, El-Lâhûn, and the town of Medinet Fayûm (Arsinoë). The object of the lake was to receive the superfluous water in the case of too high an inundation, and to distribute its contents over the fields when the overflow was insufficient. The low situation of the Birket el-Kurûn would have rendered it unsuitable, while a lake like the one discovered by Linant on the highest level of the Fayûm would have been admirably adapted for the purpose. Strabo describes Lake Möris in the following terms: 'Owing to its size and depth it is capable of receiving the superabundance of water during the inundation, without overflowing the habitations and crops; but later, when the water subsides, and after the lake has given up its excess through one of its two mouths, both it and the canal retain water enough for purposes of irrigation. This is accomplished by natural means, but at both ends of the canal there are also lock-gates, by means of which the engineers can regulate the influx and efflux of the water.' The lock-gate, which in ancient times admitted the water conducted from the Nile by the canal into the lake, was probably situated near the modern El-Lâhûn, the name of which is supposed to be derived from the old Egyptian 'Ro-hun' or 'Lo-hun', i. e. 'the mouth of the lake'. The site of the modern El-Lâhûn, which is famous for its pyramid, was probably once occupied by the town of Ptolemais. If the Birket el-Kurûn had been identical with Lake Möris, its water, in order to be capable of flowing back to the E., would have required to be raised to a greater height than could possibly have been effected by any known method of engineering. If the lake was situated where Linant supposes, it would have perfectly fulfilled all the purposes for which it was destined; and we find, moreover, that there are still considerable remains of embankments (some of which are a hundred yards in width and ten feet in height), by which the lake was doubtless enclosed.

The traveller who desires to become acquainted with the **Situation and Form of the Ancient Lake**, must undertake the following somewhat fatiguing journey of 2-3 days. The route leads towards the S.S.W. of
Medinet el-Fayûm to the Birket el-Gharak, and intersects the desert of Shékíh Ahmed, where the ancient height of the water, which far exceeds the level attained in modern times, has left its traces; it then leads to Kalamsha, turns to the N. to Déř, and then to the E. and S.E. to Díminshkieh, follows the embankment of Pillawáneh, and passes Hawára el-Abtán. From this point the traveller visits the bridge of El-Lâhûn, near which rises the pyramid of El-Lâhûn, and where the locks by which the influx of the Nile was regulated must have been situated. The lake seems here to have formed a kind of angle, on the N.E. side of which lies Hawâra el-Kebr (p. 448). The route next leads by Demo towards the N.E. to Selekh, and thence to the W. to Beyahmu (p. 448); then again to the S., and thus returns to Medinet el-Fayûm. — The traveller will thus have completed the whole circuit of the bed of the lake, which is now dried up. It is of much smaller extent than was formerly supposed, and the 3,600 stadia, which Herodotus mentions as its circumference, may, with tolerable accuracy, be reduced to 360. In accordance with modern researches, its bed measures about 63 sq. miles in area. Considering that the bed of the lake must annually have been raised by the deposit of Nile-mud, it follows that as soon as the raising of the embankments and the removal of the mud were discontinued, the lake must have become unserviceable, especially after the lock-gates at El-Lâhûn fell to decay, each opening of which, as Diodorus informs us, cost 50 talents (i.e. about £250). The discharge of the superfluous water probably ran thence through the Bahr Belâ Má, which has already been mentioned (p. 448), or through the Wâdi Nezleh (p. 453), both of which fall into the Birket el-Kurûn. The ancient conjecture, that the latter discharged part of its water into the Sahâra (or, as Herodotus says, the 'Libyan Syrt'), was not an unnatural one.

A visit to the Pyramid of El-Lâhûn is only interesting to those who are desirous of convincing themselves of the truth of Linant’s hypothesis, and to make the circuit of the boundaries of the old bed of the lake (see above). The pyramid, which is built of Nile bricks, may be reached from Hawâra el-Kebr in 4-5, or from the Labyrinth in 3-4 hours. The remains of the ancient embankments, which were tolerably well preserved in the time of the Khalifs, are not without attraction; those who are interested in hydraulic engineering should also here inspect the entrance of the Bahr Yûsuf into the Fayûm.

Birket el-Kurûn and Kaṣr Kârûn (tent, horses, provisions, etc., comp. p. 445). The railway between Medinet el-Fayûm and Abu Kesi is used almost exclusively for the conveyance of sugar-cane to the manufactories of the Khedive. The train also conveys passengers, but usually on Mondays and Fridays only; those who travel by the train must take horses with them for the continuation of their journey. The following routes are all practicable, but the third is to be preferred:

(1) We proceed by land via Nezleh (where boats must be ordered for the passage of the lake) to Kaṣr Kârûn; then by water to Dîmeh, and again by water to the S. bank of the lake, situated in the latitude of Šenhûr, which lies about 4 M. inland. The horses should be sent on from Kaṣr Kârûn to the lake (unless the somewhat refractory guides refuse to obey), in order that we may ride to Šenhûr, and thence to Medinet el-Fayûm. Four or five days are required for the excursion; the points of interest are mentioned in the third route. The road from Nezleh (see below) to Kaṣr Kârûn (4 hrs.) leads through the desert, past the remains of a small temple, called by the Arabs Kaṣr el-Benît, or 'Maidens’ Castle'.
(2) If the traveller renounces Dimeh and Kaşr Kârûn, and is satisfied with the sport to be obtained in the Bahr el-Wâdî, he may easily make the excursion in 2½-3 days. On the first day the route skirts the railway (see above) to (2 hrs.) Sinerû; it then leads through a plantation of opuntia, the growth of which is so gigantic that it almost resembles a forest, and across a sandy tract overgrown with tamarisks to (2 hrs.) Abu Kesi, situated on a hill, and commanding a fine survey of the lake and the Libyan mountains. In the neighbourhood is a sugar manufactory, superintended by a Frenchman, who accords a kind reception to travellers. We now proceed to the S.W. across meadows, and through a somewhat marshy district, to (2½ hrs.) Absheh, situated close to Nezleh. (The traveller is recommended to spend the night in a tent rather than among the Beduins.) Next day we follow the valley of the Bahr el-Wâdî (or Bahr Nezleh), which is bounded by large mud-hills, to the lake (2½ hrs.), where we spend the middle of the day. (The numerous dead fish on the bank of the lake render its proximity unpleasant; boats are to be had from the Beduins.) In the evening we return to Absheh, and on the third day to Medînet el-Fayûm.

(3) Four days at least are required for the somewhat longer route via Şenhûr and the lake to Kaşr Kârûn, if the traveller wishes to visit Dimeh, and shoot on the lake. The route first skirts the railway and the Villa of Mahmüd Bey, and then passes the tomb of a shekh, where a draught of good water is offered to the traveller by a good-natured dervish. A number of dry ditches must be crossed, and also several canals, where the traveller on horseback will hardly escape from wetting his feet when the water is high; if he rides on a donkey, he should get the Arabs to carry him and his saddle across. The fields which we pass are remarkably well cultivated, and the eye rests with pleasure on trees of various kinds, including fine olives in the gardens, with hedges of cactus. The vegetation is most luxuriant in the neighbourhood of Fidimûn, a village picturesquely situated on a slope, but inhabited by a thievish population. The Bahr et-Tâhûneh (‘mill river’), one of the broader canals, must be crossed here. Beyond this point the country is, at places, green and well irrigated, and at others dry and sterile. One part of the route, which is flanked by luxuriant gardens of olives, pomegranates, and figs, is very muddy. After a ride of fully three hours we reach the locks and the bridge Kanâtir Hasan. The large body of water of the canal, which is conducted from the Bahr Yusuf, here falls into a channel, which, with many ramifications, conveys it to the fields of Şenhûr.

The large village of Şenhûr lies on the border of the second plateau of the province. Those who visit Hawâra el-Kebrî (p. 448) reach the first plateau, while the second is crossed on the way to Şenhûr; the third lies at our feet when looking down on the Birket el-Kurûn from the great Kôm, i.e. the ruin-strewn hill to the N.
of the village. The handsome house of the Shékh el-Beled offers good accommodation, and even quarters for the night. The traveller should make a bargain here for a boat with the shékh of the fishermen. About 30 fr. for the day, and a bakhshish for the rowers (of which 6–8 are necessary for speed), are demanded.

Senhûr stands on the site of an ancient, and not unimportant, town, of which large heaps of ruins still remain. Roman walls are traceable in many places. A large building has recently been excavated by the peasants for the sake of obtaining the hard bricks of which it is built, but part of it had already been removed. No remains of columns or inscriptions have been met with.

The traveller, after having ridden to the lake, should not forget to order his horses, which return to Senhûr, to await him for the return-journey at the spot where he has quitted them, or to order them to meet him in good time on the bank of the lake by Nezleh (see p. 456).

The Birket el-Čurûn (the ‘lake of the horns’) owes its name to its shape, which resembles that of slightly bent cows’ horns. It measures 34 M. in length, and, at its broadest part, is about 6½ M. wide. It is situated on the same level as the Mediterranean, and its depth averages 13 ft. The greenish water is slightly brackish (but not unpleasant to the taste), and abounds in fish, some of which are very palatable. The right of fishing is let by government, and the whole of the fishermen dwelling on the banks of the lake are in the service of the lessee, who receives one-half of the catch. The boats (merkeb) are very simply constructed, being without deck or mast; the traveller must take up his quarters on the flooring in the stern; none of the boats have sails, for, as the fish always go in the same direction as the wind, the fishermen have to row against the wind in order to catch them. Numerous pelicans, wild duck, and other water-fowl, frequent the lake. The banks are extremely sterile; on the N. side are barren hills of considerable height. In the middle of the lake rises a mass of rock, resembling a table, and serving as a landmark. Near the S. bank, from E. to W., lie the villages of Kafr Tamîyeh, Senhûr, Abu Kesi, Bîsheh, Abu Genshûn, and Nezleh; the ruins of Dimeh are situated on the N. bank, but there are no other villages of importance.

To Kafr Kârûn across the Birket el-Čurûn. We row to the promontory of Khûshm Khalîl, overgrown with tamarisks and reeds, the creoks of which afford good landing-places. Ascending thence across the desert, we reach the temple in the desert in about 1½ hours. The fishermen object to pass the night on the bank in the neighbourhood of Kafr Kârûn, being afraid of the Beduins and the ‘Afârit’ (evil spirits).

Kafr Kârûn is a tolerably well preserved temple, probably of the Roman, or, at the earliest, of the Ptolemaic period. Before reaching it we observe numerous traces of an ancient town, which has now disappeared. The ground is strewn with blocks of hewn stone, burnt bricks, broken pottery, and fragments of
glass. A circular foundation wall indicates the site of an ancient cistern, while other walls seem to have belonged to vineyards. The walls of the temple consist of carefully hewn blocks of hard limestone. This temple, like almost all the shrines in the oasis, was dedicated to the ram-headed Ammon-Khnum, as is proved by the only two figures of this deity which still exist. They stand opposite to each other at the highest part of the posterior wall of the upper story of the open roof. — The temple is 20 yds. in width across the façade, and 29 yds. in length.

The entrance, facing the E., is approached by a lofty and carefully constructed platform, 14 yds. in length, forming a fore-court, on the S. side of which rises a massive structure resembling a tower. Adjoining the façade of the temple, to the W. of the entrance door, rises a massive, semicircular projection, resembling the half of a huge column. On the lower floor are the apartments of the temple which were dedicated to worship, divided into a triple prosekos, and leading to the Sekos or sanctuary. In the first three rooms the ground slopes down towards the sanctuary, which, built in the form of a cella, adjoins the third room of the prosekos, and (as in the case of other temples) was divided into three small rooms at the back. The sanctuary is flanked by two narrow passages, each of which is adjoined by three rooms. The rooms of the prosekos also have adjacent chambers from which we may enter the cellars, or ascend by two flights of steps to the upper floor with its different apartments, and thence to the roof, whence we obtain an extensive view of the remains of the ancient city, of the lake, and the desert. Each gate of this curious building is surmounted by a winged disc of the sun; and over the doors leading into the second and third rooms of the prosekos and into the sanctuary, instead of the ordinary concave cornice, there is a series of Uraeus-snakes, which, with their outstretched heads and bending necks, together form a kind of cornice. The names of several travellers are engraved on the stone of the first room, including those of Paul Lucas, R. Pococke, Jomard, Roux, d'Anville, Coutelle, Bellier, Burton, Belzoni, Hyde, and Paul Martin. Kaṣr Kārūn has also been visited by Lepsius. There are no ancient inscriptions remaining.

To the E. of the large temple are situated two smaller Roman temples, in tolerable preservation, the larger of which, situated 300 paces from the smaller, is not without interest. Its walls (18 ft. by 19 ft.) consist of good burnt bricks, and its substructions of solid stone; the cells terminates in a niche resembling an apse; on each of the side-walls are two half-columns, which, as the fragments lying on the ground show, belong to the Ionic order. There are also some less important ruins covering an extensive area, but nothing has been found among them dating from an earlier period than the Roman. The construction of the walls, the architectural forms, and many coins found here, are Roman; and none of those small relics of the period of the Pharaohs, which are usually found so abundantly among the ruins of Egypt, have been discovered here. This was perhaps the site of the ancient Dionysius, a town which probably sprang up on the ruins of a Roman military station, situated on the extreme western side of Egypt. On the outskirts of the
ruins are walls which perhaps belonged to gardens; there must also have been once an aqueduct for the purpose of supplying the inhabitants and their gardens with water.

From Kašr Kārān to Dimeh is one day’s journey. Dimeh is situated opposite to the point at which we approach the lake from Senhūr. The scanty ruins on the S. bank of the lake (El-Hammāmāt, etc.), are not worthy of a visit; but the ruins of Dimeh, although no inscriptions have been found there, present some attraction. A street, 400 yds. in length, and embellished with figures of lions, leads to a platform on which an important temple once stood. The numerous blocks scattered about here, resembling millstones, and apparently artificially rounded, are discovered on closer inspection to be of natural formation. The paved court was surrounded by a brick wall, and the temple itself contained several apartments; a peristyle, with columns now in ruins, led to the entrance. Notwithstanding the imperfect state of the ruins, they suffice to prove, that a town of very considerable importance, perhaps the ancient Bacchis, once stood here.

From Dimeh to Senhūr. After spending the night at the end of the street just mentioned, we take a boat on the following morning either to the coast near Senhūr, to which the horses must be ordered, and where they will find good accommodation; or we row to the mouth of the Baḥr Nezleh (see p. 453), and return thence by land to Medīnet el- Fayūm, either to Senhūr or Nezleh. In the latter case the horses should be ordered to go to Nezleh whilst the traveller is exploring the lake, and, when the day of return is fixed, they should be directed to be in waiting at the mouth of the Baḥr Nezleh.

Excursion to Medūm.

The Pyramid of Medūm may be visited from the Wāṣṭa station (p. 447), or, if the traveller approaches by the river, from the village of Rīkṣa, on its bank.

The name of the village of Medūm appears to be the oldest of the local names handed down to us, as it is met with on the maṣṭābas of the early period of Snefru.

The Pyramid of Medūm (1 1/2 M. to the N.W of the village) is so different from all the other structures of the kind that it is called by the Arabs ‘El-Haram el-Kaddāb’, or ‘the false pyramid’. From a large heap of rubbish which covers its base, the smooth and steep upper part of the structure rises in three different stages at an angle of 74° 10′, and is still preserved to a height of 122 ft. The first section is 69 ft., and the second 20 1/2 ft., while the third, now almost entirely destroyed, was once 32 ft. in height. The outer walls consist of admirably jointed and polished blocks of Mokaṭṭam stone. The holes in one of the surfaces were made by Lepsius and Erbkam when they examined the pyramid, the construction of which afforded them an admirable clue to the principle upon which the others were built (p. 336). The Pyramid of Medūm was never completed; the heap of debris at its base consists of the material which once filled the angles of the different sections, so as to give the pyramid a smooth surface.

The Maṣṭābas of Medūm, which were opened a few years ago by M. Mariette, lie to the N. of the pyramid. These were the tombs of the
relations of Snefru (p. 86), and in many respects resemble the mausolea of Sakkâra which bear the same name (p. 365). The façades of the most important of them are partially uncovered. The street of tombs, which is now accessible, presents the appearance of a hill-side covered with masonry, incrusted with stucco, and provided with ante-chambers. The mouth of each tomb is towards the E.; the leaning external walls are generally of Nile bricks, richly embellished with the linear patterns which afterwards formed the favourite decorations of the sides of the sarcophagi (which were imitations of the tomb-façades). The vestibule is in most cases comparatively large, but the inner corridors are narrow, slope downwards, and are covered with representations in a remarkably simple and antiquated style. The archaic character of the scenes and of the hieroglyphics proves the great antiquity of these monuments. The influence of the hieratic canon is already traceable here, but it does not appear to have hampered the efforts of the artists as much as it did at a later age. The admirably preserved colours are also less conventional than those seen in later monuments.

The first open tomb which we reach from the S., was that of Prince (Erpa Ha) Nefermat, of the family of Snefru. On the left wall of the corridor leading to the tomb-chamber, we see the deceased in a sitting posture, and on the right wall he is represented standing, with his wife behind him. Adjacent are men and women presenting offerings, as in the mastabas of Ti and Ptahhotep (p. 387). The flesh-tint of the men is red, and that of the women pale yellow; and this circumstance, especially in a monument of this early period, is important as tending to prove the Asiatic origin of the Egyptian nobles. The features of the persons represented are of the Caucasian, and not of the Ethiopian type. Among the villages belonging to Nefermat, which offered gifts, there appears on the left the name of the district of Medum.

\[\text{\textbf{Medum}}\]

\[
\begin{align*}
\text{i.e. 'Metun of the cattle'. Metun is the oldest form of the name Medum. From the neck of the ox, which represents the victim, flows a black stream of blood. On the right side we find among others a district named 'of the white sow', which proves that pigs were reared in Egypt as early as the time of Snefru. The pig in this group is very true to nature.}
\end{align*}
\]

\[
\text{In the name of the district Hat en Sek, or 'place of the ploughing', the most ancient form of the plough is used as a determinative symbol. The advanced condition of industrial pursuits, showing that the Egyptians already practised the art in which, according to Pliny, they afterwards excelled, is proved by the character of the dress worn by the women represented on the right side of the first passage, consisting of black and white cotton stuff with pleasing patterns on the borders. He tells us that they were not in the habit of painting the materials for their dress, but of dipping them in certain fluids. They were coloured with boiling dyes, and came out impressed with a pattern. Although the boilers contained one colour only, it is said to have imparted several different tints to the stuffs dyed in them. In order to impart a durable colour to the larger figures represented here, an entirely unique process was employed. The outlines were engraved on the stone, while the surfaces enclosed by them were divided into deeply incised squares, which were filled with stucco of different colours, the flesh-tint of the men being red, that of the women yellow, and the colour of the robes being white, etc.}
\]

A little farther to the N. is the tomb of Atet, the wife of Nefermat. On the architrave over the doorway we see the husband of the deceased engaged in snaring birds, while a servant presents the spoil to the mistress of the house, whose complexion is of a brilliant yellow. On the outside wall, to the left, we observe the cattle of the deceased browsing on reeds. On the right stands Nefermat, who, as the inscription informs us, 'caused this monument to be erected to his gods in indestructible
characters'. Among the domestic animals are several cattle of very bright colours. We also notice a gazelle held by the horns by a butcher, who is cutting off its head. Offerings of wine were also made at this early period. In the passage leading to the Serdâb is seen a group of labourers busily at work. The hunting-scenes are curious, and, notwithstanding their simplicity, remarkably true to nature. Among them is a greyhound seizing a gazelle by the leg, and another carrying a long-eared hare which it has caught.

A few paces to the N.E. is another mastaba built of well-hewn blocks of limestone. The hieroglyphics and low reliefs, resembling those in the tomb of Ti at Saôkâra (p. 374), are admirably executed. The deceased interred here was named Khent, and his wife Mara. Traversing the vestibule and a narrow passage, we reach a tomb-chapel with a sacrificial table; in the passage, on the right, is a handsome male figure with a lasso, and on the left are stone-masons, engaged in making sarcophagi. On the left, in the innermost niche of this tomb, we perceive the deceased, and on the right, his wife. We next come to a ruined mastaba, and to another tomb, half excavated, which was constructed for Rahotep, a son of Snefru, one of the highest civil and military dignitaries of the kingdom, and his wife Nefert, a relation of the royal family. The statues of this married couple, who died young, or at least are so represented, which are now among the principal treasures of the Museum of Bûlâk (p. 302), were found here. Farther to the W. are several other tombs, now covered up.

On the right bank of the Nile, opposite Rikka, upwards of 3 M. inland, is situated the small town of Atsh, where a heap of earth and broken pottery represents the scanty remains of the ancient Aphroditopolis, the territory of which, according to Strabo, adjoined that of Acanthus (Dahshûr), while its capital lay on the Arabian bank of the Nile. The city of Aphroditopolis must have been the same as that of the Egyptian Hathor, to whom also was sacred the white cow, which, as Strabo informs us, was worshipped here. The monuments, however, show us, that in the name of Aphroditopolis, Horus, the son of Isis, was more highly revered than any of the other gods, among whom Hathor must be included. At an early period the Coptic name of the place was Tpeh, from which Atbo, and the Arabian name Atsh are derived.

About A.D. 310 the city of Aphroditopolis gained some celebrity from St. Anthony, the anchorite, who took up his quarters among the mountains to the E. of the town. So many devotees of every class made pilgrimages to him, that a regular high road, practicable for camels, had to be constructed, which led the pilgrims through the desert to the cell of the hermit, situated near a group of palms and a spring. The saint, however, escaped from his visitors, by retiring farther into the heart of the mountains (see below).

Near the village of Zâwiye (W. bank) a small canal runs out of the Nile into the Bahr Yûsuf (p. 445); a deep cutting also seems to have connected the river with the Bahr Yûsuf in the latitude of Ahnas el-Medîneh and Beni Suêf. These four channels enclosed an island which has been identified with the Heracleopoliton Nome, unanimously described by Greek authorities as an island. Strabo, who visited it on his way to the Fayûm, after leaving the Nome of Aphroditopolis, describes it as a large island, and informs us, that the inhabitants of Heracleopolis worshipped the ichneumon, the greatest enemy of the crocodile, which was held sacred in the nome of Arsinoë: for, as he tells us, it crawls down the throat of the sleeping monster and devours its entrails. The large hills of rubbish near Ahnas el-Medîneh have been satisfactorily identified with the ruins of Heracleopolis; they lie about 11 M. inland from Beni Suêf, and are called by the Arabs Umm el-Rîmain ('mother of the heaps of rubbish'). An excursion to them, however, is not recommended, unless the traveller is visiting Beni Suêf from the Fayûm.

On the W. bank of the Nile the mountains recede a considerable distance, while on the E. bank their steep and lofty spur frequently extend down to the bank in not unpicturesque forms. None of the Nile

villages between this point and Beni Suéf are worthy of mention. About 2 M. inland (on the W. bank) is the village of Bâsh, chiefly inhabited by Copts, with two churches of some interest, and numerous potteries.

Beni Suéf, 72 M. from Cairo, with 5,000 inhab., the first place where the steamboat stops, and a railway station, is a pleasantly situated town, with beautiful shady avenues, and a palace in bad preservation. It is the capital of a province of the same name, which is said to contain 109 villages with about 100,000 inhabitants, and is the residence of a Muhr. Post and telegraph office, and a small bazaar. The market days present a busy scene, but the dirty streets are almost deserted at other times. The linen manufacture, for which this town was famous in the middle ages, has fallen off.

A road, which was much frequented before the completion of the railway, leads from Beni Suéf into the Fayûm.

Another road, traversing the Wâdi Bayâd, which opens near the village of that name, on the E. bank of the Nile, opposite Beni Suéf, leads through the desert to the monasteries of St. Anthony and St. Paul (pp. 99, 374), situated a few miles from the Red Sea. The fraternity of the monastery of St. Anthony now occupies the highest rank among the Monophysitic religious corporations.

From Beni Suéf railway to Cairo in 4½ hrs.

10. The Peninsula of Sinai.

The journey to Mount Sinai is perhaps the most interesting of Oriental expeditions, particularly to the student of the Bible†, as he will traverse nearly the same route as that of the Israelites described in the Bible (p. 472). The peninsula of Mt. Sinai owes its imperishable fame to the vicissitudes undergone by these wanderers under the leadership of their great lawgiver; but the scenery is also so varied that it will amply repay the traveller for all the privations of his journey, which, after all, are not more serious than those of a tour through the interior of Palestine. The usual duration of the Mt. Sinai expedition is 17-20 days (comp., however, p. 464).

The best Season for the journey is between the middle of February and the end of April, and between the beginning of October and the middle of November. During the months of November, December, and January, the nights are generally very cold, while in summer the glare of the sun, reflected from the granite rocks of the Sinai mountains, is very oppressive. Even at the end of May the weather is hot, and the Khamsin (p. 60) prevalent (setting in sometimes as early as April), but at this advanced season the traveller will have the advantage of seeing the manna (p. 489), or fruit of the fara shrub, in its ripe condition.

The Preparations for the journey require special care. The starting-point is Suez, but all the preliminaries must be arranged at Cairo, where alone are to be found the necessary dragomans and the Sheikhs of the Tâwara Beduins (p. 467), who act as guides and let camels during the travelling season. The first thing is to engage a good dragoman (p. 13), who provides camels, tents, bedding, blankets, and provisions. All these should be examined at Cairo, and the tents pitched by way of experiment. The more carefully this inspection is made, and any defects

† Although it is not the object of the handbook to enter upon the province of Biblical criticism, the views of the principal explorers are briefly given in connection with the different places. As the great charm of a journey through the Peninsula consists in its associations with the Biblical account of the Exodus of the Israelites, and the promulgation of the law (p. 469), the traveller should of course be provided with a copy of the whole Sacred Volume, or at least with the books of Exodus and Numbers.
remedied, the less likelihood will there be of subsequent annoyance. The traveller is particularly cautioned against trusting to the promises of Orientals.

The cost of the journey for a party of 3-4 persons, including camels, tents, accommodation in the monastery of Mt. Sinai (and at the Hotel at Suez if necessary), provisions (exclusive of spirits), the Dragoman’s fee, and all gratuities payable to attendants, will amount to 40-50 fr. a day for each person, according to the requirements of the party, and the demand for camels. The expense is proportionally less for a large party, but in this case, delays and differences of opinion are more likely to occur.

The following contract will probably meet the requirements of most travellers.

Contract. Mr. X. and his travelling companions on the one hand, and the Dragoman Y. on the other, have mutually entered into the following contract:

1. The Dragoman Y. binds himself to conduct Mr. X. and his party safely through Arabia Petraea to the Monastery of Sinai, and back, by the following route... (naming the principal points), at a charge of... shillings per day. For the three days, during which the camels are travelling from Cairo to Suez the Dragoman shall receive one-third only of the stipulated daily charge. The Dragoman Y. undertakes to await at Suez the arrival of the travellers, in perfect order for starting, on the... day of the month of... The day of starting from Suez shall be deemed the first complete travelling day. For each day after the first twenty days, reckoned from the starting of the camels, and also for days of rest, the right to appoint which is reserved to Mr. X., the daily charge shall be reduced to... for each person.

2. It is advisable to lay down the whole route very precisely, mentioning also the valleys which have to be traversed, but the stages must of course depend on the situation of the springs. We may again mention here that the Orientals, and the Beduins in particular, attach no value whatever to their time, so that little or no compensation need be made for delays.

3. The whole travelling expenses of the party, for the journey by land and by water, camels, boats, etc.; for food, for tents, or for accommodation at hotels (to be chosen by Mr. X.) in case of any stay at Suez; for lights, service, guides, bakhshish to all persons whatsoever, and particularly the fees for escorting the party paid to the Beduins whose territory is traversed, shall be defrayed exclusively by the Dragoman Y., who shall also bear all outlay for the stay in the Monastery, including the usual contributions to the monks. Each traveller shall be entitled, without extra charge, to ½-l bottle of wine per day, but Mr. X. shall provide any spirituous liquors required by the party. (Or the party may prefer to purchase their own wine, as well as spirits, in which case the Dragoman Y. shall be required to carry it free of expense. A few bottles of good claret or Burgundy, and of Cognac, should also be privately taken to mix with the water, which is often unpalatable, or to be used in case of illness.)

4. The Dragoman Y. shall provide a good cook, and a sufficient number of servants, and shall take care that they are always polite and obliging to Mr. X. and his party, and that they are quiet at night so as not to prevent the travellers from sleeping, and he shall also maintain order among the camel drivers, as well as the other attendants. The Dragoman Y. also undertakes to be himself at all times obliging to Mr. X. and his party (p. 13), and to comply with all their wishes so far as possible.

(It is customary for the attendants to ask a bakhshish for every trifling service, but no attention should be paid to their demands. Another bad habit of theirs, to be carefully provided against, is that of tying up their beasts too close to the tents, and of chatting beside them half the night.)

4. The Dragoman Y. shall provide... tents for 2-3 persons each (to
Camels. PENINSULA OF SINAI. 10. Route. 461

which may be added, if required, a tent to be used by the whole party during the day, and for each traveller a complete bed with clean mattresses, blankets, sheets, and pillows; each person shall have two clean towels every five days, and clean sheets once a week. A sufficient supply of water for washing shall be supplied every morning, and as much drinking water per day as the traveller desires.

(The Beduins of Sinai carry the water in small, long-shaped casks. The traveller will find it convenient to have one of these appropriated to his private use. Kullehs are best for keeping the water cool, but are easily broken.)

(5) The traveller's breakfast shall consist daily of eggs, with tea, coffee, or chocolate; lunch shall consist of cold meat (roast-meat, fowls, etc.), and fruit; dinner, at the end of the day, shall consist of . . . courses. The travellers shall be provided with oranges and dates whenever they desire.

(The traveller may adjust the bill of fare according to his taste. As the air of the desert is bracing, a liberal diet should be prescribed; preserved meats may also be stipulated for. Nothing is to be had on the route except at the monastery, where rice, lentils, bread, dates, and excellent date-brandy may be purchased. The dinner hour should always be fixed for the evening, after the day's journey is over.

It need hardly be said that wine and spirits are apt to make the traveller drowsy in hot weather. Cold tea quenches the thirst better than anything else. The bread which the dragoman proposes to take should be tasted beforehand. The Arabian bread, consisting of thin, round cakes, is only palatable when fresh, so that a supply of European bread should be stipulated for. — An abundant supply of ordinary tobacco (p. 27) should be taken to give the attendants and Beduins, but the traveller should beware of being too liberal with it at first, lest this attention should be demanded as a right.)

(6) The Dragoman Y. shall provide a sufficient number of good and serviceable camels; the riding camels (see below) for Mr. X. and party may be tried by them before starting, and in case they do not suit, may be exchanged for others. The same stipulation applies to the saddles (the condition of which should be carefully examined).

(7) In case of the illness or death of any of the camels, Mr. X. and party shall to no extent be responsible.

(8) Neither the Dragoman Y. nor the Arabs, who escort the travellers, shall, without the special permission of Mr. X., allow anyone whomsoever to join the party.

(9) The Dragoman Y. binds himself to conduct Mr. X. and party to any point within Arabia Petraea which they may desire to visit, to allow them to break their journey, whenever, and for as long a time as they may wish, and to provide each member of the party, when making excursions off the main route, with guides and luncheon. The Dragoman Y. shall not, however, be bound to provide more than one dinner, and one lodging for the night.

(10) The Dragoman Y. forfeits all claim to payment for any day when he is the cause of a stoppage for more than half a day; but no such forfeiture shall take place, if Mr. X. himself, or unfavourable weather, should be the cause of the delay. Any accidents happening to the camels, or difficulties caused through the fault of the Arabs, shall be reckoned among the delays for which the Dragoman Y. is answerable.

(This last stipulation is quite fair, as the Arabs in Arabia Petraea can always procure fresh camels within a few hours.)

(11) The day for starting from Suez shall be the . . .th day of . . .; for any postponement caused by the Dragoman Y., contrary to the wishes of Mr. X. and party, he shall be liable to a fine of . . .l.stg. per day.

The Camels (p. 12) used for riding are of an entirely different race from the camels of burden, and are called 'Hegin', or in Syria 'Deltal' (i.e. docile). The Deltals, properly speaking, are selected animals of noble breed, and very superior to the ordinary camels of the caravans. The
saddle, which is placed upon the hump of the animal, consists of a kind of wooden frame, from which two high round crutches project in front and behind. Upon the frame is placed a leather cushion (which is rendered more comfortable by the addition of rugs), and in front of the foremost crutch there is a second cushion. The traveller sits with one leg round the foremost crutch, somewhat in the way in which ladies ride, and rests the heel of one foot against the instep of the other. The camel is urged on by the rider’s heel, or a switch. The camels generally march in a long string, one behind the other, with deliberate but long steps, always snatching at herbs by the way-side when they have an opportunity. Their trotting and galloping paces are unpleasant. A camel can also carry two or more persons in a litter, and may also be made to carry the traveller’s luggage. Mounting is not easy at first. When the animal kneels down, the rider grasps the two crutches, and places one knee on the cushion; he then swings the other leg into the saddle over the hindmost crutch. The camels have a trick of getting up while the rider is in the act of mounting, but the drivers prevent this by putting their feet on one of the animal’s bent fore-legs. The first movements are always somewhat violent, and the novice must hold fast by the crutches; as the camel always gets up with its hindlegs first, the rider should at first lean back, and afterwards forward. The walking motion is very pleasant, and those who are accustomed to it will prefer a camel to a horse for a long journey. The rider can read comfortably if he wishes, and need not hold the reins in his hand.

Arabian Saddle-Bags (Khurg) should be purchased for the journey, as they are very convenient for carrying the requirements of the toilet, books, tobacco, and other articles.

With regard to Dress, see pp. 14, 15. Overcoats, cloaks, or bournuses (‘abāyēch’, see p. 40), and slippers, should not be forgotten. The traveller should also be provided with Strong Shoes, if he intends to make mountain ascents, as the rocks of the Serbâl and Jebel Mûsa are very sharp and angular.

Lastly a few hints with regard to Health (p. 15; chemists, p. 232) may be acceptable to the traveller, although the climate of the peninsula is extremely healthy, especially if the traveller walk an hour or two in the mornings and evenings. A pair of blue or grey spectacles, with perhaps a second pair in reserve, will be found to protect the eyes against the inflammation which is apt to be caused by the glare of the sun. A supply of zinc or other eyewash will often be useful. Castor oil (two tablespoonfuls), is a good remedy for diarrhoea, even when serious. Seidlitz powders are a specific for indigestion. Pills of quinine should be taken in cases of fever (which frequently attacks the Beduins), and glycerine is useful for softening the skin when cracked by the heat. A supply of lint, sticking-plaster, and linen bandages, may also sometimes be useful. — A cup of tea or coffee will be found refreshing at luncheon; fuel for heating water (camel-dung, and dry plants) can always be obtained by the Beduins. Good cocoa is also considered wholesome and nutritious, and is easily prepared. A supply of Liebig’s extract of meat should not be omitted.

At Cairo (or at Suez) the traveller should procure through his consul a letter of introduction from the Monastery of the Sinaïtes at Cairo to those of the Monastery of St. Catharine, where he will then receive every attention. Those who intend to visit ‘Akaba, should, if possible, be provided with an introduction to the commandant of the fortress there, especially if they propose to proceed thence to Petra. — Enquiries should also be made at Cairo whether a journey to Petra is considered safe.

The following are the principal routes (distances see below): —

(a) Land Route. This route leads by Wâdî Maghâra (p. 450), Wâdî Mokattab (p. 483), Wâdî Firân (p. 483), and Nakb el-Hâvi (p. 491), to the Monastery of Sinaï, and returns by Wâdî esh-Shêkh (p. 509). Sarbît el-Khâdem (p. 511), and Wâdî el-Homr (p. 513) near the sea, and to the road leading to Suez. In this way the traveller does not retrace his steps, except on a portion of the route.
(The journey from Mt. Sinai to ‘Akaba, and from Petra to the Holy Land, is very rarely undertaken, and should not be attempted without careful enquiry regarding the safety of the route.)

(b) SEA VOYAGE. A boat conveys the traveller down the Red Sea to Tur (p. 504), whence he rides to Sinai in 2½ days. When the N. wind, which almost always prevails on the Red Sea, is strong enough, the voyage takes about 20 hrs.; but it may take much longer if the breeze subsides. As the vessels skirt the coast, and as violent storms in the Red Sea are very rare, except during the prevalence of the Khamsin in April and May, the voyage in a boat of sufficient size (about 20 tons' burden) is unattended with danger, though far from pleasant in a bad vessel. The return-journey should on no account be made by water, for, owing to the prevalence of the N. wind, constant tacking is necessary, so that the voyage takes 8-10 days or more. The trip may be made in a vessel of 20 tons' burden, with a crew of four men, for 100-150 fr.

The master of the vessel should be required to provide himself with the necessary ship's documents. The traveller's consul will perhaps give him a letter of introduction to Shekh Hennen, a respectable and obliging Arab who lives at Tur, but who speaks Arabic only. Even without an introduction the traveller should apply to this shekh, who will assist him in getting camels.

The most favourable time for starting is towards evening; we embark from the quay near the Suez hotel. After traversing the narrow arm of the sea at the upper end of which Suez is situated, we reach the end of the Suez canal, and the roadstead shortly afterwards. On the right rise the 'Ataka mountains (p. 401), with the promontory of the same name, and to the left are the palms of Ain Musa (p. 406), beyond which is the low chain of the hills of Tih. Beyond Cape 'Ataka opens the broad Wadi Mista, and the hills recede. On the left lies the desert extending between the Tih hills and the sea; to the right, in the foreground, is the lighthouse of Ras Zuferaneh, opposite to which, on the left, is the Jebel Hammâmîn Farîn (see p. 477), abutting on the sea. For some distance hills on the left now rise close to the coast (see p. 478). The bay expands. To the right, in the foreground, rises the huge and picturesque Jebel Gharib (about 5900 ft. in height), at the foot of which is a second lighthouse. On the left are the conical peaks of the Jebel el-'Araba, the base of which we now skirt. Beyond the Jebel Gharib, which becomes more and more prominent, rises the table-land of Jebel el-Zer, which yields petroleum. The chain of Jebel el-'Araba is prolonged by the sandy Jebel Nakas (p. 505), and the Jebel Hammâmîn Musa (p. 505). We at length come in sight of the palm-groves and buildings of Tur, beyond which lies the sterile desert of Et-Ka'a (p. 506); above the latter tower the imposing mountains of Serbîl on the left, and of Umm Shomar on the right, between which appear the mountains of Sinai. Tur; see p. 504.

The advantages of the sea-voyage consist in the saving of time and money effected by avoiding the fatiguing and monotonous journey between Suez and Wadi Shebîkeh, while we make the acquaintance of Tur and the picturesque route through the Wadi es-Siikh (p. 506), and have an opportunity of ascending the Umm Shomar (p. 504) without making any digression. On the other hand we miss the route by Sarbîl el-Khadem (p. 511); but this is of no consequence provided we return the whole way by land, for the sake of seeing the majestic Serbîl (p. 487), the oasis of Firân (p. 484), the Wâdi Mokatteb (p. 489) with its inscriptions, and the mines of Wâdi Maghâra (p. 480), all of which are points of much interest.

Camels are always to be had at Tur, but as good saddles are rare, the traveller's dragoman should take an ample supply of rugs from Cairo, moreover it is not so easy to make a satisfactory bargain at Tur as at Cairo, though Shekh Hennen (see above) will render every assistance in his power. If the party is numerous, or if the traveller wishes to provide against the possibility of delay, camels should be sent on from Suez to Tur, a journey of three days for unladen animals, the cost of which is not very great.
To the above directions may, lastly, be added a few hints for which we are indebted to a traveller who is well acquainted with the Arabic language, and is accustomed to associate with the Beduins: — Take the railway from Cairo to Suez. Dispense with tents and beds; but take at least a couple of warm rugs to fold over the saddle, and to be used at night. Hire a boat at Suez, and procure an introduction to Shëkh Hennen at Tûr, and to the Monastery of Sinai. Pack preserved meats and a few cooking utensils in a couple of baskets. No interpreter need be taken if the traveller speaks a little Arabic. Sleep at Tûr in Hennen's house, and hire a camel from him with a Beduin attendant on foot (30 fr. to Suez). Start very early and traverse the desert to Wâdi es-Sîh (see p. 506), reaching the Sinai Monastery next evening. Thence travel slowly to Wâdi Ba'ba'. Lastly, return to Suez by forced marches, taking about two days and a night. The whole journey may thus be accomplished in eight days, without reckoning the stay at the monastery, and perhaps at Firân; and as a sheltered resting-place may always be found among the mountains, the shelter of a tent will never be missed, excepting perhaps on the last day of the expedition.

DISTANCES AND DISPOSITION OF TIME. There are of course several land-routes to the Monastery of Sinai, but we need only describe the most interesting of them, and those which are generally taken by travellers. As a standard of distance we adopt the time usually occupied by the camels in performing the journey. Their average rate of travelling is about 2½ m. per hour.

When a journey in the East is to last for several days, it will be found impossible to induce the boatmen on the Nile, or the 'Children of the Desert', to start early in the morning, as they invariably seem to think that a late hour in the afternoon is the most suitable time, so that a very short distance only is performed on the first day. So on the tour to Sinai the party seldom gets farther than 'Ain Mûsa (see below) on the first day, but on the second and following days more satisfactory progress is made. Patience is therefore indispensable at starting. The journey is usually made without any prolonged halt, except at the mines of Wâdi Maghâra in the Wâdi Mokatteb, in which we spend 3½ hrs., riding at a slower pace; at the Jebel Serbâl, if it is to be ascended, for one day; and at Şarbûţ el-Khâdem, for ½-1 day. Mount Sinai, being the great object of the journey, requires a stay of 2-3 days.

Routes to Mount Sinai.

Route I. By Land via Suez, Wâdi Maghâra, and Wâdi Firân.

1st Day. From Suez to 'Ain Mûsa (p. 406), 2½ hrs.
   A longer journey cannot well be accomplished on the first day, but
   the camels and attendants may be sent on thither, while the traveller
   may follow alone in the evening or early on the following morning,
   by boat, and there mount his camel for the first time.

2nd Day. From 'Ain Mûsa to the beginning of the Wâdi Werdân
   (p. 474), 8 hrs.
   From 'Ain Mûsa to the beginning of the great plain 3 hrs.; thence
   to the beginning of the Wâdi Werdân 5 hrs.

3rd Day. From the beginning of the Wâdi Werdân to Wâdi Gharandel
   (p. 476), 7½ hrs.
   From Wâdi Werdân to Wâdi 'Amâra (p. 475), 3½ hrs.
   From Wâdi 'Amâra to Wâdi Hawâra (p. 475), 2 hrs.
   From Wâdi Hawâra to Wâdi Gharandel, 2 hrs.

4th Day. From Wâdi Gharandel to Râs Abu Zenîmeh (p. 478),
   8½ hrs.
   From Wâdi Gharandel to Wâdi el-Homr (where Route ii. diverges,
   see p. 513) 5½ hrs.
   Thence to Râs Abu Zenîmeh (p. 478), 3½ hrs.
The 4th day may be divided into two days, if the Jebel Hammâm Farûn (p. 477) is to be visited. The best camping place is at the mouth of the Wâdi Kuvêseh.

5th Day. From Râs 'Abu Zenîmeh to the mines in the Wâdi Maghâra (p. 480), 8 1/4 hrs.

From Râs Abu Zenîmeh to Hanak el-Lakam (p. 479), 3 3/4 hrs.

Thence to the mines in the Wâdi Maghâra (p. 480), 4 1/2 hrs.

6th Day. From Wâdi Maghâra to the hill of El-Meharret in the Wâdi Firân (p. 484), 9 hrs.

From the mines to the Wâdi Firân 3 1/4 hrs.

Through the Wâdi Firân to El-Meharret 5 3/4 hrs.

The 6th day's journey should be divided into two parts by those who are specially interested in the mines of Wâdi Maghâra and the inscriptions in the Wâdi Mokatteb. On the 7th day we then arrive in good time at the foot of Mt. Serbâl, or at the Oasis of Firân (p. 484).

7th Day. From the hill of El-Meharret to the end of the Wâdi Selâf, 73/4 hrs.

From El-Meharret to the beginning of the Wâdi Selâf, 2 hrs.

Thence to the end of the valley, 5 3/4 hrs.

The traveller who desires to ascend Mt. Serbâl (p. 487), should devote this day to the excursion, giving notice to the Beduins of this intention on the previous day. They will then provide guides, and pitch the tents near the best starting-point for the ascent, which should be begun at an early hour.

8th Day. Over the Nakb el-Ḥawi (p. 491) to the Monastery of Sinai, 4 1/2 hrs.

If the easier route from the oasis of Firân through the Wâdi esh-Shèkh (see below) to the monastery (12 3/4 hrs.) is preferred, the party should encamp on the 7th day by the defile of El-Watiyeh (9 hrs.; p. 509).

Three days at least should be spent at the Monastery of Sinai (p. 492).

Route II. From the Monastery of Mount Sinai via Ṣarbâṭ el-Khâdem to Suez.

1st Day. From the Monastery of Sinai to the Wâdi et-Ṭarr (p. 510), in the Wâdi esh-Shèkh, 7 3/4 hrs.

From the Monastery of Sinai to El-Watiyeh, 3 1/4 hrs.

Thence to the Wâdi et-Ṭarr, 4 hrs.

This is a moderate day's journey only, as the traveller seldom succeeds in getting off early from Sinai, especially if the halt is made at the monastery itself. The monks will, if requested, aid the traveller in overcoming difficulties raised by the Beduins.

3rd Day. From the lower end of the Wâdi Barak to the beginning of the Wâdi el-Ḥomr, 9 1/4 hrs.

From the Wâdi Barak to the Wâdi Merattameh in the Wâdi Sâwik, 4 1/4 hrs.

Thence to the Wâdi el-Ḥomr, 5 hrs.

4th Day. Through the Wâdi el-Ḥomr to the Wâdi Gharandel (p. 476), 9 1/4 hrs.

Through the Wâdi el-Ḥomr to its union with the Wâdi Shebêkeh, 3 3/4 hrs.

Thence to the Wâdi Gharandel (see Route i.), 5 1/2 hrs.

Baedekeker's Egypt I.
5th-7th Days. From the Wádi Gharandel to Suez, see Route i.
Those who desire to visit the site of the monuments at Sarbût el-
Khadem (p. 511) should go on the 3rd day as far as the Wádi Hébrán-
tameh (see above), and devote the afternoon to the antiquities. They
would then proceed on the 4th day as far as the junction of the Wádi
Homr and the Wádi Shebêkéh (8½ hrs.). Beyond that point, see R. i.

Route III. From Suez by Sea to Tür, and by Land to Sinai.
1st Day. Sea-voyage from Suez to Tür (p. 463), 15-30 hrs.
2nd Day. Preparations for the journey in Tür (p. 504).
3rd Day. Visit the Jebel Nákûs (p. 505). Under favourable cir-
cumstances this may be managed on the second day.

From Tür to the Monastery of Sinai, 2½ days. The pass used by
the monks is much shorter than the route described below, but is
extremely rugged.
4th Day. By the plain of El-Ká'a (p. 507) to the Wádi Hébrán
(p. 507), 9 hrs.
5th Day. Through the Wádi Hebrán by the Nakb el-'Ejjâwi to the
Wádi Selâf (p. 490), 10 hrs.
6th Day. Over the Nakb el-Hâwi (p. 491), and through the Wádi
er-Râğa (p. 491), to the Monastery of Sinai, 5½ hrs.

Formation of the Peninsula. At the N. end of the Red Sea two
long, narrow bays extend into the mainland, the Gulf of Suez on
the W., and the Bay of 'Ağaba on the East. The peninsula thus
formed, which belongs to Arabia, is called the Peninsula of Sinai, or
Arabia Petraea, after Petra, its capital. It consists entirely of sterile
ranges of mountains, furrowed by Wádis, or valleys with water-
courses, which are scantily filled after rain only. The geological
formations of the peninsula are extremely interesting. The S. pro-
monitory of the peninsula is called Rás, or Cape Mohammed. This
large, triangular region is 9400 sq. M. in area, i.e. about the same
size as Sicily. It is appropriately called the Peninsula of Sinai,
because Mount Sinai constitutes the nucleus of its formation, and
presents physical features entirely distinct from those of the sur-
rounding regions. Isolated by the sea and desert from the rest of
the earth and its history, it has yet, from a very remote period,
formed the highly revered vestibule of all the temples of the civi-
lized world. (C. Ritter.) The Mount Sinai group, with its masses
of granite, forms the S.W. half of the peninsula, while the long
limestone range of Jebel et-Tih, beginning at the Isthmus of Suez,
first turns to the S.E., and then sends forth a number of ramifica-
tions to the E. and N.E. The Sinai group forms a watershed from
which wádis descend to the E. and W., i.e. to the gulfs of Suez
and 'Ağaba respectively; while the 'River of Egypt', which is men-
tioned as the boundary of Palestine in the Bible, and is now the
Wádi el-'Arish, descends from the Jebel et-Tih towards the N. to
the Mediterranean. Those parts of the Tih Mountains across which
our route lies rise to a moderate height, and are formed of limestone,
chalk, and, to a smaller extent, of sandstone.
Inhabitants. PENINSULA OF SINAI. 10. Route. 467

The Mount Sinai Group. 'This huge range, composed of primæval gneiss and granite, or, in more precise geological terminology, of colourless quartz, flesh-coloured felspar, green hornblende, and black slate, rising in majestic and precipitous masses and furrowed by vertical clefts, extends from Serbâl to the Om Shômar, and from the Om Shômar to the Bâs Mohammed. Since the time of their formation these crystalline masses have undergone no geological change, but have reared their summits above the ocean from the beginning of time, unaffected by the transitions of the Silurian or Devonian, the Triassic or chalk periods. At the base only do these venerable mountains show any trace of alteration. Thus the Red Sea has on one side thrown a girdle of coral around Mount Sinai, and so in recent times produced a coast district; while towards the N. the sea, during the chalk period, has formed the limestone plateau of the desert of Tih (4000 ft. above the sea-level), which stretches across the whole of Sinai to Mount Lebanon. The crystalline masses of the Sinai chain, which extend from N. to S. for a distance of about 40 M., exhibit no great variety. The whole range forms a central nucleus traversed by diorites and porphyrtes.' (O. Fras.)

Inhabitants. Amid the sterile mountains and valleys of the peninsula, some 4-5000 Beduins manage to obtain a livelihood. They generally have remarkably slight figures, and regular, sharply marked features. The boys, who follow the camels and wait upon travellers, are particularly graceful and engaging; the men are employed in conveying millstones, charcoal, and other wares to Egypt; they supply travellers (who are chiefly pilgrims of the Greek faith) with camels, hunt the mountain goat, celebrate festivals, and, in the W. part of the peninsula at least, rarely indulge in the sanguinary feuds which the different tribes formerly waged with one another. Those occupying the E. and the N.E. of Arabia Petraea are of a wilder and more warlike character; the boys and girls, and occasionally the men, drive the goats and the speckled sheep, which call to mind the artifice resorted to by Jacob, to the meagre pastures in summer, while the women remain in the tents to look after their children and household work. In the best watered parts of the peninsula, the Beduins have built themselves huts, and cultivate plantations of dates, the most productive of which are in the Wâdi Firân (p. 484), and in the neighbourhood of Tûr on the Red Sea. In all other districts the inhabitants live in tents. The Tâwara are good-natured, honest, and generally of noble bearing; they are quite free from the sordid cupidity of the lower classes in Egypt, and the name of 'Fellâh' is used by them as a term of reproach. They do not practise polygamy, and their families are generally small. The young Beduins have opportunities of seeing the girls of their tribe unveiled, while tending their herds on the mountains, and of forming attachments to them. Marriages from inclination are therefore frequent here, but custom requires that the bridegroom should purchase his bride from her father, the usual price being several camels, and a certain sum of money, but the bargain is seldom concluded without protracted negotiations conducted by a third party. The girl is not permitted to know anything of these negotiations between the father, the suitor, and the match-maker (khâhid); and if she should happen to have been a witness of them, decorum requires that she should retire into the mountains, though only for a few hours. Some tribes require that she should remain among the mountains for the three days preceding the marriage, but among the Tâwara she spends them in a tent erected beside that of her father, whence she is removed to the dwelling of her future husband. It occasionally happens that the girl flees of her own accord to the mountains, and seriously resists and throws stones at an unacceptable suitor (comp. p. 489). Each tribe has a sheikh, or chief, a title of honour which is also sometimes applied to the older and most respected members of the community. The dress of these Beduins is very simple. They wear a tarbûsh or a turban, and a grey gown fastened with a girdle round the waist. In cold weather they wear a burnous of coarse material; many of them are bare-footed, but the wealthier wear sandals of camel-leather. Their usual weapons consist of sabres and
knives; the guns they use for hunting are of great length and simple construction. They neither use horses nor lances, but the men often carry staves, which are still made in the form of the Egyptian \textit{\textlangle\textrangle}. From their girdles usually hang amulets, tinder, and tobacco pipes. Those tribes, with whom the traveller chiefly comes in contact, call themselves Tawara (people of Tār), and are generally honest. The principal sub-divisions of this tribe are the Sibianeddēr, Mezēneb, Gararisheh, Sawālība, Sa‘ādīyeh, ‘Awārimeh, ‘Alēkāt, ‘Rādānīyeh, and Shahin. The Beduins of the E. and N.E., and particularly the ‘Alāwīn, are wild, warlike, and insolent. The Tiyāheh, who conduct the traveller from Nakhleb to Hebron, are less objectionable. With regard to the servants of the monastery (Jebeliveh), and the families dependent on them, who are settled in the oasis of Fīrān and in Tār, see p. 493. Each tribe has its particular district, the boundaries of which are indicated by stones at doubtful points. These Beduins have long professed El-Isām, but know little or nothing of the Prophet and his religion. They are seldom seen to pray, but they celebrate festivals to Sālīh and Mūsā (Moses), their national saints, and sacrifice victims in their honour (see pp. 490, 509).

\textit{History of the Peninsula.} The history of this region is as old as that of Egypt itself, for we find that the first Pharaoh, of whose reign we possess contemporaneous monuments bearing inscriptions (Snefru), signalised himself as the conqueror of these mountain tribes, and the discoverer of the mines. The mines in the desolate Wādī Maghāra (p. 480) and Šarūb el-Khādem (p. 511) were worked by Egyptians more than 5000 years ago; and copper, malachite, and turquoises were brought thence to the treasury of Memphis. Down to the time of the invasion of Egypt by the Hyksos (p. 88), we learn that the peninsula was dependent on the Pharaohs, and was impoverished for their advantage. Whilst the latter, having been supplanted by the new masters of Egypt, maintained themselves in the S. part of the valley of the Nile, it seems that the working of the mines was suspended, and that the mountain tribes succeeded in shaking off the yoke of their oppressors. Immediately after the expulsion of the Hyksos, these tribes were subjugated anew by the powerful monarchs of the 18th Dynasty, who conquered all the states adjoined Egypt on the East. This is proved by the inscriptions of Šarūb el-Khādem, extending down to the 20th Dynasty. The names of the springs, mountains, and valleys, resemble those of the Book of Exodus; and the Biblical traditions, which the Beduins attach to them, doubtless owe their origin to the Christians who settled at an early period in this wilderness. With regard to the battle with the Amalekites, and Mount Sinai as the scene of the promulgation of the law, see p. 469 \textit{et seq.} We may, however, remark here, that the Israelites of a later period never made pilgrimages from Palestine to the sacred mount, and that, throughout the Mosaic writings, Elijah (p. 500) alone is mentioned as a visitor to Mount Sinai. Down to the time of the first settlement of the early Christians, we rarely have any mention of travellers in the peninsula: but they are mentioned on some Egyptian inscriptions, on the occasion of the journeys to Ophir (1 Kings ix. 26, 28.), and lastly in a few notices of the history of the Nabataeans, a people from the N.E., who took possession of the commercial route abandoned by the Phenicians, and, from the famous rocky city of Petra, commanded the peninsula down to about the period of the birth of Christ. Numerous rocks in the districts we are about to visit bear inscriptions (p. 483) which owe their origin to the heathen Nabataeans. Down to the beginning of the Christian era, the population probably led a similar life to that of the present day. Shepherds pastured their flocks here, and merchants and pilgrims traversed the wādis on camels, or ascended to the summit of the sacred Mount Serḥāl. The caravans of the merchants, however, were more richly freighted than at the present day, while the natives, instead of praying to Allah and the Prophet, worshipped the brilliant stars in the cloudless sky of this almost rainless country. On the diffusion of Christianity, the deserts of the peninsula were peopled by a new race, and assumed a new appearance and a more important position. Arabia Petraea lay between the two
lands which had embraced Christianity most ardently, namely Syria and Egypt, and soon became an asylum for the believers of these two countries who longed for pardon and redemption, and who hoped, by subjecting themselves to misery and privations in this world, to attain salvation in the next. Their great exemplars were Moses and Elijah, both of whom had trodden the sacred soil of the peninsula, and this region therefore appeared to them a most appropriate place of retirement from the business and pleasures of a wicked world. The first seeds of Christianity, which bore fruit in Trajan’s reign, were perhaps sown here by St. Paul about A.D. 40. In A.D. 100 the peninsula was annexed to the Roman empire by Cornelius Palma, prefect of Syria. After the middle of the 4th cent. the peninsula was gradually peopled with Anchorites and numerous Cænobites, who were bound by a common monastic rule. Tradition ascribes the foundation of the brotherhoods of hermits and monks to St. Paul of Thebes and St. Anthony of Koma, but the most recent investigations (comp. p. 371) prove this conjecture to be improbable. On Mt. Serbâl and in the Wâdi Firân, the ancient Pharan, was situated the most thickly inhabited settlement (laura) of anchorites known to have existed in any of the localities frequented by the early Christians. The penitents were not only exposed to privations of every kind, but to the attacks of the cruel and rapacious Saracens and Blemmyes. About the year 305 forty of the monks of Sinai were massacred by the Saracens. In 361-63 St. Julian founded a church on Sinai (Mt. Serbâl?). Terrible massacres of the monks of Sinai were again perpetrated by the Saracens in 373 and 393 or 411, of which Ammonius and Nîlus, two eye-witnesses, have given accounts. In the 5th cent. many of the monks and anchorites embraced heretical doctrines, which exposed them to severe persecutions. In the reign of Justinian, according to the account of Procopius, a church, dedicated to the Virgin, was built halfway up Mount Sinai (on the site of the present chapel of Elijah), while a very strong fortress was constructed at the foot of the hill, and provided with a garrison, to prevent the Saracens of the peninsula from invading Palestine (see p. 459). In the 7th cent. the armies of Mohammed began their victorious career. They did not penetrate into the interior of the peninsula, but doubtless took possession of Alia (‘Akhâba), which was chiefly inhabited by Jews. In the course of subsequent expeditions, the peninsula of Sinai was found to be almost exclusively occupied by a Christian population. The wandering tribes of the natives readily embraced the new religion, and the monasteries and cells of the anchorites were ere long deserted. The monks of the Monastery of the Transfiguration alone continued to maintain their position in spite of many difficulties, partly by their resolute conduct, and partly by stratagem (p. 459). In the time of the Crusades, Alia (p. 505) became one of the chief scenes of the battles between Saladin, who captured it in 1170, and the Franks, who were afterwards unable to maintain possession of it, notwithstanding the efforts made by Count Rainold. After the Crusades the history of the peninsula was merged in that of Egypt. Its sequestered valleys were traversed by hosts of Mecca pilgrims, while there was also, as at the present day, no lack of Christian pilgrims of the Greek faith, wending their way to the monastery of Sinai.

The Exodus. Until recently the Bible was the only source of information regarding the emigration of the Jews from Egypt, but the monuments and papyrus-scrolls which have been handed down to us by the ancient Egyptians, and deciphered by modern ingenuity, now convey to us a distinct idea of the condition of Egypt at the time of the Exodus, which we may compare with the contemporaneous Biblical accounts. On collating the Bible narrative with the monuments, we find that they agree on all material points. On the other hand, however, it seems obvious, that the vicissitudes undergone by the Israelites in Egypt and during the Exodus, must have been gradually embellished by legendary and poetical additions, before they were recorded in writing. These embellishments doubtless originated in the fertile imagination of the people, and in their profound gratitude, which prompted them to paint in the
most glowing and picturesque colours the great things which God had done for them. Most of the camping-places of the people seem, as we shall see, to be capable of identification, since the list of stations in the wilderness, as given by Moses (Numb. xxxiii), was doubtless made from contemporaneous records.

The Period of the Oppression. After Joseph's death the Israelites had multiplied greatly, and, together with other Semitic tribes, occupied the

Statue of Ramses II., the Pharaoh who oppressed the Israelites (found at Tanis).
Head of a statue of Meneptah, the Pharaoh of the Exodus (found at Karnak).

(Both in the Museum at Bulaq.)

The following theory regarding the Exodus, which was started during last century by G. H. Richter, and maintained more recently by Schleiden, has again been adopted by Brugsch (comp., however, the observation at p. 459).

According to the monuments, the Sethroitic nome was also called Suku or Succoth. This region was covered with marshes, lakes, and canals, so that it was impossible to erect towns in the interior of the district, and accordingly the Egyptian texts, as well as the classic authors, mention towns on its boundaries only. The three following are those oftenest mentioned. One named Khetam (i.e. fortress) of Succoth lay to the N., near Pelusium, and was intended to protect the N. frontier. A second, bearing the Semitic name of Segol, or Segor (i.e. key), of Succoth, and situated on the S.W. frontier of the district, was intended to protect the district of Tanis-Rames against invasion. The third, known by the Semitic name of Migdol (i.e. tower), or by the Egyptian name of Samut (also signifying a tower), lay on the outskirts of the Arabian desert, on the E. frontier of the district of Succoth, the site being probably identical with that of the modern Tell es-Samut (see Map of the Suez Canal to the E. of Kantara). Brugsch identifies the Biblical Succoth with Segol in Succoth, and Migdol with the above-mentioned Migdol-Samut. The Biblical Etham, however, which is wanting to complete the list of the stations, is also capable of identification, for it can be no other than the Egyptian Khetam, which signifies fortress, the same word being preserved also in the Khetam of Succoth (see above).
whole of the N.E. part of the Delta, whilst the early Pharaohs of the 19th Dynasty were constantly at war with the nations whose territory adjoined the Delta on the N.E. It was therefore natural that the Egyptian kings should fear that, during their absence and that of the Egyptian army, the Jews should ally themselves with the enemies of Egypt, who were of cognate race, and this apprehension is distinctly mentioned by Pharaoh in the Bible narrative. Ramses II., after whom one of the scenes of the compulsory labour of the Israelites was named, was the Pharaoh of the oppression, and his son Menephtah (the Menephtes of Ménéth) was the Pharaoh of the Exodus. The monuments inform us, that these two monarchs decorated Tanis, the ancient city of the Hyksos, anew with magnificent monuments, the place having long been shunned by their predecessors on account of the Semitic religious rites practised there. Tanis is the Zoon of the Bible, where Moses performed his miracles in the presence of Pharaoh. This place was doubtless often visited by Ramses II., who was a powerful conqueror and founder of cities, not only when on his way to battle, and on his return as a victor, but because his presence must often have been necessary for the prevention of rebellion among the numerous foreigners resident in these E. districts. The Israelitish records only mention the oppression they underwent towards the end of their sojourn in Egypt. Ramses, however, was far from being a capricious tyrant, but was a wise, though severe military prince, who employed the Semitic settlers in his kingdom in the construction of useful works, in order to prevent them from endangering his empire. The Jews, perhaps, also assisted in strengthening the double series of bastions, known as the wall of Sesostris, but constructed before the time of Ramses, which closed the Isthmus of Suez and afterwards obstructed the progress of the emigrants. The 'Egyptian wall' with its forts and frontier fortresses also afforded protection against the Asiatics, and commanded the district of Goshen.

The Pharaoh of the Exodus. Ramses II. was succeeded by his thirteenth son Menephtah (p. 90), a man of mature age. At the beginning of his reign Menephtah came into serious collision with the Libyans, who had allied themselves with the warlike inhabitants of the Mediterranean islands, and had attacked the coast of Egypt. He succeeded, however, in subduing them, and was thus enabled to march victoriously to Thebes, where he caused spacious buildings to be erected, and encouraged the scientific labours of the priests. Like his father, he also occasionally resided at Tanis, as the monuments inform us, and seems to have accorded greater

Now the monuments mention a Khetam called Khetam in the Province of Zor (i.e. Tanis-Ramses, p. 411), to distinguish it from other fortresses of the same name. A representation of this Khetam is preserved on a monument of Seti I. in Karnak, in the form of a fortress on both banks of the river (the Pelusiac arm of the Nile), the opposite parts being connected by a bridge (Kantaara), while a town, named Tabenet, lies in the vicinity. [This Tabenet is probably to be identified with the 'Pelusian Daphnae' (the plural form being applied to the double fortress), of which Herodotus (ii. 90) expressly says, that it was occupied in his time, and before it, by an Egyptian garrison for the protection of the frontier towards Arabia and Syria.] This Khetam, together with the town of Tabenet, is probably to be sought for in the ruins of Tell Defennah (see Map of the Canal of Suez, W. of Kantaara, p. 412). The memory of the bridge (Kantaara) connecting the double fortress still survives in Kantaara (see p. 422), which lies a little to the E. of Tell Defennah. The accuracy of this theory, according to Brugsch, is also proved by the Egyptian and classical accounts of the roads which led to the E. from Ramses (i.e. Tanis-Sân). Two such roads are said to have existed; one of these led to the N.E. by Pithom (p. 398) through the marshy district of Succoth, with its numerous canals, and, according to the Egyptian texts and the authority of Pliny, was unsuitable for caravans and therefore but little frequented; the second was used by the Pharaohs when they marched towards the E. with their chariots and horsemen, and led from Ramses to Segol in Succoth, Khetam, and Migdol. In the British
liberty to the Semitic inhabitants of the Delta than his predecessor. Being, however, less powerful and resolute, he was more exposed to danger from his Asiatic neighbours than Ramses, who had not only rendered them tributary, but had leagued himself with them by intermarriages and treaties of peace, of which valuable records are still preserved. Moreover, before his accession to the throne the fortification of the E. frontier of the empire had been completed. He continued, nevertheless, to employ the bondsmen in Goshen, and to keep them in check, as they might have become very formidable if they had succeeded in uniting their forces against Egypt. Accordingly, when Moses requested Pharaoh to allow him to lead his people into the desert, Menephtah's policy was to refuse, his great object being to prevent the union of the Israelites with other cognate tribes. This accounts for his obstinate resistance to the apparently simple request of Moses. The story of the plagues, and the destroying angel is well known. The historical foundation of the embellished narrative is corroborated by Egyptian and Greek records, which state that Menephtah was compelled by various disastrous occurrences to allow the foreigners (or 'lepers', as they are called in Egyptian reports) to quit the country.

The Exodus. Moses and his people doubtless started from Ramses; but it is difficult to follow the route taken by the emigrants during the first few days. Notwithstanding the ingenious theory of Brugsch (see Note, p. 410), there seems little doubt that it was the Red Sea which the Israelites crossed, when we consider that their route to the E. was obstructed by a line of fortifications. Believing this, we at once succeed in identifying the stations at which they halted, and in accounting for the apparently eccentric route chosen by Moses. The following passage occurs in Numbers xxxiii. 5, et seq.:—'And the children of Israel removed from Ramses, and pitched in Succoth; and they departed from Succoth and pitched in Etham, which is in the edge of the wilderness. And they removed from Etham, and turned again unto Pi-Hahiroth, which is before Baal Zephon; and they pitched before Migdol. And they departed from before Pi-Hahiroth, and passed through the midst of the sea into the wilderness.'—Ramses (Maskhuta), on the freshwater canal between Tell el-Kebir and the Lake of Timsah, was their rallying point; the Israelites assembled here from On (Heliopolis), Belbès, Bubastis, and Pithom, from the E. and S.E., and joined those coming from Tanis and the N. pastoral districts. The various detachments were here united; their hearts were filled with joyous hopes of reaching the happy

Museum is preserved a papyrus letter upwards of 3000 years old, in which an Egyptian writer describes his departure from the royal palace at Ramses, observing that his object was to follow two fugitive servants. The writer mentions that he started from Ramses on the 9th day of the third summer month, that he arrived on the 10th at Segol in Succoth, and on the 12th at Khetam, and that he there learned, that the fugitives had taken the route in the direction of the wall (i.e. Anbu-Gerra-Shur, see p. 413), to the N. of Migdol. If Moses and the Israelites are substituted for the two fugitive servants, and the pursuing Pharaoh for the writer, the route is precisely the same as that followed by the Hebrews on their Exodus. As the writer arrived on the first day at Segol, and on the third arrived at Etham, and as the fugitives took the route thence to Migdol and Anbu-Gerra-Shur, so also did the Israelites. On their arrival there the Israelites were then on the bank of the Sirbonic Lake (see p. 413, and the Map), a long sheet of water to the E. of Port Sa'id. This lake was well known to the ancients, but has long since been filled with sand, and has therefore fallen into oblivion. According to ancient accounts the lake was in the form of a long strip, separated from the Mediterranean by a narrow barrier only, and extending along the coast. Diiodorus informs us that the lake was entirely overgrown with reeds and papyrus plants, and that it was very dangerous to travellers, particularly when a violent S. wind drove the sand of the desert over its surface so as entirely to conceal the water, as the surface might then easily be taken for land, and thus lure the ignorant to their de-
promised land, and, with their swords ready to resist opposition, if necessary, the Israelites thus departed from Egypt 'armed', and with a 'high hand'. On leaving Ramses they took the road to Syria, and encamped at Succoth, to the S. of the modern Lake Balah. On the following day they passed Etham (or Khetam, 'the entrenchment'), i.e. the line of fortifications above mentioned. Here their march was arrested by towers, moats, and troops of well-armed soldiers. Hereupon the people, who while under the yoke of their oppressors had little opportunity of learning to use their swords, lost courage and desired to return. Moses knew the character of the multitude under his care, and was aware that they were as yet unable to resist disciplined forces, and to defy death for the sake of gaining their liberty, and now 'God led them not', we are informed by Exodus xiii. 17, 'through the way of the land of the Philistines, although that was near; for God said, lest peradventure the people repent when they see war, and they return to Egypt: But God led the people about (before Etham) through the way of the wilderness of the Red Sea'. Moses, accordingly, made them leave the route to Syria, and turn towards the S. in the neighbourhood of the fortifications, probably near the modern Bir Makhdal, anecdotically called Migdol, which, like the Egyptian Khetam (Etham), signifies a castle and the tower of a fortress. During his long sojourn in the wilderness, after he had slain the Egyptian, their great leader had become familiar with all the routes in this region, and as soon as he observed the weakness of his people, almost the only course open to him was to avoid the forts, and turn towards the S., in order to lead them round the N. end of the modern Gulf of Suez, and through the wilderness of Arabia Petraea to Canaan. From the outset he appears to have had a twofold object in view; the first being to emancipate the people from the Egyptian yoke with the least possible loss, and the second to discipline them, and accustom them to order, obedience, and nobler pursuits in life, in a locality suited for his purpose. At Etham ('the bastions') the wanderers accordingly changed the direction of their route, and turned to the S. between the W. bank of the bitter lakes and the E. slope of the Gebel Ahmed Taher, and, after a long and fatiguing march, encamped at Pi-Hahiroth, the name of which has been identified with the modern Agrâd ('pi' being the Egyptian for place). They then camped for the last time in Egypt near the Red Sea, between Migdol, a frontier fort, near the ancient Kambysus,
where a Roman military hospital afterwards stood (about 9 M. to the N. of the head of the bay and the scanty remains of the ancient Arsinoë), and the 'Atâka mountains. This range was anciently called Ba'âl Zephon, and on its commanding summit the Phoenician sailors used to offer sacrifices to Ba'âl Zephon, or the N. wind, which wafted their ships towards the South. — When Pharaoh heard that the people had not crossed the line of fortifications, and had quitted the route to Syria, on which lay the famous temple of the desert on Mount Casius, where Moses had intended sacrificing to his God, it was natural for him to say — 'they are entangled in the land, the wilderness hath shut them in' (Exodus xiv. 8). His mistrust was next aroused. — 'And it was told the king of Egypt that the people fled: and the heart of Pharaoh and of his servants was turned against the people, and they said: why have we done this, that we have let Israel go from serving us?' (Exodus xiv. 5). The pursuit now began; 'he made ready his chariot, and took his people with him: and he took 600 chosen chariots, and all the chariots of Egypt, and captains over every one of them. And the Lord hardened the heart of Pharaoh, king of Egypt, and he pursued after the children of Israel'. Whilst the Israelites were encamped at Pi-Hahiroth the disciplined army approached; they departed hastily, and succeeded in crossing the head of the gulf at low tide, as was frequently done by the caravans before the construction of the canal. The Egyptians, in hot pursuit, reached the ford before the tide had begun to set in; but a violent gale from the S.W. sprang up, the waters rose suddenly and 'covered the chariots, and the horsemen, and all the host of Pharaoh that came into the sea after them; there remained not so much as one of them'.

From Suez to Mount Sinai by Maghârâ and Wâdi Firân.

From Suez to (2½ hrs.) 'Ain Mûsa, see p. 406.

Beyond 'Ain Mûsa the route traverses the Wâdi el-'Irân, and afterwards an undulating region. On the hill-sides specimens of isinglass-stone are frequently found. To the right stretches the sea, beyond which rise the spurs of the 'Atâka mountains (p. 401); on the left are the heights of the Jebel er-Râha, and, farther on, those of the Tîh Chain (p. 513). About 3 hrs. from 'Ain Mûsa begins a monotonous tract, which extends for a distance of 20 M. in the direction of the Wâdi el-'Amâra. The whole distance to the Wâdi Gharandel (p. 476), which takes two days, is destitute of variety, and is particularly fatiguing on the return-route, even in fine weather. If, moreover, the Khamsîn (p. 69) begins to blow and to raise dense clouds of dust, the patience of the traveller is severely tried, and the journey seems interminable. Near the beginning of the plain, the so-called Derb Far'ûn (or 'road of the Pharaohs'), skirting the coast, diverges to the right to the Jebel Hammâm Far'ûn (p. 477), while another route to the left leads to the Jebel er-Râha and the desert of Et-Tîh. We follow the camel track which runs between these two.

We next cross (2 hrs.) several wâdis, the most important of which is the broad Wâdi Sudur, adjoined by the Jebel Bishr or Sudur on the left, and separating the hills of Er-Râha and Et-Tîh. After a journey of fully 5 hrs. from the beginning of the plain we reach the Wâdi Werdân. The surface of the desert is sprinkled at places with sharp flints, which are perhaps fragments of nodules
burst by the heat, and resemble arrow-heads, knives, and other implements (comp. p. 356).

We traverse the Wádi Werdân in 1½ hour. Yellow hills of sand rise on the right, and the sea and the African coast continue visible for some time. On the left the Wuta Hills, which belong to the Tíh chain, approach the route, and we obtain a fine retrospect of the Jebel Sudur (see above). The sea disappears, but is afterwards again visible. The hills assume more picturesque forms. The light-coloured limestone hills, and the whitish yellow surface of the desert, present a remarkably colourless appearance, but the soil is not entirely destitute of vegetation, especially in spring. One of the commonest plants is the Betharán (Cantolina fragrantissima), of which the camels are very fond, and which is full of aromatic juice; it is collected by the natives in the N. part of the peninsula. Golden colocynths (Handal; Citrullus colocynthis) are sometimes seen lying on the way-side, having fallen from their dark green stems. The dried shells are sometimes used by the Beduins for holding water, or as a receptacle for butter. The inside of the fruit is sometimes used as a medicine. The Scyth (Acacia tortilis) occurs frequently farther S.; the juice which it exudes (Gum Arabic) is collected by the Beduins for sale. Chewing the gum is said to be a good remedy for thirst.

The (2½ hrs.) Wádi el-'Amâra, and beyond it the Hajer er-Rekkâb (‘rider’s stone’), consisting of several masses of rock, are next reached. The ground becomes more undulating. In the distance, to the S., rise the Jebel Hammâm Forân (p. 477) and the long Jebel Gharandel (p. 476). In less than 2 hrs. we next reach the sand-hills in the Wádi Hawâra, on the summit of which a bitter spring rises. Around it grow a number of stunted palm-bushes and a few thorns. This is believed to be the Marah of the Bible, mentioned by Moses (Exodus, xv. 23-25). † Burckhardt conjectures that the juice of the berry of the gharâk (Nitrasia tridentata Desf.), a shrub growing in the neighbouring Wádi Gharandel, may have the property, like the juice of the pomegranate, of improving brackish water; but the Arabs know of no plant possessing the virtue of that thrown into the spring by Moses.

Stations of the Israelites in the Wilderness, and number of the Emigrants. The Biblical record of these stations continues as follows (Numb. xxxiii. 8): — 'And they departed from before Pi-Hahiroth, and passed through the midst of the sea into the wilderness, and went three days journey in the wilderness of Etham, and pitched in Marah. 9. And they removed from Marah, and came unto Elim: and in Elim were twelve fountains of water, and threescore and ten palm trees; and they

† 23. And when they came to Marah, they could not drink of the waters of Marah, for they were bitter; therefore the name of it was called Marah (i.e. bitter). 24. And the people murmured against Moses, saying What shall we drink? 25. And he cried unto the Lord, and the Lord shewed him a tree, which when he had cast into the waters, the waters were made sweet.'
pitched there.' The desert of Etham (which adjoined the bastions of Khetam) may now be traversed more quickly by a Sinai pilgrim with little luggage; but it could hardly have been crossed by a whole nation in less than three days. Marah is thus the bitter spring in the Wādī Hawārā, and Elim, with its twelve springs and seventy palms, has long been sought for in the Wādī Gharandel, although, as we shall see, the distance from Hawārā to Gharandel (2 hrs.) is a very short journey, even for so large a number.

Standing on the margin of the spring of Hawārā, the thoughtful traveller will naturally ask, how 600,000 men with their families, that is, at least two million persons, could possibly have drunk of its waters.† Even if we assume that the volume of water was more copious in the time of the Exodus, owing to the more luxuriant vegetation, many other circumstances would still combine to render it improbable that two million persons could have partaken of it. The probability is that these high figures are a mythical embellishment of the historical facts. Schleiden has pointed out, that if the Israelites had numbered two million as the Bible records, they would have formed a sufficiently dense population for the whole peninsula. For such a gigantic caravan a million gallons of water a day would hardly have sufficed, without allowing for the cattle, and at the present day the Beduins begin to feel anxious, when a party of a few hundreds encamps around their springs. The number 600,000 has probably originated from the poetical accounts of the miraculous preservation of the people, who gratefully ascribed so great miracles to their protecting God, in order the more effectually to extol his power. These numbers should, doubtless, be very greatly reduced, and so also should the forty years, which the Israelites are said to have spent in the wilderness. It was obviously the purpose of their leaders to inure the people to the privations of the desert, in order to prepare them for the battles they were about to fight in Palestine, but the sacred number forty, which is so often repeated, and which was used to signify a generation, most probably indicates a term of years; we may also observe that Moses was forty years old when he fled, eighty when he led the people into the wilderness, and one hundred and twenty when he died. The fact that the Arabian literature contains a number of writings called 'Arbainät', or tales in which the number forty plays a conspicuous part, affords a confirmation of the above view.

Immediately before us rises the curiously shaped Jebel Gharandel (Gerendel, Kharandel, Gurundel), the name of which occurs at an early period. Its slopes have been compared to 'petrified cushions'. It is possible that the wādī which descends to the Gulf of Suez gave its name of Charandra, used during the Roman period, to the N. part of the Arabian gulf, where Ptolemy II. founded the town of Arsinoë. In the Itinerary of Antonine the place is called Gurandel.

The Wādī Gharandel (reached in 2 hrs. from the spring in the Wādī Hawārā), which runs for a long distance to the N.E., affords, near the sea, and particularly at the spot crossed by the Sinai route, a moderate supply of slightly brackish, but drinkable, water, especially after heavy rain, in consequence of which the desert here is clothed with pleasing, though not luxuriant, vegetation. Among the plants are several lofty and bushy palms, seyal trees (p. 475), gharkład shrubs, and tamarisks. Small groups of rocks on the margin of the oasis enhance the comparative picturesqueness of

† Exodus xii. 37. 'And the children of Israel journeyed from Rameses to Succoth about 600,000 men on foot that were men, beside children'.
the valley, which was perhaps once better watered and more richly clothed with vegetation. Thus B. von Breidenbach (16th cent.), one of the first travellers who identified Gharandel with Elim, observed here a shrub bearing nuts, about the size of hazel-nuts, and known as Pharaoh nuts, but which is now extinct. If this is the Elim of the Bible, the twelve springs and seventy palm-trees are greatly reduced in number. The remains of two hermit-cells, hewn in the rocks, are not worth visiting. The Wâdi Gharandel, owing to its supply of water, is a favourite camping-place for the night.

The route, farther on, at first ascends slowly. In 1 hr. we reach the sepulchral mound of Hosûn Abu Zenneh (horse of Abu Zenneh), on which the Beduins, in passing, throw a stone or a handful of sand, as a mark of contempt, exclaiming — 'here is food for the horse of Abu Zenneh.' The story goes, that an Arab called Abu Zenneh cruelly over-rode his mare, and, when she broke down, spurred her so violently, that she gave a final, long bound, and then dropped down dead. The hard-hearted rider marked the marvellous length of the last leap of his horse with stones, and every passer-by now adds to the heap in token of disapproval.

A little farther on we obtain a fine view: facing us rises the three-peaked Šerbât el-Jemel (p. 513), to the S.E. tower the summits of the Jebel Šerbât and the Jebel el-Benät, to the left are the heights of Et-Tih, and to the right the Jebel Hammâm Farûn and Jebel Uşî. We next cross the (3/4 hr.) Wâdi Uşî, which contains several pools of water and palm saplings, and which has erroneously been identified with the Elim of the Bible (see above). The only circumstance in favour of this theory is, that the Wâdi Uşî is more distast from the Wâdi Hawâra (Marah) than the Wâdi Gharandel, which, however, lies much nearer the latter than a full day's journey.

About 2 hrs. beyond the above-mentioned hillock of stones we enter the Wâdi Kuvêsch, a spacious basin enclosed and traversed by low sand-hills, and lying at the base of the Jebel Uşî and Jebel Hammâm Farûn.

The Jebel Hammâm Farûn (1570 ft. above the sea-level), or the 'Bath of Pharaoh', is most conveniently ascended from this point, and is chiefly interesting to geologists. Half-a-day at least is required for the excursion, and the traveller should be provided with refreshments. The mountain is in the form of a blunted pyramid, with a very extensive base; the limestone on its slopes is remarkably jagged and furrowed. At several places there are warm springs, which are still used by the Arabs, particularly as a cure for rheumatism. Before using the water they are in the habit of presenting a cake or other offering, to the spirit of Pharaoh, which still haunts the spot, in order to propitiate him. One tradition is, that Pharaoh still lies here in the hot water, where he is to be eternally boiled for his sins. Another legend is to the effect, that, when Pharaoh was drowned in the Red Sea, he saw Moses standing on a rock of the Jebel Hammâm Farûn, and was so infuriated at the sight, that the water closing over him was spouted up to a great height by the violence of his panting. Ever since then his spirit has haunted this
spot, and every ship that approaches the Jebel Hammâm Farûn is doomed to sink. — This legend is supplemented by another, which is also told by the Arabs, that, when the Jews would not believe that Pharaoh was really drowned, God ordered the sea to throw up his body. Since then bodies of drowned persons have been invariably cast up on the beach.

The caverns in the Jebel Hammâm Farûn, which are frequently tubular in form and resemble long pipes, slope rapidly downwards in the direction of the strata of the rock, from W. to E. and from S.W. to N.E., communicating, doubtless, with the hot springs, as I found them completely filled with steam. In the largest of these caverns, the entrance of which is 13 ft. wide, and which lies several fathoms above the hot springs, I observed, at a distance of 6 ft. from the entrance, that the temperature was 102° Fahr., while that of the outer air was 90°. The vapour which filled the chamber had a sulphureous smell, and a slight incrustation of sulphur covered the wall at places. (J. Russegger.)

The hot springs are situated on the N. side of the mountain, facing the sea; they are easily found without a guide, owing to the steam which envelopes them. There is a good bathing-place at the point where they flow into the sea from the white rock, but the bather should beware of sharks. Higher up, the springs are very hot. When the temperature of the air was 90°, that of the water was found to be 153°. The water is slightly saline; according to an analysis made by J. Russegger of Vienna, it contains soda, lime, tate, chloride of hydrogen, and sulphuric acid.

The route continues to follow the Wâdi Kuwéseh for 1 1/4 hr., and then crosses the Wâdi eth-Thâl, a valley of considerable breadth, which descends to the sea towards the S.W. in the form of a narrow gorge. In about 1/2 hr. more we reach the Wâdi Shebêkeh. In less than 1 hr. more we reach the junction of this valley with the Wâdi Homr, through which (to the E.) runs the route to Sinai via Sarbût el-Khâdêm, described at p. 513.

We follow the valley descending towards the sea, now called the Wâdi Tayyibeh, with numerous windings, some remarkable rock formations, several springs of bad water, and a few stunted palms. The route traverses a number of round hollows of considerable size, enclosed amphitheatrically by barren slopes of whitish grey sand and by rocks. The steep sides of these basins look from a distance as if they had been made artificially. The area in the centre is often so completely enclosed that no outlet is visible. Each quarter of an hour we obtain a different view, though the colouring is always the same. A striking exception to the last remark is afforded by the very curious appearance of the Jebel Tayyibeh, situated near the sea, and consisting of oblique strata of different colours; the lowest of these is of a golden yellow tint, the next is red, which is followed by a rusty black stratum, while the whole is surmounted by a yellow layer.

After 13/4 hr. the valley expands, and we approach the open sea, washing the banks of the sandy plain of El-Mehâir. After a walk of 1 1/2 hr. along the coast we reach the Râs Abu Zenimeh, which still bears the tomb of the saint, and affords a beautiful and sheltered camping-ground. At this spot (more probably than in the Wâdi Tayyibeh, as supposed by some authorities) was situated
the encampment of the Israelites on the Red Sea (Numb. xxxiii. 10). The old harbour is still occasionally used by the fishing-boats of the Arabs. In ancient times the roads, by which ore and stone were brought from the mines of the Wâdi Maghâra and Sarbût el-Khâdem for farther conveyance by water, converged here.

Beyond Abu Zenîmeh the route at first skirts the sea for 1 1/2 hour. Travellers usually walk here, and amuse themselves by picking up shells, as Sinai travellers have done from time immemorial. This custom is mentioned by Thedmarus in the 13th cent., by Fabri, and by Breidenbach, the last of whom says, that 'various kinds of shells are to be found on the coast of the Red Sea, and also white coral, and many beautiful stones', probably meaning by the last expression the smooth fragments of quartz on the beach. On the margin of the narrow plain of the coast, to the left of the route, rise curiously formed, yellowish, limestone hills piled up in strata, one apparently resting on gigantic, shell-shaped pedestals which have been formed by the action of the water. At the S. end of these hills rises the Jebel el-Nokhel, a bold eminence abutting so closely on the sea that it is washed by the waves at high water, in which case the traveller must cross it by a path ascending in steps.

Beyond this hill we reach a plain, called El-Markha, of considerable extent, and not destitute of vegetation. It is bounded on the N. by the Jebel el-Markha (590 ft.), a black hill, contrasting strongly with its light-coloured neighbours. Proceeding to the S.E. for 2 1/4 hrs. more, we at length reach the more mountainous part of the peninsula, which we enter by the Hanak el-Lakam, a valley varying in width, and flanked with barren rocks of reddish and grey tints. After 3/4 hr. we reach the mouth of the Wâdi Ba'ba' on the N., which is commanded by the dark Jebel Ba'ba', while on the S. (right) begins the Wâdi Shelâl. Traversing the latter for 1/4 hr., we next enter the Wâdi Budra. The winding route ascends gradually. We pass several mountain slopes resembling huge walls of blocks of stone, artificially constructed. Farther on we observe grey and red granite rocks amidst other formations. In every direction lie long heaps of black, volcanic slag, strongly resembling the refuse from foundries. Beside them lie numerous fragments of brown, grey, and red stone, including felsite porphyry, which is remarkable for the bright, brick-red colour of the orthoclase felspar. Along the slopes rise cliffs and pinnacles of various colours and grotesque forms. The route leads from one basin into another, each of which has a horizon of its own, until (1 1/4 hr.) we come to a frowning barrier of rock which seems to preclude farther progress. We soon find, however, that a steep bridle-path ascends in 1/4 hr. to the Naḥb el-Budra (or 'pass of the sword's point', 1265 ft.), by which we surmount the apparent barrier. This pass was traversed in ancient times by the beasts of burden which transported the minerals, obtained in the Wâdi Maghâra, to the sea; it then fell
into disrepair, but was restored in 1863 by a Major Macdonald, who made an unsuccessful search for turquoises in the old mines. The summit of the pass commands a fine retrospective view of the wild Wâdi Budra, the Râs Abu Zenîmeh, the Jebel Hammâm Farûn, and the sea. Beyond the pass the valley is called the Wâdi Nakb el-Budra, through which we descend to the Wâdi Sidr, a winding valley enclosed by rocks of red granite.

We soon reach the Wâdi Umm Themân on the left, where Messrs. Palmer and Wilson (in 1869) discovered mines similar to those at Maghâra. The (3/4 hr.) Wâdi Maghâra next diverges to the left. At the angle formed by the latter with the Wâdi Keneh, descending from the E., are situated the famous old mines of Maghâra, which deserve a visit (2 hrs.; or, if a thorough inspection is made, half-a-day).

The Mines of Maghâra. The brown and brick-red slopes of the Wâdi Maghâra rise precipitously to a considerable height. They belong partly to the sandstone, and partly to the granite formation. The mines are situated on the slopes on the N.W. side, about 145 ft. above the bottom of the valley. The traveller has to scramble over heaps of rubble before reaching the broad but low openings of the mines, which seem once to have been protected by a gallery, now scarcely traceable. The shaft penetrates the rock to a considerable depth, being very wide at first, but afterwards contracting. Numerous pillars have been left for the support of the roof; old chisel marks are still observable. At many places the reddish stone contains small bluish-green, very impure turquoises, which may easily be detached with a penknife. These stones lose their colour entirely after a few years. On the route to the Wâdi Firân (p. 484) the Beduins frequently offer for sale large, but worthless, turquoises at exorbitant prices.

Small pillars with hieroglyphic inscriptions still commemorate the period when the mines were worked for the benefit of the Pharaohs. On large smooth surfaces of the rocky walls these ancient monarchs have handed down to posterity, by means of figures and writing, the fact that they conquered the Mentu, who inhabited these regions, and provided for the wants of their miners. A gigantic Pharaoh is represented grasping the necks of a number of the vanquished with one hand, while with the other he is brandishing a weapon (khopsh). Sacrifices are also represented, and festivals, and a visit paid to the mines by inspectors of high rank. The oldest king named here is Snefru (p. 512), the first king of the 4th Dynasty. The next are Khufu (Cheops, p. 86), the builder of the Great Pyramid of Gizeh, another monarch of the 4th dynasty; Sahura, Kaka, Raenuser, Menkauhor, Tatarka (Assa) of the 5th Dynasty; Pepi-Merira and Neferkara, of the 6th Dynasty (p. 87); Usortesen II., and Amenemhat III. of the 12th Dynasty. During the domination of the Hyksos the mines were neglected; but after their
expulsion, the working was resumed by Hatasu, the energetic sister and co-regent of Thothmes III., who has caused her ships, returning richly-laden from Arabia, to be represented at Dēr el-Bahri (Thebes). There is also a pillar here dating from the time of Ramses II., but no monument now exists of the reign of his son Menepthah, the Pharaoh of the Exodus, nor of the later kings.

The mineral obtained here is called Mafkat in the inscriptions. It was of a decided green colour, and is elsewhere represented in bars of this \( \square \) shape, and marked 'genuine' to distinguish it from the 'imitation'. The results of the careful researches of Lepsius have also been confirmed by Professor Credner's geological investigations. The genuine mafkat, which does not occur here, was probably the emerald, while the inferior quality, which was often imitated, was malachite, verdigris, green smalt, and the green colour prepared from the last. The imitation emerald, which is frequently mentioned by ancient authors was a green paste coloured with copper, which, when ground, yielded the best green paint. This raw material was used by the Egyptians for colouring glass, of which many pieces are preserved, and was probably the malachite which is called by Theophrastus 'false emerald', or copper green; and which, being much used for soldering gold, was named 'chrysocolla'. — The inscriptions always mention mafkat with khesbet, i.e. lapis lazuli (either genuine, inferior, or artificial), as the two minerals which are generally found together, principally in association with copper ores, malachite being carbonate of copper with a certain proportion of water, while lapis lazuli sometimes occurs interspersed with malachite, and sometimes in small nodules by itself. In the Wādi Maghāra copper was formerly worked, and along with it was doubtless found malachite, which was either used as a precious stone, or manufactured into paint. The district

Baedeker's Egypt I.
was called the Mafkat (malachite) region, after the most precious mineral obtained in it. The miners were condemned criminals, particularly political offenders and prisoners of war. The relations also of the prisoners were frequently condemned to the mines and compelled to work in fetters. As, at a later period, the Christians were compelled to work in the porphyry quarries, so in the reign of Ramses II. the refractory Israelites were employed in the mines.

Clambering up the rugged slope of the hill from the entrance to the mines, and passing several shafts, we reach a number of figures engraved on the rock, discovered by Capt. Palmer, and consisting of the hawk, the bird sacred to Horus, five human forms, and some illegible hieroglyphics. The first figure, now almost obliterated, seems to hold a chisel in its left hand, and may represent a miner; the second wears the crown of Upper Egypt \( \wedge \), and the third that of Lower Egypt \( \wedge \), both representing Pharaoh as the monarch of S. and N. Egypt respectively. The rope, hammer, and chisel (implements which were still used in the time of the Ptolemies whenever a foundation-stone was laid), which they hold in their hands, show that the king was once present here to inaugurate the opening of a new mine. The shape of the chisel is curious. The fourth and fifth figures represent Pharaoh chastising the miners.

The hill, about 200 ft. in height, opposite to the entrance of the mines, is also worthy of a visit. On the further side are the ruins of Major Macdonald’s house, and the summit is crowned with the remains of a fort and of the mining settlement of the period of the Pharaohs. Here also are found various tools of flint, particularly arrow-heads and sharp instruments, which were perhaps used for engraving inscriptions. The old road, once used by the miners, descending the hill and leading towards the S., with a bend towards the E., is still traceable. — There is a spring about 25 min. distant from Major Macdonald’s ruined house.

**Wādī Magḥâra**, a station of the Israelites during the Exodus. The neighbourhood of the Rās Abu Zenimeh is believed by most expounders of the Bible to have been the site of the camp on the Red Sea (p. 478). The sacred narrative (Numb. xxxiii. 11) continues as follows. — ‘And they removed from the Red sea, and encamped in the wilderness of Sin. 12. And they took their journey out of the wilderness of Sin, and encamped in Dophkah.’ In the book of Exodus (xvi. 1, et seq.) we find farther particulars of this portion of the journey. We are informed there, that the whole of the people complained bitterly against Moses and Aaron for having led them out of Egypt, accusing them of having brought them ‘forth into this wilderness, to kill this whole assembly with hunger.’

Many authorities identify the wilderness of Sin with the bleak coast-plain of El-Kā’a, which extends from Rās Abu Zenimeh to Ṭūr and beyond it; but it is more probably identical with the desolate, rocky tract which we traversed on the route from Rās Abu Zenimeh to the Wādī Magḥâra. Dophkah is the Wādī Magḥâra. Enclosed by bleak and abrupt rocks, the multitude, accustomed to the extensive plain, would naturally be alarmed and depressed, and would murmur against their leaders.
A little beyond the mouth of the Wâdi Maghâra, the Wâdi Sidr turns to the S., skirting the Jebel Abu 'Alâ'ka (2635 ft.), and after fully an hour leads to a large table-land. To the E., opposite to us, is the mouth of the Wâdi Nebâ', and to the S. lies the Wâdi Mokat-teb, i.e. 'Valley of Inscriptions', which we now follow. On the W. side of this broad valley rises the Jebel Mokatteb (2390 ft.), at the foot of which, extending down to the floor of the valley, are strewn blocks of sandstone, several of them bearing the famous socalled 'Inscriptions of Sinai'. Most of them are on the western side of the valley. Those who do not intend to make scientific investigations need only devote a few minutes to the inscriptions in passing.

Most of the Sinaite Inscriptions are in the Nabataean character, others in Greek, and a few in Coptic and Arabic. They are roughly, and superficially engraved on the rock, which has been very rarely smoothed for the purpose, and the small figures are often extremely rude and inartistic. They represent armed and unarmed men, travellers and warriors, laden and unladen camels, horses with and without riders and attendants, mountain goats, ships, crosses, and stars. A priest with raised arms, and an equestrian performer, are worthy of notice. Cosmas (Indicopleustes, or the 'Indian traveller'), who visited the Peninsula of Sinai in A.D. 535 and saw these inscriptions, believed them to be in the Hebrew language, and to have been executed by the Israelites during the Exodus, and marvellously preserved by providence, in order that they might serve as 'witnesses to the unbelieving'. It is now ascertained that the oldest of these inscriptions cannot have been written earlier than the 2nd century B.C., while the most recent are not later than the beginning of the 4th cent. A.D., and that most of them are to be ascribed to the heathen Nabataeans, who adhered to the Sabean rites, and worshipped the sun, moon, and stars, especially on high mountains, such as Mounts Serbâl and Sinai. No Christian names occur, but many of the writers call themselves 'servants', 'reverers', or 'priests' of the 'sun', the 'moon', and 'Baal', and other early Arabian divinities. — The authors of these inscriptions were doubtless travellers, partly merchants, and partly pilgrims to the holy places in the Wâdi Mokatteb, among which Mount Serbâl was certainly reckoned at a very early period. The inscriptions which they rudely engraved to commemorate their visit, were first deciphered by Prof. Beer (d. 1884) of Leipsic, and afterwards more completely by Tuch. Near the sacred places, and particularly in the Wâdi Mokatteb, festivals, with markets and shows, were held. Some of the Greek inscriptions are of later date, having evidently been engraved over the Nabatean. By the figure of a 'Diakonos Hiob', a soldier, who was hostile to the Nazarenes, has written: — 'a bad set of people these; I, the soldier, have written this with my own hand.'

The S. entrance to the Wâdi Mokatteb, a valley about 3½ M. in length, is closed by a spur of the mountain of that name, which our route crosses. Beyond the pass (1520 ft.), whence we obtain an excellent survey of the imposing mass of Mt. Serbâl, the route traverses heights and hollows strewn with small stones. The red rubble looks like fragments of bricks, and the slopes resemble dilapidated walls of loose stones.

After 3½ hr. we enter the Wâdi Fîrân, which is here of considerable breadth. This valley, which is probably the most important in the peninsula, begins above the Oasis of Fîrân, at the base of the Serbâl, and, after describing a wide curve, terminates near the coast. The granite slopes, flanking the valley, are not far apart at
places, while in other parts the valley expands to a considerable width. The grey primitive rock, veined with reddish-brown porphyry and black diorite, rises in picturesque forms; these veins run almost invariably from N. to S. The picturesqueness of the scene is greatly enhanced by the imposing summits of the barren mountains towering above the slopes of the valley to the south. At the entrance of the valley, where at the foot of the Jebel Nesrin the small wadi of that name opens on the left, are several round heaps of stones belonging to ancient tombs. On our right next diverges the Wadi Nediyeh, on the left the Wadi er-Remmínch and the Wadi Mokhères, and to the right again the Wadi el-Feshēneh, the two last being commanded by peaks of the same names. The next valleys on the right are the Wadis ed-Dér, Nebân, El-Tarr, and Abu Gerrâyât; and opposite the latter opens the Wadi Kösêr, a valley of greater extent. A little before reaching the oasis, we pass a rock called the Hēsi el-Khattâtìn, which is entirely covered with small stones. Capt. Palmer was the first traveller who was told by the Beduins that this rock was the one which yielded water when struck by Moses.

The plants of the desert now occur more frequently, and are of more vigorous growth; bushes of tamarisk, the nebêk, the seyal, and palm-trees, make their appearance, and the scene is enlivened by the notes of birds of grey and dark plumage. We now quit the desert, and with feelings of unmitigated delight, after a hot journey of more than 5 hrs. in the Wādi Firān, we enter the Oasis of Firān, the ‘Pearl of Sinai’, and by far the most fertile tract in the whole peninsula. We first reach the dale of El-Hesweh, a few hundred paces only in length, watered by an inexhaustible brook which is suddenly swallowed up by the earth here, after having converted the whole of the valley above this point into a luxuriant garden in the midst of the desert. The gardens are watered by means of Shādûf or buckets; the dates grown here are celebrated. Every tree has its proprietor, who obtains the whole of its produce, even when he lives at a distance, his property being protected by the honest Beduins of the oasis and the inmates of the monastery. On the road-side, and on the left slope of the valley, are Beduin huts, gardens, and the ruins of stone houses, dating from the time of the ancient Firān. In 1/4 hr. more we reach a second small group of palms, and for a few minutes we obtain a view of the W. side of Mount Serbâl. In 20 min. more we reach a wider part of the valley, in which the rocky and isolated hill of El-Meharret rises to a height of about 100 ft., bearing on its summit the traces of an early Christian monastery and church. Exactly opposite the ruin of the monastery the traveller should notice a very curious geological formation, consisting of a vein of green diorite in flesh-coloured porphyry, which is in its turn imbedded in green mica-slate. The largest fragment of the ruins, called Ḥererât el-Kebîr, stands
on the summit of the hill which the Beduins regard as the spot where Moses prayed during the battle with the Amalekites (Exodus, xvii. 10), and at its base the relics of a large church are still traceable. Fragments of columns and ornaments, which once belonged to it, are to be found built into the walls of the houses. The Wādis Ejeleh and 'Aleyat, valleys diverging here, are watered in winter by streams from the mountains which are sometimes covered with snow. This is a favourite halting-place with the Beduins owing to the facilities for watering the camels, and is at the same time a very picturesque spot. The best camping-ground is a little to the E. of the entrance to the Wādi 'Aleyat, and in such a position as to command a view of the pinnacled summit of Mt. Serbâl (see below).

**History.** The Oasis of Firân was probably occupied at a very early period by the Amalekites, and outside of its gates was doubtless fought the battle in which they were defeated by the Israelites. The town of the Oasis is even called by Makrizî a city of the Amalekites, long after the Christians had been expelled from it by the Muslims. The Oasis is mentioned by Diodorus only before the Christian period, but in the 2nd cent. A.D. Claudius Ptolemaeus speaks of the town of Pharan, which soon became an Episcopal See and the central point of the monastic and anchorite fraternities of the peninsula. Remains of old monasteries and hermits' cells are nowhere more numerous than here, and on the rocky slopes and plateaus of the Serbâl. In the 4th cent. we hear of the town being governed by a senate, and about the year 400 the spiritual affairs of the country were presided over by Bishop Nateras or Nathyr. The council of Chalcedon accorded to the oasis an archbishop of its own, who, however, was subordinate to the recently founded patriarchy of Jerusalem. In 454 Macarius is mentioned as bishop of Pharan. The solitary monasteries among the mountains suffered frequently from the attacks of the Blemmyes and Saracens, who, however, did not venture to attack the well-guarded city of the oasis, which paid tribute to their sheikhs. The Romans were nominally masters of Pharan, but in reality it was subject to the sway of the Saracen princes; and one of these, named Abokharagor, presented it to Justinian, who, as a reward, appointed him phyrlarch of the Saracens of Palestine. Early in the 5th cent. the monks and anchorites of Pharan began to embrace heretical principles, and we frequently hear of admonitions and threats directed by the orthodox synods and the Emperors against them as Monothelites and Monophysites. — According to the trustworthy testimony of Procopius, his contemporary Justinian (527-565) was not the founder of the present monastery of Sinai, as inscriptions of the 13th cent. built into its walls erroneously state, but he erected a church to the Virgin halfway up the Jebel Musa, probably on the site of the present chapel of Elijah, and also constructed and garrisoned a strong fortress at the foot of the mountain, on the site of the present monastery of St. Catharine, in order to prevent the Saracens of the peninsula from invading Palestine. It was doubtless the protection afforded by this castle that gradually attracted the numerous hermits of the peninsula from the Serbâl to the Jebel Musa, which they made the scene of a number of old Christian legends. Pharan was at an early period regarded as the site of the Rephidim of the Bible (see below). Eusebius of Cæsarea (b. 270), and his translator Jerome, state that the battle of the Amalekites took place near Pharan. Cosmas (535), who visited the Oasis in person, states that Rephidim, where Moses struck the rock, lay near Pharan, and the account of Antoninus Martyr of his entry into Pharan shows that regularly organised pilgrimages to Rephidim took place. Among other objects the natives offered small casks of radish-oil (Raphanino oleo) to the pilgrims, which were prob-
ably carried off as mementoes of Rephidim, as its name (raphanus, raphaninus) imports. — After the dissemination of El-Islām the anchorites gradually became extinct.

Rephidim and the Bible Narrative (comp. p. 482). In the Book of Numbers (xxxiii. 13-14) we find the following passage: 'And they departed from Dophkah, and encamped in Alush. And they removed from Alush, and encamped at Rephidim, where was no water for the people to drink'. — Alush was probably situated between the Wādī Maghāra and the Wādī Firān, and Rephidim in the Wādī Firān at the entrance of the oasis. The 17th chapter of the Book of Exodus contains important additional information. We are there informed that the people murmured against Moses, and reproached him with having led them out of Egypt to die of thirst; whereupon Moses cried unto the Lord, who commanded him to strike the rock with his staff. And Moses did so, and the rock yielded a copious spring. Amalek then came and fought with the Israelites at Rephidim, and the battle is described. The Bible narrative presents to us a picture of Moses stationed on a rock which commanded the battle-field, and praying, while Aaron and Hur 'stayed up his hands'; and we are told, that when he raised his hands, Israel had the mastery, and when he let them fall, Amalek had the mastery. 'And Joshua discomfited Amalek and his people with the edge of the sword.' — It is natural that a battle should have been fought on the outskirts of the oasis, as the Amalekite possessors of this fertile island in the midst of the desert would be very unlikely to yield up their valuable property without a blow. We are then informed (Exodus xviii.), that Moses, 'where he encamped at the mount of God', organised the people by the advice of Jethro, his father-in-law, who came to visit him, and chose valiant men from all Israel, whom he set over them 'to be rulers of thousands, and rulers of hundreds, rulers of fifties, and rulers of tens'. 'And (Numb. xxxiii. 15) they departed from Rephidim, and pitched in the wilderness of Sinai', and (Exodus xix. 2) 'they were departed from Rephidim, and came to the desert of Sinai, and had pitched in the wilderness; and there Israel camped before the mount. And Moses went up unto God'. (Comp. R. Lepsius, 'Reise nach der Halbinsel des Sinai', Berlin 1876; and also, 'Briefe aus Egypten', 1852, pp. 417-452.)

The most conspicuous of the hills visible hence is the Jebel el-Ṭāhūneh (or Mill-Mountain), situated in a line with the monastery hill (to the N.), rising above the bed of the valley to the height of 700 ft., and crowned with the ruin of a handsome church. The steep, neglected path ascending to it is flanked with the remains of ancient chapels; and near it are many houses built of loose stones. The windows of these look towards the outside, and not into the court according to Oriental usage. The settlement is culivated with children, poultry, and dogs, and with its babbling brook almost resembles a Tyrolese mountain village. Farther N. rises the summit of the lofty Jebel el-Benāt (4935 ft.), or the 'Mountain of the Virgins', sometimes called the Jebel el-Bint, or 'Mountain of the Virgin'. It is probably so called from a chapel of the Virgin situated here, but the Beduins maintain that it derives its name from two Tāwara maidens, who had been ordered to marry against their wishes, and who therefore fled to the mountains. They were overtaken by their pursuers on the Jebel el-Benāt, but, rather than be captured, they plaited their tresses together and precipitated themselves from the rocky summit into the abyss. On the N. side of the valley are numerous tombs of hermits and monks who spent their lives on Mt. Serbāl and in the monastery of the
bishopric of Pharan. These tombs are mentioned by Makrzi so early as 1445. Capt. Palmer re-discovered them, and observed that the bodies had been buried in a line from E. to W., in coarse shrouds and coffins of which traces remained.

**Mount Serbal** (6765 ft.; i.e. Serb Ba'al, or 'palm-grove of Baal') rises to the S. in the form of a broad, serrated pyramid.

The Ascent of Mount Serbal is difficult and fatiguing, and should be attempted by experienced mountaineers only, especially as the guides afford little assistance (the best of them is Husan el-Herbi). The expedition takes a whole day (the ascent 5 hrs.), so that the start should be made before sunrise. Strong boots are essential, the rocks being hard and sharp.

The ascent is most conveniently made through the Wâdi 'Aleyât on the N. side, but it may also be made through the Wâdi Selâf (p. 491) and the Wâdi er-Rimm on the S. side. If the traveller starts early enough to reach the first oasis in the Wâdi er-Rimm by 8 a.m., the ascent had better be undertaken thence. In 3/4 hr. the second oasis is reached, and in 1/4 hr. more the third, each of which contains tarfa bushes, arundo, and three or four palms. After a steep ascent of an hour we reach a ruined house; the route then passes (30 min.) a small pond bordered with the jassa plant (Colutea halepica Lmk., Arabic kasân) from which the 'staves of Moses' (p. 501) are cut, and (40 min.) several caverns in the flesh-coloured porphyry which were once occupied by anchorites. After a gradual ascent of one hour more, we reach the table-land of Sikelyî, with the ruins of a monastery. If Mt. Serbal is the Sinai of the early hermits, this building must have been the scene of the atrocities committed by the Saracens which cost forty monks their lives (comp. p. 503), and which have been described by Ammonius and Nilius. The ascent of one of the peaks of Mt. Serbal begins here. The nearest N. peak is too steep and dangerous to be attempted, but the second peak may be ascended by following a ridge of granite projecting from the crumbling diorite. If the ascent of Mt. Serbal has been made from the N., the traveller may return by Der Sikelyî, but not unless he has satisfied himself, in the course of the ascent, that his guides are trustworthy.

Ascent of Mt. Serbal from the N.E. side through the Wâdi 'Aleyât. The old Derb es-Serbal, or Serbal route, being now impracticable, there is no proper path. The route at first follows a narrow path, and traverses ridges of rocks, hollows, and ravines, and small plains watered with springs and richly clothed with vegetation. It passes several cells of anchorites and traces of walls, and then, for 3 hrs., ascends rapidly through the Wâdi Abu Hamâd (or valley of the wild figs). The ascent of the actual summit (3/4 hr.) is extremely laborious, and should not be attempted by persons inclined to giddiness. The veins of diorite afford the best footing. The traveller should observe the caverns in the rock which were once occupied by hermits, the ruins of their huts, the Sinaitic inscriptions, and the traces of old paths, and of a flight of steps, particularly near the summit.

The highest of the five peaks which form the summit of Mt. Serbal, and which are separated by deep ravines and chasms, is called El-Medawwva (the 'beacon-house'). Fires used to be lighted here either in honour of Baal, or, as Capt. Palmer conjectures, to warn the anchorites of approaching danger. Many Sinaitic inscriptions still exist here. On the lower terrace of the peak is an arti-
ficial circle of stones in which the beacon-fires were probably lighted. The view from the summit is very imposing; towards three points of the compass the prospect is unimpeled, but towards the S. it is concealed by the intervening pinnacles of Mt. Serbal and the still higher Mûsa group. Towards the E. we survey the Bay of 'Akaba, part of the arid territory of Arabia, and the interminable desert plateau of Tih, stretching to the distant heights of Petra; towards the N. lies the Bay of Suez, and towards the W. rise the hills between the Nile and the Red Sea. 'Every detail of these remarkable formations is distinctly visible hence. The wâdis, including the long, crescent-shaped Wâdi esh-Shêkh, are seen turning and winding in every direction. The innumerable hills stand forth in prominent relief, with as well-defined colours as in Russegger's geological plan which we held in our hands; the dark granite, the brown sandstone, the yellow desert, the strips of vegetation flanking the Wâdi Firân, and the solitary green spot occupied by the large groups of palms of Rephidim (assuming its identity to be established), are all surveyed at a glance'.

Geological Formation. According to Fraas the chief formations of Mount Serbâl are: — (1) Gneiss of grey colour and very fine grain, the component parts of which are uniformly distributed, the mica giving it a somewhat stratified appearance; (2) Red granite of great beauty, containing little or no mica; (3) Diorite porphyry, which frequently veins the masses of gneiss and granite. The following are the principal forms of diorite: — (1) Black diorite porphyry; (2) Dark green, and somewhat dingy diorite; (3) Diorite resembling porphyry; (4) Polyhedral porphyry of a pale-red colour, containing occasional crystals of albite, and a few grains of quartz; (5) Porphyry varying in colour from brownish to blood-red, and rough and granulated to the touch; (6) Porphyry in which pieces of oligoclase, about an inch in length, are imbedded. Turquoises of finer quality than those in the Wâdi Mâghâra are also found here.

Is Mount Serbâl the Sinai of Scripture? The traveller is reminded that during the battle of the Amalekites, Moses prayed on a rock of Hor-eb, that he received Jethro after the battle, when the people were encamped by the Mount of God, and that from the entrance to the oasis (Rephidim) to the foot of Mt. Sinai one day's journey only is reckoned, while a large caravan takes two days to reach the Jebel Mûsa, and lastly, that a person acquainted with the peninsula, as the leader of the Israelites undoubtedly was, would scarcely have acted wisely, if, while receiving the tables of the law, he had compelled the multitude entrusted to his care to encamp for a prolonged period far from the best watered and most fruitful spot on the whole route. As, moreover, Mt. Serbâl is by far the most imposing mountain in the peninsula, as many traditions declare it to be the scene of God's revelation to Moses, as it has long been regarded as holy, as Eusebius, followed by Cosmas and other Christian authors identify it with the Horêb of the Bible, and as Pharan and Sinai are always associated in the monkish chronicles and the resolutions of the Councils, it would seem more justifiable to identify Mt. Serbâl with the Sinai of Scripture, than the Jebel Mûsa group. If Mt. Serbâl is the Sinai of Scripture, Moses must have conducted his people from Rephidim through the oasis, where both space and water were inadequate to their wants, and through the defile of Buwêb, into one of the neighbouring plains in the Wâdi esh-Shêkh, whence the mountain is visible in all its majesty. Whilst we are almost surrounded by an amphitheatre of hills of moderate height, the imposing rocky mass of Mt. Serbâl, towering above them all, rises to the S.W., being more prominently and distinctly visible here, than from any other part of the peninsula. 'Mount Serbâl,
observes Capt. Palmer, 'seen from a little distance, exhibits such boldness of outline, and such huge and conspicuous forms, that it is justly entitled to be considered the grandest and most characteristic feature of the peninsula'. Although the traveller must not expect to be able to identify on Mt. Serbāl every spot referred to in the Scriptural account of the promulgation of the law, there is no doubt that the general topography of the district harmonises well with that narrative. On again referring to the book of Exodus (xix. 17) we find this passage: — 'And Moses brought forth the people out of the camp to meet with God; and they stood at the nether part of the mount'. We shall see that there would have been no room for such a movement in the wādis Er-Rāha or Sebā'īyeh, adjoining the Jebel Mūsa group, whereas it was possible, and even necessary, to lead the people who were encamped beyond the oasis, towards the foot of the mountain before us, perhaps as far as the hill of Meharret and the lower part of the Wāḍi 'Aleyāt. No one can look upon the conspicuous and majestic Mt. Serbāl, without being convinced that it was far more worthy of being the throne of Jehovah, than any of the less imposing peaks of the Jebel Mūsa group. If it be asked, 'how the glorious title of the 'Mount of the Lord' came to be transferred from one mountain to another', the question may be answered without much difficulty. When the early Christians settled in the peninsula, they found no memorials of the Exodus, but arbitrarily assigned Old Testament names to the various hills and valleys, a practice which, as we shall afterwards see, was imitated to excess by the monks of the monastery of St. Catharine on the Jebel Mūsa. One group of anchorites identified Mt. Serbāl, and another the imposing mountain situated farther to the S., with 'Mount Horeb'. As long as Pharān was a powerful place and an episcopal see, its right to claim the title was generally recognised, but after it had lapsed into heresy, this right was denied by the orthodox church, and the hermits of the Jebel Mūsa group were expressly recognised as the genuine Sinaites, for whose protection Justinian caused a castle to be built. The anchorites and Coenobites of Mt. Serbāl, who were decimated by the frequently recurring attacks of the Saracens, accordingly emigrated to the Jebel Mūsa for safety. We have already cited a remarkable passage of early date, in which it is expressly stated, that the monks of Sinai had emigrated from another mountain, and had settled on the modern Sinai by God's command. See the writings of Lepsius already mentioned (p. 456), where these views were expressed for the first time, and are fully discussed. Many critics have since adopted the same theory.

Leaving the Meharret hill (see p. 484), we proceed towards the N.E. under palm-trees. The ground becomes soft, and is carpeted with turf, moss, and reeds, interspersed with blue and red flowers. We pass rich fields of wheat, besides tobacco and other industrial crops; the bushes are enlivened by birds, and flocks of sheep and goats lie by the side of the brooks under the shade of the trees. After 1 hr. the palm-trees leave off, and are succeeded by a thicket of ūrfā shrubs, which we traverse in ¼ hour. Many of these shrubs assume the form of trees, 2¼-3 ft. in circumference.

It is only in the lower part of the Wāḍi esh-Shākh (p. 509), and here in its prolongation, the Wāḍi Fīrān, so far as the latter is watered by the brook, that these ūrfā plants yield the well-known Ma'nāa. Minute holes are bored in the fine bark of the thin, brown twigs, by an insect (Coccus manniparum) which was first observed by Ehrenberg, and from the almost invisible openings issues a transparent drop of juice, which then falls off and hardens in the sand. This sweet gum, resembling honey, which is still called 'man' by the Arabians, is collected and preserved in considerable quantities; the monks in the monastery generally keep a supply, partly for their own use, and partly for sale, in tin boxes. In 1845 Lepsius found the whole valley fragrant with manna as early as the end of March,
but it is usually most plentiful from the end of April to the end of June, and the more so in proportion to the moisture of the preceding winter.

Adjoining the rocky slopes on the left rise numerous tent-shaped mounds of earth, upwards of 100 ft. in height, which Fraas takes to be the remains of ancient moraines. After 1/2 hr. the Wādi el-Akhḍar (p. 510), leading towards the E., diverges to the left. Opposite to it opens the Wādi Rattamah, to the W. of which rises a hill situated to the S. (right) of the road, called the Jebel el-Munāja, i.e. 'Mountain of the conversation between God and Moses'. The Arabs still offer sacrifices here to Moses within a circle of stones on the summit of the hill, singing — 'O mountain of the conversation of Moses, we seek thy favour; preserve thy good people, and we will visit thee every year'. Farther to the E. we reach in 1/4 hr. the defile of El-Buwèb, i.e. little gate, or El-Būb, i.e. gate, where the valley contracts to a width of about 20 ft. The Wādi Firān terminates here, and the Wādi esh-Shēkh (p. 509) begins.

The part of the Wādi Firān between the 'Buwèb and the Hererāt, which now forms the most fertile oasis in the peninsula, was once a lake, as is proved by the deposits of earth, 60-100 ft. in height, in the angles of the valley throughout its whole distance, a feature observable nowhere else. In consequence of the peculiar configuration of the surrounding mountains, including the Jebel Mūsa group and the Serbāl, every fall of rain, snow, and dew in the whole neighbourhood of this extensive region, found its way through different channels into this basin; and, after the barrier at Ḥererāt had been removed, the brook still remained as a relic of the ancient lake. The sudden appearance of this streamlet in the rocky valley, and its as sudden disappearance in the rock at El-Ḥeswēh, must have been a constant source of wonder to the vivid imagination of the inhabitants of the desert, and it therefore seems natural that the phenomenon should have been ascribed to the miraculous rod of Moses.

Two routes lead from El-Buwèb to the Sinai monastery. The easier, through the Wādi esh-Shēkh (11 hrs. to the monastery), is more suitable for the return-journey via Sarbūt el-Khādem (p. 509); the other, rougher (101/2 hrs. to the monastery), but more picturesque, leads through the Wādi Selāf and across the interesting Nakb el-Hāwi. We select the second of these routes.

The Wādi esh-Shēkh, which frequently expands into picturesque basins, soon diverges to the N.E. (see p. 509), and we reach (1/4 hr.) the entrance to the Wādi Selāf, a monotonous and winding valley through which our route runs for nearly 6 hours. On the right opens the Wādi er-Rimm (p. 487) ascending to Mt. Serbāl, and on the same side the Wādi 'Umm Tākka, containing several curious stone-huts in the form of beehives, called 'nawāmis', to which the absurd tradition attaches, that the Israelites sought refuge in them from tormenting flies. In less than 2 hrs. we reach the Wādi 'Ajjāwi, through which the road from Tur (p. 507) on the Red Sea joins our route from the S.W. Mt. Serbāl now at length becomes visible in all its majesty, and remains in sight behind us for 1/2 hour. We next pass the Wādi Abu Ṭâlib to the left, at the entrance of which the prophet Mūhammed, when he was marching
against Syria (Shâm) with his uncle Tâlib, is said to have rested. Several other small wâdis are passed on the right and left. At the upper end of the valley at the foot of the Nakb el-Hâwi Pass, there is a good camping-place, commanding a fine distant view of Mt. Serbâl. At this point begins the ascent of the Nakb el-Hâwi Defile (4950 ft.), occupying 2½ hrs., though an active walker might reach the top in one hour. The camels progress very slowly in this narrow, steep, rocky pass, so that the traveller will find it pleasanter to dismount, and walk up the hill. The granite rocks on each side, weathered into singularly fantastic forms, are upwards of 800 ft. in height; the gorge is strewn with stones of all sizes; the camel-path skirts the hard and uneven cliffs which bound the gorge. Lepsius has proved that the laborious task of making this path was first undertaken by the Christian monks. The torrents in this rocky gorge in winter are often so violent as to carry everything before them. In 1867 they were swelled to such a height, that they washed away a camp of the Beduins in the Wâdi Selâf, causing a loss of 40 lives and of numerous cattle, in the midst of the arid desert. The last part of the ascent is less precipitous, and we now observe a few traces of vegetation. The rocks here also bear some Sinaitic inscriptions. — At the upper end of the defile the barren cliffs of the Sinai group become visible, and a view is at length obtained of the Râha plain, surrounded by lofty mountains, and not unlike a huge amphitheatre. At the end of the valley rises the bold and conspicuous rock, known as the Râs es-Safsâf (p. 501), which the members of the last Sinai expedition, following Dr. Robinson, believe to be the true scene of the promulgation of the law. The plain of Er-Râha, which we reach by at first descending a little, and afterwards ascending, the path improving as we advance, is supposed by the same travellers and explorers to have been the camping-place of the Israelites. A dark-green spot, in which antimony is probably to be found, is called Kohti after that mineral. After having crossed another slight eminence, we reach the sand of the plain. A block of rock lying here (perhaps an old boundary stone), bearing peculiar marks, is the subject of an Arabian tradition, to the effect that the Gindi tribe, having been unjustly treated by the monks of the monastery of St. Catharine, who favoured the Jebelivah (p. 493), struck their lances into this block in token of confirmation of the oath of their Shâkh, that the monks should never pass this stone. About 1½ hr. after leaving the summit of the Nakb el-Hâwi, we pass, on the left, the mouth of the Wâdi esh-Shêkh (p. 509), which is commanded by the Jebel ed-Dâr (p. 509) on the E. The gorge, called the Wâdi ed-Dâr, or the Wâdi Shu‘aib (valley of Jethro), ascending gradually, and closed by the hill of Munâja, opens before us. To the left of its entrance rises the hill of Hârûn, on the summit of which Aaron (Hârûn) is said to have
set up the golden calf. In the vicinity are the remains of stone huts, built by 'Abbâs Pasha in 1853 and 1854 for the workmen and soldiers who attended him. We enter the Shu'âib valley, flanked by enormous cliffs of reddish-brown granite, towering to a dizzy height. In $\frac{1}{2}$ hr. more we reach the terraces of the green garden of the monastery which lies to the right of the path, and the caravan stops in front of the monastery.

**Accommodation.** Formerly, when the monks were frequently attacked by the Beduins of the peninsula, visitors were drawn up into the monastery through an opening over the gate, which was always carefully closed, by means of a rope with a wooden cross attached to the end. At the present day the traveller presents the letter of introduction which he has obtained through his Consulate at Cairo, and is admitted by a side-door. The Beduins and camels remain outside. The monastery contains visitors' rooms, beds, sofas, and a kitchen. If the dragoman has undertaken to provide for the party throughout the whole journey, he must make his own bargain with the monks, to whom the traveller may afterwards present a gift on his own account. Those who have to pay their own expenses, are generally charged at least 5 fr. a day each for lodging alone. It is healthier during the cold nights in these mountains in spring, as well as more interesting, to lodge in the monastery; but the traveller will find it more independent and less expensive to camp in some suitable spot in the lower Wâdi Shu'âib, and thence to visit the monastery, the various heights of the Sinai group, and the 'Sacred Places'. The Jebeliyeh, as the servants of the monks are called, are excellent guides, and will accompany the traveller for a trifling fee. Sportsmen who wish to shoot the mountain-goat, which abounds here, may apply to the intendard of the monastery, who will provide them with a suitable guide.

**Monastery of St. Catharine on Mt. Sinai.**

The only mention of Mt. Sinai in the Old Testament, after the great event of the promulgation of the law, is in connection with the flight of Elijah, who sought refuge here after having slain the priests of Baal on the brook Kishon (I Kings, xviii. 40; xix. 8). At an early part of the Christian period a number of anchorites settled here amid the springs of these rocky mountains, and pronounced the Jebel Mûsa to be the Mountain of the Lord. As early as the 4th cent. they were terribly persecuted, and stories are told in connection with the Dèr el-Arbâ'in (monastery of the forty) in the Wâdi Leja (p. 603) of the cruel attack which cost 38 or 40 Cenobites their lives (p. 487). While Mûr Serbâl afforded a better situation for monastic settlements, Mt. Sinai attracted numerous anchorites and hermits, owing to its seclusion and greater safety, especially after Justinian, according to the statement of Procopius, his private secretary, and that of Eutychius (Sa'id ibn el-Batrîk, 9th cent.), had erected the church of the Virgin already mentioned and a castle, in A.D. 550, for the protection of the monks and the neighbouring region against the attacks of the Saracens. The emperor is said to have been so dissatisfied with the site chosen by the architect, that he caused him to be beheaded. He justly objected that the fortress was commanded by the slope of the valley rising immediately above it. The desire attributed to Justinian, that the slope should have been removed, and the execution of the architect in consequence of his answer — 'if we spent the whole treasures of Rome, Egypt, and Syria, we could not level the mountain', are by no means characteristic of so sagacious an emperor. The monastery might certainly have easily been destroyed by rocks rolled down from the E. slope of the valley. Justinian and his wife Theodora are also said to have founded the Church of the Transfiguration (p. 495). The monastery was also greatly benefited by a gift from Justinian of a hundred Roman, and a hundred Egyptian slaves, with their wives and children. From these retainers are descended the Jebeliyeh, who still render service to the monks, but are despised by the Beduins and stigmatised as 'Nazarenes' and 'fellâhin'.

J. ed-Dorra
Although originally Christians, and living under the supervision of their monkish masters, they could not be prevented from embracing El-Islâm, which they all now profess. In the reign of the Khalîf 'Abd el-Melîk ibn Mewân there seem to have been many compulsory conversions to Mohammedanism which cost many lives; but the shrewd monks contrived to ward off their Mohammedan persecutors, by pretending that they had accorded a hospitable reception to the prophet on one of his journeys, that one of the monks of Sinai had predicted his future career, and that the prophet had given them a letter promising them the protection of his followers. The document is said to have been written by 'Ali, and to have been impressed with the blackened sign manual of the prophet, who could not himself write. Sultan Selim is reported to have carried the document to Constantinople, after the conquest of Egypt, for the purpose of enriching his collection of relics, and to have sent the monks, in its stead, a copy authenticated by his own seal; this copy is also said to have been lost, but another copy of very doubtful genuineness is now preserved in the monastery of the order at Cairo. The safety of the monks is now better secured by a letter of protection accorded to them by each new sultan. The mosque, which stands within the walls of the monastery, is said to have been built in order to induce Sultan Selim (d. A.D. 1520) to abstain from his purpose of destroying the monastery, within the walls of which a young Greek priest, to whom he was attached, had died. The mosque, however, has been proved to have existed at least a century and a half earlier than the reign of Selim, having doubt less been built out of consideration for the Muslims, whom it was absolutely necessary to conciliate. So far was this policy carried, that when King Baldwin I. of Jerusalem wished to visit Mt. Sinai during the Crusades, at the beginning of the 12th cent., the monks entreated him to give up his intention, as such a visit might excite the suspicion of the Muslim rulers, and prove detrimental to the monastery. Several Beduin tribes of the peninsula were constituted the well-paid 'Ghâhir', or guardians of the monastery, one of their duties being to escort the caravans of pilgrims, a great number of whom visited the sacred places in the middle ages. The Egyptian government also, even during the Mameluke period, entered into friendly relations with the monks, partly in consequence of the pretended letter of the prophet which they possessed, partly for the sake of ensuring the safety of the Mecca pilgrims, whose route passed the territory of the monks, and partly from its desire to protect those places which were regarded as sacred by Christians and Muslims alike. Down to the reign of Mohammed 'Ali, whose patronage they enjoyed, the monks were entitled to part of the custom-house dues levied at Cairo, and that city had to supply them with the materials for their gowns; and they still enjoy the privilege of conveying their property to or from Cairo free of duty. 'Abbâs Pasha visited Mt. Sinai in 1853, and formed the extravagant plan of building himself a villa on a rock of Mt. Horeb (p. 499), but he was assassinated in 1854 before his design could be carried out. Although a fanatical Muslim, he did not scruple to pray in the church of the Transfiguration at the 'Place of the Burning Bush'. The safety of the monks is now perfectly insured, partly owing to the favour shown to the Christians by the Egyptian government, and partly to the protection of Russia. — Notwithstanding the ample revenues of the monastery, the number of the monks has greatly diminished. In the 14th cent. it is said to have contained 3,400 inmates, together with a prelate and an archbishop, but the number is now reduced to 20-30 only, who are chiefly natives of the Greek islands, where the monastery possesses estates, particularly in Crete and Cyprus. — The most famous offshoot of the monastery of the Wâdi Shu'aib is that of the Sinaiotes at Cairo, but the monks also maintain constant communication with the other churches of their order, which are scattered over a great part of the East. Thus we find fraternities in Roumania, Servia, Turkey (Constantinople), the Greek Archipelago, in Greece itself, and even in India, closely connected with the monastery of Mt. Sinai. The order belongs to the orthodox Greek church, which regards Sinai as no less sacred than Jerusalem.
The Monastic Rule is very strict. The monks are prohibited from partaking of meat or wine, and even oil is forbidden during the long fasts; but they are permitted to eat fish, and to drink an excellent liqueur which they prepare from dates (‘Araki). They assemble for prayer twice during the day, and twice during the night. Women were formerly rigorously excluded, and even cats and hens, as belonging to the same obnoxious sex. Female pilgrims, however, and enterprising lady tourists, are now lodged without difficulty in the rooms set apart for visitors. The monastery is presided over by an archbishop, who is elected by the monks here and their brethren in Cairo; the election, however, requires confirmation by the patriarch of Jerusalem, who recently exercised his right of veto in a very emphatic manner. No archbishop has resided on Mt. Sinai since 1760, as, in accordance with ancient treaties, large sums had to be paid, and gifts presented, to the Beduins upon the installation of every new prelate. After a lapse of 112 years a new archbishop (Kallistratos) was installed in the monastery in 1872, but his election was attended with great difficulties. If the quaint old writer Schilberger of Munich (1394-1427) could have foreseen these modern events, he would hardly have recorded the following miracle: — ‘A great wonder takes place in the monastery, where there are many monks, who have as many lamps, which are always burning. And when a monk is about to die, his lamp begins to wane, and when it goes out, he dies. And when the Abbot dies, the monk, who sings his praise after the mass, finds on the altar a letter on which is written the name of the man who is to be Abbot. And the lamp of the dead Abbot thereupon lights itself.’ The absent archbishop is represented by a prior or wedil, but the affairs of the monastery are actually managed by an intendant. Most of the monks, who are quite uneducated, practise some handicraft; and they are most successful in the distilling of brandy, and in gardening. Among them are also a tailor and a shoemaker who charge exorbitantly for their primitive workmanship. The bread of coarse flour is also baked on the premises. Many of the monks spend a few years only on Mt. Sinai, after which they return home as ‘martyrs’. The monastery is also considered as a kind of penal establishment. The healthy mountain air enjoyed by the inmates of the monastery of St. Catharine has always contributed greatly to their longevity, but most of them suffer from rheumatism.

The Monastery of Sinai, an irregular pile of buildings, lies 5030 ft. above the sea-level, on the N.E. granite slopes of the Jebel Mûsa or Mount Sinai, in the Wâdi Shu‘aib or valley of Jethro. Into the outer wall, facing the garden, are built two fragments of marble bearing inscriptions, one in Greek, and one in Arabic (published by Lepsius). They both date from the 12th or 13th century, and are to the same effect. The longer, in Arabic, runs as follows: — ‘The monastery of Mt. (Tûr) Sinâi, and the church of the Mountain of the Conversation, was built by Justianus (i.e. Justinianus), the pious king of the Greek confession, dependent on the aid of God, and waiting for the promise of his Lord, to remind himself and his wife Theodora of the flight of time, in order that God might inherit the earth and everyone thereon, for he is the best of heirs. And his building was ended after thirty years of his reign; and he appointed over it a superintendent named Dhulas. And this happened in the year 6021 after Adam, which corresponds with the year 527 of the year of the Lord Christ’. It appears from the style of the characters, that the inscriptions date from the 12th or 13th cent., and it has already been mentioned, that the date of the foundation of the monastery has been confounded with that of the
castle built by Justinian. The same wall contains another large stone, which, to judge from its ornamentation, probably bears a third inscription on one of its sides. The monastery was often destroyed and rebuilt, and consequently exhibits great incongruity of form; we therefore find cubes and round arches, pointed and flat roofs, and a church and mosque in close contact with each other. The whole building presents the appearance of a fortress externally, but the bold and menacing defences consist of the walls of houses, and massive walls of stones connecting the different buildings, which take the place of a regular rampart. The apartments occupied by the monks, pilgrims, and travellers, are situated on the first floor of the houses, which are only one room in depth, their doors being connected by a long, wooden gallery. The whitewashed walls bear numerous Greek inscriptions, some of which were written by a monk of Athos, named Cyril, who was formerly librarian here. The different buildings are separated by small courts; one of these contains a well, and a small group of apricot trees enclosed by stakes. The low buildings are commanded by a lofty cypress. From the embrasures in the walls and ramparts a few small cannons still frown on the now peaceful 'Saracens'. In the midst of the buildings is situated the church (see below), with its handsome tower, adjoining which is the ill-preserved mosque. The wells yield excellent water, particularly one in a shed at the back of the church, which the monks point out as the one at which Moses watered the flocks of Jethro's daughters.

The Church of the Transfiguration is an early Christian basilica. The exterior is uninteresting. In the centre of the W. side, which forms a kind of façade, a large cross, with a window in the centre, takes the place of the usual rose-window; and on each side of it is a palm-tree engraved on the stone. — The church is entered by a porch, and a flight of steps descending beyond it, both of which have been restored. In the middle of each of the topmost steps is a letter of the name of St. James ('I-A-K-Ω-B-0-Σ). — We first enter a vestibule (narthex) with a Byzantine window, containing a large, modern basin for holy water with small silver eagles. The framework of the doorleading into the nave is richly decorated and the panels are embellished with old pictures in enamel, of small size. The basilica, which we next enter, notwithstanding the lowness of its aisles, and the superabundant decoration peculiar to Greek churches, is not devoid of effect. Each of the lofty walls bearing the entablature of the nave rests on thick columns of granite, covered with stucco and painted green, the capitals of which are adorned with boldly executed foliage. The ceiling has been recently re-painted, and divided into bright coloured sections containing indifferent medallion figures of John the Baptist, the Virgin and Child, and the Saviour.

The Aisles are lighted by five Byzantine windows on each side,
and are covered by a sloping roof. A coloured Marble Pavement in the nave now replaces one of admirable mosaics which was destroyed by Arabian treasure-seekers. Adjoining the third column on the left side of the nave is a marble Pulpit adorned with pleasing miniatures, which was presented to the church in 1787. Near the fourth column on the right is the Episcopal Throne, dating from the last century, and interesting on account of a representation of the monastery at that period, painted by an Armenian artist, and held by figures of Moses and St. Catharine. The inscription repeats the date 527 which is erroneously stated by the monks as that of the foundation of the monastery by Justinian (p. 492). Between each pair of columns are rudely-carved choir-stalls. From the ceiling are suspended three candelabra, and a hundred lamps of every shape and size, some of which are adorned with ostriches' eggs, and so low, that they may be reached with the hand. The raised Tribuna projects into the nave far beyond the choir. A wooden Screen ('septum'), coloured blue, yellow, and red, and overladen with carving, with a broad gate flanked with gilded columns and rich ornamentation, separates the choir from the nave and aisles. The large crucifix, reaching to the ceiling, bears the figure of the Saviour, painted in bright colours. The candelabra, placed in front of the screen and covered with red velvet, stand on very ancient bronze lions of curious workmanship, perhaps executed before the Christian era. — The beautiful rounded *Apse is adorned with Mosaics of great value, executed by European artists as early as the 7th or 8th cent. The most important of these, which, like the others, is well preserved, is the *Transfiguration of Christ, in memory of which the church was originally consecrated. In the centre of the mosaic the youthful and somewhat commonplace figure of the Saviour soars towards heaven. Elijah, the prophet of Mt. Sinai, is pointing to the Messiah; St. John kneels at the feet of his master; Moses points to the latter as the fulfiller of his law, and St. Peter lies on the ground, while St. James is kneeling. Each figure is accompanied by the name of the person it represents. A kind of frame is formed to this picture by a series of busts of prophets, apostles, and saints in mosaic, admirably executed: —

Above the apse, on the right, Moses kneels before the burning bush; on the left, he stands before Mt. Sinai, with the tables of the law in his hand. Between these scenes and the arch of the apse hover two angels adjoining two medallion figures (perhaps Moses and St. Catharine), which the monks point out as portraits of
Justinian and Theodora, although they do not in the least resemble other portraits of the emperor and his wife. Under the scene of the Transfiguration is an inscription ('Ἐν οἵναματι Πατρός καὶ Γιοῦ καὶ Ἀγίου πνεύματος γέγονεν τὸ πάν έργον τούτο ὑπὲρ σωτηρίας τῶν κηρυγματοδότων ἐπὶ Λογγίνου τοῦ ὑστάτου πρεσβύτερου καὶ ἤγουμένου) to the effect that the mosaic was executed under Longinus, the Presbyter and Superior of the monastery, for the salvation of the souls of those who had contributed towards the cost of the work.

Among the sacred utensils in the choir are a finely executed Ciborium, or stand for the communion chalice, and a short marble sarcophagus said to contain the head and one hand of St. Catharine, who is specially revered by the Greek orthodox church. Here, too, is shown a valuable, but unpleasing reliquary, presented by Russian Christians. The head of St. Catharine is represented on a silver pillow, her face and hands being enamelled. Another similar reliquary, bearing a figure of the saint in gilded silver, was presented by the Empress Catharine of Russia.

The Chapel of the Burning Bush, at the back of the apse, marking the spot where God is said to have appeared to Moses, is probably the oldest part of the structure. Visitors must remove their shoes before entering. The walls are covered with slabs of porcelain. The spot where the bush is said to have stood is indicated by a plate of chased silver; over it is placed a kind of altar, within which are suspended three burning lamps. At the back of this sanctuary is a small niche adorned with figures, in a line with the apse, the semicircular wall of which encloses the whole E. end of the building. A ray of the sun is said to enter this sanctuary once only in the course of the year, gaining admission through a cleft of the rock on the E. side of the valley. From a cross erected there the hill has been named the Jebel es-Salib.

The Chapels surrounding the nave contain no objects of interest. Each is dedicated to an evangelist, saint, or martyr (SS. Anna, the holy martyrs of Sinai, James, Constantia and Helena, Demetrius and Sergius). Adjoining the right aisle of the basilica are the chapels of SS. Simon Stylites, Cosmas, and Damianus; adjoining the left aisle are those of SS. Anna, Marina, and Antipas. The chapel for the Latins, near the visitors' rooms, is now disused, as the Roman Catholics no longer make pilgrimages to this monastery.

The Mosque, a building of simple construction, is badly preserved. A stone arch near the mosque still bears several coats of arms in the early mediæval style, perhaps those of Crusaders.

The Library of the monastery, which is imperfectly arranged, occupies the two lower floors in a building near the entrance to the church. The ground-floor contains the works of inferior value. The upper floor, which is embellished with the inscription — ἱατρείου ψυχῆς ('Sanatorium of the soul'), contains many inter-
esting books and MSS. arranged in cabinets and on shelves. A number of the MSS., particularly the Coptic, have probably been transferred to the monastery of the Sinaites at Cairo. Among the treasures of the library are MSS. in Greek, in Syrian, in Æthiopian, beautifully written, in Arabic, Persian, Armenian, Slavonic, and Russian. The so-called Chamber of the Archbishop, a kind of sacristy near the library adorned with images of saints and relics, contains the show MSS. of the monastery. Among these is the famous Book of the Gospels of Mt. Sinai, dating from the time of Theodosius III., A.D. 766, by whom it was probably presented to the monastery. It is written on white parchment, both sides of each sheet having two columns in golden characters. A kind of frontispiece is formed by a series of elaborate miniatures of Jesus, Mary, the four Evangelists, and St. Peter. We next observe a Psalter, written in extremely elegant and minute characters, which are scarcely legible to the unaided eye, said to have been executed by a woman. Next a copy of the famous Codex Sinaiticus, discovered by Prof. Tischendorf, printed most carefully from the original, and presented by the Emperor of Russia. Several leaves of the precious MSS. are preserved at the university of Leipsic, under the name of the ‘Codex Friderico-Augustanus’, but the greater part of it is at St. Petersburg, having been purchased from the monastery by Alexander II. for a large sum. The codex contains a complete copy of the New Testament, most of the books of the Old Testament, a part of the ‘Shepherd of Hermas’, and the ‘Epistle of St. Barnabas’.

The great value of the Codex Sinaiticus is due to its completeness, the care with which it is written, the consistency of the peculiarities of its text, and, above all, its great antiquity. It is pretty well ascertained to date from the middle of the 4th cent., and is therefore nearer the apostolic times than any other MS. of the Bible yet discovered. It thus supplies Biblical critics with a new means of ascertaining what readings were in all probability generally current among the earliest Christians. Its only rival is the Codex Vaticanus, a MS. of perhaps equal antiquity, but inferior in completeness.

On the N. side of the monastery is the Burial Place of the monks, reached by several dark passages, and consisting of a strongly vaulted crypt. The remains of the bishops are preserved in coffins, and those of the priests in a separate part of the vault, while the bones and skulls of the monks are merely piled up together. The skeletons of several highly revered hermits are suspended from the wall. At the gate of the priests’ vault is placed the skeleton of St. Stephanos (d. 580), wearing a skull-cap of violet velvet. Not far from this vault is a well, and beyond it is the rarely used burial-ground for pilgrims who have died here.

A flight of steps descends from this court to the *Garden, the trees of which blossom most luxuriantly in March and April, presenting a grateful sight in the midst of this rocky wilderness. It is laid out in the form of terraces, and contains peach-trees, orange-trees, vines, etc., overshadowed by some lofty cypresses.
The Jebel Müsa and Rās eṣ-Ṣafsāf.

The ascent of the Jebel Müsa occupies 3 hrs., and presents no difficulty. The start should be made about 5 a.m. or earlier. Five different paths lead to the top, but the two following are almost exclusively used. The more interesting, but also more fatiguing, ascends the old pilgrimage-steps (see below), while the other begins in the Wādi Shuʿaib, and ascends the Jebel Müsa by a circuitous route. This last was to have been made practicable for the carriage of Ṭabbās Pasha, who intended building himself a villa on Mt. Sinai; but he was assassinated before the completion of the work (p. 493). Those who wish to ascend the Jebel Müsa and Rās eṣ-Ṣafsāf separately, may return by the second of these routes; in this case they may remain long enough on the Jebel Müsa to enjoy the magnificent spectacle of a sunset. By starting immediately after the disappearance of the sun, and walking rapidly, the traveller will have time and light enough to descend to the cypress plain (Chapel of Elijah), whence, with the aid of a guide, he may reach the monastery in an hour without difficulty, even in the dark, by following the road of Ṭabbās Pasha. The pilgrims' steps should on no account be descended at night. If necessary the night may be spent in the chapel of Elijah, in which case the monks provide blankets.

One or two of the monks or Jebeliyeh (Arabian servants of the monastery) act as guides, carrying the necessary provisions, and rendering help in the ascent of the Rās eṣ-Ṣafsāf.

Those who ascend by the pilgrims' steps quit the monastery by a small side-gate in its W. wall, and mount the bare granite of the W. side of the Shuʿaib valley, by a path which gradually becomes steeper, but is unattended with danger. This path, which, like many of the Oriental churches, is said to date from the time of the Empress Helena, was probably constructed for the pilgrims in the 6th or 7th cent. In 20 min. we reach a small spring which contains the same quantity of water in winter and summer, and where, according to the Arabs, Moses once tended the sheep of Jethro, whom they call Shuʿaib. The monks, on the other hand, declare that it issued from the rock in consequence of the prayers of the holy abbot Sangarius, when the wells in the monastery dried up, and that it is a cure for diseases of the eye. In 12 min. more we come to a hut, styled the Chapel of Mary, which is said to have been erected in memory of a vision of the Virgin. The monks, according to the story, were so terribly plagued with vermin, that they determined to leave the monastery, and ascended the mountain in procession, intending to quit the holy places. On the way, however, on the site of this hut, the Virgin appeared to them, promised to deliver them from their tormentors, and commanded them to return. They obeyed, and found that all the vermin had disappeared. The traveller, however, even at a late period of the year, will have abundant opportunity of observing that the foe has since returned. — Farther up, the route crosses a small ravine, and then passes through two rude gates. Monks are said formerly to have been stationed here for the purpose of receiving from the pilgrims, who wished to take the sacrament on the top of Mt. Sinai, a certificate that they had attended the confessional in the monastery. At the first gate they were handed a receipt, which they gave up at the second. After a few
minutes more we reach a pleasant green plain, called the 'plain of
the Cypress', after a gigantic cypress which rises in the middle of
it. It is enclosed by bold and barren masses of rock, and reddish-
brown and grey pinnacles of hard granite. Exactly to the S. of
the cypress rises the peak of the Jebel Müsa; farther distant, to
the S.W., towers the lofty Jebel Katherin (p. 504), and to the
N. is the cliff of the Ṣafṣāf rising from the Râḥa plain. On a
plateau to the right of the path is a nursery of saplings by the side
of a fresh spring. We turn to the left of the cypress, and mount
the rugged blocks over which lies the route to the summit of the
Jebel Müsa. On a small eminence, which unites the cypress plain
with the Jebel Müsa, on the left of the path, is a simple white
stone building, containing two chapels dedicated to the prophets
Elijah and Elisha. The rudely-whitewashed interior contains a
hollow which the monks point out as the cavern in which the
prophet Elijah concealed himself after he had slain the priests of
Baal on the brook Kishon and had wandered forty days and forty
nights in the wilderness. Jehovah commanded him to ascend to
the summit of the mountain.

'And behold', we read in 1 Kings xix. 11, et seq., 'the Lord passed
by, and a great and strong wind rent the mountains, and brake in pieces
the rocks before the Lord; but the Lord was not in the wind: and after
the wind an earthquake; but the Lord was not in the earthquake: 12.
And after the earthquake a fire, but the Lord was not in the fire: and
after the fire a still small voice. 13. And it was so, when Elijah heard
it, that he wrapped his face in his mantle, and went out, and stood in
the entering in of the cave. And, behold, there came a voice unto him,
and said, What doest thou here, Elijah?' — We may remind the reader
how effectively Mendelssohn has set this sublime passage to music.

Beyond the Chapel of Elijah (6900 ft.) the route, or rather the
flight of steps (3000 in all, according to Pococke: 500 to the spring
of Sangarius, 1000 to the Chapel of Mary, 500 to the chapel of
Elijah, and 1000 to the top) becomes steeper, but by daylight
it is nowhere attended with danger. The granite is at first
speckled red, afterwards grey, green, and yellow. After an ascent
of 40 min. more, a natural hollow in the granite is pointed
out by the Arabs (to the left of the path) as a foot-print of the
camel which the prophet rode on his visit to Sinai, before his
call. According to another legend, the camel is said to have
stood with one foot in Damascus, another in Cairo, the third in
Mecca, and the fourth on Mt. Sinai, where the impression is still to
be seen, and thence to have been carried up into heaven with his
rider by the angel Gabriel. In ¾ hr. more we reach the summit
of the Jebel Müsa (7400 ft.), which rises 2360 ft. above the mon-
astery. On the small plateau at the top, to the left, partly built
on ancient foundations, is situated a small and simple chapel,
which those of the guides who are monks enter with candles and
incense. On the right rises a small mosque in bad preservation,
which the Arabs revere highly, and which, until recently, they
were only permitted to enter clothed in the ihrām, or single, plain
garment which they wear when pilgrims at Mecca. After the Šâliḥ festival (p. 509) in the Esh-Shêkh valley the Beduins sacrifice animals to Mûsa (Moses) here. At the N.E. angle of the rock which bears the chapel there is a hollow, where Moses is said to have stood when ‘the Lord’s glory passed by’, and the monks show the impression of the prophet’s head and shoulders on the stone. The tradition is to the effect that Moses remained fasting for forty days in a hollow resembling a cistern near the mosque, while writing the ten commandments.

The view is wild and imposing. Towards the S.W. rise the barren, sombre, and majestic Jebel Zebîr and Jebel Katherin, the highest mountains in the peninsula. To the S.E. we survey the Sebâ’îyeh Valley, near the foot of the Jebel Mûsa, which some authorities take to be the camping-place of the Jews. Above it rises a multitude of mountain chains and peaks, picturesquely interspersed with intervening wâdis. Towards the E. the Jebel el-Me’allawi is particularly conspicuous. In clear weather the Red Sea, and even the greater part of the Bay of ʿAḵaba, are visible. The island of Tîrân to the S.E. of the peninsula is also sometimes descried. Towards the N.W. is the Râs es-Ṣafsâf, while below us lie the valleys of the two monasteries. Beyond these, on the right, framing the picture, rise the Jebel ʿArîbeh, El-Ferî, and ʿEs-Ṣamâ`; on the left, the Jebel er-Rabba and Ez-Zafarîyeh, with the château of ʿAbbâs Pasha. Towards the N., beyond the Râs es-Ṣafsâf, we obtain a glimpse through the defile of the Naḵb el-Ḥawî of the less mountainous region of the peninsula in that direction.

We descend in 20 min. to the cypress plain, whence the guides conduct us in 3/4 hr. through two fertile hollows by a slightly descending path to a third valley, picturesquely commanded by rocks. The first dale contains the remains of a cistern and a chapel dedicated to John the Baptist. From the valley in which this path terminates, it is usual to make the ascent of the Râs es-Ṣafsâf (‘mountain of the willow’), which many authorities, particularly since the time of Dr. Robinson, who is also followed by Capt. Palmer, identify with the mountain where the commandments were given. We may here enjoy a cool draught from a spring near a dilapidated chapel dedicated to the ‘Sacred girdle of the Virgin Mary’, and inspect the venerable willow which gives its name to the mountain, and from which Moses is said to have cut his miraculous rod. The monks formerly pointed out another bush in the monastery garden from which the rod was cut. The ascent of the Ṣafsâf (6575 ft.) is at first facilitated by steps. Farther up the path becomes steeper, and the extreme summit can only be attained by persons with steady heads by dint of scrambling. Those who are not disposed for this undertaking should take their stand by the opening of a chasm which descends precipitously into the Râḥa plain, situated about 50 paces below the summit of the mountain.
This point commands an admirable survey of the broad Wādī, which is believed by many to have been the camping-place of the Jews, and is picturesquely enclosed by huge mountains of granite.

Opposite the cliffs of the Safāf, on the other side of the valley, rise the red porphyry masses of the Jebel (pl. Jibāl) Frē'a, forming the nucleus of a labyrinth of other mountains extending towards the N. The S. side of it is called the Jebel Sōna, to which belong the granite slopes commanding the Wādī er-Rāha at the traveller's feet and the Wādī ed-Dēr. On the right (E.) rises the Jebel ed-Dér, and on the left (W.) are seen numerous cliffs of granite, including the narrow Ughret el-Mehd at the entrance of the Wādī Leja, and the Jebel el-Ghabesh. Far below us in the valley, at the mouth of the ravine above which we stand, rises a mound of sand with some ruined buildings and a few fruit-trees.

The Plain of Er-Rāha, which we here survey, is, according to the measurements of Capt. Palmer, two million sq. yds. in area. There is no doubt that this valley is sufficiently extensive to have been the camping-place of a large multitude like that of the Israelites. If the Mt. Sinai of the monks, and not Mt. Serbāl, is to be regarded as the mountain where the commandments were given, the Rās es-Safāf, and not the Jebel Mūsa, must have been the peak ascended by Moses. — If the Jebel Mūsa alone has been climbed, and the traveller wishes afterwards to visit the Rās es-Safāf, he should ascend with a guide through a cleft immediately behind the monastery, a little to the W. of the pilgrims' steps. There are steps here also, but the route is not recommended to those who are inclined to dizziness, and it is much more fatiguing than the pilgrims' route. The descent may be made by a cleft opening into the Rāha plain, but this route is also very rough, and cannot be recommended for the ascent. Huge masses of rock have fallen into the cleft, and the path often leads below them.

Those who desire to compare the form of the group of Mt. Sinai with the account given of the 'Mount of the Lord' in the Bible narrative should keep in mind the following points suggested by Dr. Robinson, which may also be considered in reference to Mt. Sinai. There must be the summit of a mountain commanding the camp of the people, and a space contiguous to the mountain from which a large multitude could witness the scene on the heights. The camping-place must be so situated with regard to the mountain, that the people could approach the latter, and stand upon its lower slopes; there must be the possibility of touching the mountain, and of placing an enclosure round it to prevent the people from ascending it, or touching its extremity.

Those who wish to return hence to the monastery, and not to visit the Wādī Leja and the El-Arba'in monastery (p. 503) at present, may descend by the ravine called the Sikket Shu'āib. The route is difficult, and reminds one of the question asked by Recha of the Knight Templar in Lessing's 'Nathan', whether 'it was really so much easier to ascend the mountain than to descend it'.

The Wādī el-Leja and the El-Arba'in Monastery may be reached even on horseback and without a guide. The whole excursion, which presents no difficulties, takes 4 hrs.; numerous sacred spots are pointed out on the route. Before entering the valley from the Rāha plain, the place is shown where the earth is supposed to have
swallowed up the company of Korah, although, according to the Bible narrative, the scene of that event must have been at a considerable distance from Mt. Sinai. A hole in the rock is also pointed out as the mould of the golden calf.

The Leja-Valley, which flanks the W. side of the Jebel Mûsa, owes its name to an Arabian tradition that Leja was a daughter of Jethro, and a sister of Zipporah (Arabic Zafûriya). At the entrance we first observe, on the right, the dilapidated hermitages dedicated to SS. Cosmas and Damianus, and a disused chapel of the Twelve Apostles. On the left is the ruinous monastery of El-Bustân with a few plantations; farther on we come to a mass of rock, called by the Arabs Hajer Mûsa, or ‘Stone of Moses’, and declared by the monks to be the Rock of Horeb, from which the spring issued when struck by Moses. It is probably in accordance with an ancient Jewish tradition, with which both St. Paul (1 Cor. x. 4), and the expounders of the Korân seem to have been familiar, that the monks assure us that this rock accompanied the Jews throughout their wanderings in the desert, and then returned to its old place. It is of reddish-brown granite, measures about 130 cubic yds. in content, and is about 12 ft. in height. The S. side is bisected somewhat obliquely by a band of porphyry about 16 in. in breadth, from holes in which jets of water for each of the twelve tribes are said to have flowed. Two of the holes, however, seem to have disappeared. — Several Sinaitic inscriptions (p. 483) are to be seen here.

About 20 min. to the S. of this point is the unpretending Dér el-Arba‘în, or Monastery of the Forty (i.e. martyrs), with an extensive garden containing olive and other trees. In the upper and rocky part of the site rises a spring with a grotto near it, which is said once to have been occupied by St. Onofrius. The monastery was inhabited from the 16th down to the middle of the 17th century. Two or three monks reside here occasionally to look after the garden. The forty martyrs, from whom the monastery derives its name, are said to have been monks who were slain by the Saracens, but that event may as probably have taken place at the monastery of Sîkelyîh on Mt. Serbâl (p. 487).

The Jebel Katherin.

The ascent of the Jebel Katherin is more difficult than that of the Jebel Mûsa, and is hardly suitable for ladies. The start should be made very early, or the previous night should be spent at the Arba‘în monastery (see above). See map, p. 484.

Route as far as the (2 hrs.) Dér el-Arba‘în, see above. We then follow a gorge to the S.W. which soon contracts considerably, and observe several Sinaitic inscriptions. After 1½-1½ hr. we reach the Bir esh-Shunnâr, or ‘partridges’ well’, which God is said to have called forth for behoof of the partridges which followed the corpse of St. Catharine (see below) when borne to Mt. Sinai by a
The route now inclines more to the W., and is very steep and fatiguing until (11/2 hr.) we reach the ridge of rocks leading to the top. The pilgrims have indicated the direction of the path by heaping up small pyramids of stones on larger masses of rock. After another hour of laborious climbing we reach the summit. The Jabel Katherin has three peaks, the Jabel Katherin, the Jabel Zebir, and the Jabel Abu Rumel, the first of which, according to the most recent and careful English measurements, is the highest (8537 ft.), being the loftiest mountain in the peninsula. The air is often bitterly cold here, and snow lies in the rocky clefts till summer. Half of the narrow plateau on the summit is occupied by a small and rudely constructed chapel. The unevenness of the floor is declared by the monks to be due to miraculous impression of the body of St. Catharine (p. 497), which was found here 300, or according to others, 500 years after her execution, and to which attention was attracted by the rays of light emanating from it. The view is magnificent in fine weather, but towards the S.W. it is intercepted by the Jabel Umm Shomar. Towards the S.E. lies the broad Wadi Naṣb. The greater part of the Gulf of ‘Aqaba, the Arabian mountains, and even sometimes the Râs Moḥammed (to the S.) are visible. The Gulf of Suez is surveyed as far as the African coast, on which rises the conspicuous Jabel Ghârib (p. 463). On the W. coast of the peninsula lies the sterile plain of El-Ká’a, which terminates near Tur. To the N. tower Mt. Serbâl and the Jabel el-Benât, and farther distant, in the same direction, lie the light-coloured sandy plain of Er-Ramlkh and the long range of the Et-Tih hills.

The Wâdi Sebâ’iyeh (afternoon excursion of 3 hrs.) is interesting from its being regarded by Laborde, Strauss, Tischendorf, Graul, and others, as the camping-place of the Jews. We ascend the Wâdi Shu’aib (p. 492), cross the moderate height of the Jabel Munâja (“Mountain of the Conversation”), and enter the rocky Wâdi Sebâ’iyeh, which is filled with heaps of rocks and small stones, whence the rocky Jabel Mûsâ presents a similar appearance to that of the Râs es-Safâf from the Er-Râhâ plain. We may now return by the Wâdi es-Šadâd, a valley farther to the N.E., from the Wâdi Sebâ’iyeh into the Wâdi esh-Shêkh, and thence by a longer and easier route through the Wâdi ed-Dër. On reaching the Wâdi esh-Shêkh (p. 500) we keep to the left until the entrance of the Shu’aib valley and the monastery comes in sight.

The Jabel Umm Shomar (“mother of fennel”, 8448 ft.) was long considered the highest mountain in the peninsula, but it was proved by the measurements made by the English Expedition to be lower than the Jabel Katherin. We quit Mt. Sinai by the Wâdi Sebâ’iyeh, enter the broad Wâdi Rahabeh, and pass the night at the Wâdi Zêtan. Next morning we first ascend the Jabel Abu Shefer rising 1180 ft. above the valley. The Wâdi Zerâkîyeh, on the right, contains the scanty ruins of the old monastery of Mir Antus. The majestic granite masses of the Jabel Umm Shomar, with its huge pinnacles, somewhat resemble Mt. Serbâl.

Route to Mt. Sinai viâ Tur.

From Suez to Tur, see p. 463. Tur is a place of some importance, inhabited by Arabs, whose property, estimated at several hundred
thousand francs, is partly derived from the numerous shipwrecks which take place near the island of Shadwan. The harbour is admirably protected by coral reefs, which, however, are dangerous to those unacquainted with their situation. Tûr affords the only good anchorage in the Gulf of Suez, beside Suez itself, and, like El-Wejj (p. 411), is frequently used as a quarantine-harbour. To the N. of the town the Jebel Hammâm Sidna Mûsa (‘Mountain of the baths of our Lord Moses’; 375 ft.), a spur of the low range of coast-hills, projects into the sea. At the foot of this hill are situated sulphur-springs of the temperature of 92-94°, roofed over by 'Abbâs Pasha, which irrigate plantations of palms, and are used by the natives chiefly as a cure for rheumatism. The Ka'fât el-Tûr, a castle erected by Sultân Murâd, is in a dilapidated condition. Most of the palm-plantations belong to the monks of Mt. Sinai, and are managed by their servants. One of the monks is stationed at Tûr, officiating partly as a chaplain to a few Christians resident here, and partly as a caterer for the monastery, which is supplied with provisions and fish from Tûr. The caravans between the sea and the monastery are conducted by Jebelîyeh (p. 492). Excellent fish, numerous shells, and interesting marine animals abound here.

Excursions. The palm-garden of El-Wâdî, about a mile to the N.W. of the town, is noted for its salubrity. In the limestone slopes of the Jebel Hammâm Mûsa are numerous dilapidated hermitages, with Christian crosses, and several Greek and Armenian inscriptions, dating from A.D. 633. To the N. rises the Jebel Mokattêb which boasts of several Sinaitic inscriptions. None of these places present much attraction.

The Jebel Nûkâs, or ‘Bell Mountain’, is 4½ hrs. distant from Tûr. It rises amphitheatrically about 1 M. from the shore of the Red Sea, and is the scene of a phenomenon which was first observed by Sectzen. On ascending the sand which covers its slope we hear a peculiar sound, resembling that of distant bells, which gradually increases until it terminates in a strange kind of roar.

‘The noise at first resembled the faint tones of an Æolian harp when first struck by the wind, and when the motion of the sand became more rapid and violent, it rather assumed the sound produced by rubbing the moistened finger on glass; but when the sand approached the foot of the mountain, the reverberation was as loud as thunder, causing the rock on which we sat to tremble. Our camels were so alarmed at the sound, that the attendants could scarcely hold them in.’

The phenomenon is easily explained; in ascending over the sand, when dry (in which case alone the sound is heard) the traveller loosens it and causes it to fall into the clefts of the sandstone rock on which it lies; a slight and gradually increasing sound is thus produced by this miniature avalanche. The Arabs believe that these curious sounds proceed from a monastery buried under the sand. It had been accidentally discovered by an Arab, who received hospitable entertainment from the monks, and swore not to betray its existence; but when he afterwards broke his oath, the monastery vanished.

From Tûr to the Monastery of St. Catharine there are two routes, one through the Wâdî Hebrân, the other through the Wâdî es-Sîleh (Islêh). The latter is the shorter and preferable route, as the Wâdî es-Sîleh is one of the most romantic ravines in the whole peninsula, while the route through the Wâdî Hebrân is for some distance the same as the shorter route from Suez to Sinai.
(1) Through the Wâdi es-Slêh. The start should be made at a very early hour, in order that the desert El-Kâ’a may be crossed before the heat of the day. We ride due E. for 6 hrs. through the gradually ascending desert in the direction of the huge Umm Shomar (p. 504). On reaching the base of the mountain, we descend very rapidly into a basin resembling the bed of a lake, which has been formed by the mountain torrent issuing from the Wâdi es-Slêh. At the bottom of this basin we enter the narrow, rocky defile of the Wâdi es-Slêh. After ascending this romantic gorge with its turbulent brook for half-an-hour, we reach a charming resting-place where there is excellent water. The brook, which of course varies greatly in volume at different seasons, sometimes disappears altogether in the upper parts of the valley, but there is water enough everywhere to support the vegetation, which is very luxuriant at places. Palms and numerous tamarisks thrive in the lower part of the valley. The route is not always practicable for riding, but if the rider dismounts, the camels contrive to thread their way through the most difficult part of the ravine, while the traveller will find it a relief to walk for a quarter-of-an-hour. A little above the resting-place large masses of rock compel us again to dismount for half-an-hour’s walk. About 2 hrs. from the entrance of the valley, and 280 ft. above that point, the route divides, and we turn to the left. At the next bifurcation, 10 min. farther, our route leads to the right. We enter a rocky gorge which soon contracts to a defile of 12 ft. only in width, then expands, and again contracts. We pass a few palm-trees, many tamarisks, Solanaceae, and thickets of reed. At the next bifurcation (1 hr.) we turn to the right. We pass (20 min.) the precipitous bed of a torrent on the right, and then a second descending from a curious looking hill crowned with a huge mass of rock. The stony channel of an old torrent here is deeply furrowed by that of another water-course which now crosses it. The valley becomes wilder and more barren. We ascend the Wâdi Tarfa for 5-6 hrs. to a height of about 1875 ft. We then enter the broad Wâdi Rahabeh, and traverse an open and undulating basin for 6 hrs. more, first towards the N.E. and then towards the N.W., and at length reach the Wâdi Sebâ‘iyeh, at the S.E. base of the Jebel Mûsa, recognisable by its church and monastery. (Towards the N. the Wâdi Sebâ‘iyeh is connected with the Wâdi esh-Shékh by the Wâdi Sadad; comp. p. 509). A saddle of moderate height separates the Wâdi Sebâ‘iyeh from the Wâdi ed-Dér (‘valley of the monastery’). To the left, on the precipitous Jebel Mûsa, which is quite perpendicular at the top, we perceive the zigzags of the road constructed by ʿAbbâs Pasha (p. 499). We at length descend the narrow Wâdi ed-Dér (Shu‘aib), and reach the lofty walls of the monastery of St. Catharine (see p. 492).

(2) Through the Wâdi Hebrân. 1st Day. For one hour we
ascend a gradual slope with a saline soil to the *Umm Sa‘ad*, where a spring of fresh water affords support to a few families. The waterskins should be filled here, and a supply of dates purchased, as the desert of *El-Kâ’a*, 6 hrs. in width, has now to be traversed. We follow the road of 'Abbâs Pasha, which, though sometimes covered with sand on the low ground, is always sufficiently marked to indicate the direction to the Wâdi Ḥebrân. For the first hour or two we pass a number of dûm-palms, but these also at length disappear. A single seyâl-tree stands about halfway, but otherwise we are surrounded by the hot desert, which is at first covered with fine sand, afterwards with rubble, and at length with enormous blocks of stone in the vicinity of the precipitous mountains. The Wâdi Ḥebrân is reached about sunset. At the point where it issues from the mountains it is a deep and very narrow rocky ravine. A rocky recess close to the entrance affords quarters for the first night.

2nd Day. The route through the Wâdi Ḥebrân winds considerably; the formation is granite, in which syenite predominates; it contains thick veins of hornblende, slate, greenstone, and various kinds of basalt. The volume of the brook varies according to the season; its banks are bordered with vegetation. The path, which is comparatively good, and passes a number of Sinaiitic inscriptions, was to have been converted into a carriage-road by 'Abbâs Pasha, but his plan was never carried out. After $1\frac{3}{4}$ hrs. the valley divides, and the road of 'Abbâs Pasha leads to the N. At a second bifurcation ($\frac{3}{4}$ hr.) the valley expands, and in $\frac{1}{2}$ hr. more we reach a clear and abundant spring, but disagreeably warm. The tarfa bushes and palms here form an impenetrable thicket. Water now disappears (10 min.), the vegetation becomes scantier, and we proceed to cross the precipitous Nakb el-'Ijâwâ (3300 ft.). Our quarters for the second night are near the Wâdi Selâf (p. 490). On the third day we reach the direct route leading from Mt. Serbâl to the Nakb el-Hâwî, etc. (see p. 491).

'Akâba will be visited by scientific travellers only (5-6 days' journey). The first day from the monastery of St. Catharine is generally short on account of the late start. — On the 2nd Day the watershed between the Gulf of Suez and that of 'Akâba is crossed, and the Wâdi Sa‘l traversed. Beyond the Wâdi Mârra the route is not easily found, even by the Beduins, until after 2 hrs. we reach a sandy plain extending to the foot of the Jebel el-Tib. After 4 hrs. we pass the 'Ain el-Khadra, a spring with a few palms, lying to the right, probably the Biblical Hazeroth. After having passed through a narrow defile, we proceed to the N.E. by a sandy path, enter the plain of El-Ghôr, traverse the spurs of the Tîb chain, and reach the Wâdi Ghazâl, with its steep slopes of sandstone. The night is passed in the Wâdi er-Ruwéhibîyeh. — 3rd Day. Beyond the wâdi expands a plain of sandstone, varied with granite and diorite. In 2½ hrs. we reach the broad Wâdi Samghi, quit it ($1\frac{3}{4}$ hr.), turn towards the N.E., and traverse huge masses of rock and slopes by a gradually narrowing path. The narrowest part is called El-Buwèb, 'the little gate'. The path, which now expands and is covered with gravel, gradually approaches the Red Sea, or rather the beautiful, bluish green Gulf of 'Akâba. In another hour we come to the good spring of El-Terrâbin, bordered with palms. The night is spent on the sea-shore. — 4th Day. The route
skirts the shell-strewn shore. The coast mountains are formed of grey granite. Towards noon the spring of Abu Sa‘éra is reached, and we pitch our tents near the Wādi Huwēmirāt. We observe curious crabs here which take up their abode in empty shells, and walk about with them on their backs. The hills on the opposite coast of the Bahr ‘Akaba, or Gulf of ‘Akaba, are insignificant. From our quarters for the night the Arabian village of Ḥaṭḥi is visible. — 5th Day. The route leads across promontories stretching far out into the sea, a precipitous pass, and then several more promontories, particularly near the Wādi Merdīkh. The territory of the Tāwara terminates here, and that of the Huwēfūt Be-duins begins. Negotiations for a new escort must be made with the latter, who are often unreasonable. About 4 hrs. from the Wādi Huwēmirāt we observe a small island of granite a few hundred yards from the shore, with two hills bearing the ruins of a castle of the Saracens, probably the Fort Aīla, which was unsuccessfully besieged by Rainald of Chartillon in 1182. The island is now called Kuréyeh, Gezaret Fo‘ān, or Pharaoh’s island. The broad Wādi Tāba, farther N., contains a bitter spring and dūm-palms. Dr. Robinson found a square cistern excavated here, lined with red stone. The Rās el-Masri, a promontory of dark-coloured stone, must be rounded, the mountains recede, and we soon reach the broad Derv el-Hajj, or route of the Mecca pilgrims. We now skirt the extremity of the gulf, cross a saline swamp, leave the ruins of a town on the left, proceed to the S., and at length enter the fortress which lies on the E. bank of the bay.

‘Akaba (Ka‘fāt el-Akaba). In this neighbourhood lay the Elath of Scripture, which is mentioned on the occasion of the voyages to Ophir, and which was garrisoned during the Roman period by the tenth legion. It was afterwards called Aīla, and was still inhabited by Jews as well as Christians at the time of the Crusades. In order to protect themselves against the attacks of the Saracens, the inhabitants pretended to possess a letter of protection from Mohammed. (According to another account they possess a robe which the prophet is said to have given to John, son of Rubah, the Jewish prince, as a pledge that the Jews might carry on their trade without hindrance.) Down to the 15th cent. the town is spoken of as a large and prosperous commercial place. During the Byzantine period it paid tribute to the emperors, but was afterwards under the protection of the governors and Mohammedan princes of Egypt, and was especially patronised by Ahmed Ibn Tulūn. During the crusades it was taken by the Franks, but in A.D. 1170 Saladin caused boats to be brought by camels from the Mediterranean to the Red Sea, and recaptured Aīla. The place, moreover, though on the great pilgrimage-route to Mecca, soon decayed, till at last nothing of it remained but a fort on the mainland, and one on the island of Kuréyeh. The Turkish fortress of ‘Akaba is rectangular in form, each angle of its massive walls being defended by a tower. The entrance, with its iron-clad gate (bearing an old Arabic inscription), is also protected by towers.

Travellers interested in Biblical geography may visit the Wādi Them, as far as the Jebel Barghīr (4-5 hrs.). This mountain, which is said to be known to the Arabs as the Jebel en-Nūr (‘Mountain of Light’), has been recently supposed by Dr. Beke to be the Mt. Sinai of Scripture, on the grounds that the Arabs regard it as sacred, and say that Moses once conversed here with the Lord; that sacrifices were once offered on its summit; and that stones in an upright position, and Sinaitic inscriptions, have been found here.

From ‘Akaba to Petra. The ‘Alawīn Arabs at ‘Akaba are very exorbitant in their demands, often rude in their manners, and rarely trustworthy. At times the route through their territory to the ancient Rock City is not unattended with danger, and careful enquiry on the subject should be made at Cairo and Suez before starting. An experienced dragoman, and one who is acquainted with the Sheiks, will be found very useful. From ‘Akaba to Petra, by the direct route, is a journey of 3 days, but via ‘Akhleh 4-5 days. From Petra to Hebron, 5-6 days, if nothing untoward occurs. Attractive as Petra itself is, this route to it
is not more interesting than those leading to Sinai, and the traveller can hardly be recommended to enter Palestine from this direction. A description of Petra, and of the journey to Jerusalem, will be found in Baedeker's Palestine and Syria.

Return Route from the Monastery of Sinai to Suez by the Wâdi esh-Shêkh, and via Sarbût el-Khâadem (comp. p. 462, and Maps pp. 484, 485).

On starting from the monastery, we first turn to the N. W. in the Wâdi ed-Der (p. 492), leave the plain of Er-Râha (p. 502) to the left, and turn to the N. E. into the Wâdi esh-Shêkh, which is joined by the Wâdi es-Sadad (p. 506) on the S., 1 hr. farther on. On the right rises the Jebel ed-Der, or 'Mountain of the Monastery' (p. 491), and on the left the Jebel Sona (p. 502), both of which are barren and precipitous. On the left, farther on, is the Jebel Khizamîyeh. The broad Wâdi esh-Shêkh, which is inhabited at places, extends in a large semicircle of about 15 hours' journey from the Jebel Mûsa towards the N. W. down to the Wâdi Fîrân (p. 490), presenting on the whole but little attraction. After 1¼ hr. more we observe the Tomb of the Shêkh Sâlih (Nebî Sâlih), which is highly revered by the Beduins, and from which the valley derives its name. Like all these well's (p. 182), the monument is an insignificant cubical building, whitewashed, and covered with a dome, and contains an empty sarcophagus. The interior contains votive offerings, such as tassels, shawls, ostriches' eggs, camels'-halters, and bridles. The Tawâra Beduins regard Shêkh Sâlih as their ancestor; he was probably, however, an early Mohammedan prophet celebrated for his eloquence, who is extolled in the Korân as one of the most venerable of the patriarchs. He is said to have called forth a living camel out of the rocks, and to have destroyed by an earthquake some of the proud Thamudites, to whom he had been sent, for their unbelief and for their wickedness in mutilating the knees of the sacred camel. Every May a great festival takes place here, accompanied with sacrifices, feasting, and games, at which women also are present, and a smaller festival takes place after the date harvest. At the close of the proceedings the children of the desert ascend the Jebel Mûsa, and there offer sacrifices to Moses (p. 501).

To the W. of the tomb a hill, bearing a few ruins, rises from the valley. We next pass (1¼ hr.) the entrance to the Wâdi Suwêrîyeh on the right, which is traversed by the route to 'Akâba (p. 507). Opposite us, to the left, are several small towers, above which rises the pointed Jebel Ferî'. The valley contracts, but after 1/2 hr. expands into a wide basin, bounded on the N. by a chain of precipitous rocky slopes. Beyond this basin (40 min.), and beyond the mouth of the Wâdi Shi'b, on the left, the route traverses (10 min.) the El-Watiyeh Pass (4023 ft.), enclosed by imposing masses of granite. Immediately beyond it rises a stone, resembling an altar, with a white summit, which the Beduins point out as the scene of Abraham's sacrifice. A rock near it, in the form of a chair, is
called the Mak’ad Nebi Mûsa, or seat of the prophet Moses, which he is said to have occupied while tending the sheep of his father-in-law Jethro (p. 492).

At this point begins the lower part of the Esh-Shékîh valley. The character of the region becomes less mountainous, and the route enters an undulating district. In less than an hour we reach a luxuriant growth of țarfa shrubs, which extends for a distance of about 1½ M. (comp. p. 489). Beyond these shrubs, on the left, opens the Wâdi Kasab, which leads to the S. to the Naḳb el-Hâwî (p. 491), and contains a number of palm-trees. Near the (1¼ hr.) Wâdi Maghërât, which lies to the right, is the valley of Esh-Shékîh, which, according to Capt. Palmer’s measurements, lies 3566 ft. above the sea-level. The imposing mass of Mt. Sephâl now becomes visible. Near the (1 hr.) Wâdi et-Târr (right) are a few inscriptions (p. 483). The next valley on the right is the (35 min.) Wâdi Šolîf; and opposite to it opens the broad Wâdi Sahâb, through which the Naḳb el-Hâwî (p. 491) may be reached in 5 hrs. At this point (2854 ft.) our route quits the Wâdi Esh-Shékîh, which leads to the (23¾ hrs.) defile of El-Buwêb (p. 490) farther S. We ascend rapidly to the N.W. in the western part of the Wâdi Šolîf, which soon contracts to a gorge. Several valleys are now crossed, particularly the Wâdi el-Akhḍar and the Wâdi el-‘Isksh, as well as the low ranges of hills which separate them; and in 13/4 hr. we reach the long Wâdi Berâh, lying at the base of the Jebel of the same name. We now ascend this valley, obtaining at first a fine retrospect of the Sinai group, the Jebel Mûsa, and the Katherîn, and reach the top of the pass at the base of the pyramidal hill of Zibb el-Bahîr Abu Bahâriyeh (3894 ft.). We next enter the broad Wâdi Lebweh, through which the route, now monotonous and nearly straight, descends in less than 2 hrs. to the foot of the Naḳb Wâdi Barak. The Wâdi Lebweh, which makes a bend here and descends to the Wâdi Fîrân, now takes the name of Wâdi el-‘Akîr. Our route ascends in 1/2 hr. to the top of the Naḳb Wâdi Barak Pass, beyond which begins the Wâdi Barak, a wild, stone-besprinkled valley, sometimes contracting to a gorge, and overgrown with remarkably fine old seyał trees. Near the head of the valley are several ‘Nawâmîs’ (stonehuts; see p. 490), Sinaitic inscriptions, and large fragments of a rude granite wall. The latter is said to have been erected by the Tawâra Beduins, in order to arrest the progress of troops sent into the wilderness by Mohammed ‘Ali, to punish them for pillaging a caravan; but it appears to be of earlier date. It extends along both slopes of the valley, but there is a wide opening where the route passes through it.

On the right opens the Wâdi Mesakkâr, and on the left, lower down, the Wâdi Ṭayyibeḥ, at the base of the lofty Dabbûs ‘Ilâk. In 2¼ hrs. more the Wâdi Barak reaches the Wâdi Sîk, which after 3/4 hr. turns sharply to the left, leading to the Wâdi Sîdîr,
while the Wâdi el-Merayih on the right leads to the Debbet er-Ramleh. Our route runs to the N.W., gradually ascending, and in 1/2 hr. reaches a narrow sandy plain called the Debbet Shékh Ahmed, from the tomb of a Beduin chief of that name to the right of the path. We then descend into the Wâdi Khamâileh, in which we again ascend to (2 hrs.) the Râs Sâwik (2474 ft.). On the left is the picturesque Jebet Gharâbi, a curiously eroded mass of sandstone, with several Sinaitic inscriptions. An extensive view is obtained over the Tih hills and the plain of Ramleh.

We descend from the pass by a steep zigzag path into the Wâdi Sâwik, in which after 1 1/2 hr. we reach the mouth of the small Wâdi Merattameh, situated at the foot of the hills called Šarbût el-Khâdem.

On the neighbouring hill, 690 ft. in height, are situated a number of interesting monuments, dating from the period of the Pharaohs, and re-discovered by Niebuhr in 1762. The ascent from the Wâdi Merattameh, which is somewhat fatiguing, and requires a steady head, occupies fully an hour. On the level plateau on the top are numerous monuments with hieroglyphic inscriptions. There are traces of an old enclosing wall, 57 yds. long, and 23 yds. broad, surrounded by sixteen ancient Egyptian upright monuments Ọ. Similar stones bearing inscriptions are lying on the ground, and there are the ruins of a small temple. The sanctuary and a pronao of this edifice were hewn in the rocks in the reign of Amenemhat III (12th Dyn.), and furnished with handsomely painted inscriptions (which, however, are nearly obliterated), and niches for images. In the reign of Thothmes III (18th Dyn.) the temple was extended towards the W. by the erection of a pylon and anterior court, and several rooms on the W. side were afterwards added by other kings. The dimensions of the whole building are comparatively small. As in the Wâdi Maghâra (p. 480), the goddess Hathor, and particularly the Hathor of Mafkat (p. 481), was principally worshipped here. The inscriptions indicate that this spot, instead of being a burial-place with its tombstones, as one would at first have supposed, was a religious edifice with a number of chambers for various purposes.

Khâdem (Khatem) is the ancient Egyptian word for an enclosed space, a fort, or castle; and Šarbût (pl. Šrâbiṭ) signifies a hill, or peak, in the language of the Beduins in the peninsula; so that Šrâbiṭ el-Khâdem signifies ‘the heights of the fortinsd place’. In the neighbourhood copper and mafkat were formerly werked, and the plateau was occupied with smelting furnaces, and a temple where the miners and the overseers assembled to celebrate various festivals. The dwellings of the workmen and their overseers, and the magazines, must have been nearer the mines, several of which in the Wâdi Naṣb (see below) still yield a considerable quantity of copper. Most of the monuments on the plateau were erected by the
superior mining officials, who wished to hand down their names and merits to posterity, mentioning the king in whose reign they obtained their appointments, the mineral (mafkat and ore) they worked, the number of miners they employed, the zeal with which they performed their duties, and the accidents which befell them during their term of office. Victories over the native mountain tribes are sometimes also mentioned.

The large heaps of black stone in the vicinity, resembling the slag from a foundry, are partly of natural form; but artificially produced slag also occurs in the valleys between Sarbut el-Khadem and the Wadi Nasb. The old mines were re-discovered by Mr. Holland, a member of the last English Survey expedition, while others had already been discovered and described by Rüppell in the Wadi Nasb. It appears from the inscriptions that the mines of Sarbut el-Khadem, like those of the Wadi Maghara, were first sunk in the reign of Snefru (p. 481) at an early period of the Primæval Monarchy, and that they were worked for a still longer period than the latter, and certainly down to the 20th Dynasty. The cartouche of Ramses IV. is also said to have been found here. The mines of Sarbut el-Khadem must therefore have been worked after the period of the Exodus, while in those of the Wadi Maghara the name of Ramses II., the Pharaoh of the oppression, is the last which occurs in the inscriptions.

About 3/4 hr. to the S.E. of the plateau are several tombs of the 18th Dyn. discovered by Sir Garduer Wilkinson, probably those of overseers of the mines. At a distance of 2 hrs. thence the remains of miners' dwellings were found by Major Macdonald (p. 480).

A visit to these monuments takes half-a-day. Those who desire to make a thorough inspection, and to visit the Wadi Nasb, will require a whole day. They should then walk from Sarbut el-Khadem along the hills to the Wadi Nasb, at the entrance to which are a spring, shaded by palms, some ruins, the traces of gold gardens, and a quantity of slag brought from the mines, 11/2 hr. to the N.W.

We find here a number of unusually thick layers of earthy oxide of copper, inserted in wedge-like form between the horizontal strata of sandstone. At many places the metalliferous formation seems to be about 200 ft. in thickness. The ancient natives have driven shafts through these rocks in many different directions, and excavated them in the form of labyrinths, whilst (as in the Wadi Maghara) they left pillars here and there to prevent the roof from falling in. To judge from the extent of the mines the quantity of ore obtained must have been very considerable. To this day one of the mines contains a considerable quantity of copper ore, while another, where chambers 80 ft. in length have been excavated, seems to have been given up as exhausted. (Rüppell.)

On the hill above the mines stands an ancient Egyptian obelisk with half-obliterated hieroglyphics.

Descending the Wadi Nasb towards the N. we reach the mouth of the Wadi Hobuz (see below), where the caravan should be ordered to await our arrival.

Beyond the Wadi Merattameh the Suez route continues to follow
the Wâdi Suwik, to the N.W., passing a number of fine seyal trees of great age. After 1 hr. the valley takes the name of Wâdi Hobûz, and in less than 1 hr. more it unites with the Wâdi Naṣh, which almost immediately joins the Wâdi Ba'ba', a valley leading to the S.E. to the Hanak el-Lakam (p. 479). At the junction of the Hobûz and Naṣh valleys our route turns to the right, and leads across the sandy table-land of Debbet el-Kerai in 3 hrs. to the beginning of the Wâdi el-Ḥomr. Ascending a little towards the middle of the lofty plain, we enjoy a fine view of the Sarbût el-Jemel (2175 ft.), rising to the W. opposite to us, beyond the Wâdi Ḥomr. To the left, in the distance, are picturesquely shaped mountains with flat summits; to the right is the Tîh range; and behind us are the hills of Sarbût el-Khâdem, the Jebel Ghârâbi, and the distant Mt. Sarbâl.

We now descend to the broad route leading to Nakhleh (p. 508). On the right rises the long Jebel Bêda'. On the ground here we observe a number of curious geological formations, consisting of slabs and fragments of sandstone encrusted with nodules of iron ore, with a large admixture of silica, grouped like bunches of grapes. Some of these are perfectly spherical.

The Wâdi el-Ḥomr is a broad valley flanked by low limestone hills. It is commanded on the N. side by the Sarbût el-Jemel (see above). From this valley a path, practicable for camels, traverses the Wâdi Mesakkar and several other valleys, and leads direct to the Wâdi eth-Thâl (p. 478). The regular route follows the Wâdi el-Ḥomr to its union with the Wâdi Shebêkeh (see p. 478). Thence to Suez, see pp. 478-474.
INDEX.

Besides the names of the places described, this Index also contains a number of names of persons and other words occurring in the Routes and in the Introduction. Ancient names are printed in Italics. The following is a short list of Arabic words of frequent occurrence (comp. vocabulary, p. 190): —

'Ain, Spring.
Būb, Gate.
Bahr, Sea, river (Nile).
Behērēh, Lake.
Beled, Village.
Bēt, House.
Bilād, Land, District.

INDEX.

Besides the names of the places described, this Index also contains a number of names of persons and other words occurring in the Routes and in the Introduction. Ancient names are printed in Italics. The following is a short list of Arabic words of frequent occurrence (comp. vocabulary, p. 190): —

Abū-Zediyeh 19.

Abū-Zediyeh 19.

Abū-Zediyeh 19.

Abū-Zediyeh 19.

Abū-Zediyeh 19.

Abū-Zediyeh 19.
INDEX.

Alexandria:
- Gymnasium, the ancient 208.
- Harbours 201, 206, 214.
- Harbour works, the new 220.
- Heptastadium 205, 218.
- Hippodrome 219.
- History 205.
- Hospitals 214.
- Ibrâhim, Rue 219.
- Jewish Quarter, the ancient 207.
- Kôm ed-Dik 203, 214.
- Libraries (ancient) 209.
- Lighthouse 219.
- Lochias 207.
- Mahmoudiyeh-Canal 213, 219.
- Mâchâmet-Alî, Place 215.
- Meks 220.
- —, Palace of 201, 220.
- —, Quarries of 219.
- Mohammed 'Aîli's Statue 215.
- Moharrem-Bey, Palace 219.
- Museum, the 208.
- Necropolis 207, 219.
- Nicopolis 220, 231.
- Nimregh Telâ'eh, Palace 219.
- Palaces, Quarter of the 207.
- Panœum 208.
- Passport Office 202.
- Pastré, Jardin 219.
- Pharos, Island and Lighthouse 205, 206.
- Physicians 204.
- Pompey's Column 216.
- Porte de la Colonne Pompée 216.
- — de Moharrem Bey 217, 219.
- — du Nil 216.
- — de Rosette 219.
- Posisidium 207.
- Post-office 203.
- Quarantine 220.
- Railway-Stations 204.
- Ramleh 220.
- Râs el-Tin 219.
- Restaurants 203.
- Rhakotis 205, 207.
- Roman Sebasteum 218.
- Sema 208.
- Serapeum 209, 216.
- Shops 204.
- Steamboats 204.

Alexandria:
- Streets, ancient 207.
- Telegraph-office 208.
- —, ancient 208.
- Timonium 207.
- Topography, ancient 206.
- Valets-de-place 203.
- Waterworks 214.
- 'Aleyât, Wâdi 485, 487.
- Alluvial soil 57, 60.
- 'Almehs, see 'Awâlim.
- Alphabet, Arabic 187.
- Aïsh 486.
- Amalekites, the 486.
- 'Amârà, Wâdi 475.
- Amenôthes 123.
- Americans 44.
- Ammon-Ra 135.
- Ammon, Oasis of 63.
- Annius Trajanus 415.
- 'Amr Ibin 415, etc.
- Amu, the 440, 441.
- An (Heliopolis) 320.
- —, Spring of 319.
- 'Anâtireh 19.
- Abu 413.
- Anchorites, Christian 99, 469.
- Animal Kingdom, Egyptian 78.
- Animals, Sacred 84, 124.
- Antelopes 79.
- Antiquities 24.
- Antinoë 162.
- St. Antony, Monastery of 42, 458, 459.
- Anubis 130.
- Anuqa 127.
- Apes 81.
- Apis Bull, the 124, 339.
- Apis Tombs, at Saqqâra 371.
- Apis Inscriptions 372.
- Aphroditeopolis 458.
- el-'Arâba, Jebel 463.
- Arabia Petraea 466.
- Arabian Desert 62.
- Arâdi el-Mirîyeh 35.
- el-'Arayish-Beduins 47.
- el-'Arba'in, Dîr 503.
- Arch, forms of Arabian 176.
- Architecture, Arabian 172.
- Area of the Egyptian Empire 29.
- Arianism 100.
- Aribeh, Jebel 501.
- el-'Arish (Rhinocolura) 29, 413.
- —, Wâdi 466.
- Arkiko 410.
- Armenians 52.
- Arsinoë (near Suez) 415.
- — (in the Fayûm) 446, 447.
- Arsinote Nome, the 446.
- Art, ancient Egyptian 155.
- Ashmûn Canal 428.
- Assuán 61.
- 'Atâka Mts. 401, 463.
- Athbara, the 55.
- Atef crown, the 127.
- Aţâf 458.
- Attribis 225.
- Atrib 225.
- Atâni-Beduins 47.
- Autumn Crops 74.
- 'Awâlim (Singing Women) 20.
- Awârîneh-Beduins 468.
- 'Azabat es-Siyûf 436.
- el-'Azm, Tell 433.
- el-'Azrâk, Bahr 55.
- Ba'âl Zephon 413, 472.
- 474.
- el-Bâb (Wâdi Firân) 490.
- Bâb el-Mandeb, Strait of 408.
- Bâbâ', Jebel 479.
- —, Wâdi 479, 513.
- Babylon, Castle 306.
- Bacchis 456.
- Bahr el-Abyad 30, 55.
- — el-'Arâmar 403.
- — 'Akabâ 508.
- — el-'Azrâk 55.
- Belâ mâ 448.
- — ed-Dem 433.
- — Egbî 449.
- — Farûn 408.
- — el-Gebel 56.
- — el-Ghazâl 30, 56.
- — el-'Ijâz 408.
- — Kâlin 434.
- — Koltum 408, 412.
- — Nezleh 453.
- — esh-Sherkî 449.
- — Suez 408.
- — el-Tâhâneh 453.
- — el-'Wâdi 453.
- — Wardâni 449.
- Bahriyeh, Oasis of 63.
- Bakhshish 6, 16.
- Balâlah 422.
- Ballûsh (Fâkâka) 84.
- Balsam-plant, the 319.
